LAST week's mail brought the satisfactory news that the Council of the Secretary of State for India has made a special grant of 250*l.* to the widow of Dr. Reinhold Rost. There was a disposition in one quarter to double the amount, but opposition came from another more responsible authority. There seems to be a belief that Dr. Rost was liberally treated by the India Office and that he ought not to have died poor. He was granted an extension that he might retire on half pension and further the pay was raised from 600*l.* to 800*l.* that in retirement he might draw 400*l.* or 100*l.* more than the ordinary allowance. There were other sources of income. He drew 100*l.* from St. Augustine's College, and could he not make another 100*l.* by his writings? So Dr. Rost passed rich with 1,000*l.* a year before he was retired. He should have left a provision for his wife and daughter. We will not anticipate the memorial to the First Lord of the Treasury, of which our London correspondent speaks. We prefer to wait till we have seen it. Meanwhile, we will only remark that Dr. Rost made the India Office Library what it is—the resort of scholars from all parts of the world, and that the forced retirement, however or by whomsoever caused, preyed on his mind and hastened his death. Sir Robert Peel, for services rendered by McCulloch to political economy, had recommended him to the Queen for a pension of 200*l.* The inquest on the sad death of Benjamin Robert Haydon disclosed the fact that when, in his continued embarrassments, the painter had applied to the statesman, Sir Robert, from a limited fund at his disposal, had sent Haydon 50*l.* After Haydon's suicide, the right honourable baronet, addressing one of the executors, enclosed a cheque for 200*l.* from the royal bounty fund, in order, as the letter stated, that the family might not be molested before a provision could be made.

FOR cruelty to a goat, for striking it with a stick and breaking one of its forelegs, the Chief Magistrate fined a Mahomedan woman Rs. 25 with the alternative of four days' rigorous imprisonment. For causing to be used and using the phookah process on cows, Mr. Pearson further ordered on a woman, the owner of a number of cows, and her servant, respectively, a fine of Rs. 100 or 15 days' imprisonment, and a month's hard labour. These are deterrent sentences, but being few and far between, are deprived of a greater part of their effect. Cowsheds are a great nuisance. Besides being dangerous to the health of their inmates and of the neighbourhood, they are a positive cruelty to the animals which are huddled together without a moving or breathing space. The owners are occasionally prosecuted, yet the evil flourishes. The fines being small and prosecutions at long intervals, it is easier to suffer in the shape of fines than to go to the heavy expense of making the improvements required by a municipal permit. The law empowers the Commissioners to close an objectionable shed. They do not exercise the power for many practical reasons. The owners would formerly be proceeded against in the court for the trial of municipal cases. Now the stipendiary magistrates, who are expected to fine more heavily than the honorary magistrates, try them. The Northern Division Magistrate has just punished offending milkmen with fines of Rs. 25, 20 and 10. But all to no purpose. The real question is Cannot the places be fitted for their purpose at small cost? The Commissioners should see to that. Other attempts are wide of the mark.

A FRIEND writes to us from Chitagon, under date the 1st of May:—

'No chance here of a water famine; rather the other way. It is pouring a veritable deluge; and I am consoled for the inconvenience of inhabiting a storm-swept plateau by the thought that the drenching will wash away a portion, at least, of the abomination with which this unspeakably filthy and neglected town is gorged.

Last night, while the storm was at its height, my room on the leeward side was invaded by—

- (1) A wild pigeon,
- (2) 4 mamas,
- (3) A huge and gorgeous butterfly,
- (4) Three strange leaf-insects (which simulate leaves),
- (5) About a lakh of grass-hoppers, (perhaps more).

All were quite tame and friendly; and they remained unmolested all night, the birds perched on the backs of chairs while the wind roared and the rain plumed outside."

During convulsions of Nature, when danger threatens life every moment, even tigers and lions have been seen to herd with deer and lambs and kine and human beings, forgetting their ferocity and appetite. It is a common sight in India, during extensive floods, of snakes and mice living in peace on the same branch of

a tree floating on the water. We may be sure that the mainas referred to in the letter, discovered no disposition to attack and swallow the grass-hoppers. Fear is a powerful sentiment. It conquers habit, nay, the nature itself of a living creature. During the cyclone that swept over Bengal in 1863, a man was saved by a large boa constrictor. While floating on the Hooghly somewhere near Budgebudge, catching hold of a large tree that had been uprooted by the wind and that was rising and falling with every wave, and while his grasp was weakening every moment with cold and the spray beating against his face, he suddenly saw a large boa darting towards him. Coming up to where he was, the snake twined round the man and the tree together and, placing his head upon that of its human neighbour, remained perfectly quiet for hours. The sensation of the man during this enforced companionship with the terrible monster, may be conceived. Towards evening the tree floated towards the shore whereon was a large jungle. The snake, suddenly uncoiling, swam towards the land, leaving both tree and man. The latter also gained the shore. Yielding to the idea uppermost in his mind, he knelt down and with upraised arms poured forth his thanks to the Supreme Being who, he firmly believed, had assumed the form of a snake for saving him from a watery death.

THE following letter, received from Professor E. B. Cowell by Pundit Sambhu Chandra Vidyaratna, the brother and biographer of Pundit Iwar Chandra Vidyasagar, will speak for itself:—

My dear friend, "Cambridge, April 16, 1896.
I was very much pleased to receive your kind letter, and I thank you for the Bengali memoirs you have sent me. I shall read the memoir of Pundit Iwar Chandra Vidyasagar, as I knew him well and I admired him very much. I keep a photograph of his in my drawer as a remembrance of my Indian life. I knew Pundit Tarkavachaspati well also. I constantly use his 'Siddhanta Kumudi' and his great Sanskrit dictionary, the 'Vachaspathi'; it is a grand work.

We were deeply grieved to lose Dr. Rost so suddenly from among us. He was to have examined in Sanskrit with me in the coming examination next June. He was a most lovable man, full of 'the milk of human kindness.' I am quite affected when I think of the kind words about me which you quote.

I often think of the old Calcutta days; Mrs. Cowell and I often talk about them and recall old friends.

Pundit Vidyasagar's life will interest me very much. I have no time for Bengali now, but I have not quite forgotten it. Sanskrit, Pali and Zend take up all my time. I remain, yours most sincerely,

E. B. COWELL."

It is a pleasure to recall the amiable countenance of Professor Cowell such as we saw him in the Presidency College, Calcutta. Few men threw themselves, like him, heart and soul, into the work of teaching. It has given us great satisfaction to find that Professor Cowell's solidity of Oriental scholarship is admitted and appreciated by, at least, those who come in contact with him.

REIS & RAYYET.

Saturday, May 16, 1896.

ARSENIC POISONING AND UNSUCCESSFUL TRIALS.

EMPRESS *versus* Emily Ghose, of 1896, runs on parallel lines with Empress *vs.* Ellen Wagner of 1894. Both the prisoners were native Christians. While Emily had her Solomon, Ellen her Cray. The Rev. B. C. Ghose and Mr. Wagner both died from arsenic poisoning. Ghose's body gave forty-two grains of the poison and Wagner's only one-fifteenth of a grain. But it must be remembered that Wagner had been buried four days before there was chemical analysis of the contents of his stomach. Mrs. Ghose was married several years and had six children, two boys and four girls, Mrs. Wagner had been married thirteen years and had three children. Neither Mr. Ghose nor Mr. Wagner was suffering from any serious illness before his death and both died suddenly. Ghose had no treatment, Wagner was taken to hospital when too late for he died within three hours after admission. Symptoms in the two cases simulated cholera.

We will now give the points of difference. It is not known whether Mr. Ghose gave any cause of his suffering or death. Mr. Wagner however had vague suspicions of being poisoned. Two witnesses

deposed to the administration of the drug to Ghose but they were disbelieved, while another who was present was not called. In the other case, there was no eye-witness. There was no charge of drunkenness against Wagner. Ghose, however, was not free from the weakness. The behaviour of Mrs. Ghose was inconsistent unlike that of Mrs. Wagner. The motive for murder attributed in both cases was criminal intimacy and intrigue. While Mr. Justice Trevelyan expressed the opinion that it was not adequate, Mr. Justice Norris kept himself silent on the point. But both the Judges thought that on account of the unrestricted sale of poisons, it was difficult to trace their purchase. In all European countries there is a strict regulation about the sale. It can only be made on a medical certificate or to recognized persons. In India, we have no such law, and, any restriction seems impossible as it may interfere with the sale of opium—a monopoly of Government. If it is unwise to make a general law so as to include opium, it may be asked, cannot a law be passed to regulate other poisons? But then anti-opiumists would have another string to their bow. Left complete master of the market, opium will occupy the combined place of all other poisons for murder. After the Wagner trial, Mr. Justice Norris sent up a recommendation to the Government of India, to restrict the sale of poisons. Nothing, however, seems to have been done in that direction. Though attention is now directed towards the homicidal use of arsenic, yet the number of deaths from it is infinitesimal compared to suicide by opium.

In his address to the jury Mr. Justice Trevelyan pointed out that a prisoner was above law, in that he or she could not be examined. Could Emily be a witness, many matters would have been explained, which would have made the trial more satisfactory.

Poisoning of cattle by arsenic is more common than poisoning of human beings. In Calcutta, of the latter kind, the crime, suicidal or homicidal, is growing into fashion. The first undetected case of recent years which we can remember was the suicide of a druggist. He was, however, reported to have died of cholera on the authority of a Presidency Surgeon who certified the death as natural. The next similar case was that of a man who wanted to get rid of his brother. The patient or sufferer was treated by a quandom principal of the Medical College for cholera and so he too must be taken to have died of that disease. To come to regular trials. The first in order is the Sikh poisoning case of Burra Bazaar. Arsenic was found in the possession of the prisoner. The dying declaration of his relative and victim attributed the purging and vomiting to sweets given him by the prisoner. There was no conviction. The next trial was Wagner's to which we have already alluded. The prosecution could not make out a case sufficient to go to the jury. The last to come was Emily Ghose. She too had the benefit of doubt.

For its tastelessness arsenic can be used with safety for criminal purposes, though as a precaution it is administered with sweets and *sherbut*. For suicide it is used by itself or with lime to increase its corroding action. The symptoms of arsenic are divided into three groups. The first simulates cholera. Here

DEAFNESS COMPLETELY CURED! Any person suffering from Deafness, Noises in the Head, &c., may learn of a new, simple treatment, which is proving very successful in completely curing cases of all kinds. Full particulars, including many unsolicited testimonials and newspaper press notices, will be sent post free on application. The system is, without doubt, the most successful ever brought before the public. Address, Aural Specialist, Albany Buildings, 39, Victoria Street, Westminster, London, S. W.

the action commences very rapidly and one has not to wait long for the final issue. Generally a day or a day and night completes the work. But the quantity must be large. It must be more than ten grains. In empty stomach, or after imbibing of liquors, or on persons subject to inflammatory affections, or in a system shattered by some chronic complaint, or worn out by anger, grief, jealousy or fear, the poison acts quick. When it produces symptoms like cholera, it is understood that it finds a suitable medium for rapid production of dangerous effect. In the second variety, life may struggle on for several days and the dose must be more than four or five grains. The symptoms are not choleraic nor is the urine suppressed; but you have violent colic and bloody discharges and hiccough. The action is quicker on stomachs with mucus, or after meal or eating of ice and drinking of water. The face is swollen and the eyes protrude, and as days pass on ulcers appear in the mouth. In the third, the prominent symptoms are fever, colicky pains, spasms and chronic diarrhœa. Gradually the limbs are atrophied and become paralysed. Small and distant doses do equal mischief with larger ones. Notwithstanding all these distinguishing symptoms and its action being steady, we are told that arsenic is an erratic poison. Steady or erratic, none of the trials for arsenic-poisoning has resulted in conviction, and several deaths pass off as natural.

HIS HIGH MIGHTINESS THE COMMISSIONER OF POLICE.

THE Police is a spending department. Properly speaking, it has no income of its own. There was indeed a police rate for the town of Calcutta. But the Police Commissioner had little or nothing to do with it. He made his own budget of expenditure and drew the amount sanctioned by Government. That rate has now been abolished. In the Police Budget, various sources of income are enumerated. The control of them generally rests not with the head of the Police, though the tail and the intermediate limbs may help to add to the income. With vast and unknown powers, as director general of the Police of the town, a Justice of the Peace, possessing the powers of a Magistrate and special powers conferred by law and the Local Government, with a force under command, exercising the authority to deport, the Commissioner of the Calcutta Police is a law unto himself. His word is law. He is free to make a good turn, or cause unnecessary trouble. To please a governor, he once unceremoniously sent away one who had travelled to Calcutta over sea and land to press a claim. Power begets power, and the wielder of a power that knows no limit, cannot be a Power indeed unless he can command an income. The law authorizes the Commissioner of Police to fine any member of his Force "for any lesser breach of discipline, or other misconduct not requiring the suspension or dismissal of the offender," and directs that "all sums accruing from stoppages from members of the Police Force during absence from sickness or other cause and fines imposed on members thereof for misconduct, and from fines imposed by Magistrates upon drunken persons or for assaults upon Police officers, and all moneys arising from the sale of worn or cast-off clothing or other articles supplied for the use of the Police, shall be credited to any fund applicable to Police purposes." Two other sources of income are recognized by law. Thus ;

"The Commissioner of Police may also, if he shall think fit, on the application of any person showing the necessity of it, appoint any additional number of constables to keep the peace at any place within his jurisdiction, at the charge of the person applying, but subject to the orders of the said Commissioner, and for such times as he shall think fit; and every such constable shall receive a certificate, by virtue of which he shall be vested with all the powers, privileges, and duties of the constables belonging to the police-force.

Provided that the person upon whose application such appointment shall have been made may, upon giving one month's notice in writing to the Commissioner of Police, require that the constables so appointed at his expense shall be discontinued, and thereupon the said Commissioner shall discontinue such additional constables; and all moneys received by the Commissioner for the payment of any such additional constables shall be accounted for by him."

The Police Commissioner is also competent to retain, for the fund applicable for police purposes, the sale proceeds of impounded cattle, when the owner fails to appear within a given period.

No excise license can be issued in Calcutta unless the Commissioner of Police certifies. He is besides given the authority to grant licenses on his own terms to keepers of houses or places of public resort and entertainment. And

"For every certificate or license granted by the Commissioner of Police under this Act there shall be levied a fee of two rupees."

This is the only authority under the Calcutta Police Act by which the Police Commissioner can levy any fee for any permission granted. Let us see how he exercises that authority.

In a country where marriage is the rule and every girl must be married, marriage may be a valuable source of revenue. There have been suggestions to tax marriages. Government have not yet decided to make them directly fruitful to themselves. It seems reserved to the Commissioner of Police, Calcutta, to introduce the thin end. The superior authorities quietly look on, and, when the time comes, will, after the policy of British statecraft, condemn the man and accept his action.

The Act empowers the Police Commissioner to regulate processions in streets. Thus :

"Sec. 62. The Commissioner of Police, from time to time, as occasion may require, may, subject to the orders of the said Lieutenant-Governor, make rules for the conduct of all assemblies and processions in the public roads, streets, or thoroughfares, prescribing the routes by which, the times at which, such processions may pass ;

and for keeping order in the public roads, streets, thoroughfares, ghauts, and landing-places, and all other places of public resort, and preventing obstructions thereof on the occasion of such assemblies and processions, and in the neighbourhood of places of worship during the time of public worship ;

and in any case when the roads, streets, or thoroughfares, ghauts, or landing-places, may be thronged, or may be liable to be obstructed ; and may give licenses for the use of music in the streets on the occasion of native festivals and ceremonies.

Every person opposing or not obeying the orders so issued by the Commissioner of Police, or violating the conditions of such license, shall be liable, on summary conviction before a Magistrate, to a fine not exceeding one hundred rupees."

It is a necessary power and can be exercised only according to the law. The Police Commissioner cannot prohibit processions or assemblies. He can only regulate them according to rules laid down by authority. These rules apply equally to musical processions which the Commissioner is authorized to allow or not by granting or withholding a license for the same. But there are no rules sanctioned by the Lieutenant-Governor. A set of rules approved of by the Local Government was, indeed, published by Sir Stuart Hogg in 1870. Those regulations, still in force, refer to a different matter and were framed under a different section (sec. 9) and take no cognizance of Sec. 62. Section 9 runs in these words:

"Section 9. The Police Force shall be under the exclusive direc-

tion and control of the Commissioner of Police, who may, from time to time, subject to the approbation of the said Lieutenant-Governor, frame such orders and regulations as he shall deem expedient, relative to the general government of the Force, the places of residence, the classification, rank, distribution, and particular service of the several members thereof; their inspection; the description of arms, accoutrements, and other necessities to be furnished to them; and all such other orders and regulations relative to the said Police Force as the said Commissioner shall, from time to time, deem expedient for preventing neglect or abuse, and for rendering such Force efficient in the discharge of all its duties."

Even if the rules took any notice of musical processions on the occasion of native festivals and ceremonies, they could not be recognized as framed under section 62 and accepted as supplementary law. When music is permitted, the procession only can be regulated. Nor is it competent to the Police Commissioner to regulate it as he pleases. He can do so only under rules and those rules must also be approved of by the Lieutenant-Governor. In the absence of any regulations, the power reserved in section 62 is nugatory. Government may not have sanctioned any regulations. But what of that! Is not the Police Commissioner all powerful? He has a set of rules of his own. We reproduce a license recently issued for a marriage procession under the Commissioner's own law:—

"No. 34. Fee Ten Rupees.
Office of Commissioner of Police, Calcutta.
Town of Calcutta.

License is hereby granted under the provisions of Sec. 62, Act IV of 1866.

16th of April 1896.

To.....
For a Procession with music to pass from Champatolla 2nd Lane to Dhurmotolla Street within the town of Calcutta proceeding via College and Wellington Streets only between the hours of 7 P.M. and 11 P.M. of the 17 of April 1896, upon the conditions stated on the reverse.

Signed Dy. Commissioner of Police.

Police section J.

Fee received.

Conditions.

1. The holder of the license shall, before making use of it, register it at the Police Section named upon the reverse.
2. He may at any time have more than twenty musicians with his procession.
3. That no musical instrument shall be sounded on Circular Road, between Chowringhee Road and Park Street.
4. He shall pass only by the Streets herein specified.
5. He shall make use of his license only on the day and during the precise hours for which it is granted.
6. He shall always pass by the left side of the road.
7. The members of the procession shall not carry sticks, clubs or other offensive weapons.
8. No fire shall be carried or fire-works discharged during the course of the procession.

Every person opposing or not obeying the orders issued by the Commissioner of Police, or violating the conditions of this license, is liable to a fine of one hundred rupees."

All these rules are not under the law. They may be all salutary and necessary, but they must proceed from the authorized quarter. We may as well here state the procedure, which is equally arbitrary, for issue of license. When an application is made it is sent to the Superintendent of the Division for report. On his recommendation and on the terms suggested by him, the license is issued. The invariable demand, of recent growth and which is increasing every year, on the applicant is that he must have a sufficient number of police in the procession, that is, pay for them. The number of graded police is fixed by the Superintendent. He is guided by no law or rule but his own choice. There is payable for each European constable Rs. 8, for a native officer Rs. 7 and for a constable Re. 1. There are three classes of license for which three different fees are charged. A license for 5 musicians has attached to it a fee of Rs. 2, for 10 musicians

Rs. 5 and for 20 and more, Rs. 10. Unless you pay for the police, you are not granted a license. For the license we have quoted the demand at first made was Rs. 60. It was afterwards reduced, how we need not say, to Rs. 23, that is, Rs. 10 for the license and Rs. 13 for police, made a part of the license. The payment for the police is a public demand and is accounted for. A receipt was granted for the sum charged. It is as follows:

"Office of Commissioner of Police, Calcutta.
No. 64.

To.....
Request payment of the undermentioned charges for Police supplied at his procession on the 17th April 1896.

1 Native Officer from 7 to 10 P.M., @ 3 Rs. 3	
10 Constables " @ 1 Rs. 10	

Total Rs. 13
Signed Dy. Commissioner of Police.

Calcutta.

The 16th April 1896.

It is necessary in proof of payment of this bill, that it should bear a receipt (by endorsement on the reverse) of the officer by whom it is presented for payment.

(Endorsement on the reverse under date the 16th April, 1896.)"

The receipt itself is an evidence of illegality perpetrated. It is dated the 16th of April and requests payment for Police supplied not on that day or any previous day but the day after. The Police Commissioner with all his varied powers, visible and invisible, or his deputy is up to any feat—even to extinguish Time. The mighty General of Rama, in the Ceylon war, managed to delay the appearance of the sun for his mission would not succeed if the day dawned in time. The Deputy of Sir John Lambert, with the borrowed powers of his Chief, accomplishes an equally mighty feat by merging the future in the present. That stretch of power is necessary to force down the bitter pill on an unwilling gullet. During the last unusually active marriage season which has just closed, the license fee with the Police demand, like the marriage dower, went up very high—as high as Rs. 80. We have pointed out that the Act authorizes a fee of only Rs. 2. We have yet to learn who fixed the license fees at Rs. 5 and Rs. 10, and under what authority the charges for Police are made.

So much for Buckingham and the present.

OUR LONDON LETTER.

April 24.

Social Questions. In my last letter I hazarded the remark that London morally was as bad as Paris, New York or Chicago. That remark has been more than justified by an incident that took place on the morning of Sunday April 10th. A well-known West End Club, No. 11, Regent Street, situated between St. Philip's Church on the one hand and Howell and James' large warehouse on the other was raided by the police on that morning at 1 o'clock. It was an ordinary West End Club where no impropriety in the way of gambling was ever permitted. It was a club simply for the "jeunesse d'ore" of London to pass the earlier hours of the morning. But Howell and James and others had complained to the police of the place as a nuisance and as a matter of fact nothing took place except dancing and suppers. The case has been postponed for a week and therefore I cannot yet say what the decision of the magistrate will be. But what I wish to point out to you native gentlemen of India is, how little we, who presume arrogantly to teach you Christian morality, have to boast of. In every capital of Europe except St. Petersburg and Constantinople I have studied the subject and I think it is one of the greatest tributes to Prince Bismarck that any girl may pass the streets of Berlin at any hour of the night without being insulted. In Berlin those ladies of the pavement are not allowed to show themselves but provision is made for them by allowing certain cafes to be open all night for their entertainment. In Paris there are well-known "cafes" such as the "cafe American" open all night and the advantage of Berlin and Paris is this that you have none of the disgraceful scenes which occur every night in Piccadilly Circus. It is a terrible thing to think that we in London have to witness

there melancholy scenes while we have more clergy preaching to us on Sunday than in any other city of the world.

Politics. There has not been much of public interest in the Imperial Parliament since I last wrote. I would just draw your attention however to the introducing by Mr. Chaplin on Monday, the 20th, of the so-called Government Rating Bill. He was answered by Sir Henry Fowler on the part of the Gladstonians and judging from the speeches made by Sir Henry and Sir William Harcourt I presume the Opposition intends to fight the Bill line by line. On Monday the 27th the Education Bill it is supposed, will come on for a second reading. As I pointed out in last week's letter, the Gladstonian party is on this question totally demoralized, inasmuch as the Irish members at the dictation of their priors will support the Government policy, and it is assumed that on critical divisions the Government majority will run from 250 to 300.

France. You will see from the daily papers that another French Government has fallen. M. Bourgeois in his fight with the Senate has had to yield and the only question now is whether President Faure will not fall with the Prime Minister. Many people think that M. Bourgeois has been what they term "riding for a fall" and that his great ambition is to become President of the French Republic himself. Every one allows that he is a man of consummate ability, but having put himself into the hands of the extreme Socialist party in the Chamber of Deputies the Senate resisted his attitude with the result that a very grave constitutional crisis was brought about and M. Bourgeois has resigned.

Germany. In my last letter I dwelt at length upon the duel between Herr von Schrader and Herr von Kotze. Since his return from Italy the Emperor has been engrossed with the royal marriage at Coburg, but the duel question is still alive and has been made a subject of debate in the Reichstag.

Italy. There is nothing further to communicate this week with regard to the position of the Italian army in Abyssinia. I judge by the papers that although Great Britain can not take an effectual stand in the Soudan until the autumn, the mere fact of our intervening against Osman Digma has led to the relief of the Italian army at Kessala.

Venezuela. Last week I ventured to say that the Venezuelan question as between ourselves and the United States was likely to be agreeably settled, but I am sorry to say from a letter that appeared in the "Times" from its distinguished American correspondent Mr. Smalley, the question as between Lord Salisbury and Mr. Cleveland is full of danger, and for the present therefore I leave it untouched.

Australia. You will see by the papers that Sir Henry Parkes is lying dangerously ill at Sydney. He is well over eighty and has had an extraordinary career. He began life as a journeyman printer and eventually raised himself to be the most prominent politician in New South Wales. His own worst enemy was he himself. He was eaten up with self-conceit and nothing gratified him more than to be called, after Mr. Gladstone, the "Grand Old Man" of New South Wales.

Dr. Reinhold Rost. You will be glad to hear that the memorial on behalf of Mrs. Rost will be presented to the First Lord of the Treasury next week, and in addition to the eminent signatories, the memorial will be supported by private letters from His Grace the Archbishop of Canterbury, Sir William Muir, Professor Max Muller and Mr. Bryce. As soon as the memorial has been placed in the hands of the First Lord of the Treasury I shall take care that a copy reaches you for publication in "Reis and Rayyet."

ADULTERATION OF INDIAN OPIUM AT THE TREATY PORTS OF CHINKIANG AND WUHU.

Dated 11th December 1892.

From---N. R. O'Connor, Esq., C.B., C.M.G., Her Britannic Majesty's Minister in China,

To---His Excellency the Viceroy and Governor General of India.

I have the honour to transmit herewith to Your Excellency copy of a despatch which I have received from Her Majesty's Consul at Chinkiang on the subject of complaints which have been received by him of the seizure by the Chinese Customs of opium on which duty and likin duty had been paid.

Under the system which prevails at Chinkiang and which differs from that in existence at all other Treaty Ports except Wuhu, the merchant is allowed to remove opium which has paid duty and likin to his own godown. It is only brought to be packed under the supervision of the Customs after it has been sold. During the interval a door is opened to abuses: the opium thus seized has been found to be adulterated, and it is difficult for a British merchant to prove that such opium is the same as that which has already paid the legal duties.

By Articles 4 of the Additional Article to the Chefoo Convention of 1885, opium has to be deposited in bond in warehouses or hulks approved by the Customs, and after payment of duty and likin (Tael 30 and Tael 80 per chest) is repacked on the spot, the packages being stamped by the Customs. Each such package is

then entitled to receive a transit certificate from the Customs.

I propose informing Mr. Carles that I do not consider it advisable to support the complaint of the merchants if they take upon themselves to make other conditions than those laid down in the Additional Article to the Chefoo Convention, more especially that there appears reason to think that the opium has been adulterated in the godowns.

No. 6, dated 30th November 1892.

From---W. R. Carles, Esq., Her Britannic Majesty's Consul at Chinkiang,

To---Her Britannic Majesty's Minister in China.

I have the honour to report to you that recently complaints have been made to this Consulate of the seizure by the Customs of opium on which likin and duty are alleged to have been paid.

The manner in which opium is treated at Chinkiang is different, I believe, to that at all other Treaty Ports except Wuhu, and demands some explanation on my part.

So far as I can learn, when the new Opium Regulations were introduced in 1887, it was represented to the Customs here and at Wuhu by the merchants (whether native or foreign I am unable to ascertain) that the opium trade would be ruined unless facilities were afforded to merchants of allowing their customers to test the quality of the opium offered to them for sale, previous to its being packed in wrappers sealed by the Customs.

This Customs accordingly consented to allow merchants, on the payment of likin and Tariff duty at the time of importation, to remove the opium to their own godowns, and it is only after its sale to native merchant that the opium is brought to be packed, under the supervision of the Customs in packages for which Transit Pass certificates are issued. These certificates differ from the form prescribed in the 4th Additional Article signed at London on the 18th July 1885, in the addition of a clause, in Chinese only, which requires all likin and other stations to allow the opium to pass without hindrance as the Tariff duty and *likin* on it have been paid in full, and which further gives the name of the Chinese merchant who has applied for the certificate.

The practice has, I understand, worked very well until recently, but of late the Customs has made several seizures of opium, which they are satisfied has been adulterated.

The fact that the opium has been for some time in godowns where its adulteration may have been effected leads the Customs to presume that the adulteration has taken place subsequent to importation, and the lenient practice of the port makes it practically impossible for the British merchant to satisfy the Customs that the opium brought to them for examination is the same as that on which duty and likin have been paid.

Messrs. Duff and Co., who have complained to me and my predecessors of the action of the Customs, assert that the opium is of foreign origin but of a low quality. Experts at Shanghai, to whom samples of the opium seized have been submitted, while differing as to the exact nature of the opium have, with one exception, agreed that it was adulterated, while the dealer who took a more favorable view said that it was Malwa opium, but of such a low grade that it could not be smoked without an admixture of pure opium. The majority agree that there is a large proportion of sesamum seed in the opium, and the Chinese authorities assert that sesamum seed is imported from Hankow for the purpose of being mixed with foreign opium.

Under the circumstances I have not thought it my duty to protest against the action taken by the Customs. The British merchant has the remedy in his own hands of submitting the opium at the time of importation to the Customs for examination; and if he foregoes this opportunity in order to obtain the exceptional advantages granted at this port, he cannot, I hold, complain if he suffers afterwards on account of his opium being so far adulterated or of such low grade as not to be recognized as Indian.

The question is one which may be of interest to the Indian Government, for the importation into the interior of adulterated opium purporting to be Indian will, if it continue, necessarily in time prejudice the native consumers against what they find to be an inferior drug to that to which they have been accustomed as Indian, while the certificate issued by the Customs will confirm them in the belief that the drug is genuine.

On the ground there would appear to be objections to any modifications such as exist here in the provisions of the Additional Articles to the Chefoo Agreement. Owing to the destruction of the Consular archives prior to 1889, I am unable to ascertain whether or how far these modifications have been approved by the Legation, and I shall be glad to receive your instructions regarding them.

I learn privately from the Commissioner of Customs that the Taotai is prepared to revert to the stricter practice laid down in the Additional Articles, if the Wuhu authorities follow the same course, and my own opinion is that it would be desirable to conform entirely to the rules laid down in those Articles, if any abuse of the present Regulations continues to occur.

No. 17, dated 18th July 1894.

From--W. R. Carles, Esq., Her Majesty's Consul at Chinkiang,
To--Her Britannic Majesty's Minister in China.

In my despatches No. 6 of the 30th November 1892 and No. 2 of the 20th January 1893, I had the honour to report to you on the local adulteration of Indian opium, which was afterwards sent inland for consumption as Indian opium, under transit certificates from the Customs.

At the same time I referred to the prejudicial effect which this abuse, if tolerated, might have on the market for Indian opium.

During the last twelve months the importation of Indian opium to Chinkiang has increased, and its adulteration has to some extent been checked by the action which I reported had been taken by the Customs.

But large quantities of this adulterated opium are still sent into the interior under Customs certificates for Indian opium.

The chief market is in the large tract of country known as Hsia Ho, which lies between the Grand Canal and the sea in the Northern half of this Province.

In that part of the country I learn from the Taotai that it is likely to displace pure Indian opium entirely.

The Commissioner of Customs has been strenuously endeavouring to stop the abuse by confiscation of such parcels of adulterated opium as are detected by the Customs officers. The action, however, creates a considerable outcry, as the native merchants maintain that the adulteration has occurred previous to importation into Chinkiang.

Without a strict observance of the practice prescribed by the Additional Articles to the Chefoo Agreement it is impossible to tell how far their story may be true. But with the opportunities for adulterating opium which the merchants enjoy through the Customs not enforcing the deposit of opium in its own warehouses, and granting transit certificates to opium which has been stored in private godowns, it seems more probable that the adulteration takes place here.

I have informed the Commissioner of Customs that I am quite ready to support him in any way that I can in preventing adulterated opium from being passed off as Indian, and I have spoken to the Taotai of the strong objections which exist to its improperly receiving an official guarantee of genuineness owing to the rule approved by our respective Governments not being enforced.

Dated 22nd November 1894.

From--Messrs. Sassoon J. David & Co., Bombay,
To--The Collector of Land Revenue, Customs and Opium, Bombay.

We have the honour to acknowledge receipt of your No. 13471-C. of 1894, dated the 19th instant, which was addressed to us as J. David & Co., perhaps by an oversight, instead of Sassoon J. David & Co., and in reply to your enquiry whether the adulteration of opium, before it is sent into the interior of China in the manner explained in your letter, interferes with the opium trade, and whether steps should be taken to stop it, we beg to express our opinion as follows:

There is no doubt that the adulteration complained of is most detrimental to the interests of exporters of Indian opium like ourselves, and for this reason. The practice which prevails in Chinkiang and Wuhu of allowing the merchant to remove the opium which has paid duty and likin to his own godown, and of only bringing it to be packed under the supervision of the Customs after it has been sold, offers ample opportunity and inducement to mix Chinese opium of inferior quality and value with the Indian opium. The Chinese opium by itself, as is well known, is liable to certain duties and imposts from which the Indian drug is free after once paying the Customs and likin dues. By adulterating Indian with this Chinese opium on which full likin duties have not been paid, so much of the latter is in fact smuggled, and there is in consequence so much evasion of leviable duty.

But from the point of view of the exporter of Indian opium, the quality of his drug seriously suffers by the facility thus unwittingly offered of making a mixture which, though it is passed off as Indian opium, is not really so. The mark of superiority which it has up to this time borne would be seriously damaged by the practice recently exposed, and the demand for the real Indian drug would gradually grow less and less on account of its name being thus spoiled.

Now, if strong measures are taken to put a stop to the system in vogue at Chinkiang and Wuhu, the inducement to adulteration would immediately cease. The merchant would not consider it worth while; in fact he will not have the opportunity to mix the Chinese drug which is subject to so many duties and which in consequence would be so much dearer to mix with the Indian drug.

We do not see why Chinkiang and Wuhu should not be placed under the same restrictions to keep the opium in bonded warehouses, or under the immediate control of the Customs until the drug is re-packed and the package bears the Customs stamp, as at the other Treaty Ports. Up to this time we have not heard that any mer-

chants at these ports have had cause to complain against such restrictions.

Under these circumstances we are strongly of opinion that to keep up the reputation of Indian opium as regards its superior quality and prevent its demand from falling off as above explained so as to guard the interests of exporters, it is urgently necessary to take prompt action in the matter.

No. 15, dated 22nd May 1895.

From--W. R. Carles, Esq., Her Britannic Majesty's Consul at Chinkiang.

To--Her Britannic Majesty's Envoy Extraordinary and Minister Plenipotentiary at the Court of China.

With reference to your Despatch No. 5 of the 5th ultimo, instructing me to take advantage of any opportunity that may present itself for impressing upon the Taotai and the Customs authorities the stricter enforcement of the provisions of the additional articles to the Chefoo Agreement relative to opium, I have the honour to report that the stricter measures adopted of late by the Customs to guard against the issue of adulterated opium of certificates as Indian opium have not been without a beneficial effect.

The import last year, 4,179 chests, was 810 chests in excess of that of 1893, and exceeded that of any year since 1887. The import for the first four months of the current year is little below that of the same period in 1894.

It is, however, impossible to secure that certificates be not granted to adulterated opium, unless the regulations are strictly enforced which provide that the repacking of foreign opium be under the supervision of the Customs and take place before the opium is removed from the hulks or warehouses approved of by the Customs. The Commissioner of Customs informs me that he cannot enforce these regulations without instructions from the Inspector General of Customs.

It is the practice here, and I believe at some other ports, to allow opium to be taken away after examination of the chests. As the opium is sold, it is brought to the Customs, before conveyance into the interior, in packages of 2 or 4 balls, or in much smaller quantities. Occasionally a package is opened to see whether it is genuine drug, but, as a rule, the package is accepted without question, and the Customs labels are affixed to it, in certification of its foreign origin.

The confiscation of some packages of adulterated opium last year has done much to check the adulteration of opium with sesamum seed. The presence of native opium is more difficult to detect and prove.

So general was the practice of adulteration with sesamum seed that a Chinese official stated it to be his belief that pure Indian opium would find no market in this neighbourhood. The increased demand for Indian opium is a proof that he was mistaken as to the appreciation of pure foreign opium.

It is believed that little adulteration now takes place, except that sometimes the opium is steeped in sesamum seed oil in order to increase its weight.

Last year, of 4,140½ chests of Malwa imported 3,520 chests were sent inland under transit pass, and labels were issued by the Customs for a quantity representing 503 chests, to be sold retail in Chinkiang and the neighbourhood. There was thus a balance of 117½ chests left for consumption in Chinkiang itself, which, though it appears an inadequate supply for the needs of this large town, is very much larger than in previous years.

I am of opinion that the present practice of the Customs encourages to a small extent the sale of foreign opium, but the effectiveness of the check on adulteration depends almost entirely upon the experience and carefulness of the Customs employé, in charge of the Opium Department.

Additional Article to the Agreement between Great Britain and China, signed at Chefoo on the 13th September 1876.

The Governments of Great Britain and of China, considering that the arrangements proposed in Clauses 1 and 2 of Section III of the Agreement between Great Britain and China, signed at Chefoo on the 13th September 1876 (hereinafter referred to as the "Chefoo Agreement"), in relation to the area within which *likin* ought not to be collected on foreign goods at the open ports, and to the definition of the foreign Settlement area, require further consideration; also that the terms of Clause 3 of the same section are not sufficiently explicit to serve as an efficient regulation for the traffic in opium, and recognising the desirability of placing restrictions on the consumption of opium, have agreed to the present Additional Article.

1. As regards the arrangements above referred to and proposed in Clauses 1 and 2 of Section III of the Chefoo Agreement, it is agreed that they shall be reserved for further consideration between the two Governments.

2. In lieu of the arrangement respecting opium proposed in Clause 3 of Section III of the Chefoo Agreement, it is agreed that foreign opium, when imported into China, shall be taken cogni-

zance of by the Imperial Maritime Customs, and shall be deposited in bond, either in warehouses or receiving hulks which have been approved of by the Customs, and that it shall not be removed thence until there shall have been paid to the Customs the tariff duty of 30 taels per chest of 100 catties, and also a sum not exceeding 80 taels per like chest as *likin*.

3. It is agreed that the aforesaid import and *likin* duties having been paid, the owner shall be allowed to have the opium repacked in bond under the supervision of the Customs, and put into packages of such assorted sizes as he may select from such sizes as shall have been agreed upon by the Customs authorities and British Consul at the port of entry.

The Customs shall then, if required, issue gratuitously to the owner a transit certificate for each such package, or one for any number of packages, at the option of the owner.

Such certificate shall free the opium to which it applies from the imposition of any further tax or duty whilst in transport in the interior, provided that the package has not been opened, and that the Customs seals, marks, and numbers on the packages have not been effaced or tampered with.

Such certificates shall have validity only in the hands of Chinese subjects, and shall not entitle foreigners to convey or accompany any opium in which they may be interested into the interior.

4. It is agreed that the Regulations under which the said certificates are to be issued shall be the same for all the ports, and that the form shall be as follows:

"Opium Transit Certificate."

"This is to certify that tariff and *likin* duties at the rate of taels per chest of 100 catties have been paid on the opium marked and numbered as under; and that, in conformity with the Additional Article signed at London the of 1885, and appended to the Agreement between Great Britain and China signed at Chefoo the 13th September 1876, and approved by the Imperial Decree printed on the back hereof, the production of this certificate will exempt the opium to which it refers, wherever it may be found, from the imposition of any further tax or duty whatever, provided that the packages are unbroken, and the Customs seals, marks, and numbers have not been effaced or tampered with.

"Mark.	No.	
X	...	10 packages.
"Date	"Signature of Commissioner of Customs."	

5. The Chinese Government undertakes that when the package shall have been opened at the place of consumption, the opium shall not be subjected to any tax or contribution, direct or indirect other than or in excess of such tax or contribution as is or may hereafter be levied on native opium.

In the event of such tax or contribution being calculated *ad valorem* the same rate, value for value, shall be assessed on foreign and native opium, and in ascertaining for this purpose the value of foreign opium the amount paid on it for *likin* at the port of entry shall be deducted from its market value.

6. It is agreed that the present Additional Article shall be considered as forming part of the Chefoo Agreement, and that it shall have the same force and validity as if it were inserted therein word for word.

It shall come into operation six months after its signature, provided the ratifications have then been exchanged, or if they have not, then on the date at which such exchange takes place.

7. The arrangement respecting opium contained in the present Additional Article shall remain binding for four years, after the expiration of which period either Government may at any time give 12 months' notice of its desire to terminate it, and such notice being given it shall terminate accordingly.

It is, however, agreed that the Government of Great Britain shall have the right to terminate the same at any time, should the transit certificate be found not to confer on the opium complete exemption from all taxation whatsoever whilst being carried from the port of entry to the place of consumption in the interior.

In the event of the termination of the present Additional Article the arrangement with regard to opium now in force under the Regulations attached to the Treaty of Tientsin shall revive.

8. The High Contracting Parties may, by common consent, adopt any modifications of the provisions of the present Additional Article which experience may show to be desirable.

9. It is understood that the Commission provided for in Clause 7 of Section III of the Chefoo Agreement to inquire into the question of the prevention of smuggling into China from Hong-Kong shall be appointed as soon as possible.

10. The Chefoo Agreement, together with, and as modified by, the present Additional Article, shall be ratified, and the ratifications shall be exchanged at London as soon as possible.

In witness whereof the undersigned, duly authorised thereto by their respective Governments, have signed the present Additional Article, and have affixed thereto their seals.

Done at London in quadruplicate (two in Chinese and two in English), this day of 1885, being the day of the moon, in the year of the reign of Kwang-Su.

Dated 10th October 1895.

From-Sir N. R. O'Connor, K.C.B., C.M.G., Her Britannic Majesty's Minister, Peking.

To---His Excellency the Viceroy and Governor General of India.

With reference to Your Excellency's Despatch, dated 5th of August last, regarding the adulteration of Indian opium at the treaty port of Chinkiang, I have the honour to enclose herewith copy of a further despatch upon this subject, which I have received from Her Majesty's Consul at the said port.

No. 37, dated 27th September 1895.

From---W. R. Carles, Esq., Her Majesty's Consul at Chinkiang.

To---Her Britannic Majesty's Minister, Peking.

With reference to your despatch No. 17 of the 5th instant, I have the honour to report that I learn that the Commissioner of Customs, Mr. W. Say, some time since reported to Peking in favour of a strict adherence to the provisions of the Additional Article to the Chefoo Agreement, in the interest of the Chinese revenue.

It appears that even after opium has been boiled and is therefore almost incapable of identification, it is brought to the Custom House to be certified to the Indian opium and is labelled as such by that office.

The system obtaining at Chinkiang was sanctioned, I understand, by the Inspector General of Customs on the local native dealers representing that their trade would be ruined by a strict enforcement of the additional article, but I know of no reason to apprehend that such action would produce more than perhaps a diversion of some of the trade to another port.

**A CLEAN CUT INDIVIDUAL OPINION,
BOLDLY EXPRESSED.**

It is for this reason that an assertion like the following sticks up above the dead level of our stupid talk, and becomes noticeable; "*When I saw how pale I had grown I said to myself, it was because something had gone out of my blood.*"

True! That is a statement with the seeds of an idea in it. Suppose we follow it up by quoting the rest of the letter which contains it.

In December, 1890, says the writer, "I fell into a poor state of health. I was tired, languid, and weary without any apparent cause. My appetite left me, and all food, even the lightest and simplest kinds, caused me great pain in the chest and stomach. When I saw how pale I had grown I said to myself it was because something had gone out of my blood."

"Then my sleep was broken, and night after night I scarcely closed my eyes. It wasn't long before I became so weak and dejected that I took no interest in things around me. I was so nervous that common sounds annoyed and worried me; even the noises made by my own children in their talk and at their play."

"There was a disgusting taste in my mouth; it made me sick, and often gave me a shivering sensation all over. When I saw others eating and enjoying their meals I felt as though it were a strange thing; in a way I would red how they could do it. For myself I could eat hardly anything. Food went against me, and I turned away from it, as our turns from smells or sights that are offensive. And yet I know, what everyone knows, that without sufficient food the body languishes and weakens. And such was the case with me as month after month went by."

"During all this time, so full of pain and discouragement, I was attended by a doctor who did what he could to relieve me, but without success. I do not say he did not understand my complaint; for my he not have understood it without having the means of curing it?"

The answer to the lady's question is: Yes, easily enough. All intelligent, studious doctors "understand" consumption, cholera, cancer, &c., without (is yet) having the means of curing them. There is usually a wide gap between the discovery of a want and the way to supply it.

"I will now," continues the letter, "tell you how I came to be cured. In April, 1891, I read in a small book or pamphlet about Mother Seigel's Syrup. The book said the Syrup was a certain remedy for all diseases of the stomach, indigestion in every form, and dyspepsia; and it also said that most of the complaints we suffer from are caused by that. On looking over the symptoms described in the book, and comparing them with my own, I saw plainly that my ailment was dyspepsia."

"We sent immediately for a bottle of this medicine, and after taking it a few days I began to feel better. In a very short time, by keeping on with the Syrup according to the directions, I could eat without pain or distress, and digest my food. I also slept soundly and naturally. Then my strength came back and with it the colour to my face. In short, after a few weeks' use of Mother Seigel's Syrup, I was hearty and strong as ever. And I should be indeed ungrateful if I were not willing that others should have the benefit of my experience. You are therefore free to print my letter if you think it will be useful. (Signed) (Mrs.) M. Truran, Marton, Lincoln, April 24, 1895."

I simply desire to say to Mrs. Truran that her idea about the blood is a perfectly correct one. All our food (the digestible part of it) is turned into blood, and in that shape it feeds the entire body. When the blood gets thin and poor (lacking in nourishment), we lose flesh and grow feeble and pale. And the cause of the blood getting thin and poor is indigestion, or dyspepsia. How easy this is to understand when once you get hold of the right end of it. Mother Seigel's Syrup has the peculiar power to correct what is wrong about the digestion, and thus enables the digestive machinery to make good rich blood, which is life and health and beauty.

Music for the Million!

BEECHAM'S MUSIC PORTFOLIO.

The cheapest collection of Music ever issued.

The Portfolio consists of 8 volumes, each of which contains:—

30 of the most popular Songs and Airs of the day, each of which is worth more than the price charged for the whole volume, viz., 3½ annas post free; this price, it should be mentioned, does not nearly cover cost, but the Portfolio is placed before the public at a loss, as a further advertisement of the fact that—

"BEECHAM'S PILLS"

ARE

"Worth a Guinea a Box,"

Only a limited number of volumes will be issued and in order to avoid disappointment, intending purchasers should register their orders at once.

APPLY TO

G. ATHERTON & CO.,

**3, New China Bazar-street,
CALCUTTA,**

**Agents for THOMAS BEECHAM, of
St. Helens, Lancashire.**

N.B.—A list of contents of each volume will be sent on receipt of a stamped envelope.

POSTSCRIPT.
 After paying the expenses of the publication,
 the surplus will be placed wholly at the dis-
 posal of the family of the deceased man of
 letters.

Orders to be made to the Business Man-
 ager, "An Indian Journalist," at the Bee
 Press, 1, Uckoor Dutt's Lane, Wellington
 Street, Calcutta.

OPINION ON THE BOOK.

It is a most interesting record of the life of
 a remarkable man.—Mr. H. Bunting Smith,
 Private Secretary to the Viceroy, 5th October
 1895.

Dr. Mookerjee was a famous letter-writer,
 and there is a breezy freshness and originality
 about his correspondence which make it
 very interesting reading.—Sir Alfred W. Corft,
 K.C.I.E., Director of Public Instruction, Bengal,
 26th September, 1895.

It is not that amid the pressure of harassing
 official duties an English Civilian can find
 either time or opportunity to pay so graceful
 a tribute to the memory of a native personality
 as F. H. Skrine has done in his biography of
 the late Dr. Sambhu Chunder Mookerjee, the
 well-known Bengal journalist (Calcutta :
 Thacker, Spink and Co.); nor are there many
 who are more worthy of being thus honoured
 than the late Editor of *Reis and Rayyet*.

We may at any rate cordially agree with Mr.
 Skrine that the story of Mookerjee's life, with
 all its lights and shadows, is pregnant with
 lessons for those who desire to know the real
 India.

No weekly paper, Mr. Skrine tells us, not
 even the *Hindoo Patriot*, in its palmiest days
 under Kristodas Pal, enjoyed a degree of in-
 fluence in any way approaching that which was
 soon attained by *Reis and Rayyet*.

A man of large heart and great qualiti-
 es, his death from pneumonia in the early
 spring in the last year was a distinct and
 heavy loss to Indian journalism, and it was
 an admirable idea on Mr. Skrine's part to put
 his Life and Letters upon record.—The *Times*
of India, (Bombay) September 30, 1895.

It is rarely that the life of an Indian journal-
 ist becomes worthy of publication; it is more
 rarely still that such a life comes to be written
 by an Anglo-Indian and a member of the
 Indian Civil Service. But, it has come to
 pass that in the land of the Bengali Babus,
 the life of at least one man among Indian
 journalists has been considered worthy of
 being written by an Englishman.—The
Madras Standard, (Madras) September 30,
 1895.

The late Editor of *Reis and Rayyet* was a
 profound student and an accomplished writer,
 who has left his mark on Indian journalism.
 In that he has found a Civilian like Mr.
 Skrine to record the story of his life he is
 more fortunate than the great Kristodas Pal
 himself.—The *Tribune*, (Lahore) October 2,
 1895.

For much of the biographical matter that
 issues so freely from the press an apology is
 needed. Had no biography of Dr. Mookerjee,
 the Editor of *Reis and Rayyet*, appeared, an
 explanation would have been looked for. A man
 of his remarkable personality, who was easily
 first among native Indian journalists, and in
 many respects occupied a higher plane than
 they did, and looked at public affairs from a
 different point of view from theirs, could not
 be suffered to sink into oblivion without some

attempt to perpetuate his memory by the usual expedient of a "life." The difficulties common to all biographers have in this case been increased by special circumstances, not the least of which is that the author belongs to a different race from the subject. It is true that among Englishmen there were many admirers of the learned Doctor, and that he on his side understood the English character as few foreigners understand it. But in spite of this and his remarkable assimilation of English modes of thought and expression, Dr. Mookerjee remained to the last a Brahman of the Brahmins—a conservation of the best of his inheritance that wins nothing but respect and approval. In consequence of this, his ideal biographer would have been one of his own disciples, with the same inherited sympathies, and trained like him in Western learning. If Bengal had produced such another man as Dr. Mookerjee, it was he who should have written his life.

The biography is warmly appreciative without being needlessly laudatory; it gives on the whole a complete picture of the man; and in the book there is not a dull page.

A few of the letters addressed to Dr. Mookerjee are of such minor importance that they might have been omitted with advantage, but not a word of his own letters could have been spared. To say that he writes idiomatic English is to say what is short of the truth. His diction is easy and correct, clear and straightforward, without Oriental luxuriance or striving after effect. Perhaps he is never so charming as when he is laying down the laws of literary form to young aspirants to fame. The letter on page 285, for instance, is a delightful piece of criticism: it is delicate plain-speaking, and he accomplishes the difficult feat of telling a would-be poet that his productions are not in the smallest degree poetry, without one may conclude, either offending the youth or repressing his ardour.

For much more that is well worth reading we must refer readers to the volume itself. Intrinsically it is a book worth buying and reading.

—*The Pioneer*, (Allahabad) Oct. 5, 1895.

The career of "An Indian Journalist" as described by F. H. Skrine of the Indian Civil Service is exceedingly interesting.

Mookerjee's letters are marvels of pure diction which is heightened by his nervous style.

The life has been told by Mr. Skrine in a very pleasant manner and which should make it popular not only with Bengalis but with all those who are able to appreciate merit unmarred by ostentation and earnestness unspoiled by harshness. —*The Muhammadan*, (Madras) Oct. 5, 1895.

The work leaves nothing to be desired either in the way of completeness, impartiality, or lifelike portrayal of character.

Mr. Skrine deals with his interesting subject with the unflinching instinct of the biographer. Every side of Dr. Mookerjee's complex character is treated with sympathy tempered by discrimination.

Mr. Skrine's narrative certainly impresses one with the individuality of a remarkable man.

Mookerjee's own letters show that he had not only acquired a command of clear and flexible English but that he had also assimilated that sturdy independence of thought and character which is supposed to be a peculiar possession of natives of Great Britain. His reading and the stores of his general information appear to have been, considering his opportunities, little less than marvellous.

One of the first to express his condolence with the family of the deceased writer was the present Viceroy, Lord Elgin. Mookerjee appears to have won the affection not only of the dignitaries with whom he came in contact, but also of those in low estate.

The impression left upon the mind upon laying down the book is that of a good and able man whose career has been graphically portrayed. —*The Englishman*, (Calcutta) October 15, 1895.

The career of an eminent Bengali editor, who died in 1894, throws a curious light upon the race elements and hereditary influences which affect the criticisms of Indian journalists on British rule.

The "Life and Letters of Dr. S. C. Mookerjee," a book just edited by a distinguished civilian in Calcutta, takes us behind the scenes of Indian journalism.

It is a narrative, written with insight and a

complete mastery of the facts, of how a clever youth gradually grew into one of the ablest leader-writers in Bengal, and still more gradually matured into one of the fairest-minded editors that western education in India has yet produced. If the training and experience which develop the journalist in England are sometimes varied, they seem in India to have an even wider range.

But the object of this notice is to show how a great Bengali journalist is made; space forbids us to enter upon his actual performances. They will be found set forth at sufficient length, and with much felicity of expression, in Mr. Skrine's admirable monograph. It is characteristic of the noble service to which Mr. Skrine belongs, that such a book should have issued from its ranks. Dr. Mookerjee was no optimist. One of his brilliant speeches contained the following sentence:—"India has neither the soil nor the elasticity enjoyed by young and vigorous communities, but present the arid rocks and deserts of an effete civilization, hardly stirred to a semblance of life by a foreign occupation dozing over its easily-gained advantages." This was true of the pre-Mutiny India of 1851. If it is no longer true of the Queen's India of 1895, we owe it in no small measure to Indian journalists like Dr. Mookerjee who have laboured, amid some misrepresentation, to quicken the "semblance of life" into a living reality. —*The Times*, (London) October 14, 1895.

"IMPROVED UNDAUNTED"

WATCH. Rs. 7.

Guaranteed three Years.

Strong, accurate, pretty, small, open-faced, nickel-silver, keyless, short winding, patent, "NEW STYLE IMPROVED UNDAUNTED" watch, with hand setting mechanism, secondhand, for Doctors, ornamental bold dial, for Rs. 7 V. P. P. with an extra glass, spring, pretty box and full three years' guarantee. Warranted to stand the roughest use. Runs more than 28 hours with one winding. Will last a life time. Easily repairable. Others sell at double our rates. One watch free for the purchase of 8 at a time. Mr. Jno. Dickson of Haputal Railway, from Ceylon says:—It keeps splendid time and never stopped although it sustained hard knocks and jerks. x Dr. H. Moore of Royal Artillery from Pondicherry says:—I sold it for Rs. 16. x Pte. W. Hopkins of Sussex Regt. from Dindan says:—I have sold it for Rs. 20. x Mr. T. B. Scott of Patna Opium Department says:—The watch you sent me some seven years ago is still keeping very good time.

Jewelled Ring Rs. 1-8-0. Real

Silver Watch Rs. 13. Real

Solid Gold Watch Rs. 24.

Pretty electro cased gold chain Rs. 1-8-0. Fashionable electro cased Gold Ring set with scientific diamonds, Rubies, Emeralds, at Rs. 1-8-0. Mr. G. Smith, Salt Inspector from Sankatia, says:—"A German valued the diamond ring at Rs. 50 and ruby at Rs. 30." Key winding, Government stamped, solid silver hunting case, Royal watch with extras and full three years' guarantee, for Rs. 13. Pte. G. Hawkes of 2nd York Light Infantry from Purnanhar says:—"For the first one I got Rs. 25; the second one I sold to a Sergeant for Rs. 28 x Pte. H. C. Bishop of L. P. L. Regt. from Kanpetee says:—"A Corporal offered Rs. 30 for the very same watch. Gentlemen's open faced, keyless *real solid gold watch* Rs. 30; ladies' Rs. 24; both with extras and guaranteed for 3 years. Mind they are guaranteed to be of real solid gold. No agents kept, all goods sent only by us from Bombay per V. P. P.

Novelty in Ayurvedic Medicine. AYURVEDIC PHARMACY.

36, Lower Chitpore Road, Foudzari
Bilaknana, Calcutta.

KAVIRAJ NAGENDRA NATH SEN, Physician, Surgeon, Accoucheur, practises the Ayurvedic system of medicine, after having obtained a diploma at the final examination of one of the Government medical Institutions of the country.

SPECIFICS

For all ordinary diseases, like Fever, Cough, Asthma, Pnthisis, Diabetes, &c., including diseases brought on by irregularities of kinds, Catalogues, containing full accounts of diseases and remedies, are transmitted on application. Prescriptions, with or without medicines sent to every part of India and Ceylon, Cape Colony, and the British Isles, on receipt (by post) of full accounts of diseases.

Thousands of unsolicited Testimonials from every quarter.

CATARRH,

Hay Fever, Catarrhal Deafness.

A NEW HOME TREATMENT.

Sufferers are not generally aware that these diseases are contagious, or that they are due to the presence of living parasites in the lining membrane of the nose and eustachian tubes. Microscopic research, however, has proved this to be a fact, and the result is that a simple remedy has been formulated whereby these distressing diseases are rapidly and permanently cured by a few simple applications made at home by the patient once in two weeks. A pamphlet explaining this new treatment is sent on receipt of 2½d stamp by A HUTTON DIXON, 43 & 45 East Bloor St TORONTO, Canada.

REVIEW OF POLITICS LITERATURE AND SOCIETY

VOL. XV.

CALCUTTA, SATURDAY, MAY 23, 1896.

WHOLE NO. 726.

WEEKLYANA.

THE Birthday Honours not having been published, as it ought to have been, simultaneously at Simla and Calcutta, we are unable to open this number with them. The List is given elsewhere. It is neither unusually long nor short, and contains, as usual, names of various grades and descriptions of persons.

Apropos of the duel in Germany which has caused the greatest sensation in the civilized world, we reproduce from the *Journal des Debats* a letter from Munster, Westphalia, containing an account of the first lawful duel in Prussia in the year 1846:

"The day before yesterday we were witnesses of an afflicting spectacle, and which to a certain degree transported us to the middle ages. This spectacle was that of a duel under the sanction of justice. The following is an account of this strange affair.

Two young officers, the Baron de Deukhaus, a lieutenant in the 11th Regiment of Hussars, and M. de Bonnhart, also a lieutenant in the 13th Infantry, had, whilst playing at billiards in a coffee house at Munster, a violent dispute, in which M. de Deukhaus made use of several offensive expressions towards his adversary.

These words having been uttered in a public place, and before a great number of witnesses, M. de Bonnhart felt himself under the necessity of demanding public satisfaction, and to this effect cited M. de Deukhaus to appear before the tribunal of honour sitting at Munster. It is known that for the last two years tribunals of the description are instituted in all the divisions of the Prussian army.

This tribunal, conformably to the law, used all its efforts to induce the offending party to retract the offensive expressions, and not being able to succeed, came to a decision that, considering the words in question attacked the honour of M. de Bonnhart, the latter could no longer continue in the army without having obtained public satisfaction; and considering that M. de Deukhaus obstinately refused to grant him such satisfaction, the tribunal authorized a duel between the two parties, according to the military rules.

The duel took place on Monday, June 29, at three o'clock in the afternoon, in a plain situate to the north of the city of Munster. A platform was erected in the middle of the plain, on which was seated the tribunal, the judges of the combat.

"Before the tribune, a large space, surrounded by ropes supported by staves, was reserved for the combatants. Some detachments of infantry and cavalry were placed round the enclosed ground and tribune of the judges. At an early hour an immense crowd filled the vast plain, in order to witness the strange contest which was about to take place.

At three o'clock precisely the judges wearing their uniforms, took their places in the tribune. They again attempted to effect a reconciliation, and this attempt also failing, authorized the combat to take place.

It was agreed upon by the two adversaries, with the sanction of the tribunal, that the combat should take place with cavalry swords, and be continued until one of the adversaries became *hors de combat*, and that both should fight with their heads uncovered and in their shirt sleeves.

A certain number of sabres were then brought forward, and the two adversaries, after having bound their eyes, took by chance their weapons. Then taking off the handkerchiefs from their eyes, as well as their coats and hats, they put themselves in an attitude of defence, and at a signal given by the president of the tribunal, the combat began.

M. de Deukhaus and de Bonnhart fought with the greatest obstinacy. The latter successively received two slight wounds in the arm, but soon afterwards wounded his adversary so severely in the thigh, as to render it impossible for the latter to continue the combat.

When the surgeons had dressed the wounds of the officers, the president of the tribunal again attempted to reconcile them; this time he was immediately obeyed, and the two adversaries embraced each

other. The public, which had throughout the combat observed the profoundest silence, hailed the reconciliation with loud and continued applause. Two coaches took away the late opponents, and M. de Bonnhart assisted in carrying M. de Deukhaus to his. The tribunal then separated, and the crowd quietly dispersed.

It is the first time that a tribunal of honour in Prussia has ever authorized a duel. All the disputes which had been hitherto brought before the tribunal, had invariably terminated by a reconciliation."

..

WE read of a Committee having been formed, with the Duke of Abercon as president and honorary treasurer, for the purpose of raising a fund for a memorial to the late George Augustus Sala and for aiding his widow. Sala was a prince of, and among, journalists, and died poor.

..

The Bee speaking of the assassination of Shah Nasiruddin of Persia and his fondness for cats, says:—

"The foregoing sentence may recall to some of our readers one or two articles that appeared in these columns not very long ago on the subject of Cats, and great men who have loved them. While most monarchs and rulers number dogs and horses among their pets, only one—the Shah of Persia—seemed to display any fondness for cats. And in this respect the Shah fully made up for the indifference of his fellow sovereigns, since his palace generally contained some fifty feline pets, to which he used to assign special officers and attendants. These fortunate pussies—they were beauties, as Persian cats generally are—had also a room of their own for their meals, and they all accompanied their royal master on his summer excursions. This brings to mind that Mathew Arnold was also very partial to cats, and felt terribly cut up himself when a kitten once got cut up by a passing train. We may, therefore, add these two names to our list which already includes those of Cardinals Richelieu and Mazarin, Rousseau, Dr. Johnson, Southey, Parnell, Huxley, Ida Lewis (the 'Light-house Heroine'), Dr. Sambhu Chunder Mookerjee, and other Cat lovers of modern days."

We miss one name, that of the late Mr. Anstey, the most learned and fearless advocate in India, in recent times, whose love was his cats.

..

A CORRESPONDENT writes from Moorshedabad under date the 19th May:

"Death has been busy among the young and the promising of this city. On Friday, the 8th of May, there died an amiable young Sahibzada, Syed Hedayet Ali otherwise known as Shahzada Alum, aged 25 years, a scion of the historic House of Nawab Miran, whose lineal descendants are occupying the site at Jafaragunge where Serajud-dowla was killed in cold blood by his foster brother Mahamdi Beg. Just a fortnight before, the deceased had lost his only elder step brother, Syed Abbas Ali, aged about 26 years.

A still more lamentable death occurred in the family of Nawab Wala Qudr Syed Hosain Ali Mirza Bahadoor of the Nizamut. The sad and untimely death of his son, Prince Boorham Qudr Syed Mobaruk Ali Mirza, by his wedded wife, Nawab Mahtab Arra Begum Sahiba, has aroused general sorrow and heart-felt sympathy throughout the city. The Prince breathed his last on the afternoon of the 16th of May. He was born at Benares, on the 24th of April 1876, in the family residence of his maternal grandfather, Nawab Abid Ali Mirza Bahadoor, and on his mother's side he was connected with the late Nawab-Vizier Saadat Ali Khan, and the late Nawab Sir Akbal-ud-dowla of Bighdad. The former was the wisest of all the

Subscribers in the country are requested to remit by postal money orders, if possible, as the safest and most convenient medium, particularly as it ensures acknowledgment through the Department. No other receipt will be given, any other being unnecessary and likely to cause confusion.

kings of Oudh and left the public treasury rich with 22 crores of Rupees. The remains of the lamented Prince will be removed to Karbala after a year and will be buried there by the side of his mother, the said Nawab Mahtab Arra Begum Sahiba.

The late Prince was developing many good qualities. He was an excellent rider."

..

THE same correspondent says :—

"Public health of the city is very unsatisfactory, cholera is virulently raging in the town and country. On the 14th instant, 23 deaths and 27 attacks were reported."

..

BABOO Monmothnath Bose, a scion of one of the great houses in the Hooghly district and a practical man of business, who has just returned to Calcutta, after a stay of four months at Ancoora, Sub-division Bhudruck, district Balasore, informs us that, notwithstanding free and copious distribution by Government of cholera pills, during the past month and the present, April and May, some 600 persons, belonging to the villages of Mizapur, Kumargaon, Goagoria, Mandari, Basudebpur, Karanjoria, Domalong and Bhairrampur, died of cholera. The pills recommended by the high authority of the Lieutenant-Governor were perfectly useless. Rubini's camphor and chlorodyne, which the Babu distributed gratis, proved much better, the percentage of cures being 39.

..

A HIGHLY valued friend writes from the Burdwan district under date the 18th May :

"We in the mofussil have suffered a good deal owing to scarcity of water. In our part of the district the mango crop has been a total failure. In fact, my gardens have no mangoes, the heat and subsequently the storm having totally ruined them. We have had rains during the last 10 days, but they are quite insufficient for agricultural purposes, though the weather has become somewhat cooler."

..

A CONTEMPORARY, the champion of the people, whose popularity lies in opposing Government measures and men, seems to think that the Road cess has absolved the landlords of Bengal from the duty of finding drinking water for their thirsty tenants, and is disposed to characterize the call of Government upon the landlords to re-excavate their tanks most barefaced if not tyrannical. In a season of distress all considerations of rights are of minor importance, the object being how to relieve it. A re-excavation will bring the relief quicker than an excavation of a tank. And what is the harm in reminding an owner that his tank requires renewing, which otherwise he is bound to keep clean and pure?

..

OWING to the heat of the weather, people avoid stirring out of home as much as possible. Those who do, run, indeed, the risk of sun-stroke, but any accident to them is equally calculated to make them famous. In the dearth of news, the morning papers are given to chronicling small beer. On Monday, it was announced simultaneously in all the dailies, that an inspector of the Calcutta Police (we omit the name of the worthy for an obvious reason) had a fall from a tram car. "In attempting to alight," he "sustained a slight fracture of his leg on Friday." The day of the injury is given but not the hour. "He is being treated in hospital, and is making satisfactory progress towards recovery." We miss some important information. How was the distinguished man taken to hospital and to which hospital and by whom, and what doctor is attending him? Have the Reuter Agency and the *Times'* correspondent in Calcutta telegraphed the news to England? The head of the Police is already upon the 'Tramway Company. A famous wit hoped for no railway reform in England till a Bishop was killed. Will the present accident lead to any improvement in the working of the tram lines in Calcutta? If it do, the morning papers are justified.

..

ON the recommendation of the non-official members of the Council of the Lieutenant-Governor of the N.-W. Provinces, the Governor-General has nominated the Hon'ble Pandit Bishambar Nath, Vakil, N.-W. P. High Court, as an additional member of his Council for making Laws, we do not say and Regulations, for additional members have nothing to do with Regulations, the drafts of which are never placed before them.

DRAFT regulations under the Pilgrim Ships Act, XIV of 1895, are published in the *Gazette of India* of May 16. They will be taken into consideration by the Governor-General in Council on or after the 15th of July 1896. Outside objections or suggestions after that date will be out of date. These regulations will not only have the effect of law but also be the substantive law, for the law itself under which they are framed has made over all power to the Viceroy. They, therefore, require careful examination at the hands of the Mahomedan community.

..

THE Mahomedan Judge of the Calcutta High Court, in consultation with the Brahman Judge, has, in the original suit between Behari Lal Laha and Kailash Chunder Laha for partition, held, that a son after inheriting his share of his father's property cannot be divested of it because of his subsequent adoption. Though no longer belonging to his natural father's family, he loses not by the estrangement what he had acquired in the usual course of inheritance. The decision is in accordance with the principle first enunciated by the Advocate-General Cowie, then accepted by the High Court and afterwards confirmed by the Privy Council, to save the unchaste Hindu widow from disinheritance, that an interest once vested cannot be divested, on account of any subsequent incapacity, an incapacity which, happening beforehand, would have operated as a bar.

..

WE read in the *Indian Mirror* of May 20, the day observed in India as the birthday of her Majesty :—

"The kerosine oil, the use of which is now almost universal in India, has been declared by scientists, qualified to give an opinion on the subject, as leading to the generation of certain maladies in those use (*sic.*) to light their rooms with kerosine lamps. And this is not merely a theory, which has no facts to support itself. Then, again, kerosine oil is responsible for many disastrous conflagrations and numerous deaths from burning. For these disadvantages, attending the use of this imported oil, we have always regretted the readiness with which our countrymen have betaken themselves to its use. It may be cheaper than the vegetable oils, produced in this country, but if the havoc which it makes among its users by causing fires and generating diseases, is taken into account, the advantage of its cheapness pales into insignificance. We are, therefore, much pleased to learn that in the Gangetic Districts of Behar, a movement has been set on foot among the masses to discontinue the use of kerosine oil. The method adopted is the spreading of a report throughout the Province of Behar that this imported oil is unclean. The report has passed from house to house, and Hindus, both rich and poor, in many of the Districts, are said to have already abjured the oil. The Mozufferpore correspondent of the Allahabad official journal reports that the women-folk of each household have been sending little *chirags*, lighted with this oil, sailing down the rivers probably in way of celebrating the abjuration of the article by them. We must say, we shall be very glad to see the use of the kerosine oil, substituted by that of the indigenous innocent vegetable oils. As warm and earnest supporters of the Swadeshi movement, we are also bound to give our unqualified support to this movement started in Behar, the object of which, we hope, will command immediate support and sympathy throughout the Empire."

It is too late, we fear, to condemn the kerosine, either on sanitary or national grounds. Its cheapness is too powerful and overcomes all opposition. It will spread, as it is extending, all over the Indian empire. There is no question, however, that the oil is insanitary, if not always dangerous.

..

THE people of the Eastern Districts are the most enterprising of Bengalis. They are the Scotchmen of Bengal. Their number of distant travellers in pursuit of knowledge and distinction is increasing every day. They are to be found in the highest posts of power and emoluments from the High Court downwards. Keen-witted, industrious, determined to overcome all opposition and to gain the end anyhow, they outdistance their brethren of the other districts. They have gained success in every walk of life. The latest instance is in the religious, in the Revd. Father Bollinger. The following is going the round of the press :

"The Bengali Raman Catholic convert has just returned to Benares after a visit to—Sweden. A native of the village of Atarkhada in the District of Jessore and a Vaidya by caste, Ishan Chunder Gupta was converted to Christianity while he was a young man, a few years before the Indian Mutiny. He has travelled almost all over Europe and America and is the master of nine European languages, but he has nearly forgotten Bengali. He is now known as the Revd. Father Bollinger."

DEAFNESS. An essay describing a really genuine Cure for Deafness, Singing in Ears, &c., no matter how severe or long-standing, will be sent post free.—Artificial Ear-drums and similar appliances entirely superseded. Address THOMAS KEMPE, VICTORIA CHAMBERS, 9 SOUTHAMPTON BUILDING, HOLBORN, LONDON.

**NOTES & LEADERETTES,
OUR OWN NEWS**
&
**THE WEEK'S TELEGRAMS IN BRIEF, WITH
OCCASIONAL COMMENTS.**

THE Czar and the Czarina have arrived at Moscow, where immense preparations have been made for their coronation. They made their state entry on the 21st. The pageant was a most gorgeous one. Immense crowds lined the route to the Kremlin from the Petrofski Palace, which is three miles outside the city. The most striking group was formed by the Asiatic vassals and tributaries of the Czar.

The special mission sent by the French Government to attend the coronation has also arrived and been received with unusual distinction, including a guard of honour which is only accorded to royal personages.

IN the House of Commons Lord G. Hamilton, in reply to a question, said that India was not to be charged with the cost of sending Indian troops to Mombassa, and therefore the resolution to authorize their employment outside India was unnecessary. Replying to a further question, he said it was proposed to charge India with the ordinary pay and allowances of the Suakin contingent, and he would, therefore, move a resolution according to precedent. The *Times* strongly protests against charging the Indian Exchequer with the regular pay of Indian regiments employed in Africa, and says that the question is not a party one, but one of justice to India, and must be decided by the nation. If Parliament decides to end a practice which has grown into a wrong to India, doubtless the Government will yield, and the decision now to be given may do more to confirm or shake the loyalty of India than any action of Parliament since the Mutiny of 1857. On May 20, Lord George Hamilton brought forward his resolution. It provides that if it should become necessary to replace the Indian troops and vessels engaged at Suakin by other troops and vessels, Great Britain shall bear the cost thereof. Mr. John Morley gave notice of an amendment that it was not expedient to charge India with any portion of the expenses. Mr. Maclean gave notice of a similar amendment.

REPLYING to a question as to whether the Government intended to appoint a Committee to inquire into the method of selling Council drafts, the Secretary of State for India said there was no intention at present to appoint such a Committee, but he would give the matter his serious attention.

THE Transvaal Executive has confirmed the sentence of banishment on the Rand prisoners. Mr. Grey, one of the prisoners, became insane and committed suicide. The sentences of death passed on certain members of the Johannesburg Reform Committee have been temporarily commuted to fifteen years' imprisonment, pending further revision next week. The remainder of the sentences are variously three months to one year. Nine prisoners have been acquitted. The fines have been upheld, but the sentences of banishment have been remitted, if the prisoners give their word of honour not to interfere in the politics of the Transvaal in future. The English newspapers generally urge reduction in the sentences on the four leaders and consider the revision of the other sentences as unsatisfactory, and hope it is not final. Mr. Chamberlain, presiding at an African dinner on May 21, made a speech in which he said he could not regard the sentences on the Rand Reformers as entirely satisfactory, and that he had always regarded President Kruger as the last person to be animated by a vindictive feeling towards men who, though they had erred grievously had created the prosperity of the Transvaal. The policy of Government was unchanged. They would strictly fulfil their legal obligations and maintain their legal rights. Mr. Chamberlain then said that he did not abandon the hope of a reunion of the races, but the prosperity of Africa now depended mainly on the wisdom and moderation of its political rulers.

IN a despatch from Dr. Leyds to Sir Hercules Robinson, dated the 20th instant, he asks the meaning of the large massing of British troops with cannon, on the Transvaal frontier. Sir Hercules Robinson

in reply said that he regretted the credit attached to such falsehoods, and demanded the prosecution of the propagator of them.

ADVICES from Matabeleland state that the Buluwayo column has formed a junction with Mr. Rhodes' column at Gwelo.

REUTER'S special correspondent at Akasheh telegraphs that the inaction of the Dervishes causes surprise, and it is believed that one crushing defeat will shatter the Khalifa's power. It is expected that a fight will take place at Mokrakah.

THE British Government has formally appealed against the acquittal of Major Lothaire.

THE *Times'* correspondent at Vienna telegraphs that France and Russia intend to make a vigorous effort to enforce their views on the Egyptian question on the first occasion after the Czar's coronation.

IT is understood that Spain will wait till the autumn to send more troops to Cuba. Fifty thousand men will then be despatched, the rebellion having spread throughout the Island.

NEGOTIATIONS are proceeding between France and Japan for a commercial treaty.

IN the House of Commons, on May 18, Sir William Wedderburn moved that the House adjourn for the purpose of calling attention to the Cotton Duties, which affected the poor, and caused bad feeling by boycotting Lancashire goods. Lord George Hamilton said he regretted that Sir William Wedderburn had revived an absolutely extinct agitation, and reiterated his defence of the new arrangement in regard to the Duties. The motion was ultimately withdrawn upon the understanding that the Indian Budget should be presented at an early date.

A LETTER from the Duke of Orleans has appeared, in which he disagrees with the views of the loyalist committee, repudiates distrust in the universal suffrage, and denies that monarchic and elective rights are incompatible. He further approves of Prince Henry of Orleans accepting the Legion of Honour from the Republic.

THE Governor of Natal will have 1,000 troops at his disposal on the arrival of German reinforcements. An organ of the colonial party at Berlin says that Germany will thus acquire a position in South Africa, the influence of which is already felt at Capetown, and that the Boers will indirectly receive support, the effects of which time will plainly show.

MR. Hanbury, replying to Sir Seymour King in the House of Commons, said that he was unable to accede to the appointment of a select Committee to consider the grievances of the officers on the general list.

ON the 20th May, to celebrate the birthday of the Empress, the Viceroy held, at Simla, a Levée which is reported to have been largely attended. There was also the usual state dinner, at which some seventy officials were present. In the forenoon, Lord Elgin attended the parade and sports and encouraged the volunteers with the following words:

"Believe me, every citizen who gives help to the Volunteer cause, whether by personal service, in which Colonel Bisset shows so conspicuous an example, and in which all of you here present support him, or by other assistance through which their fellows can have leisure to attend parades, deserves recognition by his country, and will, I hope, carry with him the satisfaction of knowing how highly the services of the Volunteers are appreciated by the Government of India. On this day, when throughout the Empire all her subjects are anxious to show special loyalty and devotion to the Queen-Empress it will, I hope, be a matter for pride and satisfaction to every one of you to have this opportunity of evincing as you do, your readiness to render your personal service to the Empire in the hour of need. I am sure Colonel Bisset should be proud of commanding so strong and so serviceable a body of volunteers."

IN Calcutta the celebration was a quiet affair. There were of course the firing of salutes and rounds of *feu-de-joie* and the parade on the

maidan of troops in the garrison and volunteers, numbering in all 54 officers and 1,728 N. C. officers and men. But the reports of the guns were not loud enough for all Calcutta and there was no public entertainment. The day was, however, observed as a general holiday, and what was most agreeable the weather was not bright sunshiny and we had a copious shower of rain. That is Queen's weather indeed in an Indian summer. The publication in this capital that day of the Honours of the occasion would have further enlivened the scene. Up in the clouds, the Government of India are not sufficiently mindful of those galled in the plains. The slight expense, if any, of simultaneous publication of the *Gazette of India* Extraordinary at Simla and Calcutta ought not to be grudged. We cannot think of any other cause for the omission.

THE rate of mortality in Calcutta has gone down to 395. That is the number of deaths in the last week against 361 and 402 of the two weeks previous. There were 86 deaths from cholera against 119 and 185 in the two preceding weeks, or 61 more than the average of the past quinquennium. Deaths from smallpox numbered 3 against 2 of the week before. The general death-rate was 34.1 per mille per annum against 26.0, the mean of the last five years. Yesterday, there was one death from heat apoplexy. It was due more to drink than the weather, which, however, continues oppressive.

If we had a quiet observance of the Enpress' Birthday, Chittagong the unblest had been very busy with festivities—with theatres, races, gaities of all kinds, not omitting the feeding of the poor. It seems reserved for Mr. Skrine to remove the odium of old Bignold's epigram on the town,

The church abandoned it stands,
It has neither parson nor steeple :
And the lands are low-lying lands
And the people are low, lying people.

The neglect of fifty years of not elevating the Chittagonians and leaving them to "stew in their own juice," is a stain on the British administration. They will now have a glimpse of better things than their sordid life.

SINCE our leader last week on the subject of licenses for musical processions in streets, the Commissioner of Police has ordered that Superintendents of Divisions, while recommending the number of Police to be paid for by the applicants, should give their reasons. This may lessen the hardship, but is not sufficient to put an end to illegal exactions. Unless we see any further attempt in the right direction, we shall return to the subject next week. We have not spoken of half the rottenness in the state of Denmark.

THE Calcutta Small Cause Court was closed on Thursday, out of respect to the memory of Baboo Jadunath Roy, the late Judge of that Court, recently retired and just dead. One of our weekly contemporaries was furious that the Baboo was not allowed to continue on the Bench. His death immediately after retirement, like that of Rai Bahadur Annada Persad Ghose, Personal Assistant to the Commissioner of the Presidency Division, justifies the action of the Bengal Government. The fact is, our people do not know when to cease working for gain and are extremely careless of their health. They would all die in harness, if not forced to retire on pension.

HERE is a letter from one of the retired Viceroys of India who still rules her, as far as may be, from a distance. It is addressed to Kumar Upendra Chandra Chowdry of Mymensingh, who presented him that a copy of Mr. Skrine's life of Dr. Sambhu C. Mookerjee.

"Sutton, Micheldever Station,
April 9, 1896.

Sir,—I am much obliged to you for sending me a copy of the memoir of the late Dr. Sambhu Mookerjee which I have read with much interest, for I have always felt a sincere appreciation of the work done by able and conscientious editors of Indian newspapers, who, while freely criticising public affairs, have done so in a friendly spirit and with loyalty to the British Government.

Rai Bahadur Kristodas Pal, when he edited the *Hindoo Patriot*, was a notable instance of this, and from the contents of the memoirs I gather that Dr. Mookerjee took much the same line in *Reis and Rayyet*, a paper which, I believe, was started after I left India.

I can truly say that I have never felt any annoyance at Dr. Mookerjee's comments upon the case of the late ex-Gaekwar of Baroda. I do not

remember the particular view Dr. Mookerjee took, but the case was one which was fairly open to public criticism.

I am, yours faithfully,
NORTHBROOK."

Lord Northbrook is a statesman accustomed to see himself and his friends roughly handled by politicians with principles different from his. The Baroda number of *Mookerjee's Magazine* contained the most vigorous impeachment of Lord Northbrook's treatment of poor Mulhar Rao. That the late Viceroy never felt any annoyance at it is much to his credit. The view which Dr. Mookerjee took was that it is highly impolitic to bring sovereign princes, like ordinary felons, to public trials for accusations of the kind that Colonel Phayre chose to prefer. The refusal of the Viceroy to accept the verdict of the Native Commissioners of his own selection was extraordinary. The endeavour to justify Mulhar Rao's deposition on the old charge of misgovernment was the strangest part of the business. Finally, the whole Baroda business was a blunder from beginning to end.

DEWAN BAHADUR Justice Subramaniam of the Madras High Court writes of "An Indian Journalist" to the author thus :

"You have placed the Bengalis under great obligation by your self-imposed task so very excellently executed. It is impossible to rise from a perusal of this interesting book without feeling a regret that there were not many men like Dr. Mookerjee among us."

IN course of his interesting reminiscences, in the last number of the *Calcutta Review*, Mr. H. G. Keene details the following :—

"A Village Money-lender's Gaitie.—There was, in an Indian village, an honest soldier, at home on leave, who had to answer to a claim, brought by the local money-lender, on a bond purporting to bear the sepoy's signature, and attested by witnesses whose names appeared as having seen it executed. The bond was a forgery, and the witnesses were men of straw, suborned by the banker for a few pence ; but the defendant did not see his way to proving a negative ; so he elected to acknowledge that the instrument was genuine and valid, to the astonishment and delight of the banker. But, added the innocent-looking warrior, the bond had been duly redeemed ; the banker had, indeed, excused himself for not returning it, but *here was his written receipt*. By all the rules of evidence judgment ought to have gone for the plaintiff, the defence being almost palpably false. But the bond happened to have been written on English paper ; and the judge, holding it to the light, found the watermark of a year subsequent to that on which the debt was alleged to have been contracted. The banker at once offered an easy and plausible explanation ; but the officer, well aware of the habits of him and his class, unhesitatingly threw out the claim with costs not on the ground that the debt had been discharged, but that, despite the defendant's admission, it had never been contracted. The decision was probably just, it was scarcely either lawful, or logical."

Yes, the decision was probably just. It is satisfactory to find Mr. Keene speaking in this strain instead of indulging in that dogmatism which is the principal characteristic of District administrators in India. The sepoy who admitted execution of the forged bond and set up the false plea of satisfaction, did as so many do in this country. It was a common observation of the late Justice Dwarka Nath Mitter, that to meet the claim on a forged bond the defendant usually put in a forged release, thereby admitting the genuineness of the first document and exposing himself to prosecution for perjury and uttering a forged document. And why so ? The question has not been satisfactorily answered. We are afraid, one reason is the well-known weakness of District courts in accepting every kind of formal evidence as true. Written has precedence over oral evidence. It is easier to manufacture a document than to prove it is forged. It is less costly to meet fraud by fraud than to shew up a false claim or charge. Such is the law and its administration. Wrong decisions of courts convert simple people into perjurers. Some years back, in one of the Districts of the North-West Provinces, a charge of murder was preferred against a Zamindar by a neighbouring one strongly supported by a faction in the village. The evidence was complete against the accused who admitted the offence, urging, however, the plea of sudden provocation. This was established to some extent. The Judge sentenced him to six months' imprisonment. Two years after the man had come out of jail, the victim of the alleged murder was ferreted out with the assistance of the Police from a distant town. He was accused of conspiracy along with those that had taken an active part against the convicted Zamindar. The latter, when asked by the Judge as to why he had admitted an unperpetrated murder, answered that he had no other alternative for saving himself from the gallows. If he had pleaded complete innocence, he would certainly have been sentenced to death. The conspirators all admitted

their guilt and were sentenced to varying periods of imprisonment. Mr. Keene's inference from the water mark on the paper, we fear, was not correct. Many years before a similar case was tried in the original of the Calcutta High Court. The year mark in water was subsequent to the date of the document whose genuineness was at issue. Mr. T. D. Ingram was one of the Counsel in the case. The party who produced the document ran the risk of being committed for forgery. Fortunately, Mr. Ingram had some experience of the paper trade. Large manufacturers often post-date their outturns, taking care not to issue such paper out of their manufactories till the year noted. Errors, however, sometimes occur. In the case in question, the document was a genuine one. It happened, however, to be engrossed on paper that bore the mark of a year subsequent to the date of execution. The genuineness of the document was admitted and the suit based on it was decreed. How sometimes Judges are misled by the false water-marks! A respectable purdanasheen lady in the North-West Provinces suffered in person and dignity by the water-mark argument of the opposing Counsel.

THE following gem of an extract, "from a Dacca paper," appears in the *Indian Mirror* :—

"Many among our well-meaning European friends commit mistakes in their attempt to introduce their own institutions among us. Mr. Skrine, we are sorry to say, would seem to be one of these gentlemen. While at Bhagalpore, we remember his encouraging and patronizing theatricals and *nautches*. It pains us now to learn that within the short time he has been in Chittagong, he has thrown himself, head and heart, into organizing a scheme for theatricals and *nautches*. For aught we know to the contrary these things may be innocent pastimes for enlightened Europeans, but for us, Indians, of the present generation, who are just passing through a social crisis, they have a demoralizing effect which, Mr. Skrine's penetrating powers should long ago have made it clear to him. We hope Mr. Skrine will think over this matter and, if he is desirous to provide harmless enjoyment to the poor drudging clerks and officials, he should proceed on the lines chalked out by his master, Sir Charles Elliott, in reference to the student community of Calcutta."

Appearing as it does without note or comment of any kind, it may, we think, be presumed that the august organ of Theosophy in Bengal approves of the sentiments expressed. The name of the Dacca paper is not given. This is not due to an accident or the desire of screening the inferiority of the journal. The fact is, it is a Brahmo concern, managed by one of those people who have won the appellation of "the ungood." The mention of the name would have enabled the reader to appraise the utterance at its true worth. Without concerning ourselves for the present with the Dacca paper which, "for aught it knows to the contrary," thinks that theatricals and *nautches*, though they "may be innocent pastimes for enlightened Europeans" have, however, "a demoralising effect upon Indians of the present generation," for the very satisfactory reason that they are "passing through a social crisis," it may be fairly said that the *Mirror's* approval of the sentiments is not quite in keeping with its own conduct. Formerly, spiritual drinks were its abomination. For sometime it has taken kindly to them. Then, again, twice in every week it publishes the advertisements of all the four native (or, if that word be distasteful, Indian) theatrical companies of Calcutta. The Indian theatres are demoralising, but not their mention in the advertisement columns. By the bye, has the existence of those theatres anything to do with the present scarcity of water? Do they require suppression before copious showers can be expected? Though a professed Revivalist talking glibly of the Hindu scriptures, no paper is more ignorant of those scriptures than our contemporary of Mott's Lane. He spoke the other day of the competence of the ancient Hindus to bring down rain whenever they desired. Has the *Mirror* ever read the accounts in the *Mahabharata* of those dreadful famines, occasioned by continued drought for years together, which made the Rishis forget their Vedas, converted some of them into thieves of dogs' flesh from the huts of Chandalas, and compelled others, including some of the highest, to think of saving life by utilising human corpses? The great Agastya himself, who had drunk up the Ocean for enabling Indra to take vengeance on his enemies—the Danavas—that used to shelter themselves within its depths after a general rout, and who had also saved Sachi's honour from the lust of Nahusha when the latter reigned in Amaravati, could not, by either his prayers or the puissance of his penances, induce Sachi's Lord to open the flood-gates of heaven on a parched world. The *Mirror*, however, by its grand *Yajna* (sacrifice), may, in this sinful age, achieve what the great Rishis could not in either the Krita, the Treta, or the Dwapara age.

We read that the District Judge of Mussooree has held that, for purposes of rates, the municipality "can assess on the net value of a house only, and that from the gross rental, one-fifth must be deducted for furniture, and one-sixth for annual repairs. The ruling represents a loss of ten thousand rupees per annum to the Mussooree Municipality." And how much to Government? The question may seem odd. How can the income of Government be affected by reduction in the municipal valuation of houses? The relevancy will appear when you remember that houses are not free from the Income-Tax, which is levied on a valuation the standard of which, in municipalities, is supplied by the Municipal assessment. At any rate, such is the case in Calcutta. Here Government is a gainer by adopting the municipal valuation. The principle of rating is not the same in the two Acts, Municipal and Income Tax. We have more than once pointed out that while the Income-Tax Act lays down the probable letting value, the Municipal Act fixes the value of a residential house on a different method which considerably enhances the valuation. In thus assessing on a new principle, the municipality not only makes a more than ordinary income but also helps to add to the burden of house-owners for the income-tax.

So Khan Bahadur Abdul Jubbar has not been taken a state prisoner to Constantinople. He has been appointed a Municipal Commissioner in place of the late Prince Sir Jehan Kadir Muzi. We welcome the appointment not only as that of an experienced man but also that it will bring him oftener to Calcutta which greatly needs his presence, if only to check the mischievous tendencies of those who would wish him out of it. They tried their best to send him away, offering him appointments in the distant mofussil, and would not hesitate to do anything to get him out of their way, that their career may be smooth and uninterrupted.

Errata.—In our last number, p. 231, col. 2, l. 7 for *emerged* read *immersed* (.) In the leader on Arsenic-Poisoning, p. 234, col. 1, l. 17 for *quicker* read *tardy* (.) In the article on the Calcutta Police, p. 235, col. 1, l. 4 from the bottom for *Rs. 7* read *Rs. 3* (.)

Letter to the Editor.

RAGHUNATH SIROMANI.

Dear Sir,—Here are a few more facts on the life of Raghunath Siromani, which, I hope, will be welcome to you. Raghunath was a class-mate of Chaitanya when they used to read in the *Chatuspathi* of Vāsudeva Sārvabhauma. The favourite study of Chaitanya was *Sreemad Bhagabata*—the book which coloured his future destiny so deeply. He also used to take some interest in the Nyaya philosophy, the *forte* of his native town. In the *Chatuspathi*, Raghunath and Chaitanya used to converse on the Nyaya, but Chaitanya always carried the palm in the discussion. When they were both in the *tal*, Raghunath and Chaitanya began to compose *Chintamani Diibiti* and a commentary on *Gautama Sutras* respectively. One day Raghunath came to know that Chaitanya was engaged in writing the above work. He asked his friend :—"My dear fellow, is it true that you are writing a work on Nyaya?" Chaitanya said :—"How do you know, my dear Raghunath? Yes, I am now engaged in writing the book, here it is." The next day, while crossing the Ganges in a ferry boat, Chaitanya happened to have his dear Raghunath for his fellow passenger, with his commentary in his bag. Raghunath's hope of advancement in the world was a similar commentary that had cost him the unceasing toil of years. Apprehensive that Chaitanya's work might eclipse and supersede his own, he earnestly besought his patronage. Chaitanya, who understood the meaning of Raghunath, took his commentary out of his bag and cast the only copy into the river. Thus the celebrated commentary on *Gautama Sutras* by Chaitanya was lost to the world. Soon after this, Raghunath published his *Chintamani Diibiti*. Chaitanya then turned his attention to theology, towards which his inspired mind had a natural bent.

At the last stage of his life, Raghunath became a follower of Chaitanya. It is written in the *Chaitanya Charitamrita* that Raghunath never tasted anything sweet and never wore anything but rags.

REIS & RAYYET.

Saturday May 23, 1896.

THIBET.

RUMOURS have been afloat for some time regarding a probable invasion of Llama-land by the Gurkhas, and the *Times* and several Anglo-Indian papers have been trying to set them by the ears against their Buddhist neighbours, egging them on by the somewhat risky assurance that now that China has been fairly crushed by Japan, there need be no fear of any help reaching Lhasa from the Celestial Empire. It remains to be seen if Sir Bir Shumshere will take the kind and disinterested hint and hazard an invasion of Thibet across a mountainous country presenting difficulties and disadvantages of no ordinary degree. He would perhaps do well to remember that some of his own kith and kin or their adherents—those his *coup de main* ousted from power in 1885, are reported to have cast their lot in the country around Manaswaravar. Runbir Jung is dead. He had, indeed, in 1888, offered his services to the British Government "for a practical and peaceful settlement of the difficulty with Thibet and Sikkim." But he was not the man to compromise his country for any gain to himself in pursuit of his hate towards his cousin who made him and his exiles in British territory. There is, however, no abatement in the cousinly hate, and those exiles who survive Runbir may not possess the spirit of suffering patriotism of the deceased General. A friend turned foe is very often hard to break lance with. The story of Bibhisana's treatment of Ravana—the ten-headed monster of ancient Ceylon—is instructive. It is doubtful if without his aid, his intimate acquaintance with the ins and outs of the king's affairs, Rama, with all his supernatural powers, could vanquish him. Probably, the Dalai Llama is already aware what guns and other slaughtering machinery he will have to cope with, and negotiations with China may be on foot to import more effective weapons. It is ridiculous to argue that because Japan, with her marvellous advancement during the last fifty years, has beaten China, the latter would feel diffident of her powers over her vassal. Why, the unarmed numbers of a District of the Celestial Empire would smash the Gurkha Kingdom, specially as it is not "broad-based on the people's will" and the king is a puppet. There are some amongst us who think that the Gurkhas do require a lesson, and that in the event of a war with Thibet, if England would only keep aloof, they are sure to get it. They have been called independent for too long a time to enable them to keep their heads cool. If latterly they have not been actually insolent towards the British Government, they have certainly evinced a strong desire to be treated almost as its equal, demanding for every little concession that they made in favour of the furtherance of modern ideas of progress and common happiness, a *quid pro quo* that would

feather their nest and not be universally or generally useful. The Gurkha is happy in his mountain fastness in the belief that Sisagarhi and Chandragiri, dynamite and maxim gun would not harm him, forgetting that when Gillespie and Ochterlony marched to Nepal these and various other modern appliances that break the bulwarks of Nature had not been invented. To every Hindu it is no doubt a flattering thought that mother Earth still bears on her bosom at least one Hindu Kingdom thoroughly independent. We trust the Gurkhas will strive their best to let their coreligionists continue in this belief. We will not be surprised, if, in pursuance of a policy of personal ambition, Bir Shumshere consented to an act which will bring his country no glory but will pass on a kingdom to the British who have succeeded, through his weakness, to reduce his own to a less inaccessible and a buffer State.

JAMALUDDIN.

THE *Times of India* has the following about the learned man whose name is associated with the assassination of the Shah Nasiruddin of Persia. The report that the assassin, a follower of Jamaluddin, was a Babi has been contradicted. And properly, for the sact of the Babis, akin to Wahabis, is much older in Persia than the advent of Jamaluddin.

"Some additional information has reached us regarding Djemal-ed-Din, by one of whose followers the Shah was assassinated. Much of it is in confirmation of the account which we gave of the Sheikh a few days since; some of it goes to show that Mr. Haweis, in introducing him to English readers, was led into inaccuracies which Djemal-ed-Din had reasons of his own for circulating. As an instance of the latter may be cited his account of himself as an Afghan, who had taken part in the wars between Shere Ali and the father of Abdur Rahman Khan. We are assured that he is not an Afghan. He was born at Saidabad, near Hamedan, on the road from Teheran to Baghdad. It is easy to understand why, when he went to Constantinople at the age of twenty-five and sought the favour of men in power there, he passed himself off as an Afghan. As a Persian and a Shia he would have been under manifest disadvantage; he represented himself, therefore, to Munif Pasha, then Minister of Education, as an Afghan, and consequently a Sunni. He became as we stated the other day, a member of the Board of Education, but being led in religious controversy to say disrespectful things of the Sheikh-ul-Islam, he lost his position and had to take refuge in Egypt. This was the time when the Arabist movement was beginning to take shape. A good deal more is known in Cairo than in India of the intimacy of Djemal-ed-Din and Arabi. It is known, however, that Djemal-ed-Din's proceedings were looked on with distrust by the police, and that in 1880, about a year after Tewfik had come to the throne, the new Khedive issued an order for his expulsion. From Egypt he came to Bombay, thence finding his way to Hyderabad, where the first Sir Salar Jung's hospitality to the Persian scholar took the practical form of an allowance of two hundred rupees a month. Here his activities at first took a theological turn. He entered the lists on the side of orthodoxy, and in a pamphlet entitled *Radi-i-Naturi* he attacked the school of Mussulman reformers which was at that day represented in Hyderabad even more largely than it is now. But unfortunately for him he did not stop there. If his religion was orthodox his politics were revolutionary, and when he was found instilling dangerous doctrine into the minds of the young men of the city, Hyderabad, with its usual generosity towards the undeserving, slipped five thousand rupees into his pocket and sent him about his business. He then put in a short time at Bhopal, levied a contribution of a couple of thousand rupees upon the Begum's purse, and pursued his way to Calcutta, where he delivered lectures in the Madressa. But his fame had preceded him, and he was closely watched by the police. Being a man of resource he responded to the shadowing of the Calcutta police by coolly asking for employment in the force, but there was no room for him there, and at the end of 1883 he left India, calling on his way to Europe upon Arabi, the beaten and broken conspirator, who was now a captive at Colombo. He went to Russia and thence passed to Persia, playing the part of reformer there, and paying the penalty thereof under circumstances which we have already narrated. Expelled from Persia he passed through Russia on his way to England, where Mr. Wilfred Blunt, *connoisseur* in all things oriental, particularly in patriots and Arab horses, made much of him, and under his friendly patronage

DEAFNESS COMPLETELY CURED! Any person suffering from Deafness, Noises in the Head, &c., may learn of a new, simple treatment, which is proving very successful in completely curing cases of all kinds. Full particulars, including many unsolicited testimonials and newspaper press notices, will be sent post free on application. The system is, without doubt, the most successful ever brought before the public. Address, Aurai Specialist, Albany Buildings, 39, Victoria Street, Westminster, London, S. W.

Djemal-ed-Din delivered lectures in Arabic, and in French, acquired long years before at Constantinople. We next hear of him at Paris, where he edited a strongly anti-British paper, the *Abu Nadar Kubira*, or 'Egypt for the Egyptians,' and another, the *Urwatul-Wusqa*, or "Strong Rope," the object of which was to bind the Egyptians together in the national union against English, Turks, Syrians, and foreigners generally. Djemal-ed-Din's career as a journalist was neither long nor prosperous, and when his two newspapers one after another had come to their natural end he went for the third time to Russia, where things must have gone well with him for a time, for though he had no visible means of subsistence he continued to live at a hotel of the first class, a fact which was not altogether unconnected with his intimacy with Russian officials. His article in the *Contemporary Review* calling for reforms in Persia was not his only contribution to political literature, for last year a book was brought out in London under his name telling the story of the deposition of Murad, the present Sultan's brother, repudiating the official fiction of his madness, and urging that he should be brought from confinement and put upon a throne which he is said by people who pretend to know him to be as fit to fill as Abdul Hamid is. So that Djemal-ed-Din is a man of large ideas as well as many wanderings, with the displacement of obnoxious sovereigns as a speciality."

Moulvi Jamaluddin Afghani or Djemal-ed-Din is known throughout the civilized Mahomedan world, both as a political fire-brand and a man of letters. He is a linguist also, knowing 5 or 6 languages, with great command over Arabic and Persian. His accomplishments in Persian belie his Afghan origin, for there is hardly an Afghan with his mastery in that language.

According to his own version, his father, an Afghan, went over and settled in Egypt, where the son was born and brought up. By his natural gifts he attained the highest rank among the scholars there and was considered a highly cultured man of vast researches and original ideas. He has a large number of pupils in Egypt and other places who follow not only his teachings in religious matters but also his political creed which is revolutionary. Impatient, restless and reckless, despotic Governments are his hate, and English interference in Egypt or in the affairs of any Mahomedan States, such as Turkey and Persia, his eye-sore. There are still a large number of his followers in Egypt among the young generation who read and admire his writings and those of his best pupils, such as Abdu and others, which find their way into Egypt through different channels. An Arabic paper was edited by one of his pupils in Paris for the benefit of the Fallaheen. The Arabic paper *Orvatul Uska* was edited by Abdu.

While at Hyderabad he wrote a pamphlet in refutation of the tenets of the *Necharis* of whom Sir Syed Ahmed Khan is alleged to be the head. He thus enlisted in his favour the sympathies of the orthodox and religious Mahomedans at Hyderabad, but they soon suspected him and looked upon him as an unsafe political character. His pamphlet against the *Necharis* is very ably written and has been translated into Urdu from Persian. It was published in Calcutta.

For a time he lived at Calcutta, in Colootolah. The leading Mahomedans who were aware of his antecedents and the fact that his footsteps were dogged by the Police, never allowed him to approach them, and kept themselves aloof from him. But some men of the rising generation associated with him for purposes of knowledge and studied with him. These students certainly did not know the dangerous antecedents of their Moulvi. It appears he lived very cautiously in Calcutta, seldom indulging in politics or giving vent to his revolutionary ideas about government. He was not known to deliver any lecture at the Medressah.

He was, indeed, called upon by his young friends to speak at the Medressah on the progress of Mahomedans, their condition, or some such subject. They had even moved the authorities for permission for use of the hall for the purpose, but it was not granted. The paper that was ready was read all the same, we believe, in the Bengali quarter in College Square. It was a learned and very interesting discourse. Among the audience were very few Bengali Mahomedan students who could understand his high flown and scholarly Persian. That lecture was published and had a large circulation in India. There was nothing objectionable in his writings in India, and from a literary point of view they were first class productions. Jemal-uddin, while in India, never betrayed any bloody sentiments about rulers nor preached that reform was to be won at any hazard. It is hard to believe that a great scholar of his catholicity would harbour such fiendish feelings or that he could have directly abetted the assassination of the Shah. Had he not been too much revolutionary in politics and had he not been impatient, he would have, with his extraordinary abilities, been a great man among the Mahomedans, a great reformer, and a great leader of his own sect. For one defect, his whole life has been a series of adventures and misfortunes. Now he is drifted from one corner of the world to the other, sometime arrested, sometime under watch, and sometime deported from one country to find a home in another.

Having made himself objectionable to the heads of settled Governments and obtained a notoriety as a political intriguer, he could not fulfil the principal mission of his life, which was reform in every form, in society, in government and in religion. If he had devoted himself to literature, to science, or other peaceful occupations, he would have much benefited his co-religionists and mankind generally and made a true great name for himself. It is difficult now for him to change his line of action which can only lead to error and disaster.

Unless there is positive proof of his participation in the assassination, it will not be just to say that he had a hand in it. Some of his followers or pupils might have done it, from motives not yet known.

IRRIGATION AND WATER FAMINE:

With a Suggestion.

BY A RETIRED ENGINEER.

It is to be feared that the public in England are not sufficiently alive to the importance of the subject in its bearing to the future welfare and prosperity of India. With a view, therefore, of producing a more general interest, I will give some facts and considerations.

Agriculture from a very early period has convinced man of the value of water in increasing the fruitfulness of soil. He could not but observe the fertilizing power of rain and the rich vegetation due to periodical inundation; nor, on the other hand, could he possibly have remained ignorant of the sterility consequent on long continued drought. Thus was learnt the art of irrigating land. In some countries, the soil was thus rendered so exceedingly fruitful as to exceed credibility. Herodotus when speaking of Babylonia which was chiefly watered by artificial irrigation, says that it was the most fruitful of all the countries he had visited and that corn produced was never less than two hundredfold, sometimes three hundredfold. Five hundred years afterwards, the younger Pliny, speaking of the same country, says: "There is not a territory in all the East comparable to it in fertility." He attributes the fruitfulness to the ground being well watered.

The sacred books of almost all the ancient nations placed irrigation, the digging of wells and tanks amongst the acts most accept-

able to the gods. The Zendavesta of the Persians, the Shasters of the Hindus, the Koran of the Mahomedans distinctly inculcate the duty of conveying water to dry and barren tracts. Water is considered by almost all religions as an emblem of purification and sanctity.

The development of the irrigation system of India is one of the most important duties of the Government of India, the performance of which is its own reward; and while it promotes the prosperity of the agricultural classes, it secures and increases the financial resources of the State.

Perhaps nothing can better illustrate how highly water is prized by the agriculturist, than the endless disputes and arbitrations which are continually arising in connection with private irrigation. Yet there are men who are of a different frame of mind. Serious objections have been brought against the introduction of canal irrigation in India. They are:

(1) That in some parts of India irrigation is not a successful commercial speculation.

(2) That the lands irrigated by canal water become after few years sterile, being affected by reh, a kind of saline efflorescence.

(3) That irrigation makes the country generally unhealthy. These charges, however alarming, have been found by careful analysis to be exaggerated. Let me take them up one by one.

Charge No. 1. On this point it will be sufficient to quote the opinion of that courageous public officer, the late lamented General Chesney, the author of Indian Polity, a perusal of whose work I cordially recommend to my readers, both for its style and its sterling value. He says: "Irrigation works although highly profitable to the Government do not afford a reasonable prospect to the share-holders (if undertaken as a private speculation). Consequently irrigation works are not remunerative investments for private capital. Certainly the Government has never put on the water the highest price it can bear. On the first introduction of irrigation into Upper India, the principle was enunciated that the Government did not look to a direct profit for the outlay, but the indirect one arising out of the general improvement of the country, and the security afforded for the punctual realization of the land revenue, and in that view the water rate was fixed at the lowest figure sufficient to prevent a waste in consumption. Within the last few years the price has been raised but even now the average charge on the Ganges canal amounts to only 4 shillings an acre for a season's irrigation and forms but a small item in the cost of cultivation. The indirect profit arising from the increased revenue is not available in the parts of India subject to permanent settlement. The probability of commercial success in connection with the undertaking of irrigation works in India appears but small, but when the matter is viewed in connection with the State, it bears a very different aspect. Besides that the Government should be able to reap a direct return from the works even greater than any private company could do. Since it commands from its position the means of conducting such affairs more economically and under complete supervision. There are enormous indirect benefits to be derived in the improved condition of the country which necessarily follows from improved agriculture, but these are the smallest of the objects to be derived. That poor crops should be replaced by rich ones, rather than a succession of good crops should be secured independently of variation of the season, is no doubt a highly important result; but the surprising value of irrigation in India is to be found in the increase it effects against hours of famine. Thrice within the last 20 years have rains failed in the plains of Bengal causing the calamity of successive deficient harvest which has produced an enormous rise in prices of staple food, and this would in a less frugal race, have caused extreme distress. The famine of 1869 although experienced in greatest intensity in Orissa, extended with more or less severity from the Ganges to the extreme south of the Peninsula, and the suffering created must have been undergone by from 50 to 60 millions of persons."

In 1874 large portions of Bengal and Behar were again afflicted with extreme drought producing in extensive regions the fearful miseries of famine, and involving a large public outlay for keeping the starving population alive. It is to prevent or at any rate to alleviate the effects of these awful calamities that irrigation is needed in India.

Answer to charge No. 2. Reh is simply a generic name for all saline efflorescences consisting sometimes of an impure sulphate or carbonate of soda (khar), sometimes a bona fide chloride of sodium (common salt), sometimes carbonate or nitrate of potash (sajee) but generally a mixture of these, forming sometimes an excellent manure. The report of Captain Fulton, officiating Superintending Engineer, Panjab Irrigation, in 1865, has the following:

"1st. Canal water cannot be the cause of reh as it has invariably been found purer than the generality of well water.

2nd. Because reh is found quite as bad if not worse in places not in any way influenced by a canal.

3rd. Because it is found to exist in fields irrigated by well water, as well as in lands irrigated from the canal.

It appears to me that the development of reh in sufficient

quantities to be destructive to crops is caused in two ways:

1st. By certain substances being brought in excessive quantities to the surface of the soil.

2nd. By withdrawal from soil of certain other substances which would, to a certain extent, neutralize the bad qualities of the reh.

"Sometimes only one of these actions takes place but generally both the causes work at one and the same time; or to be more explicit, that which brings the one to the surface withdraws the other from the soil. In the first place I believe the reh, which from the reports of Mr. Medlicott and Dr. Brown, appears to consist principally of sulphates, is brought to the surface by capillary attraction when the soil is saturated with water, it matters not whether the water comes from rain, wells or canals; as the water dries up, the reh is left on the surface of the soil. This can only take place where water lodges; if the water can run freely off, salt is washed away with it; otherwise it accumulates on the surface, as in a large evaporating salt pan. To prove that this is the case, I will mention a circumstance lately related to me by a native gentleman. Some years ago, there was a great deal of swamp land in the villages of Dillana, Begumpore, Baoli, Baljaten, &c., the reh in these villages was also excessive. The Baoli drainage cut was made to carry off the water lying in the swamps; and it was found that not only were the swamps relieved, but the land which was covered a foot deep with reh and on which not a blade of grass would grow, became freed from the reh by rain washing it away and produced sugarcane and other crops."

The chemical analysis of reh by Professor Anderson of London is appended:

Organic matter	6.60
Silica	54.46
Alumina	4.47
Lime	2.93
Magnesia	1.49
Oxide of iron	3.30
Potash	1.84
Soda and common salt	11.85
Sulphate of Soda	0.00
Sulphuric acid	6.06
Phosphoric acid	trace
Water or loss	7.00
	100.00

I now proceed to the last charge, though not the least alarming. The surface of water of most of the Indian canals is above the soil (instead of being within the soil as it is called) where it has to be retained by embankments. Frequently it is not the surface only but the whole body of water that is above. The embankments must of course be very massive and may be required to be puddled to render them water-tight. In the great Solani embankment (on the Ganges canal near Roorkee in Shaharanpur District), water is retained within a solid masonry revetment backed up on each side by an earthen bank averaging 16 feet high and 40 feet thick. Although the water thus raised above the soil increases the facility of irrigation by its command of level, it is evident that the construction of such an embankment not only involves great expense but from sanitary consideration it is highly objectionable, as the continual soaking of a large quantity of water through porous sub-soil together with incessant weeping of the bank renders the soil highly saturated, thus forming a permanent swamp without any or sufficient drainage, which in all probability is the fruitful source of pestilential malarial fever with its concomitant evils. Nor is that all. If any breach occurs, the damage to the country is likely to be great. The danger is minimized when the canal water is partly within and partly above the soil and the earth excavated for the channel is just sufficient to build up the banks. The fear that canal irrigation makes the country generally unhealthy is exaggerated. The country adjacent to the Ganges and other canals flowing through the N.-W. P., Bengal, Behar and Orissa have not as yet shown any premonitory symptoms of unhealthiness. It would occupy too much space to dwell on the several inherent defects and suggest improvements in detail in the practice now generally followed in designing canals for this country.

The cry of want of water for both men and cattle, not unfrequently driven to drink foul water no better than sewage, is a sufficient ground for opening out irrigation channels. Colonel Strachey, in his able minute dated the 10th of February 1865, on the measures to be adopted for the extension of irrigation works in India says: "It will not admit of dispute that the Government must either heartily enter the field on its own account or give every facility to private capitalists to carry out this class of work." Again: "If there is any one thing which the British Government may be fairly regarded as bound to do for the people of India by all the laws of good government, of civilization and humanity, it is to take all practicable measures to secure them from the greatest physical calamity to which mankind is liable, the curse of famine and starvation."

The starting of a new irrigation work, where direct pecuniary advantage is the only aim, without any considerations of civilization and humanity, is like the launching of a commercial enterprise; you must consider the saleable value of the commodity to be bought or supplied, its cheap rate, and start with a sufficient working capital which is to be laid out with the utmost economy consistent with utility and to be expended as the transaction becomes more and more profitable, guarding against waste and extravagance. With the development of the Railway system in India, canals for the purpose of navigation are becoming obsolete. Hence it would be an economy if future canals be designed with the sole object of irrigation instead of the dual purpose of irrigation and navigation which frequently requires a large outlay without an adequate revenue return. The costs of irrigation canals cannot be heavy on account of the reduced height of the weir across the river whence the canal is to start and the absence of locks with their manifold costly apparatus, parallel channels, &c. The existing water channels may be utilized as far as possible in canalizing them for irrigation.

I will illustrate what I mean by a rough scheme of a simple irrigation canal. A canal commencing from the right bank of the River Adjai, near Gourbazar, in Parganah Sherghur, in the District of Burdwan, and passing through the villages of Gourbazar, Raja Nuratumghurh, Hijalgorah Ookra, Bistapur, Pattur-dhi, Tilakchandpur, Kanksa or Panaghur, Raghunathpur and Dhanarrah, and tailing on the River Damoodar near the village of Sillahkaspur in Parganah Champanagar in the same district, will irrigate a tract of land 50 miles in length unwatered by any permanently flowing river. Of the 50 miles, 10 miles will be taken up by canalizing the Kookore Naddi, a small rivulet issuing from Raghunathpur Dhanarrah in Parganah Selampur. The average section of the channel need not be more than 40 feet, bottom width and depth 8 feet, side slopes $1\frac{1}{2}$ to 1. I give also a rough estimate of cost and probable return:

40 miles of canal @ 600 Rs. per mile,	Rs. 2,40,000
10 „ „ canalizing the Kookore nadi @ 2,000 per mile, „	20,000
1 low weir across the Adjai River with } regulator and other headworks,	50,000
Bridges, &c.,	5,000
Land to be acquired, say 1500 } biggas, @ 30 per bigga,	45,000
Establishment and contingencies,	20,000

Rs. 3,80,000

Assuming that about $\frac{3}{4}$ ths of a mile in breadth on each side of the canal as the area to be benefited by the canal water, which is a modest supposition, we have $50 \times 1\frac{1}{2} \times 640$ or 48,000 acres, and assessing Re $\frac{1}{8}$ per acre on each crop, we get Rs. 72,000. With double rate for Dofasli land and superior kinds of crops, such as sugarcane, indigo, garden produce, &c., together with the amount likely to be derived by the sale of water for filling up tanks, &c., I put the total gross revenue at Re 1,00,000, or

100,000 × 100

3,80,000 or nearly 26 per cent. on the initial cost.

This high percentage of profit excludes the cost of the distribution channels which I have not taken into account, as I believe it will not materially affect the revenue return seriously. Allowing a deduction on that account, it is safe to take 15 per cent. (including collection charges) per annum as the net profit, not an unsatisfactory result even as a commercial speculation.

In India the promotion of irrigation works should be a matter of public policy as well as humanity; the wide-spread distress occasioned by want of water may lead to serious consequences of kinds. It is to be remembered also that about half the revenue of India is derived from land. Government in this country may be regarded as a great landed proprietor, receiving something more than twenty millions of pounds sterling a year in land revenue, and there is every reason why public property should be improved by means of irrigation just as private property of an English landlord is improved by drainage and other works. A sufficient supply of water to the parched fields would more than double the value of that land. It would therefore be wise for the Government to carry out works of the description with vigour, the needful capital could be borrowed easily @ 4 per cent. interest on the credit of the District Boards or other public bodies.

It is to be noticed that a canal with a continuous stream of water must either be an open or a closed one, it is not like a railway that it may be opened for a part only of its length and usefully worked on such part.

The great supply of wholesome water we receive in the rainy months which not unfrequently deluge the country, we permit to run to waste and pay the penalty in summer. No community can live by theocracy; natural laws are only guides in human affairs and the bounty of the clouds should be seized and treasured as a set off against seasons when the "heavens are as brass." It is passing strange that the English in India should

be so far behind Italy, Egypt, Spain and other lands as regards irrigation.

Happily, the value of water as a sanitary agent is being recognized as evidenced by the increasing number of towns and villages that are year after year asking for sanction under the local self-government law to provide an adequate supply of wholesome water. The desire for good potable water is welcome. It would be more so if there were the further desire to economize that essential element of life and comfort.

THE BIRTHDAY HONOURS.

Member of the Privy Council.

Professor Max Müller.

Knights Bachelors.

Mr. Justice Parker, of Madras, Chief Justice Cox, of the Straits, and Mr. Peter Renouf, Egyptologist.

Grand Cross of the Bath.

Generals Sir Hugh Gough, Sir Gerald Graham and Sir George Greaves.

Knights Commanders of the Bath.

Generals John William Cox, George Schomberg, David Dodgson, Arthur Howlett, Sir Robert Biddulph, Charles Mansfield Clarke, and Robert Grant; Admirals Alexander Buller, Henry Fairfax, Richard Wells, and Lord Walter Kerr.

Companions of the Bath.

Surgeon General Madden, Generals W. Walters, Biscoe, Revell, Eardly-Wilmot, Robert Melville Jennings and Hugh Hope, and Colonels Way, John Collins, Prettyman, Halv, Lane, Sartorius, Hart, Kidston, Nort (query North), George Hogg, Begbie, Henry Turner, Earl of Dundonald, Jeffreys, Patch, Maitland, Murray, Creagh, Dunne, Rainsford, Edward, Ward and Woodgate.

Raised to the Peerage.

The Right Hon. Edward Heneage; the Marquis of Granby; Colonel J. Malcolm.

Baronet.

Mr. McIver, M.P.

Companions of St. Michael and St. George.

Colonel Rundle; Rogers Pasha.

STAR OF INDIA.

Knights Commanders.

William Erskine Ward, Esq., C. S. I., Indian Civil Service, Chief Commissioner of Assam.

The Hon'ble Brigade-Surgeon-Lieutenant-Colonel Alfred Swaine Lethbridge, M. D., C. S. I., Indian Medical Service (Bengal), Resident of the 2nd Class and General-Superintendent of Operations for the Suppression of Thagi and Dacoity, and an Additional Member of the Council of the Governor-General for making Laws and Regulations.

Companions.

James Fairbairn Finlay, Esq., Indian Civil Service, Secretary to the Government of India in the Finance and Commerce Department.

INDIAN EMPIRE.

Companions.

Henry O'Connell Cardozo, Esq., Superintendent of Revenue Survey, Madras.

Brigade-Surgeon-Lieutenant-Colonel Benjamin Franklin, Indian Medical Service (Bengal), Surgeon to His Excellency the Viceroy.

Thomas Higham, Esq., M.I.C.E., Chief Engineer of the 2nd Class, and Secretary to the Government of the Punjab in the Public Works Department, Irrigation Branch.

Major John Shakespeare, D. S. O., Leinster Regiment, Assistant Commissioner of the 1st Grade in Assam, and late Superintendent of the South Lushai Hills.

Sardar Ratan Singh, President of the Council of Regency of the Jhind State.

Raja Bhup Indra Bikram Singh, of Piazpur in the Bahraich District of Oudh.

Major (Honorary Lieutenant-Colonel) James John Macleod, V.D., Behar Light Horse, and an Honorary Aide-de-Camp to the Lieutenant-Governor of Bengal.

Captain Norman Franks, Secretary to His Highness the Maharaja Holkar of Indore.

Arthur Henry Plunkett, Esq., Deputy Collector and Magistrate, 1st Grade, Bombay, and City Magistrate and Collector of Income Tax, Poona.

Rao Bahadur Chunilal Venilal, Special Magistrate in the Broach District and Vice-President of the Broach Municipality.

MILITARY DEPARTMENT.

Personal Staff.

Aide-de-Camp.

Risaldar Wali Mahummad, *Sardar Bahadur*, Governor-General's Body-Guard, *vice* Subadar-Major Tara Singh, *Sardar Bahadur* who completes his tenure of the appointment on the 1st June 1896.

Honorary Aide-de-Camp.

Subadar-Major Tara Singh, *Sardar Bahadur*, 45th (Rattray's Sikh) Regiment of Bengal Infantry, with effect from the 1st June 1896.

FOREIGN DEPARTMENT.

Maharaja Bahadur.

Maharaja Raghoonath Saran Singh Deo, Chief of Sirgajah, Chota Nagpur, in the Bengal Presidency.

Raja.

Rai Shib Chandra Banerjee, Bahadur, Chairman, Bhagalpur Municipality.

Dewan Bahadur.

Rao Bahadoor Vembakum Raghav Charlu, First Assistant, Local and Municipal Department of the Madras Secretariat.

Rai Bahadoor Pulicat Ramaswami Chettiyar, Revenue Officer, City of Madras Municipal Commission.

Shams ul-Ulama.

Pir Ali Gauhar Shah Hussain, Pir of Rohri in Sind.

Mahamahopadhyaya.

Pundit Kailash Chandra Siromani, First Professor, Government Sanskrit College, Benares.

Pundit Shiva Kumar Shastri, of the North-Western Provinces.

Khan Bahadurs.

Wardero Shah Passand Khan walad Ursulla Khan Baber, of Kot Sultan, in Sind.

Serai Ghulam Rasul Khan Jatoi, Honorary Magistrate in the District of Hyderabad in Sind.

Kaikasru Barjoji Cooper, Assistant Surgeon in the Bombay Presidency.

Rab Nawaz Khan, Musazai, of the Dera Ismail Khan District in the Punjab.

Munshi Fazl Din, Extra Assistant Conservator of Forests in the Punjab.

Sheikh Kabiruddin, Senior Hospital Assistant, Indian Subordinate Medical Department, Bengal.

Moulvi Badruddin Haidar, Registrar, Presidency Magistrate's Court, and Municipal Commissioner, Calcutta.

Moulvi Muhammad Hussain, Dewan to the Raja of Khairagarh in the Central Provinces.

Mir Khair Baksh Khan, Marri, of Beluchistan.

Arbab Hussain Khan, Chief of the Mohmands.

Muhabbat Khan, of Toru, in the Peshawar District in the Punjab.

Khwaja Muhammad Khan, of Hoti, in the Peshawar District in the Punjab.

Rao Bahadurs.

Rao Kuran, Singh of Bedla, in Mewar, Rajputana.

Chatar Sal, Thakur, of Mangalgarh, in the Bairsasia District of the Bhopal State, in Central India.

Peruma Pillai Sundarum Pillai, Professor in the Maharaja's College, in Trivandrum.

Conjevaram Somasundra Sastri, Deputy Collector in the Madras Presidency.

Kotikalapud Subharayudu, Deputy Collector in the Madras Presidency.

Gopal Balwant Nene, late Curator of the Government Book Depot in the Bombay Presidency.

Balkrishna Ramchandra Tipnis, late Junior Assistant to the Administrator of the Native State of Rajpipla in the Bombay Presidency.

Gunpatrao Amric Mankar, late a Subordinate Judge in the Bombay Presidency.

Rao Sahib Bihari Lal, Khazanchi, of Jubbulpore in the Central Provinces.

Lataria Bhau, Zamindar of Kampta, in the Bhandara District in the Central Provinces.

Rai Bahadurs.

Thakur Dip Singh, Commandant of the Bikanir Imperial Service Camel Corps.

Baboo Sasi Bhusan Mukarji, Professor in the Government College in Lahore.

Rai Sahib Hari Chand, Vice-President of the Municipal Committee of Multan in the Punjab.

Pundit Bishashur Nath, Assistant Traffic Superintendent, State Railways.

Babu Saroda Prosad Roy, First Assistant Comptroller, Post Office of India.

Thakur Gobind Pershad Singh, of Banka, in the Palamau District in the Bengal Presidency.

Babu Hari Ballabh Bose, Government Pleader, Cuttack, in the Bengal Presidency.

Baboo Anand Chunder Sen, Retired Deputy Magistrate and Deputy Collector, Bengal.

Baboo Kamalashari Persad Singh, Banker and Zamindar of Monghyr in the Bengal Presidency.

Babu Sreenath Pal, Senior Superintendent, Calcutta Police.

Deo Datt Pandey, Senior Hospital Assistant, attached to the Escort of the Resident in Nepal.

Mahtab Singh, Subadar-Major, Upper Burma Military Police.

Khan Sabebs.

Sandhi Khan, Inspector of Police in the Punjab.

Ghulam Haider Khan, Achakzai, of Gulistan, and Jemadar of Levies in Beluchistan.

Babu Meera Baksh, late Head Clerk in the office of the Engineer-in-Chief, Mushkaf-Bolan State Railway.

Pir Baksh, Hospital Assistant, 2nd Grade, Indian Subordinate Medical Establishment, Bengal.

Rao Sabebs.

Maharaj Thammon Singh Hazari, Assistant Surgeon in the Madras Presidency.

Salvador Felix Brito, Municipal Councillor and District Board Member, South Canara District in the Madras Presidency.

Raghvendra Krishna, Vice-President of the Municipality of Bijapur in the Bombay Presidency.

Rai Sabib.

Lala Bhagwan Das, Assistant Surgeon in the Punjab.

Babu Dina Nath Sen, Inspector of Schools, Eastern Circle, Bengal.

Babu Gunpat Singh, Zamindar of Harwat, in the Bhagalpur District in the Bengal Presidency.

Nirpat Singh Dangi, of Rehli, in the Saugor District in the Central Provinces.

Seth Mohan Lal, of Renda, in the Saugor District in the Central Provinces.

Sher Singh, 1st Class Agent of the Commissariat Transport Department.

A CLEAN OUT INDIVIDUAL OPINION,
BOLDLY EXPRESSED.

It is for this reason that an assertion like the following sticks up above the dead level of our stupid talk, and becomes noticeable; "When I saw how pale I had grown I said to myself, it was because something had gone out of my blood."

There! That is a statement with the seeds of an idea in it. Suppose we follow it up by quoting the rest of the letter which contains it.

In December, 1890, says the writer, "I fell into a poor state of health. I was tired, languid, and weary without any apparent cause. My appetite left me, and all food, even the lightest and simplest kinds, caused me great pain in the chest and stomach. When I saw how pale I had grown I said to myself it was because something had gone out of my blood."

"Then my sleep was broken, and night after night I scarcely closed my eyes. It wasn't long before I became so weak and dejected that I took no interest in things around me. I was so nervous that common sounds annoyed and worried me; even the noises made by my own children in their talk and at their play."

"There was a disgusting taste in my mouth; it made me sick, and often gave me a shivering sensation all over. When I saw others eating and enjoying their meals I felt as though it were a strange thing; in a way I wonder how they could do it. For myself I could eat hardly anything. Food went against me, and I turned away from it, as one turns from smells or sights that are offensive. And yet I know, what everyone knows, that without sufficient food the body languishes and weakens. And such was the case with me as month after month went by."

"During all this time, so full of pain and discouragement, I was attended by a doctor who did what he could to relieve me, but without success. I do not say he did not understand my complaint; for may he not have understood it without having the means of curing it?"

The answer to the lady's question is: Yes, easily enough. All intelligent, studious doctors "understand" consumption, cholera, cancer, &c., without (as yet) having the means of curing them. There is usually a wide gap between the discovery of a want and the way to supply it.

"I will now," continues the letter, "tell you how I came to be cured. In April, 1891, I read in a small book or pamphlet about Mother Seigel's Syrup. The book said the Syrup was a certain remedy for all diseases of the stomach, indigestion in every form, and dyspepsia; and it also said that most of the complaints we suffer from are caused by that. On looking over the symptoms described in the book, and comparing them with my own, I saw plainly that my ailment was dyspepsia."

"We sent immediately for a bottle of this medicine, and after taking it a few days I began to feel better. In a very short time, by keeping on with the Syrup according to the directions, I could eat without pain or distress, and digest my food. I also slept soundly and naturally. Then my strength came back and with it the colour to my face. In short, after a few weeks' use of Mother Seigel's Syrup, I was hearty and strong as ever. And I should be indeed ungrateful if I were not willing that others should have the benefit of my experience. You are therefore free to print my letter if you think it will be useful. (Signed) (Mrs.) M. Truran, Marton, Lincoln, April 24, 1895."

I simply desire to say to Mrs. Truran that her idea about the blood is a perfectly correct one. All our food (the digestible part of it) is turned into blood, and in that shape it feeds the entire body. When the blood gets thin and poor (lacking in nourishment), we lose flesh and grow feeble and pale. And the cause of the blood getting thin and poor is indigestion, or dyspepsia. How easy this is to understand when once you get hold of the right end of it. Mother Seigel's Syrup has the peculiar power to correct what is wrong about the digestion, and thus enables the digestive machinery to make good rich blood, which is life and health and beauty.

NOTICE.

Music for the Million!

BEECHAM'S
MUSIC PORTFOLIO.

The cheapest collection of Music ever issued.

The Portfolio consists of 8 volumes, each of which contains:—

30 of the most popular Songs and Airs of the day, each of which is worth more than the price charged for the whole volume, viz., 3½ annas post free; this price, it should be mentioned, does not nearly cover cost, but the Portfolio is placed before the public at a loss, as a further advertisement of the fact that—

"BEECHAM'S PILLS"

ARE

"Worth a Guinea a Box,"

Only a limited number of volumes will be issued and in order to avoid disappointment, intending purchasers should register their orders at once.

APPLY TO

G. ATHERTON & CO.,

3, New China Bazar-street,
CALCUTTA,

Agents for THOMAS BEECHAM, of
St. Helens, Lancashire.

N.B.—A list of contents of each volume will be sent on receipt of a stamped envelope.

Published on the 16th September, 1895

POSTSCRIPT.

After paying the expenses of the publication,
the surplus will be placed wholly at the disposal
of the family of the deceased man of
letters.

Orders to be made to the Business Manager,
"An Indian Journalist," at the Bee
Press, 1. Uckoor Dutt's Lane, Wellington
Street, Calcutta.

OPINION ON THE BOOK.

It is a most interesting record of the life of
a remarkable man.—Mr. H. Babington Smith,
Private Secretary to the Viceroy, 5th October
1895.

Dr. Mookerjee was a famous letter-writer, and there is a breezy freshness and originality about his correspondence which make it very interesting reading.—Sir Alfred W. Corft, K.C.I.E., Director of Public Instruction, Bengal, 26th September, 1895.

It is not that amid the pressure of harassing official duties an English Civilian can find either time or opportunity to pay so graceful a tribute to the memory of a native personality as F. H. Skrine has done in his biography of the late Dr. Sambhu Chunder Mookerjee, the well-known Bengal journalist (Calcutta: Thacker, Spink and Co.); nor are there many who are more worthy of being thus honoured than the late Editor of *Reis and Rayyet*.

We may at any rate cordially agree with Mr. Skrine that the story of Mookerjee's life, with all its lights and shadows, is pregnant with lessons for those who desire to know the real India.

No weekly paper, Mr. Skrine tells us, not even the *Hindoo Patriot*, in its palmy days under Kristodas Pal, enjoyed a degree of influence in any way approaching that which was soon attained by *Reis and Rayyet*.

A man of large heart and great qualities, his death from pneumonia in the early spring in the last year was a distinct and heavy loss to Indian journalism, and it was an admirable idea on Mr. Skrine's part to put his Life and Letters upon record.—*The Times of India*, (Bombay) September 30, 1895.

It is rarely that the life of an Indian journalist becomes worthy of publication; it is more rarely still that such a life comes to be written by an Anglo-Indian and a member of the Indian Civil Service. But, it has come to pass that in the land of the Bengali Babus, the life of at least one man among Indian journalists has been considered worthy of being written by an Englishman.—*The Madras Standard*, (Madras) September 30, 1895.

The late Editor of *Reis and Rayyet* was a profound student and an accomplished writer, who has left his mark on Indian journalism. In that he has found a Civilian like Mr. Skrine to record the story of his life he is more fortunate than the great Kristodas Pal himself.—*The Tribune*, (Lahore) October 2, 1895.

For much of the biographical matter that issues so freely from the press an apology is needed. Had no biography of Dr. Mookerjee, the Editor of *Reis and Rayyet*, appeared, an explanation would have been looked for. A man of his remarkable personality, who was easily first among native Indian journalists, and in many respects occupied a higher plane than they did, and looked at public affairs from a different point of view from theirs, could not be suffered to sink into oblivion without some attempt to perpetuate his memory by the usual expedient of a "life." The difficulties common to all biographers have in this case been increased by special circumstances, not the least of which is that the author belongs to a different race from the subject. It is true that among Englishmen there were many admirers of the learned Doctor, and that he on his side understood the English character as few foreigners understand it. But in spite of this and his remarkable assimilation of English modes of thought and expression, Dr. Mookerjee remained to the last a Brahman of the Brahmins—a conservation of the best of his inheritance that wins nothing but respect and approval. In consequence of this, his ideal biographer would have been one of his own disciples, with the same inherited sympathies, and trained like him in Western learning. If Bengal had produced such another man as Dr. Mookerjee, it was he who should have written his life.

The biography is warmly appreciative without being needlessly laudatory; it gives on the whole a complete picture of the man; and in the book there is not a dull page.

A few of the letters addressed to Dr. Mookerjee are of such minor importance that they might have been omitted with advantage, but not a word of his own letters could have been spared. To say that he writes idiomatic English is to say what is short of the truth. His diction is easy and correct, clear and straightforward, without Oriental luxuriance or striving after effect. Perhaps he is never so charming as when he is laying down the laws of literary form to young aspirants to fame. The letter

on page 285, for instance, is a delightful piece of criticism: it is delicate plain-speaking, and he accomplishes the difficult feat of telling a would-be poet that his productions are not in the smallest degree poetry, without one may conclude, either offending the youth or repressing his ardour.

For much more that is well worth reading we must refer readers to the volume itself. Intrinsically it is a book worth buying and reading.—*The Pioneer*, (Allahabad) Oct. 5, 1895.

The career of "An Indian Journalist" as described by F. H. Skrine of the Indian Civil Service is exceedingly interesting.

Mookerjee's letters are marvels of pure diction which is heightened by his nervous style.

The life has been told by Mr. Skrine in a very pleasant manner and which should make it popular not only with Bengalis but with all those who are able to appreciate merit unmarred by ostentation and earnestness unspoiled by harshness.—*The Muhammadan*, (Madras) Oct. 5, 1895.

"IMPROVED UNDAUNTED"

WATCH. Rs. 7.

Guaranteed three Years.

Strong, accurate, pretty, small, open-faced, nickel silver, keyless, short winding, patent, "NEW STYLE IMPROVED UNDAUNTED" watch, with hand setting mechanism, secondhand, for Doctors, ornamental bold dial, for Rs. 7 V. P. P. with an extra glass, spring, pretty box and full three years' guarantee. Warranted to stand the roughest use. Runs more than 28 hours with one winding. Will last a life time. Easily repairable. Others sell at double our rates. One watch free for the purchase of 8 at a time. Mr. Jno. Dickson of Haputal Railway, from Ceylon says:—It keeps splendid time and never stopped although it sustained hard knocks and jerks. x Dr. H. Moore of Royal Artillery from Poonamallee says:—I sold it for Rs. 16. x Pte. W. Hopkins of Sussex Regt. from Dumdum says:—I have sold it for Rs. 20. x Mr. T. B. Scott of Patna Opium Department says:—The watch you sent me some seven years ago is still keeping very good time.

Jewelled Ring Rs. 1-8-0. Real

Silver Watch Rs. 13. Real

Solid Gold Watch Rs. 24.

Pretty electro cased gold chain Rs. 1-8-0. Fashionable electro cased Gold Ring set with scientific diamonds, Rubies, Emeralds, at Rs. 1-8-0. Mr. G. Smith, Salt Inspector from Sankutia, says: "A German valued the diamond ring at Rs. 50 and ruby at Rs. 30." Key winding, Government stamped, solid silver hunting case, Royal watch with extras and full three years' guarantee, for Rs. 13. Pte. G. Hawkes of 2nd York Light Infantry from Parandhar says:—For the first one I got Rs. 25; the second one I sold to a Sergeant for Rs. 28. x Pte. H. C. Bishop of L. F. L. Regt. from Kamptee says:—A Corporal offered Rs. 30 for the very same watch, Gentlemen's open faced, keyless *real solid gold watch* Rs. 30; ladies' Rs. 24; both with extras and guaranteed for 3 years. Mind they are guaranteed to be of real solid gold. No agents kept, all goods sent only by us from Bombay per V. P. P.

WESTERN INDIA TRADING CO., BOMBAY.

GENUINE HOMCEOPATHY. A CARD.

Hem Chandra Rai Chaudhuri, L. M. S.

Homœopathic Practitioner,

May be consulted by letter or personally daily at his residence, 24, Mirzapore Lane, near Creek Row, Calcutta.

Novelty in Ayurvedic Medicine. AYURVEDIC PHARMACY.

36, Lower Chitpore Road, Foudzari
Bilaknana, Calcutta.

KAVIRAJ NAGENDRA NATH SEN, Physician, Surgeon, Accoucheur, practises the Ayurvedic system of medicine, after having obtained a diploma at the final examination of one of the Government medical Institutions of the country.

SPECIFICS

for all ordinary diseases, like Fever, Cough, Asthma, Phthisis, Diabetes, &c., including diseases brought on by irregularities of kinds. Catalogues, containing full accounts of diseases and remedies, are transmitted on application. Prescriptions, with or without medicines, sent to every part of India and Ceylon, Cape Colony, and the British Isles, on receipt (by post) of full accounts of diseases.

Thousands of unsolicited Testimonials from every quarter.

CATARRH,

Hay Fever, Catarrhal Deafness.

A NEW HOME TREATMENT.

Sufferers are not generally aware that these diseases are contagious, or that they are due to the presence of living parasites in the lining membrane of the nose and eustachian tubes. Microscopic research, however, has proved this to be a fact, and the result is that a simple remedy has been formulated whereby these distressing diseases are rapidly and permanently cured by a few simple applications made at home by the patient once in two weeks. A pamphlet explaining this new treatment is sent on receipt of 2½d stamp by A. HUTTON DIXON, 43 & 45 East Bloor St. TORONTO, Canada.

Scientific American.

VOL. XV.

CALCUTTA, SATURDAY, MAY 30, 1896.

WHOLE NO. 727.

MAIDES AND WIDOWES, AN OLD BALLAD.

IF ever I marry, I'll marry a maide ;
To marry a widowe I am sore a frayde ;
For maydes they are simple, and never will grutch,
But widowes full oft, as they saie, know to [] much.

A maide is so sweete and so gentle of kinde,
That a maide is the wyfe I will choose to my minde ;
A widowe is froward, and never will yeeld ;
Or if such there be, you will meet them but seeld.

A maide nere complaineth, do whatso you will ;
But what you meane well a widowe takes ill ;
A widowe will make you a drudge and a slave,
And cost nere so much, she will ever go brave.

A maide is so modest, she seemeth a rose,
When it first beginneth the bud to unclose ;
But a widowe full blownen full often deceives,
And the next winde that bloweth shakes downe all her leaves.

That widowes be lovelie, I never gainsaye,
But to [] well all their bewtie they know to display ;
But a maide hath so great hidden bewty in store,
She can spare to a widowe, yet never be pore.

Then, if I marry, give me a freshe maide,
If to marry with anie I need be not a frayde ;
But to marry with anie it asketh much care,
And some batchelors hold they are best as they are.

WEEKLYANA.

It is stated that possibly Röntgen's X rays may put an end to vivisection, as it will enable the physician to a great extent to see into the bodies of animals and of human beings. Did not, fifty years back, at a meeting of the Paris Academy of Sciences, a Greek physiologist, M. Eselija, announce that, by the aid of electric light, he had been enabled to see through the human body and to detect the existence of deep-seated visceral diseases? He had further followed the operations of digestion and of circulation and had seen the nerves in motion. What became of the discovery named by the Greek "Anthroposcope"?

"THE longest artificial water course in the world," the *Scientific American* is informed, "is the Bengal Canal, in India, which is 900 miles long. The next longest is Eris Canal, which is 333 miles long; each cost nearly ten millions dollars." What is the Bengal Canal in India? The writer probably means the Ganges and Jumna Canal, the work of Sir Probyn Cutley.

DEAFNESS. An essay describing a really genuine Cure for Deafness, Singing in Ears, &c., no matter how severe or long-standing, will be sent post free.—Artificial Ear-drums and similar appliances entirely superseded. Address THOMAS KEMPE, VICTORIA CHAMBERS, 9 SOUTHAMPTON BUILDING, HOLBORN, LONDON.

THE highest speed has been gained by a torpedo boat destroyer in the British navy. It is appropriately named Desperate, and was built by Thornycroft and Co., of London. It averaged a speed of 31.535 knots an hour on four consecutive runs, equal to nearly 36 miles an hour.

PROFESSOR Ramsay has written a book on the method of extracting from air the new gas, argon, and its property.

ACCORDING to the *Pharmaceutical Journal*, in the last China-Japan War, the Japanese surgeons used freely the ash of rice straw as a dressing for wounds, after they had been cleansed, and sublimate gauze or linen was then superposed and held in position. It is said that the ash proved a perfect antiseptic, on account of the presence in it of potassium carbonate. This is the cheapest of all surgical dressings on record.

IN 1846, there were in the United Kingdom 551 journals, 14 of them being daily, namely, 12 in England and 2 in Ireland. In 50 years the total number has swelled to 2,355. Of these, the daily papers are 156 in England, 19 in Scotland and 18 in Ireland.

SIR B. Baker, in his presidential address to the Institute of Civil Engineers, points out that enlightened men have not always been for progress, as for instance, "Smenton did not consider Watt's steam engine of any importance. Telford thought the Liverpool and Manchester railway would be of small use. Sir Robert Peel, by action in Parliament, prevented the building of a central station in London, where all railway lines would have had a common terminus. Lord Brougham tried to limit the speed of railways to thirty miles an hour, and some people say that, if Brougham failed, several modern railway managers have succeeded. Lord Palmerston opposed the cutting of the Suez Canal."

A BOSTON journal writes:—

"The announcement that Queen Victoria is to leave by will Osborne House to one daughter, the lease of Abergeldie House to another, and Balmoral, the royal residence in the Highlands, to the Duke of Connaught, recalls the fact that the man who would devour this particular widow's houses must make an uncommonly full meal. It was discovered a few years since that the Queen owned six hundred houses in various parts of England, not royal residences, but rent-yielding property, and that about six thousand houses had been built by crown lessees on building leaseholds held of the Queen. She then also had rents from markets and tolls from ferries, besides the proceeds of mines and other works upon her property. She had large estates in Yorkshire, Oxfordshire and Berks, valuable lands in the Isle of Man and in Alderney, Scotland, Ireland, and Wales. Of the New Forest there are two thousand acres of absolute and sixty-three acres of contingent crown property. Her Majesty enjoys income from the Forest of Dean, from several other forests and from rich properties in and about London. Osborne, on the Isle of Wight, and Balmoral, in the Highlands, are the private property of the Queen and are maintained out of her own income. But she has the use of a few royal palaces besides, and these are maintained by the nation at an annual expenditure ranging from 2,500 to 50,000 dollars. The Queen is in the occupancy of Buckingham Palace, Windsor Castle, the White Lodge at Richmond Park, and part of St. James's Palace. The remainder of the last named palace is occupied by other members of the royal family. Other royal palaces maintained as such, although not in the occupancy of the Queen, are Kensington Palace, Hampton

Subscribers in the country are requested to remit by postal money orders, if possible, as the safest and most convenient medium, particularly as it ensures acknowledgment through the Department. No other receipt will be given, any other being unnecessary and likely to cause confusion.

Court,—which, according to a recent estimate based on the statistics of eight or ten years, costs the nation on the average over 70,000 dollars a year—Kew Palace, Pembroke Lodge, the Thatched Cottage and Sheen Cottage, Richmond Park, Bushy House in Bushy Park, and Holyrood Palace. When she visits the continent, she has one great house or another, with whatever repairs and refurnishing are necessary to fit it for a temporary royal occupant, although for all this she pays out of her own income. Bagshot House, Gloucester House and Clarence House are palatial dwellings, occupied by various members of the royal family. The Queen has four rather old fashioned yachts, in which she makes her sea journeys, although the oldest of them probably is used seldom or never. The four cost originally about 1,375,000 dollars."

THE *Calcutta Gazette* of May 27 makes the following announcement:—

"No. 213 A.D.—The 22nd May 1896.—The following Subordinate Judges are appointed to be also Assistant Sessions Judges for one year, or until further orders, and are posted to the districts noted against their names:—

Babu Joges Chandra Mitter, Subordinate Judge, Bhagalpur,
Bhagalpur.
Babu Dwarka Nath Mitter, Subordinate Judge, 24 Parganas,
Saran.
Babu Syam Chand Dhur, Subordinate Judge, 24 Parganas,
Mymensingh."

THE Bakrid has not been a peaceful one. It proved more than usually bloody in two quarters. Here is an account from one.

"It appears that for some time past there has been bad blood between the Hindu and Mahomedan employés on both sides of the river in the vicinity of Barrackpur and Serampur. This feeling assumed a threatening aspect around Serampur (opposite Barrackpur) two days before the Bukr-Id festival and the Joint-Magistrate at Serampur addressed the officer commanding at Barrackpur and begged to have a military force prepared to cross over at a moment's notice to quell any disturbance. There are several mills in and about Serampur and the sub-divisional officer was afraid that the police at his disposal would not be sufficient to cope with any disorder which might occur among the vast population of mill hands. As it was feared that the Mahomedans employed in the mills on the Barrackpur side of the river would go over to the assistance of their co-religionists on the other bank a large native police force under three sub-inspectors was placed along the river bank near the Barrackpur shore mills to prevent any attempt to cross over, and so as to be prepared for any possible emergency that might arise in Serampur, boats were requisitioned and held in readiness at the main ghats to carry troops over if necessary.

The festival, however, passed over in Serampur without any disturbance. But the festival was on Sunday and troops were still kept in readiness on the Saturday, and fortunately so, because of the occurrences at Titagarh. On the evening of Saturday the 23rd a Musalman named Mohamad Hossein, a *raj mistri* working at the Standard Jute Mills, which are under construction, returned to Titagarh from a neighbouring village. He brought with him a cow which he had purchased for sacrifice on the following day, and which he stabled until the morrow, in the small yard attached to his hut. This hut adjoined the dwelling place of a Hindu, employed as a durwan with the contractors for the building on which Mohamad Hossein worked. The lowing of the cow attracted his attention and he ran off and told a brother durwan that a cow was haltered in the bricklayer's yard. Both the durwans called at Mohamad Hossein's place and demanded of him to tell them what he intended to do with the animal. He frankly admitted that he intended to sacrifice it on the following day. They warned him against slaughtering it near the residences of Hindus or in public. Fearing that the Mahomedan might slaughter the cow during the night, despite his assurances to the contrary, they induced him to allow them to keep the animal till the following day.

On the Sunday morning when the Mahomedan applied for delivery of his cow both the durwans refused to restore it to him. They told him, however, that they would pay him its cost. The owner refused the offer and as he could not obtain his property he reported the matter to one of the European assistants in charge of the works. This gentleman summoned the two durwans and ordered the restoration of the cow. Both swore that they had already delivered it to Mohamad Hossein. The gentleman did not believe this statement, so he told the Mahomedan to purchase another cow and that he would see that the cost be defrayed from monies due to the durwans. When the European assistant had moved away, the durwans addressing Mohamad Hossein cried out derisively 'Yes, go and buy another cow, and we shall rob (snatch away) you of that one too.' Shortly after this occurrence some of the clerks on the works called upon the European above referred to. They protested against the slaughter of any cows about the locality, because of the many Hindus residing there and most insolently concluded by saying 'even if you or any other gentleman wanted to do so we would prevent you.'

Shortly before noon Mohamad Hossein proceeded to a mosque to perform the obligatory religious services for the feast. When he had concluded these he proceeded to the nearest police outpost and laid a charge of theft against the two durwans. The sub-inspector in charge of the post, who by the way was a Brahmin, named Nironjon Banerji, took down the charge; he, however, desired the complainant to be seated and he would promptly summon the alleged offenders. A constable was despatched to call the durwans. After some time had elapsed the constable returned with a message that the durwans were then busy, but would attend at 2 o'clock. At that hour Mohamad

was again present at the police station but neither of the durwans turned up. On this the sub-inspector said that he would go and find them himself and he walked away from the station. Mohamad returned to his quarters and having aroused his co-religionists into a fury because of the trick that had been played upon him by the durwans, who had also defied the sub-inspector, the crowd armed themselves with sticks and chased the Hindus through the bazar. Here Mohamad came upon the sub-inspector with whom it would have gone hard had he not very discreetly bolted at top speed to the river side where a strong police force was patrolling the bank, for reasons already explained. The Hindus now began to arm themselves and convinced that a fight was imminent the sub-inspector above alluded to ran into Barrackpur and informed Mr. T. A. Kleyn, the Divisional Inspector and the Inspector of the Mills on both sides of the river, of how matters stood. Mr. Kleyn promptly got together forty native constables and while he hurried with these to Titagarh, scarcely two miles away, he sent the sub-inspector on to Captain Wake, the Cantonment Magistrate, to explain the situation to that official. Captain Wake immediately communicated with the officer commanding the station and urged the speedy despatch of troops to the scene of the disturbance. The half company of the Munster Fusiliers which were in readiness were at once ordered to Titagarh, and within a couple of minutes they were on the road at the 'Double.' Forty men of the Field Artillery, mounted on horses and armed with whips were also sent to the scene of the disturbance. The artillery men overtook the Munsters and reached the place where the two factions faced each other just about the time the police got there; the Munsters came up shortly afterwards, two of the number thoroughly overpowered by the fierce heat and the continuous run. These two were immediately sent back to Barrackpur in doodies. Lieutenant Blundell commanded the Royal Artillery party and Lieutenant Harvey the Munster Fusilier detachment, sent out on the occasion. The Artillery and Infantry having charged and dispersed the Mahomedan crowd and driven them from the village the troops with the police under Mr. Kleyn broke up into four parties and for some hours patrolled the four roads leading into Titagarh. The rest has already been told. Matters having apparently quieted down by eight o'clock, the main body of the troops were ordered back to Barrackpur, 20 men of the Munsters being left to guard the Mills, and assist the police. The troops had no sooner withdrawn when the Mahomedans returned and caused another disturbance. They were not, however, able to withstand the charge of the police and the Fusiliers and the large crowd of Hindus who charged them and drove them out of the bazar for the second time. Several huts were destroyed by the Mahomedans and much damage done to property. After their second dispersion the Mahomedans settled down for the night, sleeping away from their homes in the neighbouring jungles.

Early the following morning a company of the 8th Madras Infantry was sent out from Barrackpur to relieve the Munsters and the police. The Native troops remained in Titagarh until late in the evening, when they were in turn relieved by a force of armed police from Alipur.

As already reported only ten persons have been injured to any extent. All save one of these are Hindus. The exception is a Mahomedan who says that he was beaten by his co-religionists because he would not join the rioters.

Twenty people have been arrested, but only eight of these are the two durwans, who it is alleged stole Mohamad's cow and another Hindu. The remaining are Mahomedans. There is likely to be some delay in bringing the accused to trial as there is no magistrate in the sub-division in a position to try the case, and Government have been applied to for the deputation of a special officer to preside at the trial.

Mr. Westmacott, the Commissioner of the 24-Pargannas, who is out on tour, was in camp in the grounds of Government House, Barrackpur, and as soon the news of the disturbance reached him, he proceeded to Titagarh, and was a witness of what occurred."

There was another disturbance in another mill—the Lower Hughli Jute Mills, 8 miles from Calcutta down the river. Here too the military was called out. In this, as in the other case, the origin was a cow. The Mahomedans working at the mills had slaughtered an animal outside the mills premises, and some *Chamars*, to spite the Mahomedans, killed a pig within the limits of the factory. The Mahomedans shewed fight. The Magistrate of the 24-Pargannas and the Superintendent of Police hastened to the spot and with a number of police restored quiet. But the Mahomedans again grew sulky and threatened assault, when an appeal for aid was made to the Senior Military Officer at Alipur, who immediately told off 100 of his men—50 of the 8th Bengal Cavalry and 50 of the 5th Bengal Infantry. They had, however, little or no work.

THE Seals of Colootola live in their Free College. Founded by the founder of the family, Muttylal, in 1843, it survives to this day. In his time it had a good staff of teachers. The sons gave it a local habitation. It is now the turn of the grandsons to further improve it. With a fund set apart for its maintenance, the institution is a glorious monument of the Seals' charity, and may go down from generation to generation. We were glad to read that the Chief Justice, Sir Comer Petheram, had come to Halliday Street to preside at the last Prize Day of the institution. The report read gives no ambitious programme. The speakers advised the students to turn agriculturists, if not hewers of wood and drawers of water. The free

tuition given in the school, which is its chief drawback, as it scares away honourable students, students with Spanish notions of dignity, seems to have suggested that train of thought.

At the formal opening of the College on the 1st day of March, 53 years back, there was a respectable gathering of Europeans, ladies and gentlemen, and natives. The Chief Justice Sir Lawrence Peel was present and delivered an address.

THE limit of the spheres of influence of Great Britain and France in regard to Siam and the Upper Mekong having been fixed, the following Proclamation by the Governor-General of India in Council in the Foreign Department appears in the *Gazette of India* of May 23, 1896:

"Simla, the 22nd May, 1896.

No. 958-E—Whereas by a Declaration in regard to Siam and the Upper Mekong signed and made on the fifteenth day of January 1896, it was agreed between Her Majesty the Queen, Empress of India, and the President of the French Republic that the thalweg of the Mekong river should be the boundary between the possessions or spheres of influence of Great Britain and France, respectively:

Know all men, and it is hereby proclaimed, that the thalweg of the Mekong river from the mouth of the Nam Huok northwards as far as the Chinese frontier is the limit of the possessions or spheres of influence of Great Britain and France, respectively.

Also know all men, and it is further proclaimed, that the Governor-General in Council is hereby pleased to order that all lands and territories whatsoever situate within Her Majesty's possessions between the thalweg of the Mekong river as aforementioned and the existing frontier of the Shan State of Keng Tung shall henceforward from part of the said Shan State of Keng Tung."

NOTES & LEADERETTES,

OUR OWN NEWS

&

THE WEEK'S TELEGRAMS IN BRIEF, WITH OCCASIONAL COMMENTS.

AFTER sitting all night, the House of Commons have passed the Agricultural Rating Bill through the committee stage. Five members of the House including Messrs. Dillon, Tanner, and Lloyd George, have been suspended for a week for refusing to quit the House for a division as a protest against the Closure.

LI-HUNG-CHANG, who has been interviewed at Moscow, said that his only mission, apart from the coronation of the Czar, was to study European systems with a view to introducing reforms into China. The Chinese Government, he said, had no treaty with Russia, but was entirely in accord with her in every respect, and desired similar excellent relations with France. It was difficult, he said, to ascertain the relations with Great Britain until he had visited London.

THE Transvaal Green Book has been published, and includes a copy of a telegram from Dr. Jameson to the Chartered Company at Capetown saying that Mr. Newton, Imperial Commissioner at Mafeking, will help as much as possible. The meaning is doubtful, but the Transvaal apparently regards Mr. Newton as implicated in the raid.

The Cape House of Assembly has rejected by sixty to eleven votes the motion of Mr. Merriman demanding the revocation of the South Africa Company's Charter, but has adopted an amendment condemning Dr. Jameson's raid and demanding a searching enquiry into it, and the prevention of its repetition.

THE insurrection among the Dugans in North-West China has been renewed, and the rebels have captured the town of Kiayukwan.

THE situation in Crete is grave, and the insurrection is extending to the eastern districts of the Island. The insurgents, who are besieging the Turkish garrison at Vamou, have defeated a Turkish force, which was attempting to relieve the Turks, who lost heavily. The Porte has authorised the convoking of the Cretan Assembly on Thursday next. It is believed that this will appease the people. Fighting between the Turks and the Christians is going on in the streets at Knia. A French cruiser has been despatched to the scene of the disturbances to render assistance to the foreigners. Advices from Candia state that the Turkish soldiery at Canea on May

25 broke loose and massacred and pillaged the Christians. The cavasses of the Greek, French, and Russian Consulates were among those killed. Fighting is also proceeding at Retimo and Sphakia. The British Mediterranean Squadron has sailed for Crete, and all Foreign Consuls have telegraphed to their respective Governments for warships. The armoured battleship Hood is the only British man-of-war so far ordered to Canea. The latest news state that things are quieter, but the authorities have forbidden all letters and telegrams except official ones. Abdullah Bey, the newly appointed Governor, has started to take up his duties. The Porte has despatched a reinforcement of troops to Crete.

THE *Gaulois* publishes an account of the interview that has taken place at St. Petersburg between the Czar and M. Flourens, in which His Majesty declared he would support France in the Egyptian question to the end.

THE coronation of the Czar was completed on the forenoon of May 26. There was a splendid pageant, and the ceremony was most impressive. Bright sunshine prevailed throughout. To distinguish the occasion, the Czar has issued a Manifesto in which he remits all arrears of taxation, and reduces the land tax by a half for ten years. He also grants amnesties to all minor offenders, and remits and reduces other sentences. With regard to political exiles he authorises the Minister of the Interior to extend further remissions where deserved.

France has paid special honours to the coronation. Paris was decorated and the Minister for War granted a day's leave to the troops, and remitted the sentences on certain offenders.

COLONEL Plumer, with a strong patrol, left Buluwayo to clear the country round the town, and has had a slight engagement with the Matabele. Mr. Cecil Rhodes with his column is expected at Buluwayo in twelve days. The joint forces of Mr. Cecil Rhodes and Mr. Napier about eight hundred strong, are laagered near the Pongo territory of the Shangani river. Mr. Rhodes, addressing the men, announced that the force would be divided into two columns, and would sweep the Matabele into the Mutoppo Hills, where they would be repressed at leisure. It was intended, he said, to establish forts in different parts to protect the settlers, who would be fully compensated for their losses. He thanked the Dutchmen present, especially for their services. Mr. Napier afterward, when advancing towards Buluwayo, attacked and routed a large impi in the Insiza Mountains, killing two hundred. Napier lost five troopers in the engagement.

Colonel Plumer with his force has defeated the Matabele three times with heavy loss.

CHOLERA is spreading alarmingly in Cairo. A private soldier in the Connaught Rangers has died from it. Seventy deaths took place during Friday and Saturday, besides forty-five deaths in Alexandria in the same time. Visitors are taking flight.

ST. LOUIS, in Missouri, America, has been fearfully devastated by a cyclone. It is the worst that has occurred since that of Johnstown. 523 people have been killed and 724 injured. The damage to property is estimated at five millions sterling.

THE Prince of Wales, on the 28th of May, opened the annual military tournament at the Agricultural Hall, Islington. It eclipses in variety of interest any of its predecessors. Eight hundred men represent the British Army and the forces in India, Ceylon, Hongkong and other Colonies in the grand pageant, called "Sons of the Empire," which is a great success.

M. GEORGES Cochery, the Minister of Finance, proposes a tax of four and-a-half per cent. on French rents except in the case of those holders who live abroad. He proposes a similar tax on dividends in French or foreign Companies.

DEAFNESS COMPLETELY CURED! Any person suffering from Deafness, Noises in the Head, &c., may learn of a new, simple treatment, which is proving very successful in completely curing cases of all kinds. Full particulars, including many unsolicited testimonials and newspaper press notices, will be sent post free on application. The system is, without doubt, the most successful ever brought before the public. Address, Aural Specialist, Albany Buildings, 39, Victoria Street, Westminster, London, S. W.

WHEN the water scarcity occupies so much public attention, any information regarding what is being done here and there to meet it, cannot fail to be of interest. Indeed, the gravity of the situation was never before realised as it has been now, so that there must be great advantage in knowing all about the different methods by which the difficulty is being encountered according to the differing conditions of different places. The public are aware of the action taken by district officers in this behalf. We have today to add information of a very interesting kind of what is being done in some of the Factory-towns in the neighbourhood of Calcutta. We learn from Baranagar, the seat of a great jute factory, that the dried up tanks are being filled with good water from the mill-engines, through the ordinary municipal drains, these being only cleaned, and some connections with the mills on the one hand, and the tanks on the other being all that is necessary. Messrs. Thoms and Macpherson of whose kind efforts for supplying their operatives with drinking water we had occasion to speak some time before, have entitled themselves to the lasting gratitude of the townspeople of Baranagar by the zeal with which they have thrown themselves into this matter of converting dry tanks into reservoirs full to the brim of good water. Another incidental advantage of the arrangement is the purification of the entire drainage system through which the water is carried.

We understand the same thing has been done at Rishra, Serampore and some other manufacturing towns.

BABOO Monmoth Nath Bose, whom we introduced to our readers last week, writes to say that, since the introduction of the Road Cess Act into the Balasore District, the Zemindars of Pergana Ancoora have paid in all Rs. 72,000, but upto date, not more than Rs. 3,000 have been spent for the material improvement of this part of the District. The road leading from the zemindary kutchery at Ancoora to a point on the road to Bhudruck, which is the Sub-divisional headquarters of the Balasore District, is only half a mile. It is a kutcha road and has no culverts. What is done during the cold season is that only *changars* or sods of earth are thrown upon the road and not rammed down, tuffed or levelled. The consequence is that the road becomes almost impassable from December to May. Both the District officer and the Divisional Commissioner are natives. Will they take pity upon the inhabitants, who have to use the Basudebpur post office which is only at a distance of a few feet from the Zemindary kutchery and whose boys have to resort to the Basudebpur aided school which is close to the Post office, and cause this half a mile road to be raised and made higher and bridged with culverts?

The other works which deserve attention are old tanks. If these be deepened or reexcavated, much of the curse of water scarcity will be removed.

NEXT year, the Presidency and Rajshahye District Boards will be called upon to recommend a member for nomination for the Bengal Legislative Council. To prevent a tie, as in the two elections in the Dacca and Bhagalpur Divisions, Mr. Cotton, Chief Secretary to the Bengal Government, before going on leave, asked, by letter No. 97 dated Darjeeling, the 23rd April 1896, now published, the Commissioners of Divisions for suggestions. Under the existing rules, the voting power of municipalities is calculated by their income, the votes ranging from 1 for income of Rs. 5,000 and less than Rs. 6,000, to 8 for income of Rs. 2,50,000 and over. Each Municipality elects one delegate only, and that delegate exercises all the votes of that municipality. The objection taken to this method of voting is that "it places it in the power of the delegate of one Municipality to secure the return of his nominee against the votes of the delegates of 7 or 8 municipalities." There is no disposition in the Bengal Government to alter the procedure, for the Chief Secretary remarks, "it must be remembered that any system under which municipalities must be treated as equal would be open to great and reasonable objection and that it would be obviously unfair to give an equal vote to the representative of Darjeeling and Nator, Patna and Jugdispore, or Howrah and Tumlook. No scheme can be devised to which some objection will not be raised; but the Lieutenant-Governor believes that the existing method of election in the case of municipalities has worked well and has given satisfaction." Sir Alexander Mackenzie evidently thinks that the vote of Mr. Brown, Jones or Robinson should not have equal value with that of the Grand Old Man of England. Even in the election of mem-

bers for Indian Councils, municipalities should be distinguished by their worth or income. That principle has been recognized in the Calcutta municipal elections. The old law of one man one vote has been dispensed with, and voters now vote according to their income, that is, the rates paid by them. The Commissioners of Divisions are asked if they "are in a position to suggest any modification of the existing orders, either with a view of ensuring a better representation or minimising the chance of a tie." The letter continues:—

"In the case of District Boards a different principle is followed. The whole question was under discussion in 1893, and a sliding scale of voting power, according to the ordinary income of the District Boards, was suggested as follows:—

Boards with an ordinary income

Rs.	Rs.	No. of votes.
From 50,000	to 1,00,000	5
" 1,00,000	" 1,50,000	8
" 1,50,000	" 2,00,000	10
" 2,00,000	" 3,00,000	12
Over 3,00,000	15

An alternative sliding scale was also proposed, in which one vote should be allowed for every fifty thousand rupees or part of fifty thousand rupees of ordinary income. These schemes were, however, not accepted and eventually it was laid down that all districts were considered by the Government to be of approximately equal importance, and that each District Board should appoint one representative having one vote.

It so happened that at the elections of 1893 this decision did not raise the question of a tie. There are three Boards in the Chittagong Division and seven in Patna, and the numbers being uneven in both cases, there could be no tie. But this condition of affairs was reversed in 1895, when it became the turn of the Dacca and Bhagalpore Divisions to be represented. In each of these Divisions there are four District Boards, and the election in both Divisions resulted in a tie. In Dacca the difficulty was got over by the voluntary withdrawal of one of the candidates, but in Bhagalpore no such solution offered itself, and the Government were obliged to resort to the nomination of a candidate.

The Lieutenant Governor observes that if either of the sliding scales proposed in 1893 had been accepted, a tie in 1895 would have been avoided.

There are five Boards in the Presidency Division, and the question of a tie could not arise there, but there are six in Rajshahye (excluding Darjeeling), and if there is no change in system the difficulty may recur in that Division. The sliding scales proposed would operate as follows in these Divisions:—

		I	2	3	4
Presidency	{ 24-Pergunnahs ...	1,66,000	10	3	4
	{ Jessore ...	1,28,000	8	8	4
	{ Nuddea ...	1,17,000	8	8	3
	{ Khoolna ...	1,04,000	5	2	3
	{ Moorshedabad ...	99,000	5	2	3
Total	39	15	15
Rajshahye	{ Rungpore ...	1,72,000	10	3	4
	{ Dinagepore ...	1,26,000	8	8	4
	{ Rajshahye ...	1,08,000	8	8	3
	{ Julpigorie ...	89,000	5	2	3
	{ Patna ...	84,000	5	2	2
	{ Bogra ...	64,000	5	2	2
Total	41	16	16

It will be noticed that according to the alternative scale, under which one vote is allowed for every half a lakh (or part of half a lakh) of ordinary income, the contingency of a tie is not excluded in the Rajshahye Division, while the higher number of votes given in the first scale does apparently shut out the risk as completely as it is possible to do so. But in any case the adoption of one or other of these schemes suggests itself as a preferable arrangement to that which is now in force. It is most important to avoid the risk of a tie in future, and the question to consider is how this can best be done. You are, therefore, requested to favour the Lieutenant-Governor with the benefit of your advice, both in regard to the number of votes which should be given to each electoral representatives, and the principle on which they should be allotted. The standard of income has been adopted in the case of municipalities, and it appears better to adhere to that than to resort to the alternative of population. It must be remembered that although in the elections for representation in Council where the bodies and interests to be represented are so different, very much symmetry cannot be expected, and there are other elements to be taken into consideration besides income and population, yet that when the unit of the electoral colleges has been determined on—and in Bengal it has been finally decided that they shall be Municipalities and District Boards—it is desirable that as far as possible the same principles should guide the Government in calculating the basis of representation in both cases."

If it is intended not to disturb the existing procedure, the simplest course is to allow a casting or second vote to the Chairman. The rules are insufficient, if not inoperative, which do not provide against a tie. The votes must always be uneven to avoid the catastrophe of a tie. When the Chairman has too many votes they may be reduced by one, and where he has not more than one, it may be raised by another number.

LAST two years, there was no Hare Anniversary. We are glad, therefore, to announce that the Committee have arranged for the next observance on Monday next, at the Theatre of the Science Association, at 6 P. M. The subject fixed is the Medical College of Calcutta. David Hare was as much interested in this educational institution as in any other or the one bearing his name. If other schools and colleges were his love, with the Medical College he was officially connected.

THE Commissioner of Police has run up to Darjeeling, for sleep we suppose, for, here in Calcutta we have sleepless nights on account of the stifling weather. Sir John Lambert is not, however, idle up in the hills. Not that he takes long walks and rides, but keeps himself informed of what passes here. Further, he is in communication with his Deputy regarding the license fees and Police charges for marriage or musical processions in streets. We hope he will satisfactorily settle the whole question before he comes back and save us the necessity of returning to the subject.

THOUGH the Birthday Honours are not as plentiful as blackberries, from which they differ but little, Bengal has no reason to be dissatisfied with the number. For that Presidency there are one K.C.S.I. and one C.I.E., one Maharaja Bahadur, one Raja, two Khan Bahadurs, six Rai Bahadurs, one Khan Saheb, and two Rai Sahebs. There is no disposition in any quarter to grudge the honour of Knighthood done to the Chief Commissioner of Assam about to retire, who, if the usual rule were observed in his case, would have been a Knight ere long, and that of the Companionship to the Behar Volunteer who, besides contributing much to the amateur defence of the country, is otherwise held in great regard. The title of Maharaja Bahadur need not cause any surprise, unless the present chief of Sirgajah, whom we do not know, is especially disagreeable to his tenantry. Such titles are matters of courtesy, and but for the British interference, matters of course, at least locally. Whether the British recognize it or not, Maharaja Rughonath Saran Das is a Maharaja or Maharaja Bahadur all the same. Nor is it any distinction to him to be catalogued with the titled Zemindars of Bengal.

The Rai Bahadur lifted to Rajaship has been exceptionally fortunate. But what will he do with it? Rai or Raja, he has been a Bahadur always, and no guinea stamp will make him more than the guineas he had made to flow from his clients' to his own pockets had made him. Let us hope he will prove a Raja.

The Indian Subordinate Medical Establishment has been given a Khan Bahadur and a Khan Saheb. The services of the Honorary Presidency Magistrates of Calcutta have been recognized in those of the Registrar of their court, or rather their guide and philosopher, unless the honour be a solace to him for his late defeat at the election of the Municipal Vice-Chairman.

The Senior Superintendent of the Calcutta Police is not likely to appreciate his honour when Inspectors have been placed above him. The distinction to the Government Pleader, Cuttack, comes late. He had long earned it, but not being ambitious and content to do his duty faithfully and conscientiously he has been outdistanced by many behind him. The little distinction served to the Inspector of Schools, Eastern Circle, although sure to be taken as an honour done to East Bengal, is small indeed, considering the estimation in which he is held, and the post held by him, though for a very short time, in the service of the Maharaja of Tipperah. That service itself, however short or however performed, is an honour in that part of the country to a dweller thereof which will distinguish the holder's family from generation to generation. Perhaps we err in thinking that Rai Sahebship is a trifle or that it is the lowest rung in the ladder. A Zemindar in the Bhagalpur District has also been honoured with it.

A distinction had hitherto been made between the two Orders and the Indian titles usually conferred. A Raja made a K.C.I.E. was verbally assured that his knighthood was as good as that of another Raja of the other Order. Since the commencement of the present year there has been an attempt to formally equalize all titles. On New Year's Day, we had the spectacle of a Companion of the Most Eminent Order of the Indian Empire made a Rai Bahadur. What is his place in a durbar? Will he be given a seat among the C.I.E.'s or the Rai Bahadurs? How again is he to be addressed?—C.I.E. and Rai Bahadur or for brevity C.I.E. and R. B.?

THE death of his wife, at his time of life, in his retirement from Government service though not from that of the Cooch Behar State, is a terrible blow to Babon Kalicadas Dutt, the Dewan of that State. She had been ailing for three years. In November last, the old school practitioners had given her up. Homœopathy kept her up for another six months, and to the grief of her husband, her sons and daughters, relatives, friends and neighbours and those who knew her, she suddenly passed away on Monday last. The many good qualities that she possessed as a loving wife, an affectionate mother, a good neighbour, a kind mistress and an obliging friend, heighten the grief of the surviving husband. But that survival ought to be a consolation to him, a devoted husband, in that it saves her from widowhood than which there could not be a greater calamity to a Hindu lady in a society where widow marriage is not practised. The sharing of his sorrow by so many is another support to him. The very encouraging telegram of condolence that the Dewan has received from his master, the Maharaja, proves that he had the highest regard for the deceased lady. The Maharani of Koch Behar, too, not to wound her feelings, never visited her except in *saree* and as a *bahu*.

It is not many months that our much respected neighbour, Babu Buddynath Brohmo, another retired officer of Government, lost his wife and soon after his only son, and he bears the load of grief like a hero. The wife was indeed a godsend to him. Though the mistress of the household, she remained a *bahu* to the last without the least self-consciousness and always equally attentive to all the inmates of the household. Her final departure from the world was very pathetic. She took leave of her husband and apologised and asked forgiveness for the many sins of commission and omission on her part. We are afraid we are obtruding too much upon private sorrow and treading forbidden ground. We dwell upon the virtues of these two old type zenana ladies because they were model wives and we wish that their examples may not be lost on the present generation.

A CONTEMPORARY begins a sketch of the leading events of the life and rule of the present Gaekwar of Baroda in these words:—

"His Highness the Maharaja Sayajee Rao Gaikwari, G.C.S.I., of Baroda, Sena-Khaskel-Samsher-Bahadur, Fuzund-a-Khas-a-Daulat-a-Englishtia was born in the village of Kavlana in the Mulegan taluka of the Nassik district, Bombay Presidency, on the 11th of March 1863 of comparatively poor parents. In 1875 when he was twelve years old a strong wave bore him aloft from his obscure position and deposited him at once on the summit of rank and wealth. The ex-Gaekwar Mulhar Rao was deposed on the 14th of January 1875 and the management of the State was temporarily assumed by the British Government. On the 22nd of April Mulhar Rao was deported to Madras. On the 10th of May Sir T. Madava Rao, the great Indian statesman who had distinguished himself in Travancore and in Indore, was appointed Minister and on the 27th of May 1875 Gopal Rao Gaikwar was adopted by Her Highness the Maharani Janna Bai Saheb, C.I., on which same day he was proclaimed ruler of Baroda under the style and title of Sayajee Rao III."

The Maharaja and his two brothers were literally street boys when they were brought over by the Police in search of a Gaekwar to the Residency and rejoiced at the clothing and sweets furnished them by Dewan Manibhai Jushbai. The Government of India selected the youngest brother for the throne on the ground that the minority of the Prince would be the longest. The Maharani would have the eldest for the opposite reason. After a deal of haggling, the choice closed on the second, who was proclaimed Gaekwar. The mother does not seem to have followed his sons to Baroda. At any rate, she died in her native place. The elevation was too great for Gopal or Guppa, and if it has not turned his head, it does not keep it all right.

SIR Comer Petheram has resigned his office of Chief Justice of Bengal from November next. There is no knowing yet who will succeed him.

THE Pleaders of the Bengal High Court have applied for permission to wear gown like their brethren in the other Presidencies. The Chief Justice favours their aspiration, but there is disinclination in some quarter to grant the gown unless the wearers take to European dress.

DEATHS in Calcutta during the week ending 23rd May numbered 280 against 305 and 361 in the two preceding weeks. There were 71 deaths from cholera, against 86 and 119 in the two preceding weeks, and three deaths from small-pox as in the previous week.

REIS & RAYYET.

Saturday May 30, 1896.

BRAHMOS AND THE STAGE.

IT is the misfortune of India that she should, in most things, stand to the English race in the relation of a younger sister on whom devolves the clothing outgrown by her elder. Take municipal institutions as an example. The governing bodies of mediæval cities played an important part in the history of western civilisation. They served as ramparts to restrain the lawlessness of feudal kings and barons; and through long centuries they alone kept the lamp of liberty dimly burning. But the political advantages attending their rude attempts to regulate civic life were very dearly bought. Sanitation was then undreamt of. The smells with which the narrow streets reeked were such as no modern nasal system could support; and so the black death, the sweating sickness and half-a-dozen other terrific forms of contagious diseases periodically avenged the disregard of nature's laws. At last it dawned on the western mind that the management of a modern city with a population running into millions is an affair for specialists. The old corporations are gradually being dispossessed by bodies which, *qua* their executive functions, are in the hands of men who have made a life study of the extremely complex problem of social life. Indian towns, while they present far greater difficulties than those of the icy north, have inherited methods of government elsewhere regarded as obsolete. They are still under the hoof demagogues—men destitute of experience in science or administration, who seem to regard a municipal council chamber as a sort of superior debating club. Incapable of transacting business with despatch and precision, they are for airing their newly found eloquence to the detriment of the interests committed to their charge.

So with the views entertained by a small but noisy clique of would-be reformers with regard to the Drama. Their apostle, Babu Keshub Chunder Sen, was far too cultured and enlightened not to have perceived its uses; and he was one of the friends of the Bengali stage, and an amateur actor of great merit. When, however, a quarter of a century back, he paid a visit to England, he fell into the hands of the Low Church and Non-conformist sections which still exercised a powerful influence over public opinion. An abhorrence of the stage in every form was one of their tenets—a legacy from the Puritans of old. Everybody knows how bitter the self-accusations were of Bunyan for his habit of bell-ringing in early years. Trifling weaknesses of conduct were exaggerated into grave sins. Music was condemned as something belonging to the enemy of man. A ball or a masquerade was the reproduction on earth of the sports of Pandemonium. The very charms of poetry and polite literature were regarded as seductive pleasures against which all virtuous hearts should be steeled. We are far from undervaluing Puritanism as a social and political force. It did great things in its day and saved Europe from sharing the fate of Spain. But that day had nearly passed away at the time of the Brahmo apostle's advent. Broader and more enlightened views were beginning to assert themselves. Men began to see the folly of allowing the theatre to develop on lines beyond the sphere of influences making for social progress. They recognized the fact that the stage, if

properly conducted, is a great popular educator, spreading as no other agency can spread the doctrines of light and sweetness. Reading the lessons of history, they admitted that the incomparable greatness of ancient Greece was due to her heart-whole devotion to the drama: and that the burning patriotism which enabled their grand-fathers to defy Europe in arms was fostered by the same influence. The triumph of common sense has brought with it results that can be appreciated by only those who knew the London playhouses a generation back and who have watched the gradual change that has come over English-speaking peoples since the drama began to take rank as a national institution. Keshub Chunder Sen, however, returned to this country full of the spirit which animated his English friends. He forswore the theatre as a thing accursed, and his followers still blindly maintain the same attitude towards it.

Their principal objection seems to be that actresses being "fallen women" (to use the sickening cant of the unco guid), they cannot be seen or listened to without catching moral contamination. The theory is too absurd to need refutation. In the first place, the individual and the artist are two very different things; and the latter must be judged by the public on only the merits of her performances on the public stage. If they are modest as well as full of grace and charm, the result to the pure-minded spectator is distinctly elevating. He leaves the theatre with some glimmerings of a higher ideal than had yet penetrated his purblind nature. The man who, without being moved by the lamentations of Sita personated by an actress of histrionic powers, chooses to think the while of the life she leads in private, cannot fail to incur the charge of downright stupidity with every sensible person. By doing what he does, he simply shuts himself out from an intellectual and æsthetic enjoyment of a very superior kind. Yudhishtira, with all the dignity of a king, trying to dissuade Bhima from insulting a fallen foe by striking his crowned head with the left foot, is so ennobling a sight that the spectator who, without feeling himself elevated by it, seeks to pry into the life, out of the stage, of the actor, must be held to be destitute of a capacity for higher enjoyment. The man who fails to laugh at the sight of Bottom strutting on the stage and suggesting devices for introducing a wall and moonlight into a scene, or offering to play the lion in such a way as to make the duke cry—"let him roar again, let him roar again,"—should, indeed, be pitied. Our commiseration, again, would be much deeper, if it appeared that the incapacity to laugh had arisen from the spectator's knowledge that Bottom, after all, was not an Athenian weaver but only a contemporary against whom there were dozen decrees of the Small Cause Court. Indeed, one whose mind becomes diverted to such low thoughts amid surroundings of such a pleasing and elevated character, has not been unfitly compared by the Persian poet to a filthy porker, which, when admitted into a flower garden, avoids parterres gay with perfumed flowers of various kinds, and searches for some nook reeking with the dirt of the foulest description. Nor, again, it should be remembered, is the stage less beneficent to the unfortunate creatures rescued by it from a life of infamy and placed in a position rendering it possible for them to earn an honest and avowable living. Have we so many professions open to women that one of the most

lucrative and joy-diffusing should be closed to them?

If a theatre were established in every town of the Empire it would no longer be possible to affirm that, in spite of his so-called high education, the average Indian was still in the rudimentary stage in all that appertains to the cultivation of his artistic faculties. And much more than this would a well regulated stage bring with it. The true national spirit would be fostered. An Aryan spectator is reminded that time was when his ancestors were not sunk in civic and intellectual sloth: did not struggle for the privilege of eating a foreign rulers' salt, nor place their chief delights in the chicane and barren triumphs of the law-courts. For a few, fleeting hours at least he forgets his dull and sordid home surroundings and lives the lives of kings, saints and heroes brought as it were a phantasma before him. Let those who echo the parrot cry of the corruption of the stage clear their minds of cant, if only for an evening, and visit the Star, the Royal Bengal or the Minerva Theatres. We venture to affirm that their views would gain in breadth and charity, and that they would admit that the healthy craving for amusement is fairly met in our capital.

A MUNICIPAL ELECTION SCANDAL.

IN 1892, we noticed the curious election of a peon of a Raja in the District of Rajshahi. This worthy came in through one of the bye elections in a Sub-division where the Raja has large landed property and much local influence. The Raja conceived a dislike for the Municipal Commissioners or their ways and proceeded to mark his displeasure in a strange way. Unlike the Raja of Krishnagur, he was wise enough not to offer himself for election as a Commissioner to be elected by the Commissioners as their non-official head, but found for them a compeer in the person of an orderly of his own. To the first meeting after his election the peon Commissioner, gorgeously dressed, came in the Raja's carriage. The other Commissioners, who had hoped that they would be saved the disgrace of deliberating on public affairs with a peon of no education and of inferior social status, were disappointed. In that hour of trial they hastily decided to depart without meeting. The matter was then brought to the notice of the Sub-divisional officer, who, sympathising with them, applied for advice to Government through the proper channel. The result was that, under the advice of the Local Government, the district authorities induced the Raja to make his orderly resign the commissionership. An amendment of the Bengal Municipal Act was, we believe, then under consideration, and it was hoped that some provision would be introduced in it to prevent manœuvres with the sinister object of offending and insulting respectable people who willingly devote their time and energy to public business, and in the interest of the election system itself. On a representation, Mr. Risley, the Municipal Secretary, in charge of the Bill, promised to consider the matter which, however, he said, was beset with great difficulties. Those difficulties prevailed and no notice was taken in Council of the Rajshahi scandal, probably because it was a solitary instance. One of the drawbacks of elections in this country is the loosening of the hold on the pushing low and vulgar. It was mainly this consideration which drew forth such opposition to Lord Ripon's scheme of local self-government and which still keeps away many good and worthy natives.

One scandal succeeds another. We will now mention another of a different kind in a different district. Municipal Commissionership, Honorary Magistrateship and other honorary appointments, besides being posts of honour and dignity as of usefulness, have of late become a source of income. The candidates are numerous in every District and Sub-division, and every thing fair and unfair is done to secure the posts. Large amounts are spent and all kinds of recommendations are brought to bear upon the local authorities. Under such circumstances it is evident what value is attached to the offices of Chairman and Vice-Chairman of Municipalities or District or Local Boards. There are no doubt honest men but all of them are not fit for the work, while others have hardly any leisure for it. Members, whether worthy or not for the duties, without any visible means of their own, have been known to live like Nawabs, and it is an open secret that the principal source of their income is the Municipality or some other Board to which they belong. Nor are the local authorities ignorant of such instances, but they never trouble themselves about them as long as the fortunate incumbents can play their cards cleverly and please them in other ways. It is the interest of the men of this class to stick like leeches to their honorary posts of emoluments. They know how to fight an election, and not only they themselves are returned but they also bring to the Boards members of their own choosing who, following them as their shadow, support their election as Chairmen or Vice-Chairmen and uphold all they do. Then it is the interest of these Chairmen and their Vices to get such men elected without any regard to their qualifications other than that of subserviency. For this they hesitate not to abuse their powers and employ the municipal servants of all grades to secure votes for their *aphawasta* nominees.

During the last election in one of the largest Municipalities in the Patna division, such unscrupulous but froward men had their way and respectable people had to retire. One of the elected was a bad character whose name was for a long time on the black register of the Police, who was known as a receiver of stolen property and who was shunned by the respectable part of society. This man has been on the Board for the last two and half years and is tolerated by the Commissioners themselves and the executive of the District. The Commissioners justify their inaction by saying that it is the law of the *sarkar* that has brought him in and that it was not open to the Board to send him away. A Commissioner being asked how with any self-respect he could associate with a black sheep in public business, replied that "if Government want that we should associate with sweepers what can we do? When the Magistrate Saheb has no objection to sit with a thief or a cutthroat at a public meeting, who am I to object? am I a greater person than the District Magistrate?"

It is possible that the official Chairman has never been informed of this fact and is still ignorant of it. Is the law so bad that bad characters can not be excluded or expurgated from the Boards? Then, surely, it needs revision. There will be an election before the year closes, and there is a Bill in the Bengal Legislative Council to amend the Municipal law.

Under the old system when Government exercised the full power of appointment, we had had sycophantic or *aphawasta* Municipal Commissioners. With the privileges of election, we are no better,

we make worse selections. The experiment of local self-government not only suffers from such unsavoury successful candidates but the general administration of municipalities is opened to much abuse.

Even if the law gave no power, Government is not so powerless as not to be able to prevent the spread of the Behar scandal. Did it not nip the Rajshahi scandal in the bud? Perhaps the Commissioners are more to blame than Government. If they had resented the election of the bad man, the district authorities could not be deaf to their complaint.

The Act empowers the Local Government, "if it thinks fit, on the recommendation of the Commissioners at a meeting, (to) remove any Commissioner appointed or elected under this Act, if such Commissioner shall have been guilty of misconduct in the discharge of his duties, or of any disgraceful conduct." Objection being taken in Council to the term "disgraceful conduct" as too vague, the Advocate General had replied that the term was not in any way vague or indefinite. "It was conduct unbecoming the position of a Commissioner." The expulsion of a Commissioner must therefore be initiated by his colleagues. It is doubtful also if under this section a bad character elected as a Commissioner can be removed unless for misconduct as a Municipal Commissioner. His bad character *per se* is no bar to his candidature or election. Every candidate for Government service is required to produce a certificate of good birth and good conduct. In the election of Municipal Commissioners such safeguards are not deemed necessary. A thug or a cheat is as competent as any honest citizen for local self-government. Only he must not be found so or denounced at a meeting of his colleagues when only he will render himself liable to be treated as a felon and deprived of his powers. Probably, it was meant that the electors would exercise sound discretion in choosing their representatives and that municipal boards would prove so many reformatories for grown up criminals.

Official Paper.

WATER-SUPPLY AND WATER CESS.

LOCAL SELF-GOVERNMENT.

Circular No. 10 T.—M.

From H. H. Risley, Esqre., C.I.E., Secretary to the Government

of Bengal,

To all Commissioners of Divisions.

Darjeeling, May, 22, 1896.

Sir,—I am directed to forward, for your information, copies of the papers noted in the margin, relating to the prevailing scarcity of drinking water in many districts of Bengal. I am to observe that, taken as a whole, the correspondence goes to show that, although the scarcity has been to some extent exaggerated, there can be no doubt that large tracts of country may in years of unusual drought be in real danger of visitation by a water famine which would cause serious and widespread suffering, if not actual loss of life. Such a failure of the supply of drinking water for the daily use of men and animals is in some respects more difficult to deal with than a failure of food-crops. When the water-supply breaks down there is no general warning of what is about to happen, such as is given, in the case of ordinary famine, by the rise of prices; there is no accumulated stock of water to draw upon; nor, if there were, could it be imported into the distressed area except on a small scale and at very heavy cost. Apart, moreover, from the risk of the water-supply actually failing, it is certain, whenever an abnormally dry season occurs, that the people will be driven to use polluted tanks and wells, and that thus epidemics will be started which will tend to spread beyond the tract in which they first arose. There will also be great mortality among cattle. Even in ordinary years serious evils constantly result from the want of proper conservation of the existing sources of water-supply, and without entering on controverted questions of causation, there can

be little doubt that much of the cholera, dysentery, and malarial fever that prevails is traceable more or less directly to the use of bad water. Owing mainly to want of funds, sections 88 to 90, 118 and 119 of the Local Self-Government Act, which purport to deal with this subject, have in practice remained virtually a dead letter, and must be pronounced useless in their present form.

2. In order to initiate effective action for the improvement of the local water-supply, it is clear that the subject must be dealt with in a systematic manner, in order that steady progress may be made from year to year towards the completion of a definite scheme. With this object the Lieutenant-Governor has ordered the registration of all sources of domestic water-supply so as to ascertain and record permanently to what extent (a) municipalities, and (b) rural villages containing more than 100 houses, already possess an adequate supply of wholesome drinking water, and what is being done to meet their requirements in this respect. It is obvious, however, from the mere statement of the case, and without waiting for the statistics which these orders will produce, that the task is a heavy one, and that very large expenditure will be required to produce an appreciable result. As things stand now, the only resources that can be drawn upon for such a purpose are (1) private liberality, (2) loans under the Land Improvement Act, (3) funds raised by Union Committees under section 118 of the Local Self-Government Act, (4) the Road Cess. These can readily be shown, both singly and collectively, to be insufficient to meet the wants of a growing population. Nor can any help be looked for from the income which the Boards derive from pounds, ferries, and educational and medical receipts. These revenues are expansive only within certain limits, which in most districts have already been reached, and their entire proceeds are absorbed by expenditure on education, medical aid, and general administrative purposes.

3. In times now past the land-owners of all grades were active in increasing the supply of drinking water, and to them the country owes a large proportion of the tanks and wells that exist. But the religious sentiment which inspired these works is believed to be weaker than it was; the forced labour by which many of them were executed can no longer be had; more ostentatious forms of benevolence have come into fashion, which compete seriously with local works of charity; and of late the doctrine has been more or less explicitly put forward that the imposition of the Road Cess has relieved the zamindars of their moral and religious obligations in respect of water-supply. This doctrine, though unfounded as regards the original object of the cess—for Bengal Act X of 1871 makes no mention of water-supply, which appears for the first time in Act IX of 1880—will probably in the long run gain ground; and as it spreads, the digging of tanks and wells by private landlords for the use of the public will tend to decline. A few of the great landholders may be expected, in the hope of official recognition, to contribute to the cost of municipal water works; but as a rule hardly any of them will interest themselves in the small and relatively inconspicuous works which rural tracts require. These will be left to the systematised efforts of District and Local Boards and Union Committees, or of Government acting as zamindar in its own estates; while the aid derived from the landlords as a class will be comparatively scanty and occasional.

4. The digging of tanks and wells from loans under the Land Improvement Act was referred to, in my Circular of the 2nd April 1896, as a possible means of adding to a rural water-supply; but such works are really made of private expenditure undertaken by people for the improvement of their own property, and only incidentally benefiting the community. An exceptionally dry season like the present no doubt tends to encourage expenditure of this kind; but it will be seen from the correspondence on the subject that applications for loans have not been specially numerous, and it is clear that whatever help may be derived from this source will be on a small scale and cannot be taken into account in attempting to estimate the funds available for the purpose of providing mufassal villages with a pure water-supply.

5. Under section 118 of the Bengal Local Self-Government Act, a Union Committee may cleanse or repair any public tank, stream, well or drain within the Union, and may charge the cost, up to a limit of Rs. 100, to the Union Fund, or, if the Fund be not sufficient, may levy the cost from the residents of the Union as if it were chaukidari tax. In paragraph 4 of the Resolution of this Government, dated 1st September 1894, on the formation of Union Committees, it was observed that "this useful provision will make it possible to procure funds for what has long been felt to be one of the most crying wants of rural Bengal—a pure water-supply for the villages in the interior, which cannot be provided with it under the municipal law." It seems, however, to have escaped notice that the powers of the Committee are restricted to public tanks and wells, and of these there are so few in most ordinary villages that in its present form the section is, and must continue to be, practically inoperative.

6. There remains, as the most natural and legitimate source from which the District Boards might be expected to make provision for rural water-supply, the balance of the Road Cess levied

in the district after payment of the expenses of collection. The question of the proper application of the proceeds of the Road Cess has recently been brought prominently to the notice of the Lieutenant-Governor, and has been dealt with in the orders noted in the margin (Letter No. 1284 L. S.-G., dated 30th March 1896, to the Commissioner of Orissa), in which special reference has been made to the necessity of improving the supply of drinking water. These orders, however, though they will prevent the diversion of Road Cess Funds to general purposes, such as education or medical administration, will go but a small way towards providing the Boards with the large sums necessary to enable them to cope with the problem of water-supply. Nothing can be more certain than that the income which District Boards derive from the Road Cess, so far from having a surplus for other objects, is really insufficient for the purposes for which the cess was originally levied—that is to say, as is recited in the preamble to Bengal Act X of 1871, “for the construction and maintenance of roads and other means of communication.” It is possible that the pressure on the District Fund might be relieved to some extent by reducing the mileage of metalled roads; but it is doubtful whether this policy, however rigorously carried out, would enable the Boards to divert an appreciable proportion of their cess income to the purpose of water-supply; while on the other hand it must be remembered that the progressive extension of railways in Bengal requires to be met by a corresponding development of feeder roads, which must be metalled, and which often follow entirely new lines not conforming to the existing system.

7. After fully considering all that has been written on this branch of the subject, the Lieutenant-Governor is satisfied that whatever may be done to reduce the present outlay on roads and bridges, the balance of Cess Funds available for the other purposes specified in section 109 of Bengal Act IX of 1880 must in the most favourable event be too small to enable District Boards within any measurable time to make adequate provision for the water-supply of the villages in the interior. Some relief might perhaps be given to the Boards from Provincial revenues by revising the conditions under which certain Provincial roads were transferred to local management under the Bengal Acts X of 1871 and IX of 1880. It has been alleged, in the course of debates in the Legislative Council, that such transfers have been unfairly made so as to throw on local funds the burden of maintaining roads which should form a Provincial charge, and the subject is now under inquiry. In the Lieutenant-Governor's opinion, however, it is unlikely that this inquiry will result in any material increase of the available income of the Boards.

8. A larger proposal, involving a substantial sacrifice of Provincial income, is to make over to District Boards all ferry receipts except those already reserved to Municipalities. This was considered in 1890 by Sir Stuart Bayley, who admitted the justice of the proposal, but was compelled to reject it by financial considerations. The Lieutenant-Governor agrees in thinking that ferry receipts, being derived from local taxation, should at any rate in theory be devoted to local purposes, and more especially to the construction and repair of roads and bridges. This was clearly the intention of the third clause of section 7 of Regulation VI of 1819, and the case is even stronger now, as most of the ferries of which the tolls are credited to Provincial revenues are situated on roads maintained by District Boards. The condition of the Provincial finances is at present favourable enough to render this concession feasible, and the Lieutenant-Governor will be prepared to make it if effect is given to the other proposals put forward in this letter.

9. While thus expressing his readiness to surrender to District Boards the ferry receipts now credited to Provincial Revenues, the Lieutenant-Governor deems it necessary to declare in the clearest and most positive language that no further alienation of these revenues for local objects, and no material increase of the large grant already made to District Boards, can in future be looked for. The recent debate (Proceedings of the Bengal Council, 4th April 1896) on the Bengal Financial Statement for 1896-97 not only brings out very clearly that the demands on Provincial revenues for ordinary administrative purposes tend to increase very rapidly, but also indicates the possibility of pressure being brought to bear upon the Government to surrender productive sources of income in deference to supposed principles. At the present time the Bengal Government is being urged to add to the number of Munsifs and Subordinate Judges, to build new courts and improve existing ones, to provide residences for Munsifs in the mofassal, to reconstruct portions of two of the great hospitals in Calcutta, and to incur large expenditure on buildings and appliances required for the extension of medical and technical education. Under the head of Civil Buildings alone the expenditure provided in the current year's budget for original works amounts to Rs. 22,14,700. In addition to this an elaborate scheme of roads to serve as feeders to railways is under consideration, and large sums are about to be spent on improving communications in the tea-growing areas of the Western Duars. These charges, it may be said, are not recurring, though they necessarily

involve a substantial addition to the constant expenditure on repairs; but in fact the works which are mentioned represent only a selection from among a number of projects, all of which deserve consideration, and to which new schemes are constantly being added. On another side, again, a demand is being put forward for a general increase in the salaries of ministerial officers, on the ground that the prices of food-grains have risen since these salaries were fixed. It will be seen from the remarks on this subject at pages 185 to 182 of the Council Proceedings already referred to, that an increase of $12\frac{1}{2}$ per cent., or two annas in the rupee, which is a mere fraction of the increase suggested by the Salaries Commission of 1884, would involve an addition to the Provincial expenditure of Rs. 3,68,292 a year. In the same debate reference was made to the alleged obligations of the Government to reduce the fees charged on the institution of suits in the Calcutta Small Cause Court, the growth of the excise revenue was unfavourably criticised, and it was suggested that the rates of process fees in all classes of courts were too high. The last point has formed the subject of correspondence with the Government of India, and it has been estimated that if these fees were fixed so as merely to cover the cost of the establishments actually employed, the loss to Provincial revenues would be about four and a half lakhs. In the face of these possibilities of permanently increased expenditure on the one hand, and of a permanent reduction of income on the other hand, the Lieutenant-Governor feels bound to make it perfectly clear that, over and above the surrender of the ferry receipts, no further liability can be imposed on Provincial revenues in respect of rural water-supply.

10. Existing resources being thus shown to be inadequate, it is clear that other and more productive means of raising funds must be looked for if any real progress is to be made towards the solution of the difficulty of rural water-supply. The Lieutenant-Governor has accordingly been led to consider the comprehensive scheme of local taxation which was drawn up under Sir Stuart Bayley's orders, and was laid before the Government of India early in 1890. On that scheme no action was taken, as the Government of India agreed with the late Lieutenant-Governor in thinking that it was not then advisable to undertake legislation for the purpose of imposing fresh taxation in Bengal. Since April 1891, when this decision was arrived at, circumstances have materially changed. During the last five years a great deal has been done in the municipal towns of this Province to promote sanitation and to improve the water-supply, and it is believed that the upper and middle classes of Native society in Bengal now realise in a way they never did before the great benefits derived from the use of pure drinking water, and the paramount necessity of providing the inhabitants of rural villages with some effective means of raising funds for the purpose of improving the village water-supply. The prevalent feeling of alarm occasioned by the recent scarcity of water, and the serious danger which this indicates in the future, are forcibly expressed by Dr. Mahendra Lal Sircar, C.I.E., in a recently published review of a paper on “Water and Health,” which has appeared in an American Magazine:—

“The present water famine has not come upon us as a surprise. We were receiving warnings regarding it for some time past when the rainfall was becoming less and less from year to year, and our tanks and other reservoirs of water were, in consequence, drying up and threatened with complete exhaustion. We heeded not these warnings. We have not excavated new tanks, we have not even deepened by re-excavation old ones, for the storage of whatever rain water we were having. The threatened exhaustion of the chief sources of the water-supply of the villages and most of the towns of Bengal, as an inevitable result, has come; and unless prompt measures are taken, it will be impossible to avert the consequences of a water famine, which are far speedier and far more frightful than those of food-famine. Already cholera, the offspring of dirty and polluted drinking water, is raging with epidemic virulence, and if the present state of things is allowed to continue, the mortality from this disease alone will be something which it is appalling to contemplate.”

11. The suggestions for legislation put forward in 1890 may be summed up as follows:—

I. (a) That a local general rate or cess be imposed on land in the same manner as is now done in the case of the Road Cess, the amount of the general cess not to exceed one pie in the rupee on the annual value of land, and not to be less than one-third of a pie, or one pie, in the rupee on such value.

Provided that the general cess shall not be levied within the area of those Unions in which a system of local rating has been imposed on Union Committees.

(b) That the proceeds of the local general rate or cess shall be devoted to general purposes, and especially to the furtherance of sanitation and of primary education.

Provided that the Lieutenant-Governor shall have power to direct, in regard to any district, that the whole of the proceeds of the local general cess at its minimum rate of one pie in the rupee, or such proportion as may be determined of this minimum

and not exceeding it, shall be devoted to the furtherance of primary education only.

(c) That, subject to the maximum and minimum as aforesaid, the rate of the local general cess be fixed by the District Boards.

(d) That the proceeds of the local general cess in regard to sanitation and primary education be, so far as possible, expended locally.

II. That it should be declared that the balance of the District Road Fund under the Cess Act, IX (B.C.) of 1880, shall be applied to the objects specified in section 109 of that Act, and to no other.

III. That a permissive power, subject to the approval of Government in each case, should be granted to District Boards, on the establishment of Union Committees, to authorize these Committees to assess and collect a local rate upon the residents within the Union according to their circumstances and property, the amount to be recovered by this rate being fixed by District Boards with the sanction of Government; and that the whole of the proceeds of this rate, after deducting five per cent. for supervision and inspection, should be spent within the Union by the Union Committees, under the control of the Local Boards, in the furtherance of sanitation and of primary education.

Provided that the Lieutenant-Governor shall have power to direct that, in regard to any Union, such proportion of the local rate as he may determine shall be devoted to the furtherance of primary education only.

IV. That District Boards should be allowed in their own right to establish toll-bars on bridges constructed by them until the cost of the bridge, including the capital and interest expended thereon, as well as the cost of maintenance and of renewal if necessary, has been recovered.

12. It will be seen that the chief feature of the scheme was the imposition of a local general cess on land, to be assessed and collected like the Road Cess, the proceeds being devoted to general purposes, and especially to the furtherance of sanitation and of primary education. This portion of Sir Steuart Bayley's proposals the Lieutenant-Governor would now propose definitely to abandon, not only on the ground of the widespread opposition which it would evoke, but also because it appears to him inequitable to lay any further burden exclusively upon the proprietors of the land in Bengal for the purpose of meeting expenditure upon local, as distinguished from Provincial or Imperial purposes, which he hopes to be able to provide for by other and less unpopular means. A further objection, to which the Lieutenant-Governor attaches considerable weight, is that the incidence of the cess, if imposed in the manner suggested in 1890, would necessarily be unequal. It was intended that the cess should not be levied in localities where Union Committees are organised and local rates imposed. It seems to have escaped notice that this system would not merely cause great discontent, but would give rise to intolerable complications in the assessment and collection of the cess. If such a cess is to be imposed at all, it must be universal; it cannot be partial and fluctuating. And if universal, its introduction would of necessity defer indefinitely the introduction of the more promising and equitable scheme of permissive local rating.

13. A second suggestion was to declare by law that the balance of the District Road Fund under the Bengal Cess Act IX of 1880, shall be applied to the objects specified in section 109 of that Act, and to no other. This also the Lieutenant-Governor is unable to accept, for the following reasons. In the first place the object in view has been already attained by the orders contained in my letter to the Commissioner of Orissa referred to in paragraph 6 above, which has been circulated to all Commissioners of Divisions in which the Bengal Local Self-Government Act is in force. Those orders are in effect a direction to the Commissioner as to the manner in which he should exercise the powers of control over the District Board budgets, conferred upon him by section 48 of the Act; and in this way they rest upon a strictly legal basis. Secondly, a formal alteration of the law in the manner suggested in the memorandum would entail the keeping of a separate account for Road Cess receipts, a procedure which would cause considerable inconvenience, and would in practice lead to complicated adjustments and tend to restrict the employment of the District Engineer and his subordinates by the Boards on general administrative purposes. Thirdly, the proposed change would conflict with the principle laid down in 1890, that in time of serious scarcity it is the duty of the Boards to direct their whole resources, subject only to the maintenance of absolutely necessary works in non-affected tracts, to affording relief. It would absolutely debar the District Boards from spending any portion of their income from Road Cess on the purposes set forth in clauses (2) and (3) of section 99 of the Local Self-Government Act, and it would be capable of being construed as equally precluding expenditure on roads, tanks and similar public works started merely for the relief of distress. It may be added that the liability thus imposed upon the Provincial Government by the Government of India, and as such is a matter of Imperial concern.

14. A third proposal put forward in 1890 was to introduce a system of permissive local rating by Union Committees for the furtherance of sanitation and primary education within the limits of the Union. Sir Steuart Bayley then expressed a decided opinion that it was only by such a scheme that real Local Self-Government could eventually be established in Bengal; that if tried in selected districts its success would justify its extension; and that in course of time local rating would spread to considerable tracts of country and in the end obviate the necessity of imposing a general cess on land. He proposed, however, that in the first instance the two systems should work side by side, but that the general cess should not be levied where local rating was in force.

15. It seems to Sir Alexander Mackenzie that the weak point of the entire scheme of 1890 was the attempt to introduce at the same time and for the same purposes two distinct methods of taxation, one of which was intended gradually to displace the other. If the outcry that would be caused by imposing a general cess is to be incurred at all, it should surely be incurred on adequate grounds and for a substantial return in the form of a permanent increase of the incomes of the District Boards; not for a tax the proceeds of which would in the nature of things tend to diminish and eventually to disappear altogether, and which would in any case provoke criticism by its uneven incidence as between localities where Union Committees have been introduced and those where they have not. Moreover, as the extension of local rating was made dependent upon the initiative of District Boards, and every such extension would necessarily have reduced the yield of the general cess administered by them, it seems doubtful whether any real progress would ever have been made in the organization of Union Committees equipped with powers of taxation.

(To be continued.)

HAPPIEST OF ALL.

THERE is no time in the twenty-four hours when one ought to feel so thoroughly satisfied and content as immediately after a good, hearty meal. And all healthy persons do feel so. The body's demands have been met, and we are easy and comfortable, as though we had paid off an old dun and had money left. We are accessible, humane, and good natured. Then, if ever we will grant a request without grumbling. "True benevolence," says a crusty old friend of mine, "is located in a capable stomach recently filled."

Yes, but what of the incapable stomachs, of which there are so many?—stomachs that disappoint and plague their owners, till the act of feeding, so delightful to others, becomes an act to avoid the necessity of which they are almost willing to die? Ah, that is quite another thing. These poor souls are they who say, as Miss Wallace says in this letter of hers, "I was no longer to be counted among those who have pleasure in eating. Far from it. As for me I was afraid to eat. I felt the need of food, of course—the weakness and sinking that accompanied abstinence—but what was I to do? The moment I ate, my distress and pain commenced. No matter how light the repast was, nor how careful I was not to hurry in taking it, the result was the same. The distress and gnawing pains followed, with discomfort in the chest, and a sense of choking, as if some bits of food had lodged there and were irritating me."

"So objectionable and repugnant to me was the act of eating that for days together I didn't touch a morsel of solid food, subsisting entirely on milk and soda water. Owing to this enforced lack of nourishment I got extremely weak, and about as thin as I could be. I must not forget to say that this happened to me, or rather it began to happen in July, 1886, when I was living at Wellington, in Shropshire. It came on, as you may say, gradually and not with any sudden or acute symptoms. I found myself low, languid, and tired. Then came the failure of my appetite and the other things I have named."

"I took the usual medicines for indigestion, but they had no good effect. After six months' experience of this kind of misery I read in a book about Mother Seigel's Syrup as a remedy for this disease, and got a bottle from Mr. Bates the chemist, in Wellington. Having used it a few days I felt great relief, and when I had consumed two bottles I was entirely well. Since then I have heartily commended Mother Seigel's Syrup to many friends, who have invariably been cured, as I was. You have my permission to publish my letter, if you desire to do so. (Signed) Minnie Wallace, Nurse, The Union Workhouse, Oldham, February 22nd, 1895."

In a communication dated January 8th, 1895, Mrs. Henrietta McCallam, of 40, Downsfield Road, Walthamstow, near London, states that her daughter Emma fell ill in the spring of 1886 with the same symptoms described by Miss Wallace. She craved food, yet, when it was placed before her, she turned from it almost with loathing. "As time went on," so runs the mother's letter, "my daughter became so weak she could hardly walk. Neither home medicines nor those of the doctors did any good. Her sufferings continued for over eight years."

"In June, 1894, she began taking Mother Seigel's Syrup, of which we had just read in a little book that was left at the house. In a week she was better, and in less than two months she was enjoying better health than ever before. She has since ailed nothing and can eat any kind of food. (Signed) (Mrs.) Henrietta MacCallam."

"Happy," sings Homer "were they who fell under the high walls of Troy." Happier are they who have never fallen under the crushing weight of indigestion or dyspepsia. Happiest, perhaps, of all are they who have been lifted up by Mother Seigel's remedy and placed where once again they can eat, drink and be merry. And if all these could be gathered together they would make a greater host than the Greek poet ever dreamed of.

Music for the Million!

BEECHAM'S MUSIC PORTFOLIO.

The cheapest collection of Music ever issued.

The Portfolio consists of 8 volumes, each of which contains :—

30 of the most popular Songs and Airs of the day, each of which is worth more than the price charged for the whole volume, viz., 3½ annas post free; this price, it should be mentioned, does not nearly cover cost, but the Portfolio is placed before the public at a loss, as a further advertisement of the fact that—

"BEECHAM'S PILLS"

ARE

"Worth a Guinea a Box,"

Only a limited number of volumes will be issued and in order to avoid disappointment, intending purchasers should register their orders at once.

APPLY TO

G. ATHERTON & CO.,

3, New China Bazar-street, CALCUTTA,

Agents for THOMAS BEECHAM, of St. Helens, Lancashire.

N.B.—A list of contents of each volume will be sent on receipt of a stamped envelope.

POSTSCRIPT.

After paying the expenses of the publication,
the surplus will be placed wholly at the dis-
posal of the family of the deceased man of
letters.

Orders to be made to the Business Manag-
er, "An Indian Journalist," at the Bee
Press, 1, Uckoor Dutt's Lane, Wellington
Street, Calcutta.

OPINION ON THE BOOK.

It is a most interesting record of the life of
a remarkable man.—Mr. H. Babington Smith,
Private Secretary to the Viceroy, 5th October
1895.

Dr. Mookerjee was a famous letter-writer,
and there is a breezy freshness and originality
about his correspondence which make it
very interesting reading.—Sir Alfred W. Corft,
K.C.I.E., Director of Public Instruction, Bengal,
26th September, 1895.

It is not that amid the pressure of harassing
official duties an English Civilian can find
either time or opportunity to pay so graceful
a tribute to the memory of a native personality
as F. H. Skrine has done in his biography of
the late Dr. Sambhu Chunder Mookerjee, the
well-known Bengal journalist (Calcutta :
Thacker, Spink and Co.); nor are there many
who are more worthy of being thus honoured
than the late Editor of *Reis and Rayyet*.

We may at any rate cordially agree with Mr.
Skrine that the story of Mookerjee's life, with
all its lights and shadows, is pregnant with
lessons for those who desire to know the real
India.

No weekly paper, Mr. Skrine tells us, not
even the *Hindoo Patriot*, in its palmiest days
under Kristodas Pal, enjoyed a degree of in-
fluence in any way approaching that which was
soon attained by *Reis and Rayyet*.

A man of large heart and great quali-
ties, his death from pneumonia in the early
spring in the last year was a distinct and
heavy loss to Indian journalism, and it was
an admirable idea on Mr. Skrine's part to put
his Life and Letters upon record.—The *Times*
of India, (Bombay) September 30, 1895.

It is rarely that the life of an Indian journal-
ist becomes worthy of publication; it is more
rarely still that such a life comes to be written
by an Anglo-Indian and a member of the
Indian Civil Service. But, it has come to
pass that in the land of the Bengali Babus,
the life of at least one man among Indian
journalists has been considered worthy of
being written by an Englishman.—The
Madras Standard, (Madras) September 30,
1895.

The late Editor of *Reis and Rayyet* was a
profound student and an accomplished writer,
who has left his mark on Indian journalism.
In that he has found a Civilian like Mr.
Skrine to record the story of his life he is
more fortunate than the great Kristodas Pal
himself.—The *Tribune*, (Lahore) October 2,
1895.

For much of the biographical matter that
issues so freely from the press an apology is
needed. Had no biography of Dr. Mookerjee,
the Editor of *Reis and Rayyet*, appeared, an
explanation would have been looked for. A man
of his remarkable personality, who was easily
first among native Indian journalists, and in
many respects occupied a higher plane than
they did, and looked at public affairs from a
different point of view from theirs, could not
be suffered to sink into oblivion without some

attempt to perpetuate his memory by the usual expedient of a "life." The difficulties common to all biographers have in this case been increased by special circumstances, not the least of which is that the author belongs to a different race from the subject. It is true that among Englishmen there were many admirers of the learned Doctor, and that he on his side understood the English character as few foreigners understand it. But in spite of this and his remarkable assimilation of English modes of thought and expression, Dr. Mookerjee remained to the last a Brahman of the Brahmins—a conservation of the best of his inheritance that was nothing but respect and approval. In consequence of this, his ideal biographer would have been one of his own disciples, with the same inherited sympathies, and trained like him in Western learning. If Bengal had produced such another man as Dr. Mookerjee, it was he who should have written his life.

The biography is warmly appreciative without being needlessly laudatory; it gives on the whole a complete picture of the man; and in the book there is not a dull page.

A few of the letters addressed to Dr. Mookerjee are of such minor importance that they might have been omitted with advantage, but not a word of his own letters could have been spared. To say that he writes idiomatic English is to say what is short of the truth. His diction is easy and correct, clear and straightforward, without Oriental luxuriance or striving after effect. Perhaps he is never so charming as when he is laying down the laws of literary form to young aspirants to fame. The letter on page 285, for instance, is a delightful piece of criticism: it is delicate plain-speaking, and he accomplishes the difficult feat of telling a would-be poet that his productions are not in the smallest degree poetry, without one may conclude, either offending the youth or repressing his ardour.

For much more that is well worth reading we must refer readers to the volume itself. Intrinsically it is a book worth buying and reading. —*The Pioneer*, (Allahabad) Oct. 5, 1895.

The career of "An Indian Journalist" as described by F. H. Skrine of the Indian Civil Service is exceedingly interesting.

Mookerjee's letters are marvels of pure diction which is heightened by his nervous style.

The life has been told by Mr. Skrine in a very pleasant manner and which should make it popular not only with Bengalis but with all those who are able to appreciate merit unmarred by ostentation and earnestness unspoiled by harshness. —*The Muhammadan*, (Madras) Oct. 5, 1895.

The work leaves nothing to be desired either in the way of completeness, impartiality, or lifelike portrayal of character.

Mr. Skrine deals with his interesting subject with the unfailing instinct of the biographer. Every side of Dr. Mookerjee's complex character is treated with sympathy tempered by discrimination.

Mr. Skrine's narrative certainly impresses one with the individuality of a remarkable man.

Mookerjee's own letters show that he had not only acquired a command of clear and flexible English but that he had also assimilated that sturdy independence of thought and character which is supposed to be a peculiar possession of natives of Great Britain. His reading and the stores of his general information appear to have been, considering his opportunities, little less than marvellous.

One of the first to express his condolence with the family of the deceased writer was the present Viceroy, Lord Elgin. Mookerjee appears to have won the affection not only of the dignitaries with whom he came in contact, but also of those in low estate.

The impression left upon the mind upon laying down the book is that of a good and able man whose career has been graphically portrayed. —*The Englishman*, (Calcutta) October 15, 1895.

The career of an eminent Bengali editor, who died in 1894, throws a curious light upon the race elements and hereditary influences which affect the criticisms of Indian journalists on British rule.

The "Life and Letters of Dr. S. C. Mookerjee," a book just edited by a distinguished civilian in Calcutta, takes us behind the scenes of Indian journalism.

It is a narrative, written with insight and a

complete mastery of the facts, of how a clever youth gradually grew into one of the ablest leader-writers in Bengal, and still more gradually matured into one of the fairest-minded editors that western education in India has yet produced. If the training and experience which develop the journalist in England are sometimes varied, they seem in India to have an even wider range.

But the object of this notice is to show how a great Bengali journalist is made; space forbids us to enter upon his actual performances. They will be found set forth at sufficient length, and with much felicity of expression, in Mr. Skrine's admirable monograph. It is characteristic of the noble service to which Mr. Skrine belongs, that such a book should have issued from its ranks. Dr. Mookerjee was no optimist. One of his brilliant speeches contained the following sentence:—"India has neither the soil nor the elasticity enjoyed by young and vigorous communities, but present the arid rocks and deserts of an effete civilization, hardly stirred to a semblance of life by a foreign occupation dozing over its easily-gained advantages." This was true of the pre-Mutiny India of 1851. If it is no longer true of the Queen's India of 1895, we owe it in no small measure to Indian journalists like Dr. Mookerjee who have laboured, amid some misrepresentation, to quicken the "semblance of life" into a living reality. —*The Times*, (London) October 14, 1895.

"IMPROVED UNDAUNTED"

WATCH. Rs. 7.

Guaranteed three Years.

Strong, accurate, pretty, small, open-faced, nickel silver, keyless, short winding, patent, "NEW STYLE IMPROVED UNDAUNTED" watch, with hand setting mechanism, secondhand, for Doctors, ornamental bold dial, for Rs. 7 V. P. P. with an extra glass, spring, pretty box and full three years' guarantee. Warranted to stand the roughest use. Runs more than 28 hours with one winding. Will last a life time. Easily repairable. Others sell at double our rates. One watch free for the purchase of 8 at a time. Mr. Jno. Dickson of Hapital Railway, from Ceylon says:—It keeps splendid time and never stopped although it sustained hard knocks and jerks. x Dr. H. Moore of Royal Artillery from Poona says:—I sold it for Rs. 16. x Pte. W. Hopkins of Sussex Regt. from Dindan says:—I have sold it for Rs. 20. x Mr. T. B. Scott of Puna Opium Department says:—The watch you sent me some seven years ago is still keeping very good time.

Jewelled Ring Rs. 1-9-0. Real

Silver Watch Rs. 13. Real

Solid Gold Watch Rs. 24.

Pretty electro cased gold chain Rs. 1-8-0. Fashionable electro cased Gold Ring set with scientific diamonds, Rubies, Emeralds, at Rs. 1-8-0. Mr. G. Smith, Salt Inspector from Sankutia, says:—"A German valued the diamond ring at Rs. 50 and ruby at Rs. 30." Key winding, Government stamped, solid silver hunting case, Royal watch with extras and full three years' guarantee, for Rs. 13. Pte. G. Hawkes of 2nd York Light Infantry from Parandhar says:—"For the first one I got Rs. 25; the second one I sold to a Sergeant for Rs. 28. x Pte. H. C. Bishop of L. F. L. Regt. from Kumptee says:—"A Corporal offered Rs. 30 for the very same watch. Gentlemen's open faced, keyless *real solid gold watch* Rs. 30; ladies' Rs. 24; both with extras and guaranteed for 3 years. Mind they are guaranteed to be of real solid gold. No agents kept, all goods sent only by us from Bombay per V. P. P.

WESTERN INDIA TRADING CO., BOMBAY.

GENUINE HOMŒOPATHY.

A CARD.

Hem Chandra Rai Chaudhuri, L. M. S.

Homœopathic Practitioner,

May be consulted by letter or personally daily at his residence, 24, Mirzapore Lane, near Creek Row, Calcutta.

R. N. MOOKERJEE & CO.,

Novelty in Ayurvedic Medicine. AYURVEDIC PHARMACY.

36, Lower Chitpore Road, Foudari
Bilakarna, Calcutta.

KAVIRAJ NAGENDRA NATH SEN, Physician, Surgeon, Accoucheur, practises the Ayurvedic system of medicine, after having obtained a diploma at the final examination of one of the Government medical Institutions of the country.

SPECIFICS

for all ordinary diseases, like Fever, Cough, Asthma, Pthisis, Diabetes, &c., including diseases brought on by irregularities of kinds. Catalogues, containing full accounts of diseases and remedies, are transmitted on application. Prescriptions, with or without medicines, sent to every part of India and Ceylon, Cape Colony, and the British Isles, on receipt (by post) of full accounts of diseases.

Thousands of unsolicited Testimonials from every quarter.

CATARRH,

Hay Fever, Catarrhal Deafness.

A NEW HOME TREATMENT.

Sufferers are not generally aware that these diseases are contagious, or that they are due to the presence of living parasites in the lining membrane of the nose and eustachian tubes. Microscopic research, however, has proved this to be a fact, and the result is that a simple remedy has been formulated whereby these distressing diseases are rapidly and permanently cured by a few simple applications made at home by the patient once in two weeks. A pamphlet explaining this new treatment is sent on receipt of 2½d stamp by A. HUTTON DIXON, 43 & 45 East Bloor St. TORONTO, Canada. *Scientific American*.

VOL. XV.

CALCUTTA, SATURDAY, JUNE 6, 1896.

WHOLE NO. 728.

AN OLD BALLAD.

WOMEN are best when they are at rest,
But when is that, I praye?
By their good-will they are never still,
By night, and eke by daie.

If the weather is bad, all daye they gad,
They heede not winde or raine;
And all their gay geare they ruine, or neare,
For why, they not refraine.

Then must they chat of this and that,
Their tongues alsoe must walke;
Wheresoever they goe they alway do soe,
And of their bad husbundes talke.

When cometh the night, it is never right,
But ever somewhat wronge;
If husbundes be wearie, they are so mery,
They never cease one song.

Then can they chide, while at their side
Their husbundes stive to sleepe;
"Why, how you snore I goe lye on the floure,"—
Such is the coile they keepe.

So women are best when they are at rest,
If you can catch them still;
Crosse them, they chide, and are worse, I have tried,
If you grant them their will.

Give them their way, they still say nay,
And chaunge their minde with a trice.
Let them alone, or you will owne
That mine was good advice.

WEEKLYANA.

VESUVIUS is again throwing up liquid lava from many little outlets in the crater opened in July last.

THE young Duchess of Marlborough (a Vanderbilt) has a small menagerie at Blenheim, where two ostriches, several eagles and vultures, and an ibis are housed. Among her curious collection is a garter snake, purchased on the banks of the Nile. A Nubian boy in native costume is one of her honeymoon souvenirs.

LORD Rosebery's attention being drawn to certain statements made by Mr. Chamberlain at the Constitutional Club, he wrote to one of his correspondents:—

"38, Berkeley Square, W., 24th April, 1896. Sir,—The language and tone on which you remark would indeed be noteworthy if they proceeded from any one but Mr. Chamberlain. Coming from him, however, they need excite neither comment nor surprise."

OUT of a total of 28 600 students in the German Universities, 2 287 are foreigners. They are chiefly found in Berlin, Leipsic, and Munich.

ON the walls of the Dover Castle, an ancient gun of unusual size pointing towards France has the following inscription:

Sponge me well and keep me clean;
I'll throw a shot to Calais Green.

Calais is 21 miles distant from the castle. The ordinary modern guns cannot throw their contents so far but can take shells to the sea close to Calais.

A species of Krupp with an elevation of forty-five degrees can vomit a shot weighing nearly one-fourth of a ton to a distance of 12-42/100 miles.

In 1888, the year of the Queen's Jubilee, a smaller gun than Krupp named "Jubilee Round," with 9 2 inch ribs of the wire-wrapped type, with an elevation of 45 degrees, sent a shot weighing 380 pounds to a distance of 12 1/4 miles, at the rate of 2,360 feet per second.

The Elswick Works, of Newcastle, England, have turned a hooped quick-fire 6 inch gun. Firing 19 1/2 pounds of cordite it could send a shot 4,928 feet per second or to more than double the distance done by the "Jubilee Round."

THE earth, like the sea, has its gems. Like the caves of the ocean, the mines in land are no less rich, with hollows of real gems. Burma after its annexation has assumed an additional importance, as the land of gems. When the Burma Ruby Mines Co. Ltd., was organized in London, shares were sold at three times their paper value, though now it is less by twenty per cent. The rubies are found associated with ruby-red spinel, occurring in a layer of sand and gravel in the valley bottoms and also in the beds of granular lime stones. The lime-stone is the original matrix of the ruby.

In Siam, close to Bangkok, rubies, sapphires, etc., are found in a layer of soft yellowish sand at a depth of from few inches to twenty feet.

The rocks in Macon county, North Carolina, yield crystals of ruby. They are flat, hexagonal, and tabular, and equal in size to the medium rubies of Burma.

Sapphire is generally intermixed with ruby in Ceylon, Burma, Siam, the Himalayas, but rarely in the Ural mountains and the United States. Ceylon abounds in ruby, sapphire, spinel, alexandrite, cat's eye, and other gems as also tolled pebbles in gravel in or near old river beds. Ratnapura, at the foot of Adam's Peak, about 6,000 ft. high, is a great mining centre.

Nearly all fine sapphires of the last fifteen years are from the Zaskar range, in the Himalayas, close to the line of perpetual snow. They were discovered accidentally after a land-slip in 1882.

DEAFNESS COMPLETELY CURED! Any person suffering from Deafness, Noises in the Head, &c., may learn of a new, simple treatment, which is proving very successful in completely curing cases of all kinds. Full particulars, including many unsolicited testimonials and newspaper press notices, will be sent post free on application. The system is, without doubt, the most successful ever brought before the public. Address, Aural Specialist, Albany Buildings, 39, Victoria Street, Westminster, London, S. W.

Subscribers in the country are requested to remit by postal money orders, if possible, as the safest and most convenient medium, particularly as it ensures acknowledgment through the Department. No other receipt will be given, any other being unnecessary and likely to cause confusion.

Along the eastern flank of the Appalachian mountains in America, you will find corundum. At Franklin, Macon county, sapphires, associated with corundum and blue, purple and green stones, as well as rubies, were taken out of the crystalline rocks.

In Eldorado bar sapphire in plenty is found with other stones. Finest torques, richest in colour, have been discovered in a clayey state near Nishapur, Meshed, Persia. Mt. Sinai has yielded them as also New South Wales, in Australia, though their yield is of inferior quality.

Turquoise is also found in Santa Fé, the Buno Mountains, Grant County, all in New Mexico.

There are emerald mines near Muza, Colombia, America; Emaville mines in New South Wales, Australia; and Siberian side of the Ural mountains.

Topaz is found in Brazil, Ural, Siberia, Japan, Madagascar, New Zealand, Australia, the Strait Settlements, the United States (Texas and Colorado.)

THE *Manchester Times* writes :—

"Admirers of Byron has often wondered at the abrupt termination of his greatest work. The adventures of 'Don Juan,' it will be remembered, end in the midst of a most exciting incident with the revelation to the astonished hero of

The phantom of her frolic Grace—Fitz-Fulke.

Various explanations have been assigned for this unexpected close, but happily all prove to be apocryphal, for the two concluding cantos of 'Don Juan' are in existence, safe in the possession of the late Mr. John Murray's representatives. They will shortly be issued to the public in a complete edition of Byron's prose and poetic works, along with some hitherto unpublished poems."

AT the meeting of the Mahomedan Literary Society of Calcutta, held on Sunday last, at 16, Taltolla, the residence of the Secretary, Mr. A. F. M. Abdur Rahman, the Chairman, one of the Vice-Presidents and since President, Khan Bahadur Abdul Jubbar lamented in Urdu the death of Prince Sir Jehan Kadr Mirza to the following effect :

"Surely we are all to return to Him who brought us into existence. Nothing is so certain as death, yet no one thinks of it even when death stares him in the face. In fact, the charm of this life lies in the forgetfulness of death. Scarcely full three years have elapsed when we met in this very hall to lament the death of the founder of the Mahomedan Literary Society, Nawab Abdool Luteef Bahadur, C.I.E., and at that meeting the very nobleman whose irreparable loss we are called together to-day to bemoan, presided. It was then little known that within so short a space of time we would have to record the sad untimely end of our President, Prince Sir Jehan Kadr Mirza Wahed Ali Bahadur. I must tell you that a meeting of this kind confers no spiritual benefit on the soul of a deceased person, but of late it has been the fashion even among the Mahomedans to hold meetings in memory of their public men. That the late Prince was a worthy leader of the Mahomedan community of Bengal nobody can deny, and a public manifestation of grief by all sections of the community at his death is due to his merits. Of his personal qualities I need not say much. Every one present here is perfectly conversant with his sincerity, frankness and genial temper. We respected him not because he was a Prince, the nobleness of his heart endeared him to all. He had a good word for every one and his loss is keenly felt throughout the length and breadth of this country. By his untimely and sudden death, the Mahomedan Literary Society has been deprived of its President and the Mahomedan community of its sincere well-wisher. There was scarcely a gathering in Calcutta, social or political, in which he did not take a prominent part and which did not borrow lustre from his presence. He belonged to the old school and took particular care not to hurt the feelings of his co-religionists by any act or word inconsistent with the Faith of Islam. Personally, I have lost a great and kind friend, but my consolation is that he has gone to a better world. Now I conclude with a prayer that his soul may find peace in heaven and that his two daughters may enjoy long life and prosperity and be enabled to maintain the good name of their illustrious family."

After lamentations for the deceased President, on the motion of Khan Bahadur Fazl Rubbi, Dewan of the Nawab Bahadur of Moorshedabad, the meeting unanimously elected Khan Bahadur Abdul Jubbar President of the Society. Sham-ul-Ulama Sheikh Mahmood Gilani, the high priest of the Shia community of Calcutta, in a long speech, supported the appointment saying that Moulvi Abdul Jubbar was looked upon as a leader of the Mahomedan community. The great esteem in which he was held by both the Shia and Sunni sects was a guarantee of able discharge of his new duties. Mr. Hashim Bhai Visram, of Bombay, bore another testimony from another quarter to the worth of the new President. He said Moulvi Abdul Jubbar was well-known to the Mahomedan community of the Western Presidency. They knew him in Bombay as a most learned, honourable and pious man and his appointment as the head of the leading Mahomedan Society of Bengal was sure to be received with genuine pleasure.

It was announced at the meeting that, being requested by Government to choose a representative for the Indian section of the governing body of the Imperial Institute for the years 1899, 1902, 1906 and 1909, the committee of management, had elected Sir Charles Elliott, the late Lieutenant-Governor of Bengal, and Sir Andrew Scoble, M.P., the late Law Member, that is, such one of the two as might be residing in England, to represent the Mahomedan community of Bengal.

Now that cholera is on the wane in Calcutta, the Municipal Commissioners are enquiring into the epidemic. Following the judicial doctrine of *sub judice*, they are for allowing an epidemic to run its own course. At Thursday's meeting, Dr. Jogendra Nath Ghose put the following questions :—

"(a) During severe cholera epidemic is it not a fact that upwards of 90 per cent. of the people living in the midst of the disease, exhibit a natural immunity? (b) Does the anti-choleraic inoculation afford absolute protection, and if so, for how long? (c) If (as stated in question 1) upwards of 90 per cent. of the population are immune, what inference can be drawn from the results of anti-choleraic inoculation as now practised? (d) Has any person been attacked with cholera subsequent to undergoing the complete process of inoculation? (e) Is it not a fact that many persons, who submitted to one inoculation, refused to allow the second dose to be given owing to the pain and distress they suffered? (f) Does one inoculation afford any protection? Why are two inoculations necessary? (g) Is it not a fact that *comma bacilli* are more abundant during the end of an epidemic when the disease is becoming milder and the attacks fewer than during the height of the epidemic?"

The Health Officer through the Chairman replied :

(1) It is not clear what is meant by 'natural' immunity but in the severest epidemics, whether of cholera or Chinese plague or any other disease, there is a large proportion of the people who escape; and 90 per cent. may be admitted as a proper figure to indicate the unaffected for an epidemic occurring in a large population. (2) No, no more than any other treatment of disease known in preventive or curative medicine, but from the observations we have up to date it appears that the anti-choleraic inoculation produces a great reduction in mortality in cholera-stricken population for at least a year after the first four days of inoculation. As regards the duration beyond a year of the effect of the inoculation, as now practised, we have not as yet any facts to decide the question, as the treatment by increased doses of stronger vaccines was not introduced till the close of 1894 after the observations made in the case of the East Lancashire Regiment at Lucknow, and as in the observations made up to date in Calcutta the people referred to were inoculated either before the Lucknow experience or were only treated with the first weak anti-cholera vaccine. (3) The result of anti-choleraic inoculation is established not by a comparison of the inoculated with the bulk of the population of which many escape, but by observations on those of the inoculated who belong to cholera-stricken families, households or isolated bodies of population. In the note submitted to the Chairman on the 6th ultimo, I have shown the results of such observations made in the East Lancashire Regiment, in the jail in Gaya, in the Cachar tea estates, on a batch of Khassia coolies encamped near Mughhera and in the jail in Durbhanga. In Calcutta the comparison between the inoculated and the uninoculated is made exclusively in members of the same household affected with cholera, a part of whom have been inoculated, while the rest have remained uninoculated. (4) Yes. In Calcutta, all those who have succumbed after inoculation except one were inoculated only once with the first weak vaccine; at other places, there were instances of failure even after two inoculations, but chiefly among people inoculated with weak doses of relatively weak vaccines. (5) The anti-choleraic inoculation usually gives an attack of fever with local pains which requires rest for 24 to 36 hours; and on this account the poor classes among whom the inoculations are mostly done find it difficult to undergo the treatment twice. Owing to this circumstance the treatment has now been modified, the 2nd vaccine in slightly reduced doses being now alone given without the previous injection of the 1st vaccine. (6) From the results hitherto observed it appears that even one inoculation affords a high degree of protection. Two inoculations (and specially that with the 2nd vaccine) are employed in order to produce a higher degree of immunity and to lengthen the duration of the effect of the treatment. (7) No. The *comma bacilli* are invariably present in all cases of cholera, the very small proportion of negative results (about one per cent.) in this direction being within the limits of errors of observation. The presence or absence of *comma bacilli* in nature (in water, etc.) has been found by repeated observations in Calcutta to correspond precisely to the prevalence or absence of cholera in a locality."

The reply seems to say—Haffkinism is a sure preventive of, if not a cure for, cholera, and, following the directions on many patent medicines, advises the repetition of the dose, till the epidemic dies off—or kills you.

STATISTICS have been ridden to the despair of the d—. A statistician has counted the hairs in a human body. He is more terrible than the gentleman who finds work for idle hands, but who, it is said, grew tired of a task in connection with a certain hairy growth.

IN May, 21,211 persons visited the Indian Museum, namely, 261 male and 88 female Europeans, and 16,787 male and 4,075 female natives of India. The daily average during the 12 public days was 1,764.

NOTES & LEADERETTES,

OUR OWN NEWS

&

THE WEEK'S TELEGRAMS IN BRIEF, WITH OCCASIONAL COMMENTS.

THE Czar's Coronation has been marred not by any Socialist violent demonstration but by a terrible catastrophe. At Moscow, on May 30, at the people's feast on Khodyn's Koje plain, the impatience of the crowd of several hundred thousands of people to reach the sheds, where food was being distributed, caused a terrific crush, in which 2,700 people were trampled to death. In the absence of any police arrangements, the people fell pell mell in the great hollows in the vicinity of booths, wherein tables were spread with food and presents.

The same night, the Czar attended the French Ball and danced with the Countess of Montebello, the wife of the French Ambassador.

THE French Cabinet have decided to introduce a Bill in the Chamber of Deputies declaring Madagascar a French Colony, and so enable France to cancel all previous treaties between Madagascar and Foreign Powers.

Advices from Madagascar state that fifteen hundred insurgents have burnt the village where the Norwegian Mission was situated. A body of French troops have relieved the Missioners and killed two hundred of their aggressors.

THE Reform prisoners at Pretoria have all been released with the exception of the four leaders, and two who have not petitioned. The fines are maintained, but the sentences of banishment are suspended on condition that the prisoners undertake to abstain from politics. The released prisoners waited on President Kruger to thank him for his clemency. The release has caused general joy throughout South Africa, and a sharp recovery in South Africa stocks has taken place in London.

The first fort in the hills to the southward of Pretoria is being built rapidly by a German engineer.

THE Turkish reinforcements have arrived in Crete, and the Turkish garrison at Vamou has been relieved. Thirty-five battalions of Turkish regular troops have also been ordered to Crete. Many of the insurgents there have retreated to the mountains, and proclaimed the union of Crete with Greece. Russia has informed the Porte that the massacres of Christians in Crete will lead to grave results for Turkey. Led by Russia, the Powers have jointly cautioned the Porte, Russia being especially emphatic. A telegram has been received at Athens from Crete stating that the insurgents have cut to pieces eighty-five Turks who were bringing material from Vamou.

THE Italian Chamber of Deputies have rejected by three votes only the motion of censure on the Marquis of Rudini in connection with the funds of the Interior, nevertheless the Cabinet disregard the narrow majority. The Chamber have authorised the trial of General Baratieri.

LORD Wolseley and the head-quarters staff, all in full uniform, besides the diplomatic body and military attachés, visited the military tournament at Fellington. The men representing the Indian and Colonial forces were most warmly popular. The great feature of the show was the pageant called the "Sons of the Empire."

THE *Times* again urges the injustice of charging the Indian Exchequer with the regular pay of the Indian contingent sent to Suakin. In the House of Commons, on June 2, Mr. Balfour announced that a telegram had just been received from the Government of India

asking that no final decision be taken until Her Majesty's Government had heard the views of the Indian Government. Mr. Balfour said that the discussion on Lord George Hamilton's resolution would, therefore, be postponed.

THE judgment of the Egyptian mixed tribunal regarding the appropriation of the reserve fund for the Nile expedition has been deferred until the 8th instant.

Mr. Curzon, replying to Mr. Morley in the House of Commons, said there had been no negotiations with Germany regarding recent events in the Soudan. Communications, he said, had passed between the British Government and Italy, but they were solely of a military nature, and therefore it was impossible to publish them.

General Kitchener has left Wady Halfa for Akasheh, where the headquarters of the expedition are now fixed.

Mr. Cecil Rhodes has arrived at Buluwayo. Colonel Carrington, who is now at Buluwayo, intends sending three columns to attack the Matabele in the Matoppos hills.

A RIOT has taken place among the students at the Elashar Mosque at Cairo, where a case of cholera had occurred. The officials on seeking to enforce sanitary measures were resisted, and the police, who came to their aid, were stoned, and the Governor was wounded. The police then opened fire and killed three of the students. One hundred arrests were made, and order was eventually restored. 60 Syrian students have since been banished.

IT is believed in New York that the silverites have a majority in the Democratic Convention at Chicago, and possibly also in the Republic Convention at Saint Louis.

CHOLERA is now decreasing both in Cairo and in Alexandria. The Pasteur Institute is sending a mission to Cairo to test anti-cholera serum.

REUTER'S correspondent at Brass telegraphs that the French expedition to the Niger has been totally routed at Borgu, and many have been killed. The remnant of the expedition reached Kiama on the 12th of May. The Niger Company is sending assistance.

TWO German warships at Shanghai have proceeded to Nanking owing to the maltreatment of the German officers stationed there, who are teaching the Chinese their drill.

THE Budget of the Cape Colony shows a surplus of one and-a-quarter million sterling, which is unprecedented. The Premier in his speech mainly attributed the prosperity of the Cape to its remaining a part of the British Empire.

REFERRING our article on Jemaluddin (*R. & R.*, May 23.) a correspondent says that Abdu wrote a short sketch of the Moulvi's life, and then continues:

"To my knowledge he was not a Shia but a Syed of Koz. His father's name was Feroze, who was Vizier to the Amir Mahomed Azam Khan of Cabool. When he was defeated, Feroze wandered in several places in great distress. Jemaluddin's father's native tongue was Persian and his mother was an Arab woman. He learnt Persian from his father and Arabic from his mother. Jemaluddin was a young man when his father fell into difficulties, and I believe went over to Egypt with his son."

A REPORT reaches us that on Sunday, May 31, at 9 in the morning, in the tract from Jehanabad to Jharcorda, in the Hooghly district, a hot wind passed over this length of 20 miles from the south accompanied with drops of rain scalding men and animals. What is the official report? What the scientific explanation?

THERE is a simultaneous call from the Inspector-General of Registration, Bengal, on behalf of the Local Government, for the second and third free copies of "An Indian Journalist" by F. H. Skrine, I.C.S. Under the old law, the printer was bound to supply within one month.

of the publication, three copies of every book printed by him to Government which would pay for them. The amended law frees the printer from the obligation of supplying three copies all at once. He has now to furnish the first copy as soon as out, and the second and third copies whenever called upon within one calendar year. But there is no payment for any of the copies. In the present instance, the Bengal Government has been liberal enough. It has purchased three additional copies.

IN connection with our article on Municipal Election Scandals (*R.S. R.*, May 30), we are informed that the Maharaja of Krishnagpur was as innocent as the Rajshahi Raja, if not worse. After the Maharaja had severed his connection with the Krishnagpur Municipality, he wanted to have in his place a thatcher to represent him and a ward of the town. He had made all necessary preparations to have the low man returned. The matter getting abroad, the Commissioners took early steps to prevent the scandal. Government being appealed to, the magistrate was instructed to dissuade the thatcher, and the vengeful action of the Maharaja was nipped in the bud.

Thus we find Government is not so powerless as the Act would seem to make it. At Ranaghat, in the Nadia district, it has sent to coventry a truly good and desirable member of society. Baboo Jogesh Chunder Pal Chowdry, the head, since the death of Baboo Surendra Nath (Baboo Nogensdra Nath being in Government service), of the famous Pal Chowdries of Ranaghat, was made to resign the Honorary Magistrateship of the town and his election as Chairman of the Ranaghat municipality was not sanctioned, because of a murder in his zemindary, which the Courts believed he had it in his power to prevent. He had no hand in the murder. He had no hand in the management of the affairs of his family which had been entrusted to a manager. But the murder having been committed in the family property, every adult male member of the family, the manager and other servants were hauled up, convicted and heavily fined, under a preventive section of the Penal Code. For that stain of conviction under a criminal law, for an act of omission, Babu Jogesh Chunder Pal Chowdry, after being doubly punished, has been kept out of all honorary public offices for six years. The rustication ordered in 1891 threatens to be perpetual.

He was, as we have said, elected Chairman of the Municipality in 1891. The Commissioner of the Presidency Division, with full knowledge of the resignation of the Baboo as Honorary Magistrate, did not view with any alarm that election. He evidently believed that the Baboo was more sinned against than sinning, and thought that when the Municipal Commissioners, who represented the town and were supposed to echo the voice of the people, had found no fault with him, he had better be restored to Government confidence. But the then puritanical ruler of these Provinces, a zealous guardian of morality, private and public, refused his sanction.

The Magistrate of the District, while submitting to the order of Government, was free to express that if it was too early then to take back Baboo Jogesh Chunder, his representation for return to confidence might be considered a year after if he still wished to re-enter public service.

Modest and unambitious, finding no sign of return of favour for six long years, Baboo Jogesh Chunder was being reconciled to his lot, when early in March last he had a cheerful vision. There being vacancies, the Sub-divisional Officer of Ranaghat asked the permission of the Baboo to nominate him as an Honorary Magistrate and a Municipal Commissioner. All Ranaghat was pleased that the mind of Government had changed, for the Baboo is held in high esteem and has always been believed by those who know him to be innocent of the offence of omission charged to him. The Baboo also thought that his rustication, supposed to be for 12 months only but continued for half as many years, had ended. All this, however, proved a delusion. He accepted both the offers. But he has been appointed neither the one nor the other. Why this fresh insult?

THE theatre of the Indian Association for the Cultivation of Science has been the scene of many interesting ceremonies. In April last, there was celebrated the 141st anniversary of Hahnemann's birth-day, and in the month following, on Monday last, the 54th anniversary of the death-day of David Hare. The subject of discourse on both the occasions was medical, and on both the occasions Dr. Mahendralal Sircar presided. At the Hahnemann celebration, held on April 19, Dr.

W. Younan read a paper on Influenza. Dr. Sircar, as president of the Hahnemann Society of Calcutta is for the 10th day of April as the birth-day of the Founder of Homœopathy as given by Hahnemann himself and not for the 11th as entered in the baptismal register of Meissen, the town in which he was born, on which day also his 100th birth-day was celebrated there and which day the American homœopaths prefer to the earlier one. In his concluding remarks Dr. Sircar repeated his advice of proving Indian drugs and re-proving old ones. He also impressed on his colleagues, from his experience of over thirty years, that homœopathic medicines were not the innocent things they are represented to be, doing good and no evil. His belief was that homœopathic medicines were as potent for evil when wrongly used, as they were potent for good when properly used. The so-called failures of homœopathy, he laid at the door of ignorance of this great fact.

The paper at the Hare celebration was on the Medical College of Calcutta, and read by Baboo Nilmonoy Coomar. None of the morning papers has reproduced it. From the published reports of the meeting it appears that the occasion was marked by the opening of a fund to found a Hare professorship at the Science Association. The resolution, suggested by the lecture, for the Professorship by public subscriptions was proposed by Mr. Justice Gurudas Banerjee, who, to prove that he was in earnest, offered Rs. 1,000 as his contribution to the Fund. Dr. Sircar made a similar offer, while other offers came up to Rs. 300. In the course of his address, the Chairman lamented the absence of native professors other than Drs. Chuckerbutty and Chandra from the Medical College. It was, he said, due to no fault of the natives but to the short-sighted policy of Government in not appointing natives passed from that College as its professors. The meeting was one of the longest on record lasting for about 3 hours, though the attendance was not as could be wished.

THE following letter, received by Mahamahopadhyaya Mahesh Chandra Nyayaratna from Professor E. B. Cowell, will be read with interest by many :—

"Cambridge, April 24, 1896.

My dear friend,—I enclose you a draft for fifty rupees and I send it to you because I felt sure that you would not mind the trouble of giving it to the Editor or Superintendent of the Mahabharata translation for use.

I am glad to be able to show my real feeling of sympathy in that meritorious work.

I am now reading over again the "Sankhya Tattva Kaumudi" in Tarkavachaspati's excellent edition. I was delighted to find out the explanation of a hard phrase which often occurs, as in p. 9, "sattva-purusha" for "prakritipurusha," in our old Sanskrit College text books: *Māgha*, canto 4, 55; I came upon it quite accidentally, and it shone on me "pradipavat." I have not been quite well lately, but the weather is better, and I hope to be soon strong and well again. Mrs. Cowell is fairly well, I am glad to say. She sends her kind remembrances to you.

When I read Sanskrit philosophy, I seem to be back in Calcutta and to hear your voice as in 1864! It is like what our poet Wordsworth describes in one of his poems—a woman who was born among the mountains has long lived in London; and one day she hears a bird sing, and immediately, as by magic, all London vanishes and she seems to be walking alone as a girl in the mountain valley where she was brought up.

Good bye.—Yours affectionately, E. B. COWELL."

Pronounced meritorious by many scholars, the English translation of the Mahābhārata has at last been completed. The last fasciculus, numbered the hundredth, has come out of the press. Poor Pratapa Chandra Roy is not alive to receive the congratulations of friends and the reading public in general. It is a melancholy pleasure to his widow who, for carrying out the last injunction of her husband, has devoted even her *stridhan* for completing the work which he had begun and nearly finished. We hope the debts incurred by her, amounting to about Rs. 10,000, will be paid off. There are two postscripts, one by the widow, and the other by the translator who appears in it *in propria persona*. The announcement is scarcely a surprise. For the last twelve years, it was an open secret. Anonymity, with regard to such a work, could scarcely be possible. Patronised as the undertaking was by many eminent officials including provincial Governors and Viceroys, the authors

name could not fail to be known. Oriental scholars in every part of the world made enquiries which could not but be answered. Many people think that the translator did an injustice to himself by remaining behind the screen. The translator's postscript is full of interesting matter. He has not exaggerated the difficulties which he had to struggle with. There are many verses in the Mahabharata which are of the nature of oracles. Considerable light has been thrown upon them by Nilakantha. It is believed that the interpretations given in that great commentator's gloss represent those which came down to his time from great teachers before him. It is a matter of regret that the two vernacular versions we have of the Mahabharata are both disfigured by numerous errors. The Santi Parva, in particular, has been made a mess of by the Bengali translators. In the postscript of the widow, mention is made of a Bengal Zemindar who has not paid his promised contribution; and of two others who, though generally liberal, have strangely neglected to aid this herculean enterprise. It is not too late yet for them to help the poor widow out of her difficulties.

Few Oriental scholars in England have devoted themselves with greater earnestness to the study of Sanskrit than Professor Cowell. His solidity is beyond dispute. His love for the people of India is genuine. The poem of Wordsworth to which he alludes is entitled "The Reverie of Poor Susan." We quote the lines:—

At the corner of Wood Street, when daylight appears,
Hangs a Thrush that sings loud, it has sung for three years :
Poor Susan has pass'd by the spot, and has heard
In the silence of morning the song of the bird.

'Tis a note of enchantment ; what ails her ? She sees
A mountain ascending, a vision of trees ;
Bright volumes of vapour through Lothberry glide,
And a river flows on through the vale of Cheapside.

Green pastures she views in the midst of the dale
Down which she so often has tripp'd with her pail ;
And a single small cottage, a nest like a dove's,
The one only dwelling on earth that she loves.

She looks, and her heart is in heaven : but they fade
The mist and the river, the hill and the shade ;
The stream will not flow, and the hill not rise,
And the colours have all pass'd away from her eyes !

RECENTLY we spoke of the Seals' Free College in this City. Another small and modest charity has been newly opened under the name of Students' Home. The number of inmates is very limited and they are all free boarders, receiving their food, clothing and all other requisites. True to its name, it aims to supply, as far as possible, all the comforts of home. It is a boarding house but no school.

In our advertisement column will be found the starting of an experiment of a free school and free home for students.—K. P. Pal's Free Higher Class English School, at Secundarpore, near Tarakeswar. The advertisement gives all particulars. We will only introduce the proprietor by saying that he constructed a fine bathing ghat at Howrah (through the Port Commissioners) at a cost of Rs. 20,000 and a wooden shed at another ghat at Seebpore for the convenience of female bathers. He is already known to the student population for his gift of Rs. 5,000 for the Marcus Square recreation ground. Having attended to their health, he has now turned his attention to their education.

LAST week, at Calcutta, there were 44 deaths from cholera, against 71 and 86 in the two preceding weeks, and three deaths from small-pox against three in the previous week.

REIS & RAYYET.

Saturday, June 6, 1896.

SERPENTS AND THEIR BITES.

THE great Darwin wrote : " Battle within battle must ever be recurring with varying success ; and yet in the long run the forces are so nicely balanced, that the face of nature remains uniform for long periods of time, though assuredly the merest trifle would often give the victory to one organic being over another, Nevertheless so profound is our ig-

norance, and so high our presumption, that we marvel when we hear of the extinction of an organic being ; and as we do not see the cause, we invoke cataclysms to desolate the world, or invent laws on the duration of the forms of life ! " In evolution nature tries to preserve the balance by adaptability of species to altered conditions. In this way, they are preserved. But the change is a continuous contest for life, the weak succumbing to the strong. By nature poisonous serpents are generally ophiophagus. For instance, cobra bungarus (*chandrachura*) and cobra di capello devour their young as soon as born. A casual observer at the Calcutta Zoo will observe a common serpent being swallowed by cobra bungarus during an afternoon meal in the summer season. On one occasion it was observed that the serpent food was gradually taken in by two bungari from the two ends, head and tail, and only a small portion remained undevoured. Then the danger of devouring one of the bungari became imminent. The duty of the keeper of the serpent house was to cut the food serpent into two by a pair of scissors. He entered the room and did his work coolly in the midst of serpents of the same species. Bungari have been known to devour full grown *gakhuras* or *kantias*. The popular notion is that these are double-faced without a tail. This is a mistake and it arises from the caudal scales being of the same character and colour with the mouth. The present Superintendent of the Zoo has seen only one of this species bearing marks in the tail, exactly resembling those on the head including the eyes. Such specimens are very rare. Their ophiophagus nature is a bar to their infinite multiplication. And for another reason. *Herpestes griseus*, the Indian moongoos (*benji*) is a deadly enemy to them, and kills and eats them.

Serpents are old inhabitants of the earth. They have been traced to the tertiary strata of geological formation. Most of the early species belong to the class of pythons or rocks nakes (*bora*). The order of ophidia is pre-eminently tropical, and becomes scarce as the distance from the equator increases, and wholly disappears before the arctic or antartic circle is reached. The most poisonous are found in the portion of the earth inhabited by human beings, so there is a continuous war between man and the reptile. Serpent poisons not only kill all living beings but can cure diseases and they are so being utilized from remote antiquity. The two great store houses of serpents are India and South America. In the new world cobras predominate, in the old crotalidæ (*crotalus horridus* type), while vipers abound in both, the most poisonous among the last, Russel's viper (*daboia russeli*) being in India.

The old classification of poisonous and non-poisonous snakes has been found unscientific. Modern research has proved that some of the so-called non-poisonous snakes have also grooved fangs like the poisonous ones, but in the back of the jaw. The serpent class belongs to the order ophidians of Zoology. According to Nicholson, the three important groups of the existing ophidians are the colubrine, the constricting and the viperine snakes, but they are usually treated as one. The family of colubridæ have distinctive characters. The head is generally shielded, the nostrils apical, lateral open, the belly covered with broad band-like shields, the tail conical and tapering. The typical genus is *coluber* (*dhonra*) found in almost all countries. The

colubridæ are divided into *aglypha*, without grooved teeth, *opisthoglypha*, having grooved teeth in the back of the jaw, and *proteroglypha*, having grooved teeth in the front of the jaw. We are concerned with the second and third varieties, with grooved fangs supposed to hold poison. To the second belong many of the tree snakes as *cælopeltes* allied to *psammophis* and *dryophis* found in West Africa and Bengal. They paralyze their small prey before deglutition. Mr. Boulanger, an authority on this subject, writes: "It is probable that all snakes with grooved teeth will prove to be poisonous to a greater or less degree, as it is clear *a priori* that these grooved fangs are not without a function." Another genus of tree snakes, *dipsas*, belongs to this variety. In ordinary language it means a serpent whose bite was fabled to produce unquenchable thirst. There is in Milton's *Paradise Lost*, X., 526:—

Cerastes horn'd, *hydrus* and *ellops* drear, and *dipsas*.

This variety has a repulsive look with flat heads, grooved teeth, body long and compressed, vertical scales square, lateral scales linear, subcaudal plates double. The common green tree snake of India (*laudaga*) has grooved fangs placed behind the jaw. It devours the prey at once and does not seem to paralyze it by the poison.

Of the third class are the poisonous snakes, such as the cobra *bungarus*, serpent eater (*chandrachura*), *kautia*, *gokhura* and others. In this class several degrees of perfection of the poison fangs are seen. Some tree snakes whose salivary gland secretes a mucus which can not properly be said to be poison, have the fang-like teeth situate behind on a lengthened maxillary bone. The elapinæ have a short rounded head, covered with plates. The fangs are smaller but more deadly than in viperine snakes. The skin of the neck is loose and can be distended into a hood. The tail is long and tapering, with a double row of plates beneath. The cobra di capello (*Naja Tripudians*) belongs to this family. The word is Portuguese and means hooded cobra. The *gokhura* has generally nine plates on its behind head which is broad, the neck is very expansible, covering the head like a hood, and the tail round. The colour is brown above and bluish-white beneath. When the disc is dilated the hinder part exhibits dark markings like a pair of spectacles reversed, or rather a pair of barnacles, whence it is sometimes called spectacle snake. One species of it is very white and called the *khoya gakhura*. The *kautias* are black, without distinct plates on the head and with irregular lines. The expanded disc does not resemble spectacles. For their colour they are known in the Burdwan district, Bengal, as black snakes. They are not always wholly black. Some of them live on animals within shells by breaking their cover, and hence they are called *garibhanga*. *Naja Haje*, another variety, known as Cleopatra's asp, is common in Ceylon. It is also deadly poisonous. In Elapinæ the fangs are placed in front and the glands secrete a deadly poison. The fangs are deeply grooved or folded over to form a channel; they are placed on the front of the maxillary, which has a slight power of movement.

In the highly poisoned apparatus of the vipers, the two sides of the groove coalesce and form a complete channel, giving the appearance of a perforated tooth. The maxillaries have a considerable moveable power and the fangs can be erected or depressed at the will of the snake.

The term viper is derived from "vivipara" or "viviparus," producing live young, from "vividus," alive, and "pario", to bring forth. Vipers do not attain to any great size. They know their venom to be very deadly, for having bitten their prey, they leave it to die, and then leisurely prepare to swallow it. The best known species are the common viper (*vipera communis*) of Europe; the cerastes (*vipera cerastes*); the horned (*vipera cornuta*), and the River Jack viper (*vipera rhinoceras*) of Africa, and Russel's viper (*daboia russeli*), *uloobora* of India.

The vipers are distinguished from the crotalidæ by the absence of any depression between the eyes and nostrils. They are attached to Palæ arctic and Ethiopian regions, only one species being found over a large part of Africa and South-Western Asia. The common viper ranges over the whole of the Palæ arctic region, from Portugal to the Saghalien Island, reaching to 67° N. in Scandinavia and 58° N. in Siberia. Some authorities include the genus *Acanthophis* in this family, and place them in the Australian region, while others transfer them to Elapinæ. Wallace, following Strauch, divides the genera into three classes, (*vipera*, *echis* and *atheris*), and the species into twenty-two. *Crotalus* is derived from the Greek word *krotalon*, a rattle. *Crotalus horridus* is the rattle snake. It is so-called because a series of horny bodies loosely united together at the tail end rattle when the reptile moves or is angry. It has a deep pit on each side of the nose lined with small plates. The crown of the head is scaly, the belly covered with shield-like plates. The poison fangs are very large, while the other teeth are small. Its habitat is South America. A specimen is to be found at the Calcutta Zoo.

Its mobility and the facility with which it can move its head make it easy of the serpent to bite. Now as to the mechanism that connects the bones of the jaw with the skull. In an ordinary harmless snake, the maxillary (jaw) bone is found to run as far as the eye socket. With it are joined the transverse and pterygoid bones, studded with teeth, forming the interior row. The pterygoid meets another bone, the quadrate, which unites it with the skull. In the cobra, the maxillary bone is short, bearing a grooved poisonous fang and two or three solid teeth behind it. The transverse is long and the quadrate moveable which enables the snake to move its fang through an angle of 45 degrees. The mechanism is perfect in Russel's viper. The maxillary is very short and higher than those bearing the fang, without any other teeth. The transverse is longest and the quadrate has the greatest motion. On opening the mouth the quadrate is forwarded and with it the maxilla is pushed into front. The fang can be rotated to 90 degrees and erected at right angles. In sea snakes, the maxilla is long and there are two fangs with solid teeth behind. The movement of the quadrate is almost *nil*.

Cobra poison has been analysed by Wolfenden, Blyth, Pedlar and others. It is an amber coloured, syrupy, frothy liquid. Sp. gr. 1.046. It has a feeble acid reaction, and contains albumen, a minute trace of fat and a crystalline body called cobric acid. It dries up, on exposure to the air, to a yellow acrid pungent powder. The poison of "gakhura" is more yellow than that of "kautia." The poison of "kautia" is recommended, in Hindu Medicine, as that of the black snake. In popular belief the poison of this snake has quicker action than that of "gakhura."

Crotalus and cobra poisons have been analyzed and physiologically experimented upon by Drs. Mitchell and Reichart who, in 1886, sent a paper on the subject to the Smithsonian Institute of America. They write : "The active principles of venom are contained in its liquid parts only. The solid constituents, such as we observed suspended in the poison, consist of epithelium cells, some minute rod-like animal organisms, and micrococci, &c., which when separated from the liquid fresh venom by means of filtration and well washed by water are harmless. Micrococci are constantly present in fresh venom but having nothing to do with its virulence. Venoms may be dried and preserved indefinitely in this condition with but very slight impairment of their toxicity. In solution with glycerine they will also probably keep for any length of time. There probably exist in all venomous representatives two classes of proteids, globulins and peptones, which constitute their toxic elements; the former may be represented by one or more distinct principles."

Then they describe their experiments on animals. They make a distinction between the poisons of crotalus and cobra. "Cobra venom does not produce the marked lesions of crotalus-poisoning because it is so lacking in globulins; it is weak in ecchymosis of the altered corpuscles and of the non-coagulability of the blood, but the effects of cobra venom are closely in accord with the actions peculiar to peptones. The peptone of cobra seems to have a more decided power in producing convulsions than that of the rattle snake." They recommend a study of the poison of bungarus and daboia on this basis. These researches seem to be the best of their kind. Dr. Fayrer, the author of "Thanatophidia," and Dr. Shroff, of Madras, have worked to no purpose for an antidote of the snake poison. Dr. Cunningham is experimenting in the Calcutta Zoo, to the same end with hardly any better result. The present recognized treatment of a bite of any poisonous snake, is the rapid application of a few ligatures at a short distance from the wound to prevent the circulation of the poison with the blood. Such ligatures are only possible when the cut is in one of the extremities. Immediate sucking of the bitten part or soon after the ligatures by a man who has no spongy gums, may help to draw out the poison. Deep cutting and burning of the wound are the other methods adopted to take out or destroy the poison. To fight the poison, stimulants are generally administered. The action of the poison is very rapid because of the circulation in man being completed once within twenty or thirty seconds. It is slower in the capillaries than in the larger veins and arteries. When a sufficient quantity of poison is injected by any snake, there is little chance of recovery. Not unoften poisonous symptoms are produced from the bite itself without the injection of the poison, from fear only. In Australia, where most of the serpents belong to the sub-family of Elapinae, to which also the cobra belongs, their poisons are not so powerful as the cobra's. It is said that the injection of a saturated or strong solution of permanganate of potash cured snake bites in that Island continent, but here in India, it has failed entirely. Injection of nitrate of strychnia gives no better result. Our indigenous drugs, *achyranthes aspera* (*apang*), *nerium oleander* (*seth karapi*), *calotropis gigantea* (*seth akanda*) and several such others have proved as fallacious. Ancient India is said to have possessed the remedy, but modern India has yet to find a cure for snake bite.

NOTICES OF BOOKS.

Málavati Natak, composed and published by Radharaman Mittra, from 9, Shambazar Street, Calcutta. 1301 B. S. All rights reserved.

Considering the general run of dramas coming out of the press in Bengal in these days, the production of Babu Radharaman Mittra need not fear a comparison with the very best. It is a Pauranik story that Babu Mittra has utilised. The characters are gods, celestial Rishis, Gandharvas, and Gandharvi girls. The dialogues are not deficient in vigour. The songs are good. The field for the portraiture of character is not large, yet some of the characters have not been unsuccessfully drawn. The heroine is Málavati, the eldest daughter of the Gandharva chief, Chitraratha. The Hindu virtue of devotion to the husband distinguishes her. The drama, if represented on the boards of any of our theatres, may draw as good houses as any recent drama that we have seen acted. Babu Radharaman Mittra deserves to be encouraged. *Malavati* is his first production. He is certain to improve with practice.

Cebinnamasta, Sarbani, Ami, composed by Kalimaya Ghatak, and published by the Sanskrit Press Depository, 20 Cornwallis Street, Calcutta.

It was observed by Bacon that some books are to be tasted, others to be swallowed, and some few to be chewed and digested. The books under notice fall under the first of these classes. Babu Kalimaya Ghatak has taken leave of biography, and is now a novelist. *Cebinnamasta* is a romantic tragedy in prose. It gives a vivid portraiture, with lights and shades, of the sinister influences of early marriage, we mean, of course, infant marriage, such as is seen in this country. *Kapālīni*, the heroine of the plot, is a wonderful product of the writer's imagination. Married at the early age of five, she became subject to a rigorous discipline and looked like a wild bird confined in a cage. Before other girls learn to abstain from sport, she became a housewife and mother of a deformed child. Her husband loves her deeply. To him she is a veritable goddess. But she suspects his chastity. She wrongly accuses him of an intrigue. The husband leaves home. The wife finds out her mistake. She too flies away disgusted in quest of her absent lord whom she now loves with all her heart, becomes a *sanyasini* and devotee of the goddess *Cebinnamasta*, the headless form of Sakti, and, at last, by an accident, meets him in a crematorium in the impenetrable darkness of the night. The catastrophe reminds one of the tragical end of Bankim Chandra's *Kapalakundala*, who closely resembles Babu Ghatak's *Kapālīni*. The same melancholy fate overtakes both. The former drowns herself, the latter stabs herself to death, mourned by a loving husband. Both are children of nature. Both of them, like Wordsworth's *Lucy*, are the sweetest things that grow besides a human door. The solemn stillness of the moon-lit midnight; the sweet babbling of the meandering stream; the occasional howlings of jackals breaking the horrid silence of a vast crematorium, the sounds of the leaves of trees shaken by the wind; the lake resembling a white sheet of paper spread out under the rays of the moon; the morning breeze, charged with the perfumes of flowers, blowing softly, and slightly agitating the rows of flower plants in the cultivated gardens; the full-blown lotuses on the bosom of the sylvan tank rippling with little waves; the blue canopy of heaven, decorated with innumerable starry diamonds; the ruins of a palatial mansion, covered with creepers and plants, and ap-

DEAFNESS. An essay describing a really genuine Cure for Deafness, Singing in Ears, &c., no matter how severe or long-standing, will be sent post free.—Artificial Ear-drums and similar appliances entirely superseded. Address THOMAS KEMPE, VICTORIA CHAMBERS, 9 SOUTHAMPTON BUILDING, HOLBORN, LONDON.

pearing from a distance, under the rays of the moon, like a mound of silver; these are some of the pictures presented by the author in *Cebinnamasta*. Babu Ghatak's extreme fondness for colloquialism has, in many places, marred the beauty of the writing. Many words have been admitted that are unknown in other districts of Bengal. His *Sarbani* is a better production. Though the story is a simple domestic one, still it has merits of its own. The book is written in a delightful and easy style. The description of *Sarbani* is so natural and enchanting that the reader cannot but follow the narrative till the end. *Sarbani* surpasses her sister *Kapalini* in natural attractions. *Sarbani's* character is pure and unalloyed. *Kapalini* is a jealous woman. She suspects the love of her husband, and, therefore, ruin overtakes her and engulphs her unfortunate husband also.

The author's third book goes by the name of *Ami*. It contains some very good essays on social and domestic subjects. These will repay perusal.

All the three productions are worthy of Babu Ghatak. His literary reputation stands high. He has done much for the Bengali language by his varied publications consisting of biographies and novels. These are sure to please a large class of readers.

Official Paper.

WATER-SUPPLY AND WATER CESS.

LOCAL SELF-GOVERNMENT.

Circular No. 10 T.—M.

From H. H. Risley, Esqre., C.I.E., Secretary to the Government

of Bengal,

To all Commissioners of Divisions.

Darjeeling, May, 22, 1896.

[Concluded from page 262.]

16. If, however, the scheme of permissive local rating is allowed to stand by itself without being hampered and discredited by the odium attaching to the imposition of a general cess, the Lieutenant-Governor believes not only that there will be no serious difficulty in extending it wherever Union Committees are constituted, but that a modified form of it may be introduced into all villages of a certain size, whether situated in Board districts or in districts to which the Local Self-Government Act has not yet been extended. The provisions necessary to legalise this action are contained in sections 36, 44, 56, 57, 104---119, 119A---119I, 130, 133, and 134 of the annexed draft amendment of the Local Self-Government Act. Instead of taking these sections in order, it will be convenient first to explain the object and scope of the group of sections numbered 104 to 119, which will take the place of Part III, Chapter III of the present Act, dealing with the duties and powers of Union Committees.

17. Sections 104 and 104A are intended in the first place to remove a technical difficulty which has arisen from the confused parentage of the sections of the Local Self-Government Act which deal with the powers of Union Committees. The obvious intention of certain sections is that there shall be a chain of delegation, and that the District Boards shall delegate, if they think proper, certain powers to Local Boards, who shall in their turn bestow such of them as they think fit upon Union Committees. On the other hand, there are some sections which appear to give to Union Committees independent powers either absolutely or subject to rules to be made by the Local Government. Sections 108, 109, 112, 114 and 115 are instances in point. Moreover, the working of Chapter III of Part III is complicated by the fact that in many districts it has been found inadvisable to entrust to Local Boards the administration of primary education and sanitation, while nowhere do they deal with the registration of births and deaths; and thus, if section 104 be literally construed, it would appear that wherever Local Boards have not taken these matters under their direct control and administration, they devolve upon Union Committees. In order, therefore, to place the law on an intelligible basis, and at the same time to enable the District Boards either to deal direct with Union Committees or to delegate their powers wholly or partially to Local Boards, section 104 has been amended so as to place Union Committees directly under the District Board, and section 104A has been added so as to enable the District Board, where it thinks fit, to delegate its powers of control to a Local Board.

18. Sections 105 to 117 repeat the provisions of the present law either unchanged or with such modifications as are rendered

necessary by draft sections 104 and 104A. In section 114 a further change has been introduced. In its present form it requires every Union Committee to provide for the registration of births and deaths, and to submit such returns as the Local Board may direct. But the registration of births and deaths is not, and never has been, under the Local Board, and consequently if section 104 be strictly interpreted, section 114 would unconditionally impose upon Union Committees the duty of registering births and deaths. In fact, however, registration of both births and deaths is carried out by the police under the control of the Magistrate, and there is no intention of transferring the work to the District or Local Boards. In 1892 it was found necessary to relieve Municipalities of this duty, as most of them were quite incapable of conducting it properly; and there is no reason to suppose that District or Local Boards would do much better. Bengal Act IV of 1873, which provides for the compulsory registration of births and deaths, has not yet been extended to any rural area; but should this hereafter be found desirable, the District Magistrate, and not the District or Local Board, would be the controlling authority. For these reasons section 114 has been altered so as to provide that a Union Committee shall register births and deaths only if required to do so by the District Magistrate—an occasion which is most unlikely to arise.

19. Section 118 deals with the powers of a Union Committee in respect of water-supply, and is intended to take the place of section 118 of the present Act, which, as has been explained, is too limited in its scope to be of any practical use. The new section is based upon sections 51 of the English Public Health Act, 1875, and 8 of the Local Government Act, 1894. Its most important provision is clause (iii), the object of which is to enable the Union Committee to utilise for public purposes any source of water-supply, whether public or private, within the Union, provided that they do not interfere with the exercise of certain specified rights. The rights so specified—fishing, irrigation, and the exclusive use of tanks resorted to by the female members of a household—are understood to be those to which the proprietors of tanks in Bengal attach most importance, and it is hoped that if these are expressly reserved, the powers given to Union Committees of utilising private sources of water may meet with general acceptance. The measure is no doubt a strong one, and goes beyond section 8 (e) of the Local Government Act, 1894, in so far as it restricts the saving of private rights to certain specified cases. Experience, however, has shown that owners of tanks in the mufassal are frequently deterred from placing them at the disposal of local authorities, by the fear that they will thus lose valuable fishing rights, and the Lieutenant-Governor hopes that in practice this clause will render it possible for Union Committees to order the reservation of private tanks for drinking purposes without interfering with rights of fishing and irrigation. The concluding words of this clause have reference to *zanana tanks*, in respect of which no public rights can be exercised. Such tanks are usually more or less enclosed, and it is unlikely that any Union Committee would wish to interfere with them except in pursuance of a private quarrel. Sub-section (2) of section 118 reproduces section 119 of the existing Act with the changes necessary to adapt it to the new section 118.

20. Section 118A is based upon section 5 of Act XIX of 1889, the Central Provinces Village Sanitation Act, modified in the following respects:—

(1) The proceeds of the tax may be applied to all the purposes of Chapter III, except village roads, which should be paid for by a grant from the Road Cess income at the disposal of the District Board.

(2) The character of the tax is defined and its amount limited as in section 85 (a) of the Bengal Municipal Act, instead of leaving the limit to be fixed by rule.

(3) The sanction of the Commissioner of the Division is substituted for that of the Local Government.

21. Sections 118B, 118C, and 118D.—The first of these is based on section 6 of the Central Provinces Act, already referred to, and gives the Local Government power to make rules for dealing with the Union Fund, for regulating conservancy, and for defining and punishing nuisances. These powers will, it is understood, cover whatever provisions may be necessary to prevent the pollution of the village water-supply. Sub-section (3) of section 118B enables the Union Committee to realize arrears of the tax as if they were arrears of *chaukidari* tax under Bengal Act VI of 1870. This procedure is simpler than that prescribed in section 6 (3) of the Central Provinces Act; it is one with which the rural population are already familiar, and its adoption will facilitate the transfer of the powers of *chaukidari panchayats* to Union Committees, should this measure hereafter be found advisable. Sections 118C and 118D are based upon sections 46A and 46B of Bengal Act VI of 1870, and provide for the not improbable contingency of the Union Committee being unwilling to take the trouble and incur the odium of collecting the tax themselves.

22. Chapter IIIA, comprising Sections 119---119H, deals with

the sanitation of villages not included in Unions, and is intended to be applicable not only to Board districts, but also to the districts of the Chota Nagpur Division and Jalpaiguri, Darjeeling and the Sonthal Parganas, where the Local Self-Government Act is not in force. The entire chapter has been drafted on the lines of the Central Provinces Village Sanitation Act, with such alterations as are necessary to adapt it to the condition of this Province. For example, in section 119B, which is modelled on section 4 of the Central Provinces Act, the maintenance of roads has been omitted from the purposes for which a tax is to be imposed, because in Bengal village roads are already a charge on the Road Cess. In section 119C, corresponding to section 5 of the Central Provinces Act, the maximum limit of the tax has been fixed by law instead of being left to be determined by rule, and the assessment has been made subject to the sanction of the Commissioner of the Division. Sections 119D, 119E, and 119F correspond to sections 118B, 118C, and 118D, the object of which has already been explained.

23. Sections 36, 44, 56, 57, 130, 133, and 134 merely introduce into the corresponding sections of the present Act the alterations which are rendered necessary by the provisions of the new Chapters III and IIIA.

24. It will be observed that the scheme of permissive local rating now put forward differs from that proposed by Sir Stuart Bayley in the following particulars :—

(a) the power of taxation is conferred on Union Committees as such, and is not made dependent first on the authorization of the District Board, and then on the sanction of Government ;

(b) the amount to be raised by taxation is to be fixed by the Union Committee subject to the control of the Commissioner of the Division, instead of being fixed by the District Board with the sanction of Government ;

(c) no deduction is proposed for supervision and inspection ;

(d) a maximum limit is fixed for each assessee ;

(e) the proceeds of the tax may be applied to all purposes included in chapter III, with the exception of village roads, and their application is not restricted to sanitation and primary education ;

(f) the powers of the Union Committees in respect of water-supply are materially extended ;

(g) the present scheme is more comprehensive in that it provides for the water supply and sanitation of villages in Board districts which are not included in Unions, and also of villages in districts to which the Local Self-Government Act has not been extended.

25. The fourth suggestion was that District Boards should be allowed in their own right to establish toll-bars on bridges constructed by them, until the cost of the bridge, including the capital and interest expended thereon, as well as the cost of maintenance and of renewal if necessary, has been recovered. Tolls on roads and bridges are leviable on roads made or repaired at the expense of Government under Act VIII of 1851, which is still in force ; and under this Act toll gates were formerly established in most districts on local and district roads. The receipts appear to have reached their highest figure in 1870-71, when they amounted to Rs. 92,189. At this time the Road Cess Act of 1871 was passed and it was the frequently declared policy of Sir George Campbell that as this Act came into force the existing system of tolls should be abolished. This policy was slowly given effect to, for the Road Cess Committees generally murmured against it, and as recently as 1877-78 the receipts from tolls in Bengal amounted to Rs. 62,237. In 1879-80 all tolls on roads and bridges were abolished under the orders of Sir Ashley Eden, on the ground that "toll-bars were a great hindrance to trade and traffic, and, managed as they must be, were sure to produce much extortion, oppression and fraud." In Bombay and Madras the law allows tolls to be levied by the District Boards on both roads and bridges, and the net revenue of the Madras Boards from this source amounts to more than six lakhs of rupees. From a financial point of view, therefore, the reimposition of tolls would be likely to yield a considerable revenue to the Boards in Bengal. Sir Stuart Bayley, however, was not prepared to reverse a policy which had been deliberately followed for many years. He considered the arguments against the proposal too strong to be resisted, and held that the reimposition of tolls on roads or bridges as a source of revenue, and not merely for the recovery of the cost of construction, would be a retrograde measure and obstructive to trade. While holding, however, that tolls on roads could in no case be justified, he thought that there were no similar objections to the proposal that District Boards should be empowered to levy tolls on a bridge erected in place of a ferry. It seems, however, to the Lieutenant-Governor that in the discussions of 1890 the case against the imposition of tolls as a source of revenue was stated in too abstract and general a form and that insufficient weight was given to the practical argument in favour of such a measure, that the people would rather pay tolls than be saddled with an additional local rate to be collected with the rent. As Mr. Wace pointed out in 1889, "one recommendation of the toll to the raiyat will be that it hits the baniya

harder than the Road Cess does. The baniya, of course, will try to pass it on, but of this the raiyat will be unaware ; and even if he should feel it less than another turn of the tahsildar's screw." A similar opinion, which may probably be taken as representative, was expressed by Mr. Ashutosh Gupta, then Officiating Collector of Jessore, who observed :—"The entire cost of constructing roads and bridges is borne by the agricultural classes, while the commercial classes, who profit most by the opening up and maintenance of communications, contribute nothing. It is only fair that the traders should contribute a portion of the District Fund." As regards risk of oppression, Mr. Wace argued that there was less at a toll-bar on dry land than at a ferry. "The ferryman sitting in his boat, six yards from shore, is much more likely to dictate his own terms and levy excessive toll than the man at a bar, and I maintain that the levy of excessive tolls is even now rare."

26. There appear to be three forms in which the power to levy tolls might be conferred upon District Boards, with or without the antecedent sanction of Government ; thus :—

(1) Tolls may be levied on roads and bridges, without restriction as to the recovery of initial cost, on the system sanctioned by Madras Act V of 1884.

(2) Tolls may be levied on roads and bridges, until the initial cost has been replaced, as is contemplated by sections 158--172 of the Bengal Municipal Act III of 1884.

(3) Tolls may be levied on bridges only until the cost of construction, maintenance and renewal has been recovered with interest, as proposed in head IV of Sir S. Bayley's scheme as summarised in paragraph 11 of this letter.

The Lieutenant-Governor thinks that reasonable grounds exist for adopting the second of these methods, and for allowing the levy of tolls to continue until the Board have recovered the initial cost of constructing the bridge or road, and the capitalised value of the estimated cost of maintenance and of renewal in the case of bridges required to be periodically renewed, together with interest on such expenditure. The necessary provisions are contained in sections 86A to 86K on the draft annexed, which are based upon sections 158 to 170 of the Bengal Municipal Act, and, like those, require the previous sanction of the Local Government in each case. Section 138 (4) supplements these by conferring on the Local Government power to prescribe the mode of ascertaining the capitalised value of maintenance and of determining what class of bridges requires periodical renewal.

27. The proposals discussed in the foregoing paragraphs would, in the Lieutenant-Governor's opinion, be sufficient in themselves to place the question of local taxation in the rural portions of Bengal on a sound and permanent footing, and to provide both District Boards and Union Committees with a fairly progressive income for expenditure on local purposes. As, however, the entire scheme is of a permissive character, it seems desirable to leave as much latitude as possible to local authorities, and to give them the power to vary their modes of taxation in accordance with special conditions, subject of course to the sanction of Government in each case. In this view, I am to mention the three following taxes, power to impose which might, if opinions are favourable to them, be embodied in the amendment of the Local Self-Government Act which is now before a Select Committee of the Bengal Council.

28. Fees on musical processions which have been sanctioned by the police have been levied for the last thirty years by the Municipal Commissioners of Patna, and in 1894-95 such fees amounted to Rs. 1,589. Similar fees were levied in 1890 by the Dinapore Nizamut Municipality on the scale noted in the margin ; but this practice was discontinued in 1892, under the orders of the Commissioner of Patna, who, however, recommended, with reference to the Bill to amend the Municipal Act, which was then before the Legislative Council, that a provision should be introduced legalising the general imposition of such fees by Municipal Commissioners. Towards the end of 1893, Mr. Forbes's proposal was referred for consideration to the Select Committee on the Bill, but they expressed no opinion on the subject, and the matter seems to have been overlooked. It has since been suggested that the opportunity of the Act being now under amendment might properly be taken to introduce a section empowering Municipal Commissioners to levy fees on musical processions sanctioned by the police, in accordance with a scale to be approved by the Commissioner of the Division. In my letter No. 3T.--M. of the 28th April last, circulating for opinion the draft Bill to amend the Municipal Act, which was introduced into Council on the 11th April, this proposal has been referred to, and District Officers, Municipal Commissioners, and public bodies have been asked for an expression of opinion on the subject. So far as the Lieutenant-Governor has been able to ascertain at present, native feeling is decidedly in favour of an impost of this kind, and it is believed that such fees would be paid without a murmur, if Union Committees were invested with the powers which it is proposed to confer upon Municipalities. The proceeds no doubt would be small in any given place, but the possible sources of income available

to a Union Committee are so few that, in the Lieutenant-Governor's opinion, it would be unwise to reject any means of adding to them that is likely to meet with popular acceptance.

29. Marriage tax.—A further suggestion of a somewhat similar type is to permit Union Committees to levy a tax on marriages celebrated within the Union in proportion to the expenditure incurred, and in accordance with a scale to be fixed by them with the approval of the Commissioner of the Division. The Lieutenant-Governor is aware that as a measure of Imperial taxation the imposition of a tax upon marriages has been discussed and rejected on the ground that it would not yield much revenue unless assessed and collected in such a way as to reach the poorest classes in the country; and that, if so collected, it would be extremely unpopular. It may be doubted, however, whether these objections, the force of which His Honour fully admits, are at all applicable to a marriage tax as a mode of permissive local taxation introduced, assessed and collected by a rural representative body, and expended by them for the benefit of the community which they represent. In favour of such a tax, so administered, it may be urged that something practically indistinguishable from it already exists in the form of the so-called subscription or *chanda* which is levied in most villages on the occasion of all domestic ceremonies which involve any kind of entertainment, including not only marriage but also *annaprāsana*, the giving of the first rice, and *upanayana*, the investing of a boy of the higher castes with a sacred thread. In the hands of a committee of villagers intimately acquainted with the circumstances of every assessee, the proceeds of a marriage tax would probably be quite large enough to form a substantial addition to the income of the Union; the expenditure which it would affect is purely luxurious; and the control of the Commissioner, to whom the scale of fees would be submitted for approval, would be a sufficient guarantee against any unreasonable exaction. Finally, it is quite possible, as has been observed in previous discussions on the subject, that the levy of such a tax may be found in practice to appeal to the popular instinct of display, and that the official receipt showing that a particular person has paid the tax on a certain outlay as stated by himself or appraised by the Committee, may come to be regarded in popular estimation as evidence that the individual has discharged a social obligation with suitable pomp and circumstance. The tax may thus not only swell the income available for village purposes, but may also indirectly tend to bring about a reduction of wasteful expenditure. I am to add that in 1889 a proposal that the District Board should be authorised to levy a tax on marriages within the district was brought forward, in connexion with the scheme of local taxation then under consideration by Babu Ram Chandra Mukherji, Government Pleader of Nadia, and Vice-Chairman of the District Board, who wrote as follows on the subject:—"People spending hundreds and thousands on marrying their sons and daughters will gladly contribute a certain amount to the district fund on such happy occasions. It was, and still is, the practice in this country to contribute a certain amount to village pathsalas on the occasion of marriages, and we, the village people, invariably levy a certain amount of money from the bridegroom's party whenever a marriage takes place. The amount is now-a-days paid as a gift, and it depends entirely on the option of the *karta* of the bridegroom's party and his circumstances. In my opinion, in all marriages in which the expenditure is below Rs. 50, the rate of contribution ought to be four annas, and in all other cases the rate should be the same as prescribed by Article 13 of Act I of 1879, prescribing value of stamps for bonds."

30. Wheel tax.—A third suggestion, which seems to the Lieutenant-Governor to deserve consideration, is the proposal to sanction the levy of a wheel tax in the form of a yearly or half yearly fee for the registration of carts. Such a tax could of course only be levied in districts where tolls were not introduced and there would be some difficulty in dealing with carts which only occasionally ply for hire. On the other hand, it may be urged—

(a) that it would be popular with the District Boards, and that public opinion would generally be in favour of it on the ground that country carts with their narrow tyres and heavy loads damage the roads more than any other form of traffic;

(b) that in many of the drier districts a substitute is needed for tolls, which can so easily be avoided that it would not pay a District Board to establish them on roads, while even on bridges they would only be effective during a part of the year;

(c) that such a tax is levied in Municipalities and regarded as an important source of income, and that its adoption by District Boards would put an end to the difficulties of assessing the tax fairly which are referred to at length in paragraph 25 of the Resolution on the working of Municipalities during 1894-95;

(d) that the opportunities for extortion, and the expenses of collecting the tax, would be reduced to a minimum, as a gratuity could only be exacted once or twice a year when the cart was registered, and when once the system of registration had been fully introduced, the tax would practically collect itself, as the carters would take care to renew their tickets periodically;

(e) that if the tax fell solely on the owners of carts, they could well afford to pay it; while on the other hand, if its burden were shifted to the producer or consumer of the goods carted, neither of them would be aware of its incidence.

31. In conclusion, I am to say that the Lieutenant-Governor is so impressed with the necessity of substantially increasing the resources of District Boards and Union Committees in Bengal, and thus enabling them to promote village sanitation and water-supply, that he considers it essential that the present opportunity of introducing a comprehensive measure of permissive local taxation should not be allowed to pass without pressing the question to a decisive issue. The exceptionally dry weather which now prevails has brought home to the population of Bengal the serious danger to health which arises from an inadequate and impure supply of drinking water. Neither Government nor the District Boards can hope with the resources at their disposal to reconstruct the sanitary arrangements or to reform the water-supply of villages in rural Bengal. That task must be left to the people themselves; but given suitable machinery such as the legislation now proposed would call into existence, the Lieutenant-Governor is not without hope that the village authorities, taught by the experience of the last few months, will be ready to make effectual use of their powers, and thus to bring about within a reasonable time a sensible improvement in the material conditions of rural existence in Bengal.

32. I am accordingly to request that the Lieutenant-Governor may be favoured with an expression of your opinion, and of that of the District Boards of your Division, in order that, if possible, the requisite provisions, somewhat in the form of the annexed draft, may be embodied in the amendment of the Local Self Government Act now under consideration, and passed into law during next cold weather. Your report should reach this office not later than the first week of August.

HAPPIEST OF ALL.

THERE is no time in the twenty-four hours when one ought to feel so thoroughly satisfied and content as immediately after a good, hearty meal. And all healthy persons do feel so. The body's demands have been met, and we are easy and comfortable, as though we had paid off an old dun and had money left. We are accessible, humane, and good natured. Then, if ever we will grant a request without grumbling. "True benevolence," says a crusty old friend of mine, "is located in a capable stomach recently filled."

Yes, but what of the incapable stomachs, of which there are so many?—stomachs that disappoint and plague their owners, till the act of feeding, so delightful to others, becomes an act to avoid the necessity of which they are almost willing to die? Ah, that is quite another thing. These poor souls are they who say, as Miss Wallace says in this letter of hers, "I was no longer to be counted among those who have pleasure in eating. Far from it. As for me I was afraid to eat. I felt the need of food, of course—the weakness and sinking that accompanied abstinence—but what was I to do? The moment I ate, my distress and pain commenced. No matter how light the repast was, nor how careful I was not to hurry in taking it, the result was the same. The distress and gnawing pains followed, with discomfort in the chest, and a sense of choking, as if some bits of food had lodged there and were irritating me."

"So objectionable and repugnant to me was the act of eating that for days together I didn't touch a morsel of solid food, subsisting entirely on milk and soda water. Owing to this enforced lack of nourishment I got extremely weak, and about as thin as I could be. I must not forget to say that this happened to me, or rather it began to happen in July, 1886, when I was living at Wellington, in Shropshire. It came on, as you may say, gradually and not with any sudden or acute symptoms. I found myself low, languid, and tired. Then came the failure of my appetite and the other things I have named."

"I took the usual medicines for indigestion, but they had no good effect. After six months' experience of this kind of misery I read in a book about Mother Seigel's Syrup as a remedy for this disease, and got a bottle from Mr. Bates the chemist, in Wellington. Having used it a few days I felt great relief, and when I had consumed two bottles I was entirely well. Since then I have heartily commended Mother Seigel's Syrup to many friends, who have invariably been cured, as I was. You have my permission to publish my letter, if you desire to do so. (Signed) Minnie Wallace, Nurse, The Union Workhouse, Oldham, February 22nd, 1895."

In a communication dated January 8th, 1895, Mrs. Henrietta MacCallam, of 40, Downsfield Road, Walthamstow, near London, states that her daughter Emma fell ill in the spring of 1886 with the same symptoms described by Miss Wallace. She craved food, yet, when it was placed before her, she turned from it almost with loathing. "As time went on," so runs the mother's letter, "my daughter became so weak she could hardly walk. Neither home medicines nor those of the doctors did any good. Her sufferings continued for over eight years. In June, 1894, she began taking Mother Seigel's Syrup, of which we had just read in a little book that was left at the house. In a week she was better, and in less than two months she was enjoying better health than ever before. She has since ailed nothing and can eat any kind of food. (Signed) (Mrs.) Henrietta MacCallam."

"Happy," sings Homer "were they who fell under the high walls of Troy." Happier are they who have never fallen under the crushing weight of indigestion or dyspepsia. Happiest, perhaps, of all are they who have been lifted up by Mother Seigel's remedy and placed where once again they can eat, drink and be merry. And if all these could be gathered together they would make a greater host than the Greek poet ever dreamed of.

K. P. Pal's Free Higher Class English School.

SECUNDARPORE.

THE PROPRIETOR OF THE ABOVE

School will admit ten students in the First or Entrance class whose expenses for food, clothes, books, stationery, etc., for one year, as also medical charges, if any, and the fees for appearing in the Entrance examination, will all be supplied by him. No student will be admitted without a certificate from Baboo Kisari Mohan Ganguli, B.L., of No. 23 2, Raja Rajendra Mullick's Street, Chorbagan, Calcutta.

None need apply who has not every chance of passing in the First Division.

Before admission every student, by himself or his guardian, shall have to enter into an agreement to the effect that if, except for sufficient reason, such as certified illness, etc., he leaves the school without appearing at the next Entrance examination, he shall have to refund the charges incurred for his board, etc. Secundarpore is about eight miles to the southwest of Tarkessur. Applications for admission should be addressed to Baboo KISARI MOHAN GANGULI, B.L., at the above address, within June 30th following.

Music for the Million!

BEECHAM'S MUSIC PORTFOLIO.

The cheapest collection of Music ever issued.

The Portfolio consists of 8 volumes, each of which contains :-

30 of the most popular Songs and Airs of the day, each of which is worth more than the price charged for the whole volume, viz., 3½ annas post free; this price, it should be mentioned, does not nearly cover cost, but the Portfolio is placed before the public at a loss, as a further advertisement of the fact that—

"BEECHAM'S PILLS"

ARE

"Worth a Guinea a Box,"

Only a limited number of volumes will be issued and in order to avoid disappointment, intending purchasers should register their orders at once.

APPLY TO

G. ATHERTON & CO.,

3, New China Bazar-street, CALCUTTA,

Agents for THOMAS BEECHAM, of St. Helens, Lancashire.

N.B.—A list of contents of each volume will be sent on receipt of a stamped envelope.

POSTSCRIPT.

After paying the expenses of the publication, the surplus will be placed wholly at the disposal of the family of the deceased man of letters.

Orders to be made to the Business Manager, "An Indian Journalist," at the Bee Press, 1, Uckoor Dutt's Lane, Wellington Street, Calcutta.

OPINION ON THE BOOK.

It is a most interesting record of the life of a remarkable man.—Mr. H. Babington Smith, Private Secretary to the Viceroy, 5th October 1895.

Dr. Mookerjee was a famous letter-writer, and there is a breezy freshness and originality about his correspondence which make it very interesting reading.—Sir Alfred W. Corft, K.C.I.E., Director of Public Instruction, Bengal, 26th September, 1895.

It is not that amid the pressure of harassing official duties an English Civilian can find either time or opportunity to pay so graceful a tribute to the memory of a native personality as F. H. Skrine has done in his biography of the late Dr. Sambhu Chunder Mookerjee, the well-known Bengal journalist (Calcutta: Thacker, Spink and Co.); nor are there many who are more worthy of being thus honoured than the late Editor of *Reis and Rayyet*.

We may at any rate cordially agree with Mr. Skrine that the story of Mookerjee's life, with all its lights and shadows, is pregnant with lessons for those who desire to know the real India.

No weekly paper, Mr. Skrine tells us, not even the *Hindoo Patriot*, in its palmiest days under Kristodas Pal, enjoyed a degree of influence in any way approaching that which was soon attained by *Reis and Rayyet*.

A man of large heart and great qualities, his death from pneumonia in the early spring in the last year was a distinct and heavy loss to Indian journalism, and it was an admirable idea on Mr. Skrine's part to put his Life and Letters upon record.—*The Times of India*, (Bombay) September 30, 1895.

It is rarely that the life of an Indian journalist becomes worthy of publication; it is more rarely still that such a life comes to be written by an Anglo-Indian and a member of the Indian Civil Service. But, it has come to pass that in the land of the Bengali Babus, the life of at least one man among Indian journalists has been considered worthy of being written by an Englishman.—*The Madras Standard*, (Madras) September 30, 1895.

The late Editor of *Reis and Rayyet* was a profound student and an accomplished writer, who has left his mark on Indian journalism. In that he has found a Civilian like Mr. Skrine to record the story of his life he is more fortunate than the great Kristodas Pal himself.—*The Tribune*, (Lahore) October 2, 1895.

For much of the biographical matter that issues so freely from the press an apology is needed. Had no biography of Dr. Mookerjee, the Editor of *Reis and Rayyet*, appeared, an explanation would have been looked for. A man of his remarkable personality, who was easily first among native Indian journalists, and in many respects occupied a higher plane than they did, and looked at public affairs from a different point of view from theirs, could not be suffered to sink into oblivion without some

attempt to pervert his memory by the usual expedient of a "life." The difficulties common to all biographers have in this case been increased by special circumstances, not the least of which is that the author belongs to a different race from the subject. It is true that among Englishmen there were many admirers of the learned Doctor, and that he on his side understood the English character as few foreigners understand it. But in spite of this and his remarkable assimilation of English modes of thought and expression, Dr. Mookerjee remained to the last a Brahman of the Brahmins—a conservation of the best of his inheritance that wins nothing but respect and approval. In consequence of this, his ideal biographer would have been one of his own disciples, with the same inherited sympathies, and trained like him in Western learning. If Bengal had produced such another man as Dr. Mookerjee, it was he who should have written his life.

The biography is warmly appreciative without being needlessly laudatory; it gives on the whole a complete picture of the man; and in the book there is not a dull page.

A few of the letters addressed to Dr. Mookerjee are of such minor importance that they might have been omitted with advantage, but not a word of his own letters could have been spared. To say that he writes idiomatic English is to say what is short of the truth. His diction is easy and correct, clear and straightforward, without Oriental luxuriance or striving after effect. Perhaps he is never so charming as when he is laying down the laws of literary form to young aspirants to fame. The letter on page 285, for instance, is a delightful piece of criticism: it is delicate plain-speaking, and he accomplishes the difficult feat of telling a would-be poet that his productions are not in the smallest degree poetry, without one may conclude, either offending the youth or repressing his ardour.

For much more that is well worth reading we must refer readers to the volume itself. Intrinsically it is a book worth buying and reading. —*The Pioneer*, (Allahabad) Oct. 5, 1895.

The career of "An Indian Journalist" as described by F. H. Skrine of the Indian Civil Service is exceedingly interesting.

Mookerjee's letters are marvels of pure diction which is heightened by his nervous style.

The life has been told by Mr. Skrine in a very pleasant manner and which should make it popular not only with Bengalis but with all those who are able to appreciate merit unmarred by ostentation and earnestness unspoiled by harshness. —*The Mahanadan*, (Madras) Oct. 5, 1895.

The work leaves nothing to be desired either in the way of completeness, impartiality, or lifelike portrayal of character.

Mr. Skrine deals with his interesting subject with the unflinching instinct of the biographer. Every side of Dr. Mookerjee's complex character is treated with sympathy tempered by discrimination.

Mr. Skrine's narrative certainly impresses one with the individuality of a remarkable man.

Mookerjee's own letters show that he had not only acquired a command of clear and flexible English but that he had also assimilated that sturdy independence of thought and character which is supposed to be a peculiar possession of natives of Great Britain. His reading and the stores of his general information appear to have been, considering his opportunities, little less than marvellous.

One of the first to express his condolence with the family of the deceased writer was the present Viceroy, Lord Elgin. Mookerjee appears to have won the affection not only of the dignitaries with whom he came in contact, but also of those in low estate.

The impression left upon the mind upon laying down the book is that of a good and able man whose career has been graphically portrayed. —*The Englishman*, (Calcutta) October 15, 1895.

The career of an eminent Bengali editor, who died in 1894, throws a curious light upon the race elements and hereditary influences which affect the criticisms of Indian journalists on British rule.

"Life and Letters of Dr. S. C. Mookerjee" a book just edited by a distinguished citizen of Calcutta, takes us behind the scenes of Indian journalism.

It is a narrative, written with insight and a

complete mastery of the facts, of how a clever youth gradually grew into one of the ablest leader-writers in Bengal, and still more gradually matured into one of the fairest-minded editors that western education in India has yet produced. If the training and experience which develop the journalist in England are sometimes varied, they seem in India to have an even wider range.

But the object of this notice is to show how a great Bengali journalist is made; space forbids us to enter upon his actual performances. They will be found set forth at sufficient length, and with much felicity of expression, in Mr. Skrine's admirable monograph. It is characteristic of the noble service to which Mr. Skrine belongs, that such a book should have issued from its ranks. Dr. Mookerjee was no optimist. One of his brilliant speeches contained the following sentence:—"India has neither the soil nor the elasticity enjoyed by young and vigorous communities, but present the arid rocks and deserts of an effete civilization, hardly stirred to a semblance of life by a foreign occupation dozing over its easily-gained advantages." This was true of the pre-Mutiny India of 1851. If it is no longer true of the Queen's India of 1895, we owe it in no small measure to Indian journalists like Dr. Mookerjee who have laboured, amid some misrepresentation, to quicken the "semblance of life" into a living reality. —*The Times*, (London) October 14, 1895.

"IMPROVED UNDAUNTED"

WATCH. Rs. 7.

Guaranteed three Years.

Strong, accurate, pretty, small, open-faced, nickel-stemmed, keyless, smart winning, patent, "NEW STYLE IMPROVED UNDAUNTED" watch, with hand setting mechanism, secondhand, for Doctors, ornamental bold dial, for Rs. 7 V. P. P. with an extra glass, spring, pretty box and full three years' guarantee. Warranted to stand the roughest use. Runs more than 28 hours with one winding. Will last a life time. Easily repairable. Others sell at double our rates. One watch free for the purchase of 8 at a time. Mr. Jno. Dickson of Hapital Railway, from Ceylon says:—It keeps splendid time and never stopped although it sustained hard knocks and jerks. x Dr. H. Moore of Royal Artillery from Poonaallee says:—I sold it for Rs. 16. x Pte. W. Hopkins of Sussex Regt. from Dublin says:—I have sold it for Rs. 20. x Mr. T. B. Scott of Putna Opium Department says:—The watch you sent me some seven years ago is still keeping very good time.

Jewelled Ring Rs. 1-3-0. Real

Silver Watch Rs. 13. Real

Solid Gold Watch Rs. 24.

Pretty electro cased gold chain Rs. 1-8-0. Fashionable electro cased Gold Ring set with scientific diamonds, Rubies, Emeralds, at Rs. 1-8-0. Mr. G. Smith, Salt Inspector from Simkutin, says: "A German valued the diamond ring at Rs. 50 and ruby at Rs. 30." Key winding, Government stamped, solid silver hunting case, Royal watch with extras and full three years' guarantee, for Rs. 13. Pte. G. Hawkes of 2nd York Light Infantry from Parandhar says:—For the first one I got Rs. 25; the second one I sold to a Sergeant for Rs. 28 x Pte. H. C. Bishop of L. F. L. Regt. from Kanjee says:—A Corporal offered Rs. 30 for the very same watch. Gentlemen's open faced, keyless *real solid gold watch* Rs. 30; ladies' Rs. 24; both with extras and guaranteed for 3 years. Mind they are guaranteed to be of real solid gold. No agents kept, all goods sent only by us from Bombay per V. P. P.

SPECIFICS

for all ordinary diseases, like Fever, Cough, Asthma, Pthisis, Diabetes, &c., including diseases brought on by irregularities of kinds, Catalogues, containing full accounts of diseases and remedies, are transmitted on application. Prescriptions, with or without medicines, sent to every part of India and Ceylon, Cape Colony, and the British Isles, on receipt (by post) of full accounts of diseases.

Thousands of unsolicited Testimonials from every quarter.

CATARRH.

Hay Fever, Catarrhal Deafness.

A NEW HOME TREATMENT.

Sufferers are not generally aware that these diseases are contagious, or that they are due to the presence of living parasites in the lining membrane of the nose and eustachian tubes. Microscopic research, however, has proved this to be a fact, and the result is that a simple remedy has been formulated whereby these distressing diseases are rapidly and permanently cured by a few simple applications made at home by the patient once in two weeks. A pamphlet explaining this new treatment is sent on receipt of 2½d stamp by A. HUTTON DIXON, 43 & 45 East Bloor St. TORONTO, Canada.

VOL. XV.

CALCUTTA, SATURDAY, JUNE 13, 1896.

WHOLE NO. 729.

LUCY.

The simple and beautiful ballad below is said to have been written by William Laidlaw, steward and friend to the author of Waverley, and of whom the touching anecdote is told, that on Sir Walter's return from Italy, during his last illness, he was capable of recognizing but few of his friends and relatives; however, on Laidlaw's entering his room and standing at his bedside, his eye brightened, and looking up in his face, he exclaimed: "Is that you, Willie! I ken I'm hame noo!"—*Boston Courier.*

'T was when the wan leaf frae the birk-tree was fa'en,
And Martinus dow'ie had wound up the year,
That Lucy row'd up her wee kist we' her a' in 't,
And left her auld maister and neebors sae dear;
For Lucy had served i' the glea a' the simmer—
She cam there afore the flower bloomed on the pea;
An orphan was she, and they had been kind till her,
Oh, that was the thing brocht the tear to her e'e.

She gaed by the stable where Jamie was stannin',
Richt sair was his kind heart, the fittin' to see;
"Fare ye weel, Lucy," quo Jamie and ran in,
The gatherin' tears trickled fast frae his e'e.
As down the barn side she gaed slow wi' her fittin',
"Fare ye weel, Lucy," was ilka bird's sang,
She heard the crow sayin' 't, high on the tree sittin',
And Robin was chirpin' 't the brown leaves among.

O, what is 't that pits my puir heart in a flutter?
And what gars the tears come sae fast to my e'e;
If I wasna ettled to be ony better,
Then what gars me wish ony better to be?
I'm just like a lammie that loses its mither,
Nae mither or friends the puir lammie can see;
I fear I hae tist my puir heart a' the gither,
Nue wonder the tear fa's sae fast frae my e'e.

Wi' the rest o' my claes I hae row'd up the ribbon,
The bonnie blue ribbon that Jamie gae me;
Yestreen, when he gae me 't, and saw I was sobbin',
I'll never forget the wae blink o' his e'e.
Tho' then he said naething but "Fare ye weel Lucy,"
It made me I neither could speak, hear nor see;
He could nae say mair but just "Fare ye weel Lucy,"
Yet that I will mind till the day that I dee.

The lamb likes the gowan wi' dew when it's dronkit,
The hare likes the brake and the braid on the lea,
But Lucy likes Jamie—she turned and she lookit,
She thocht the dear place she wad never mair see.
Ah, weel may young Jamie gang dowie and cheerless,
And weel may he greet on the bank o' the burn;
For bonnie sweet Lucy, sae gentle and peerless,
Lies cauld in her grave, and will never return.

WEEKLYANA.

It is not that Britannia,
Whose march is o'er the mountain-waves,
Whose home is on the deep,
It is not that

Britannia needs no bulwark,
No towers along the steep.

There is a proposal in Parliament in the shape of a Bill to fortify some of the commanding heights between London and the South Coast, in order to better prepare the ocean-warriors,

The Mariners of England,
That guard *their* native seas,
Whose flag has braved, a thousand years,
The battle and the breeze,

Their glorious standard launch again
To match another foe,
And sweep through the deep,
While the stormy tempests blow;
While the battle rages loud and long,
And the stormy tempests blow,

and to make

The meteor flag of England
Yet more terrific burn,
Till danger's troubled night depart,
And the star of peace return,

when, when,

Their song and feast shall flow
To the fame of *their* name,
When the storm has ceased to blow;
When the fiery fight is heard no more,
And the storm has ceased to blow.

THE Prince of Wales and the Duke of Connaught have been made Knights of the Grand Cross of the new Victorian Order.

PRINCESS Henry of Battenberg has been appointed to the Governorship of the Isle of Wight vacated by the death of her husband.

AT Cimiez, during her stay, the Queen purchased the Villa Sicard for Princess Beatrice.

THE Queen has got another great-grandchild. On the 2nd May, a daughter was born to the Crown Princess of Greece, who is a daughter of the Empress Frederick and sister of the German Emperor.

A PACK of cards of the fifteenth century "Tarrochi di Mantegna" from the collection of the late lady Charlotte Schreiber fetched, in a London sale, £120.

THE Hungarian Millennial Exhibition was opened in Buda-Pest

Subscribers in the country are requested to remit by postal money orders, if possible, as the safest and most convenient medium, particularly as it ensures acknowledgment through the Department. No other receipt will be given, any other being unnecessary and likely to cause confusion.

with pomp befitting the occasion. The members forming deputations from different provinces and guests numbered about twenty thousand.

ONE of the largest dinners to the press of recent times was given on the 4th of May by the largest hotel in Europe, the Hotel Cecil. Covers were laid for five hundred persons. Viscount Hurdingle, the chairman of the Hotel company, presided. The hotel has splendid accommodation for thousand diners. A fine orchestra has been permanently engaged.

THE Playfair-Kitson appeal has been settled out of court. Mrs. Kitson has agreed to receive £9,000 in full satisfaction of £12,000 awarded her by the Jury, who by the excessively heavy damage marked their disapprobation of the conduct of Dr. Playfair which deprived her of the means of livelihood.

MRS. Langtry's action against the Union Bank of London, for the loss of her ornaments, has been amicably settled. The bank pays her £10,000 but no costs. The jewels, if recovered, would go to her on her refunding the amount received.

LIEUTENANT COLONEL Lord Raglan and Major the Hon'ble Grenville Somerset, both of the Royal Monmouthshire Engineer Militia, have compiled statistics which show that of 14,051,902 male adults in England and Wales, only 48·72 per 10,000 are in the Militia. In Scotland with 1,942,717 adults, the percentage is 60·48, while in Ireland with 2,318,953, it is 93·16.

TRISTAN D' ACUNHA, a small island lying between the Cape of Good Hope and South America, is owned by Great Britain. It was recently visited by the Captain of the *Dartford* who found the population to be no more than forty-five women and fifteen men. The latest addition was a shipwrecked mariner who was washed ashore and received in marriage before he was dry.

Out and Home, a London journal, writes:—

"The Dominion of Canada, the largest of British colonial possessions, has a voluntary militia force of about 40,000 men, who are called up for drill sixteen days every year. In addition, it maintains several permanent corps and schools of instruction of a maximum strength of 1,000 men. The Victorian land forces number between 5,000 and 6,000, and those of South Australia some 2,600, including a thousand volunteers. Queensland, by an Act passed in 1884, keeps up a drilled force of 4,500 including about 150 fully paid engineers, 2,500 militia, paid for each day's drill, and 2,000 volunteers assisted with uniforms, etc. In New South Wales, the defence force numbers upwards of 8,000 men of whom some 600 are regulars, 4,000 volunteers and 3,500 reserves. New Zealand maintains a voluntary force of 10,000 men, besides a small permanent militia for artillery and torpedo work. Finally, Tasmania and Western Australia each maintains small volunteer forces, the former of about 2,000 men and the latter of considerably under 1,000.

In nearly all the colonies the law provides that, in case of emergency, the whole of the male population, usually between 18 and 55, may be called upon for service. Taking the figures as they stand, they do not furnish a very imposing display of military strength; but if the colonial forces are small in numbers, they are of excellent quality. For the most part, the men are of superb physique, literally ready to go anywhere and do anything."

WE read in the *Times of India*:—

"For all the good they are likely to achieve in bringing to a head the important question of house connections in Bombay the two elaborate reports which have been formulated by the Committee appointed to discuss the subject might never have been written. The Committee appear to be hopelessly divided, though one would think there could hardly be two opinions on the subject. The final conclusions of the majority of the Committee are that house connections should be divided into two parts, the first including all work to be carried out on public thoroughfares which, the Committee observe, should be done at municipal cost out of general drainage funds; while the second, consisting of all the rest of the work, external and internal, required for connecting the house, should be carried out by the house owner at his own cost. The native house-owner, however, with a few

DEAFNESS COMPLETELY CURED! Any person suffering from Deafness, Noises in the Head, &c., may learn of a new, simple treatment, which is proving very successful in completely curing cases of all kinds. Full particulars, including many unsolicited testimonials and newspaper press notices, will be sent post free on application. The system is, without doubt, the most successful ever brought before the public. Address, Aurai Specialist, Albany Buildings, 39, Victoria Street, Westminster, London, S. W.

exceptions, is notoriously indifferent to sanitary requirements, and it seems pertinent to inquire by what means the Municipality would seek to compel him to do what he does not want to do and what he does not see the necessity of doing. Is the Municipality prepared to undertake the wholesale prosecution of every refractory householder in Bombay? The task would be altogether too Herculean; and, moreover, would mean a delay of years in the carrying out of this eminently necessary sanitary reform. The minority of the Committee come to a much more sensible decision when they declare that the Corporation is responsible for the health of the city, and must employ the best agency for the construction and maintenance of house connections; in other words the Corporation itself must do the work, and if the common revenue is not sufficient to meet the cost it must be made so by increased taxation."

In Calcutta, the house owner has to pay for the connection, but perhaps it is not so costly as in the first city of the Empire. Before the water is laid in any house, the Bombay Municipality cannot do better than guard against waste of water. It is almost criminal in Calcutta.

FROM his championing of all Indian religions, the sage of the lion-guarded Aryan Cottage in Moti's Lane has come to the conclusion that "all our physical ills are due to sins, committed either by ourselves or by our ancestors," and that "if we are to raise ourselves physically and materially, we must elevate ourselves spiritually."

THE *Indian Mirror* reports that "the Cotton Institution shall remain closed for Thursday, the 11th instant, as the day to congratulate on the new coronation of the Rajah Shih Chander Bannerji Bahadur, the vice-President of the Institution." We have not seen any subsequent account shewing where and how the new king was crowned and how many hundreds of persons in their quick march to the tables spread out with food and presents were trampled to death. Nor is there any announcement about banquets, balls, parades, theatrical performances, royal receptions and popular festivities following the "new coronation."

ENDORISING our remark that it is too late for the *Indian Mirror* to condemn the kerosine oil because of its foreign origin, Baboo Monmath Nath Bose writes:

During X'mas of 1893 I had occasion to go up to Chandusee, a station on the Oudh and Rohilkhand Railway. I went up to Nazimabad, once the residence of Nazimaddaula, the Viceroy of Shah Akun the second, the last Emperor of Hindustan, whose name it still bears. His tomb close by the small square fort, is still to be seen; but the buildings within it were dismantled during the Sepoy revolt, lest the rebels would use them. After a few days' stay, I went higher up to the Karnasram on the banks of the river Malinee, which the immortal Kalidas, in his celebrated *Sakuntala*, has dealt with so minutely. Thence to Haldikater, a plateau of the Himalayas, 25 miles North-West of Nazimabad. This place is full of jungles and is almost uninhabited, except by some Paharees who have 10 or 12 huts of rude construction to live in. Supreme in ignorance they recognize no currency and the British rupee, which has invaded the Native States, has no value to them. Some baniahs from the lower valley bring them rice, flour, salt, &c., and receive in exchange linseed, wheat, maize and other local productions. But marvel not, Mr. Editor, if I tell you that the darkness of Haldikater is illumined by kerosine—the oil for the poor. Therefore I think you were quite right to say "too late" when commenting on the paragraph quoted from the *Indian Mirror* of the 20th May. It is a vain endeavour to stop the consumption of the oil which for a trifle gives more light than any indigenous oils. It may be patriotism but is not Political Economy.

THE latest official report on the state of the season and prospects of the crops in the N.-W. P. and Oudh is:—

"The whether is somewhat unsettled. Duststorms with showers are reported in several districts. Heavy rain fell in one tahsil in Bara Banka. The extra crops are flourishing everywhere and are being reaped in places. Cane and indigo are being irrigated where practicable and are doing well. Sowings for the autumn crops continue. The numbers employed on relief works and in receipt of gratuitous relief on Saturday, May 30th, were—Banda 88,688, Hamirpur 49,068, Jhansi 33,953, Jalaun 41,821, Allahabad 8,008, Pilibhit 1,903, Gorhwal 2,522, Almora 1,769, Haridwar 793—total 228,615; of this number 30,995 dependants were gratuitously relieved on the works, and excluding Jhansi for which figures are not reported, 7,282 persons received relief under other provisions of the Famine Code. The numbers employed on village works were—Jhansi 915, Banda 22,067, Hamirpur 24,291 and Jalaun 12,495. Supplies are generally sufficient, but fodder is becoming scarce in many districts. Water is still deficient in Hamirpur and Lucknow. Prices continue high and are rising in most districts."

ACCEPTING the opinion of the Madras Government, the Government of India have held that hand-pumps, not being "ordinarily used in processes of husbandry, or for the preparation for use or for sale of the products of husbandry," and also not being ordinarily known as "water-lifts," are not exempt from import duty.

A SPECIES of spider has been discovered in the forests of Java, which produces webs of such extraordinary strength that a knife is required to sever them.

THE Archbishop of Canterbury, Dr. Benson, has expressed the opinion that in no part of the world are there to be found greater refinements of brain than amongst the Hindus.

THE biggest library in the world is the National in Paris, containing 2,100,000 volumes. If they be arranged in a straight line, they would, it is said, occupy a length of 32 miles. The next greatest is the collection in the British Museum of England, with 1,260,000 volumes, which might cover 30 miles. The Russian Imperial Library in St. Petersburg has 1,000,000 volumes capable of occupying a lineal space of 29½ miles.

NOTES & LEADERETTES, OUR OWN NEWS

&

THE WEEK'S TELEGRAMS IN BRIEF, WITH OCCASIONAL COMMENTS.

THE Committee of the French Chamber has adopted the Bill declaring Madagascar a French Colony. This step has been taken to enable France to cancel previous treaties between Madagascar and the Foreign Powers. America has accepted the move and renounced her treaty.

MR. Labouchere moved that the House of Commons do adjourn for the purpose of demanding further explanations regarding the Nile Expedition. Sir William Harcourt supported the motion, and quoted from the Italian greenbook to show that the expedition was undertaken in the interest of Italy, and that the idea of any danger to the Egyptian frontier was purely an afterthought. Mr. Curzon replied that the Italian despatches were only a gloss placed upon the language of Lord Salisbury by the Italian Ambassador. The Government, he said, took certain steps for the security of Egypt which had the advantage of assisting Italy. Mr. Balfour defended the non-publication of the correspondence with Lord Cromer, and concluded by declaring that confidential negotiations would be impossible unless greater discretion was shown than had been done by Italy. The motion was eventually rejected without a division.

In the Italian Chamber of Deputies the Duke of Sermoneta admitted that some of the documents in the greenbook were published contrary to usage, but said that their publication was necessary in order to enlighten the Chamber. Explanations, he said, had been exchanged with Britain which afforded fresh proof of the cordiality of the relations between the two countries.

MR. Rhodes in a speech at Bulawayo sketched a prosperous future for Matabeleland as an autonomous state connected with the Cape, by joint defence and trade relations which would eventually lead to federation.

ITALY is sending to Abyssinia an Engineer who is a friend of King Menelik, to propose a treaty of peace, based on resuming the treaty of Ucciali, and making the river Mareb the frontier of Erythraea.

GENERAL Kitchener has established his head-quarters at Omkeh, slightly to the north of Akasheh. The Egyptian troops from Akasheh, under command of the Sirdar, after marching all night, attacked and totally dispersed the Dervishes at Firket on the morning of the 7th. The Dervishes lost heavily, their camps, camels, horses, and stores were all captured. Their loss in men amounted to one thousand, including commander Emir Hammuda and many important Baggara chiefs, and some hundreds of prisoners. Although strongly posted,

the Dervishes were surprised by an ably planned and vigorous attack. The Egyptian and the Soudanese troops behaved splendidly and lost twenty killed and eighty wounded. No British officers or men were killed or wounded. It is reported that King Menelik has offered to assist the Khalifa against the Egyptians.

Major Burn Murdoch, of the Egyptian Cavalry, has occupied Suarda, capturing the Dervish camp and killing many of the enemy. Infantry are advancing to hold Suarda, which gives the Egyptians command of the whole Nile to the north. The Egyptians have captured a quantity of cattle, stores and treasure at Suarda. Altogether forty-five principal Mahdist Emirs have been killed, wounded or captured.

Advices from Bulawayo state that the British, on Saturday last, attacked and routed the Matabele near there, and that the Matabele lost three hundred in killed.

The Egyptian Mixed Tribunal has pronounced the advance from the reserve fund for the Nile expedition illegal, and ordered Government to refund the amount paid with five per cent. interest. All further advances are prohibited. The Egyptian Government and the British, German, Austrian and Italian Commissioners have appealed against the decision. In the House of Commons, Sir Michael Hicks Beach said that he had every hope of a reversal of the decision, and that the Government were considering whether they should invite Parliament to aid the Egyptian Government.

NEWS from Crete through Greek sources states that the Turks are still pillaging and burning. There is great excitement at Athens over the Cretan question.

MR. Curzon, replying to several questions in the House of Commons, said the Government had been pressing the Porte to remedy the state of unrest in Crete since December last, and the British Consul at Canea had been instructed to join the other consuls there and intervene in the negotiations between the Turks and the insurgents.

ALL honour to *Punch*! It has an excellent cartoon in which India, represented as a graceful girl, is saying to John Bull: "I have found the men for Snakin, but why the money too?" To which John Bull replies: "I really don't see why you should."

A GREAT sensation has been caused throughout Spain by the late outrage at Barcelona at the Corpus Christi festival. Forty Anarchists have been arrested, and the Cabinet is compiling a special Bill for the severe repression of the agitation.

THE trial of Dr. Jameson and his officers was resumed at Bow Street on June 11. The evidence showed that the raid had been long in preparation.

THE Commercial Congress of the Empire has passed a resolution in favour of arbitration in international disputes.

THE Rand Reform leaders have been released on payment of a fine of £25,000 each, and undertaking to abstain from politics in future under pain of banishment. Colonel Rhodes, refusing to abstain from Transvaal politics, has been banished.

MUHAMAD ALI, the eldest son of the Shah has been proclaimed heir-apparent.

THE rumour that Mr. Justice Glose retires is premature, if not wholly unfounded. His pensionable term will not be complete till May next, when he goes on furlough. If then time be heavy on his hands, he will continue in service.

THE third Criminal Sessions begins on Wednesday, the 1st of July next. Already the Sheriff's notice requiring the attendance of gentlemen to serve on the special jury is out. It contains the seal of the sheriff and a signature supposed to be Mr. Playfair's. We are not sure that the signature is his. The practice in the office is to empower the deputy to sign the sheriff's name. Is this legal? Is the

notice valid? At any rate, the chief executive officer of the highest Court should be above any device however well intentioned or adopted for convenience. If the sheriff has to sink himself in his deputy, the nominal head may well be removed, especially when he cannot always earn his own poundage.

THE Royal Bengal Theatre Company of Beadon Street have had a most successful campaign at Chittagong. Engaged by the Empress's Birthday Festival Committee for three days only, they received so much encouragement that they remained for a fortnight, playing to crowded houses in spite of the heat and frequent storms of rain and wind. Their financial success is the more remarkable inasmuch as men apparently qualified to speak with assurance by long residence at Chittagong were unanimous in prophesying that the people would not pay for admission. The Company left Chittagong last week for Comilla after performing two operas, for the special delectation of Mahomedans, to a house packed with followers of the Prophet. They were loud in their acknowledgment of the hospitality received from the inhabitants and the pains taken to provide them with lodging and fare of the very best. The glimpse of a higher life thus afforded to the Chittagonians is already evident in an amelioration of the popular manners. It had hitherto been usual, in this most neglected corner of the Province, for people denied admission to a public entertainment to signify their disapprobation by pelting the building and audience with brick-bats. The custom was a recognised one, and those indulging in it were called *kujaras*. It was put in practice during the first few nights; and the Assistant Manager was struck on one occasion by a missile hurled at him from the outer darkness. Measures were instantly taken to keep the local "roughs" under proper control, and not only were the audience during the last week unmolested but silence succeeded the Babel of tongues which had at first drowned the business on the stage.

The public were especially charmed with the grace and modesty displayed by the actresses; and, indeed, there was but one complaint—the absence of programmes. Here, we venture to think, reform is called for in the Calcutta Theatres. The programmes supplied are generally bald records of entrances and exits, and fail to satisfy the average spectator's desire to gain an idea of the action of the piece. An ideal programme, or, more properly, playbill, begins with the *dramatis personæ* and gives the names of the actors and actresses taking the several parts. Then follows a synopsis of the plot which tells the story of the play in brief and simple language. Next, the *venue* of the different acts and scenes, and the bill ends with the names of the business and stage managers, the leader of the orchestra and other officials of the Theatre.

A BRAHMAN named Sashi Bhusan Roy obtained a rule from the High Court, Original Side, against Shamapada Roy Chowdry, a convert, to produce his infant daughter Mrinalini Debi whom Sashi claimed as his wife. He made an affidavit saying that he was married to the girl in the year 1892, when she was nine years of age; that after marriage she remained with her mother who lived in the paternal family dwelling house separate from her husband who had left his own religion for Christianity. In the year 1894 the mother also embraced Christianity and left the family dwelling house to rejoin her husband. Two years after, the parents caused the child to be surreptitiously removed from the custody of the members of the father's family and to be brought down to Calcutta with the avowed and secret purpose of converting her to their new faith. Sashi's next statement was that the child was being detained against her will by the parents, and that arrangements had been made on the day next to the day on which the application for the rule was made, to compel the girl to renounce Hinduism, and that the child was so much averse to the treatment that she was receiving from her parents, that she declined to take food from their hands or to eat with them, and that she herself absolutely refused to be compelled to embrace the Christian religion. In answer to the rule, the father swore that there was no surreptitious removal of the child at all, that no force or compulsion had been employed for the purpose of removing the child from the custody in which she was left by the mother, to bring her under the care and charge of her parents, that she was living with them of her own free will and was content to remain with them, that the girl was of the age of 11 years and not 13, and had not attained puberty. On these two affidavits, Mr. Justice Sale pronounced judgment discharging the rule. His words are:—

"The question is whether the present custody of the child by the parents is legal custody which a Court can or ought to interfere with under the provisions of Section 491, Cr.P.C. Now I don't think there is any reasonable doubt as to the jurisdiction which is vested in the Court under the provisions of that section. That section gives the Court the jurisdiction which was formerly vested in this Court as the successor of the Supreme Court, and that jurisdiction has been thus described by Mr. Justice Phear in the case of *Queen vs. Vaughn*, V, B. L. R. 427. I refer to his case as it is mentioned in the case of *Week vs. Krishna* reported in I. L. R., IX, Mad. 306. The latter case is one of the cases which are referred to in the case in XVI, Bom. 307.

(After reading the remarks of Mr. Justice Phear on the nature of a habeas corpus which had for its object the guarding the liberty of the subject, and which was issued on behalf of a person illegally confined, and not for the purpose of lending the arm of the law to any person claiming authority, Mr. Justice Sale continues:) Now taking that as the correct view of the jurisdiction exercised by this Court under Section 491, the question is whether I can say that it has been shown that the present custody of the infant is illegal custody. It has been strongly urged that under the Hindu law the right of a husband over an infant wife is paramount, but that right, as has been remarked, is subject to this qualification, that it may be limited by any custom shown to exist, under which, until the infant wife attains puberty, the proper custody of the child is the recognized custody of the parents. The case here is not one which so frequently happens as between the husband and a stranger who is acting as guardian of the infant, but the question here is as between the natural parents of the infant child and her alleged husband. It is shown that the child has never been in the custody of the husband, but has throughout remained in the custody of the parents or those appointed by the parents. It seems to me under these circumstances, for the purposes of exercising the summary jurisdiction of this Court under Section 491, that it would be impossible to say that custody of that character is an illegal custody. I think that it is unnecessary, having regard to the age of the child, that I should stop to consider whether she is now being detained by her parents against her will, though I am bound to say that, if I thought it necessary, I should be inclined to exercise the power which the Legislature has thought fit to clothe the Courts of this country with, under the Guardian and Wards Act in cases where the question of the proper custody of the child arises. In these cases, by Section 17 of the Guardian and Wards Act, one of the circumstances which the Court must take into consideration in determining the proper custody of the child is the preference of the child, if it is old enough to form an intelligent preference. Therefore in cases of that character the question would depend not upon the age of the child but upon its intelligence. But as I have said, I do not think, having regard to the facts of the case, that it is necessary for me to consider what the choice of the child itself may be except so far as it is stated by the father in his own affidavit, and I should also desire to observe that not only does the Hindu law itself recognize that the authority of the husband over the person of an infant wife is subject to the limitation which I have already mentioned, but also the Legislature itself has thought fit, under certain circumstances, to give the Court power, upon questions of custody, to disregard the authority of the husband. By Section 12 of the Act, in cases where it becomes necessary to provide for the interim protection of the person of an infant the section provides (reads the Section). I must say that it appears to me extremely undesirable that the Court in a proceeding of this character should take upon itself to determine definite questions of custody when these questions may be, and as I think ought to be, properly determined by a regular suit for the purpose. It is undesirable, I think, that under the summary jurisdiction of this Court parties should be encouraged, under the guise of an application for the custody of an infant, to exercise or enforce rights arising upon marriage. But even assuming that the husband has in a case of this kind a paramount authority, before the Court would exercise jurisdiction under Section 491, Cr.P.C., so as to assist the husband in obtaining possession of the person of his child-wife, it would be necessary that it should be satisfied that the exercise of its power was required for the welfare and well-being of the child. On more occasions than one the Court has exercised the jurisdiction which it undoubtedly has, by declining to give effect to the legal custody of infants where the circumstances have shown, for the purpose of securing the welfare and well-being of the infant, that that legal custody should be interfered with; and it is from that point of view that I have to regard the present application. As I have already pointed out, the application was made for the purpose of preventing what, it was alleged, would be a lasting injury to the child. The facts shew that no case of that sort has to be considered so far as the infant is concerned. Whatever injury it was the object of the applicant to prevent happening to the child, has already occurred. If the fact of eluting, taking its food with its parents, has the result of outcasting it, that result has already taken place, and I am not prepared to say that under the circumstances it necessarily follows, assuming that the marriage with her alleged husband is a valid marriage, that the welfare of the child demands that her custody should be now entrusted to the husband. It seems to me that the circumstances, as they at present exist, demand rather that the child should remain with her parents. Whether or not it will be for the welfare or well-being of the child that the marriage which took place in 1892 should be recognized by the Court by the handing over of the child to the parents, must depend upon a good many facts and circumstances which are not now before me. It has been suggested that, if I am unable to say that this marriage proceeds upon the basis of a valid marriage, before determining the question now at issue, I should set down the fact of the marriage to be determined upon oral evidence as a separate issue. It seems to me that if I take that course I should be turning the proceedings under Section 491 to purposes for which it was never intended. Whether the marriage is a valid marriage or not, is a question which at present I have not before me to determine. The fact that the validity of the marriage is denied by the father of the infant is one of the circumstances which I take

into consideration in determining whether it is for the well-being of this child that she should, in the present proceedings, by the order of this court be made over to the custody of her husband.

Thinking as I do, upon the facts I have found, the circumstances shew that the welfare of the child demands that she should remain with her parents until the question as to the right of the husband be otherwise determined. This rule should be discharged with costs."

Supposing the husband retire from the business, will the father of the girl be free to marry her again before another order is made by the court? It seems that on the conversion of the father, that the child might not be lost to Hinduism and be overtaken by the fate of Native Christians, she was married by her near relatives to the claiming Brahman. The father repudiates that marriage as without his consent, and considers the marriage invalid. He thinks that with his conversion, all his children became converts and that as a supposed Christian his daughter could only be married under the Christian Marriage Act. Mr. Justice Sile was not evidently prepared to dispose of such grave questions in a summary proceeding and left the husband, if he still claimed his wife, to establish his right in a regular suit.

AN extension of two years having been granted by the Lieutenant-Governor to Mr. B. C. Seal of the Statutory Civil Service, at present District Judge of Beerbhoom, a gentleman, evidently belonging to the Covenanted Civil Service, took umbrage at it in the correspondence column of the *Englishman*. In attempting, however, to prove the extension as unwarrantable and as inflicting a downright injury on Covenanted Civilians, the writer discovered a complete unacquaintance with facts as also service regulations. The truth is Sir Alexander Mackenzie had not to stretch a point for doing what he has done. Extensions to members of even the Covenanted service are by no means rare; nor are they opposed to the regulations governing the statutory service. As a rule, Covenanted Civilians retire after a definite period of service. That period is 35 years. In the case of Statutory Civilians, however, retirement follows the attainment of a certain age, *viz.*, 55 years. Allowing that there is a difference in stamina between the European and the Indian constitution, it does not follow that every native, after fifty-five years of age, becomes incapacitated for further employment under Government. Mr. Seal is an exceptional officer. Then, again, the retention of a senior officer beyond the usual limit of age or period of service should not be looked upon as a block in the way of the advancement of junior officers. It is very true that extensions operate to delay the promotion of juniors, but then the interests of the public are graver than those of individuals. It is to the benefit of the public that a capable senior officer should not be superannuated at fifty-five. Such a material consideration should not be overlooked for the sake of avoiding the displeasure of men who look upon the public service as only a milch cow that exists for them and their clientele. There is no better paid Service in the world than the Indian Civil Service. Created under circumstances that no longer exist, its retention on the old basis can scarcely be justified. When India was little known to Englishmen, when, indeed, the climate of this country was regarded as exceedingly baneful to the European constitution, when an appointment in India was looked upon as the best means for disposing of a younger son, when a voyage to these shores could not be accomplished without doubling the Cape and risk of shipwreck and scurvy, when a residence here for six months was sure to bring an affection of the liver and the spleen without a qualified physician to consult within fifty miles around, when such appliances of art as ice, *punkahs* and *khaskhs* for mitigating climatic rigours were unknown, when there was not a mile of railway for journeys on land and not even a poor flit on the water propelled by steam, high pay and especial privileges were needed for attracting superior men into this country. More than a century of British rule, however, and the advancement of science and art, have done much to alter the condition of things. Accordingly, in those days, young men of sound university culture,—indeed, the flowers of Oxford and Cambridge,—have not the slightest disinclination to come out to India and enter the public service. What can be the justification, then, of keeping up an expensive and exclusive organisation for recruiting the Indian service? It can be confidently said that the curriculum of studies for the Civil Service examination is narrower than that of many of the examinations of the British universities. We do not deny that even the Competitive Civil Service has given us many men possessed of high culture and exceptional talents and, therefore, capable of holding their own against all comers. But

who will deny that similar men are capable of being furnished by the universities of the United Kingdom? Upon a comparison of results, the universities, it will seem, have always been the nurseries of talents far higher than those which the Indian Civil Service Commissioners have been able to foster or find out. It is somewhat ridiculous that at a time when the civil service itself is looked upon as an anachronism and anomaly, its defenders should harp upon the interests of its members, seeking to extoll and protect them against the interests of the Indian public. Sir Alexander Mackenzie has acted very properly by retaining Mr. Seal in the service. The advantages the public will derive from the matured experience of Mr. Seal will prove heavier if weighed against the injury done to a few juniors. The fifty-five years rule, again, is scarcely consistent with wisdom. Superannuation at that age is undoubtedly too early.

ELSEWHERE we have given the last week's report of the famine. This week's account is that relief works have been started in the Shahpur tansil and the Lahore district, where 7,460 persons are now employed. General rain has fallen in the North-Western Provinces, and the crops have much benefited. The numbers on relief works are 193,837, of whom 20,000 are being gratuitously relieved. This does not include some 45,000 persons on village works at at Banda, Hamirpur, Jhansi and Jalaun in Central India. Nearly 20,000 persons are on works in Bundelkhand, 3,000 in Gwalior, and 3,500 in Bighelkhand. In Rajputana the agricultural stock are suffering, and in Meywar and Alwar, and are dying in parts of Jaisalmer for want of fodder. In Mirwar 5,000, Merwara 2,000, and Ulwar about 1,000 persons are on relief works.

No sooner acquitted of the charge of murder of her husband, Mrs. Emily Ghose made preparations to receive her boy love Solomon in open matrimony. The marriage was not gone through in any church. The pair were afraid of violence from neighbours if the ceremony were performed openly in their house. They had therefore decided to call in the Registrar of Christian Marriages and make their declarations of affection in secret in his presence. But he, wise man, equally afraid of a row, preferred his own office, which was crowded with Bibos of the Secretariat eager to have a view of the famous couple. We hope she will love him truly and he shall have a cheerful home.

THE Bengal Provincial Conference, to be held at Krishnaghur, will be presided over not by Raja Jagadindra Nath Roy of Nutor but the Hon'ble Guru Prasad Sen. Biboo Gauruprasad is one of our ablest men and is deserving of the honour done him. The sittings are fixed for next Friday and Saturday, the 19th and 20th days of June.

LAST week, the deaths in Calcutta numbered 235 against 257 and 280 of the two weeks preceding. There were 33 deaths from cholera, against 44 and 71 in the two preceding weeks; the number is higher than the average of the past quinquennium by 18. There was one death from small-pox against three in the previous week.

REIS & RAYYET.

Saturday, June 13, 1896.

COMPETITIVE EXAMINATION NOT A SOUND TEST.

COMPETITIVE Examination is the rage of the day. Of all the Governments in India, that of Bengal has ridden the hobby to absurdity. It has prescribed that test of merit for all kinds of posts—from a Police Sub-Inspectorship to a Deputy Magistrateship. It is said that Bengal has much advanced in education and that the State must have the best educated men for the public service. This argument may look very well in theory and be arrayed with much effect in the public utterances of our rulers, but when carefully examined it is not so invincible as it may seem.

Let us see what has been the effect of the system. This examination has been introduced for more than 12 years, and since then the selection has

generally been made from the University degree-holders. A glance at the civil list would show that we have a set of highly educated men in the subordinate public service, but would Government take the public (who are interested in the appointments) into its confidence and tell them what is its experience as regards character and qualifications of such Deputy Collectors and Deputy Magistrates and how they have been reported upon by the District and other superior officers? We have now every class of men in this branch of the service, which may be said to be truly representative with sons of Rajas, Nawabs, Rai Bahadurs, Khan Bahadurs, scions of old and respectable houses, would be founders of families and houses, men of all grades of society, of various sects and castes,—sons of peons and orderlies, ploughmen and grass-cutters, not excluding Sir George Campbell's representative rayyets and respectable fakirs.

It is true that Government has reserved the power of taking in scions of respectable families who may not come up to the standard of education laid down, but who, for various reasons, for their own good and the good of the State, ought to be encouraged to Government service. For a time also this power was exercised in the spirit in which it was reserved. Of late, however, there has been a tendency to shew no such disposition. From the recent examinations, it seems that a sort of limited competition has been introduced among the candidates who fail in the open competition but obtain $\frac{1}{3}$ marks or more. Among these, preference is given to such as gain the highest numbers. Of these, again, if there is any with a family or other claim, it is considered a qualification in his favour, above the educational. In other words, in the first place, they only are accepted who win in the examination; next, those who, failing in the prescribed test, are fortunate enough to gain one-third or more marks and have respectable connections. But a truly respectable candidate with general knowledge and fair education, failing to obtain one mark less, is nowhere in the race. He must give way to one who has obtained just the passable numbers. It does not matter who this man is or from what stratum of society he comes. High birth if not caste and good breeding are great factors in Indian administration. The first has been recognized in the highest office in the Empire. The low-born or the ill bred, though educated in the ordinary sense, without being raised, by their little knowledge of English, to the caste of Vere de Vere, not only

Smile at the claims of long descent,

but also consider it a privilege and take delight in humbling those claiming long descent or respectability. They are the scourge of the land and do not add to the prestige of British Government in India. Yet they must be obeyed.

This year's result of the examination confirms what we have noticed of late. Among the successful Mahomedans we do not find one single name which indicates that the accepted candidates had any other claim than the marks obtained at the examination. Very good and able Mahomedans with strong family claims presented themselves from Behar and Bengal. Not one of them has been gazetted. Mahomedans from Behar have appeared for two years successively, but to no purpose. The result is very discouraging to the Mahomedans of Behar and generally to the higher and respectable classes all over the Province.

Is this examination or mode of nomination truly conducive to the interests of the service, or is it an unfailing test of the ability and character of the candidates? Is Government convinced that men so chosen are, as judicial officers or administrators, superior to, or as good and reliable as, men formerly appointed under the nomination system, whose race has not yet died out?

Competition pure may be a necessity in China or may have been found successful in England. India is differently circumstanced and that mode of selection of public officers cannot be only for good. India has been said to be an epitome of the world. That observation is as true geographically as in other ways. With various races and religions, with different and opposing customs, with no end of grades of society in various stages of development, with different and conflicting interests, where all is race and caste, where kings and chiefs are believed to be more divine than human, where heredity rules, the administration of the Indian empire is a stupendous administrative difficulty. It will not do to bodily import any Western or Far Eastern system. To adapt it to this country, it must be modified by the necessities of the country itself and the experience gained in it, and have proper respect for the long cherished feelings and prejudices of the people. Administrative abilities and qualifications are quite different from academical distinctions and literary acquirements. Dons, if not dunces, are not always successful judicial officers or administrators. The university stamp is only an indication of a man having received a fair education. Administrative talent in India is inherent in the higher respectable classes. With the firmer consolidation of British rule, the quality of governing is dying out, and whatever remains is visible only in the upper ten. A ruler of men, one who is placed in a position of authority over his fellow countrymen, one whose duty it is to administer justice between man and man, must command the respect and confidence of the public as of the contending parties. In the case of Europeans and especially civilians, this rule does not apply, and we need not give the reasons. If India is to be governed justly and properly, Government cannot afford to ignore this great consideration.

Can an official who has his cousins as peons under the Nazir, or whose father-in-law is the Record-keeper of the Collector, or who is daily seen in court during lunch to smoke *hooka* or chew betel with the ministerial officers under the Bur tree or in the private chamber of his Amla, command any respect from subordinate officers or the public at large, and can he have the courage to control his men? Can an officer whose brother or uncle is a Sub-Inspector of Police or a Head constable in the same district or sub-division have the inclination to reprimand or censure a Police Inspector, the immediate superior of his relation? Can he detect a defalcation in the *tanzi* or treasury by his kinsmen? Can he stop corruption and not be afraid of being boycotted the next day in the society in which he moves and lives. Can a low officer keep a tight hand over such members of the bar who unnecessarily waste the court's time? Are men of this calibre worthy of the respect and confidence of superior officers?

Not only they are not free to perform their ordinary daily routine of duty, but they are also a drag in times of trouble and danger. They lack the courage to walk up to a crowd of religious rioters

and have not the tact to restore peace among them. Kurmi and Jnola Deputy Magistrates will not face a cow killing fight where guns are fired and heads are broken. They or their like are not the men to remain unmoved in times of trouble and stand long by the side of a handful of besieged Europeans rendering them every assistance possible in their power. They are the last men to protect the lives of helpless Europeans or the Government Treasury at a time of commotion and rebellion, which god forbid! If they are not brave enough to receive a bullet shot standing by the side of their Magistrate when the whole population of a city are in arms against the Europeans, they are equally useless in arbitrating a religious or social dispute among the Natives as well. They bring no influence of their own to their posts except such as their places may give them, their education and training in the service fail to bring them any, except that by law they are to be obeyed in peaceful times. They are no leaders, born or "groomed," of men. Then, again, a poor Bania boy, who has never seen 100 Rs. together, is not always and everywhere the officer to resist the temptation of a thousand rupees offered him to go wrong. We had reason to believe that the present race of educated officers were above suspicion and, if anything, they brought honesty to the service. We are afraid, Government, by blindly following a hard and fast rule, is introducing undesirable men, and native Fordyces and Jones are again filling the service. Government may appoint any man to the public service, it may lay down any educational tests for its own guidance in the selection of officers.

But an honest man's aboon its might.

Miserliness may be no disqualification for public service. It is all the same a sin, and a miser is a disgrace to society and may be to the public service. If not dishonest in the discharge of their regular duties, most of the men we are speaking of, are a set of money making machines whose great aim in life is hoarding. That is quite natural for men brought to service from depths of poverty. Their mode of living and style of dressing are inconsistent with their position and cannot raise them in the estimation of the public. With all their elevation, they are not without their grievance. Their general complaint is that they are not properly treated by their European superiors. This neglect is greatly due to their own fault. If they knew how to draw respect they would get it first of all from a European superior. They know that they are not raised by the service, but they do not see that the service suffers by their connection; and, to the misfortune of the country, the boy Magistrates who rule the districts appear to be under the impression that all deputies are of the same class.

The old class of Deputy Magistrates (of whom we are still some left) raised themselves to the highest public positions in the gift of Government, commanded general respect, and rendered most valuable services to their own country and to Government. What a change with the present order of things! The new class hardly bring any dignity to their office. Many of them are proud if they are allowed a seat in front of a pheaton of some big Banker or Bania in his drive. They mind no insults from the ghatwal and Railway ticket collectors.

There are certain families who have served

Government with credit and honesty for two or three generations in this branch of the service, but under the present system of competition and nomination there is very little chance for their sons in the future.

In the N.-W. P. and the Punjab almost all the higher judicial and executive appointments are filled by members of respectable families. In the former any respectable person who has passed the B. A. examination can, without further examination, be appointed a Deputy Magistrate. There can not be any comparison between the present generation of officers in Bengal and the N.-W. P. In the Upper Provinces they are in every way a much superior class of men, possessed of real administrative abilities. Many of them have not passed the higher University examinations, but still they are well educated men. If the Government of the Lower Provinces do not change its system of examination, in another decade the entire rank of the service will not boast of any superior men.

LITERATURE OF BENGAL—V.

(Conclusion.)

Let me now resume the thread of my discourse. In my last letter I attached sufficient reasons to show that the era of Lakshmana Sena must have commenced from 1108 A. D. I cannot close my present letter without pointing out some archaeological vagaries of Dr. Rajendralala Mitra and of some European Oriental scholars who have expressed independent opinions on the subject.

(1) In page 256 of Dr. Mitra's *Indu-Aryan*, he says,—"the Era must have commenced in January, 1106 A. D."

(2) Further down in the same page he says :—"Beginning with 1106 A. D., Lakshmana Sena had a very prosperous reign."

(3) In page 256 of the same work he says :—"its date in 1874 was 767." (1874 - 767 = 1107).

(4) In page 256 he says—"the era is still current and in the present year (1878 A. D.) reckons 791." (1878 - 771 = 1107).

(5) In page 201 of his work on *Buddha Gaya* he says :—"In the present year, it numbers 770. Its initial date must, therefore, correspond with A. D. 1103" (*vide also* Major-General Sir Alexander Cunningham's *Archæological Survey Report*, vol. XV, page 159).

(6) In Dr. Francis Buchanan's *Account of Purneah* (*vide his Eastern India*, vol. III, page 4), it is stated that the year 1810 A.D. was the year 706 of the era of Lakshmana Sena according to the almanacs of Mithila. (1810 - 706 = 1104).

(7) In the preface to his translation of the *Digest of Hindu Law*, Mr. H. T. Colebrooke says :—"Hityatha, the spiritual adviser of Lakshmana Sena, (a renowned monarch who gave his name to an era of which six hundred and ninety two years are expired)," &c.

(8) In noticing an inscription from Buddha Gaya, Mr. James Prinsep, the celebrated numismatologist, writes :—"the era (of Lakshmana Sena) commenced on Thursday, the 12th of the wrent, in the month of Vaishakha, Sam or year 74 after the expiration of the reign of the auspicious Lakshmana Sena."

(9) In page 254 of his *Indu-Aryan*, Dr. Mitra writes :—"Calculated with the datum given by Colebrooke, it would have at once settled the date of Lakshmana Sena; but this was not done."

(10) In page 165 of his *Archæological Survey Report* (vol. XV) Major-General Sir Alexander Cunningham says :—"The era of Lakshmana Sena commenced in 1107 A. D."

(11) Dr. Albrecht Weber writes as follows (*vide his History of*

DEAFNESS. An essay describing a really genuine Cure for Deafness, Singing in Ears, &c., no matter how severe or long-standing, will be sent post free.—Artificial Ear-drums and similar appliances entirely superseded. Address THOMAS KEMPE, VICTORIA CHAMBER, 19, SOUTHAMPTON BUILDINGS, HOLBORN, LONDON.

Indian Literature p. 210, footnote 219a) :—"According to Bühler letter, September, 1875), Jaydeva, who does not appear in the "Sarasv. kanthab" flourished under king Lakshmana Sena of Gouda, of whom there is extant an inscription of the year 1116, and whose era, still current in Mithila, begins, according to the *Indian Antiquary*, iv, 300, in A.D. 1170."

According, therefore, to Dr. Rajendralala the era commenced in 1106 A. D., again, in 1108 A. D. (*vide* quotation 5 above), and again in the beginning of the auspicious reign of Lakshmana Sena, and once more "in the year 74 after the expiration of the reign of the Sena Raja." What a derangement of epitaphs,—confusion worse confounded—is here! Again, according to Dr. Buchanan and Colebrooke, the year commenced in 1104 A. D.. Colebrooke's "Digest" was published in December, 1796. Therefore, 1796-690=1104 A. D. is the reason advanced.

It appears to me that all the Oriental scholars named above, and Dr. Rajendralala also, were nodding at the time. Dr. Mitra was an archaeological Bohemian. The appellation of "Dr. Error" he had earned was scarcely improper. In a highly autocratic way all these antiquarians have presented the public with a debris of facts. I need not say anything more, for, from the above tabular list the reader will be able to measure the extent of the vagaries committed. As regards General Cunningham, all I have to say is that the datum from which he calculated the commencing year of the L. Era is not an accurate one. That datum is the last line of the copper plate noticed in the last paragraph of my last letter on Babu Trailokyanath Mookerjee's *Life of Bidyapati*. I would request the reader to refer to it again. That my calculation is the most accurate one, I think, I have made out. The late Babu Rajkrishna Mookerjee, in his *History of Bengal*, also fixed the year 1108 A. D. as the commencing year of the L. Era.

In pages 139 and 145 of his book, Mr. Dutt says :—"And at last, in 1828 he (Rammohan Roy) established the Brahmo Somaj," &c. This is clearly an error. On the 6th July, 1829, Rammohan Roy bought a piece of land for the foundation of his Brahmo Somaj. The building was completed in November. In December the Brahmo Somaj was formally opened by the Rajah. In page 156, Mr. Dutt says,—"One Gouri Sankar Bhattacharjee started a rival paper," &c. The italics are mine. One who is not familiar with the name of Gouri Sankar *alias* Goorgoore Bhattacharjee, should not take up the pen for writing a work on the *Literature of Bengal*. The very women of our country know the name of the Pandit who waged a spirited journalistic war with Iswar Chandra Gupta, and who, in spite of his coarseness, amused our ancestors greatly. If Gupta was superior in rhyme, Bhattacharjee was superior in prose. Mr. Dutt says,—"Madhusudan was born in 1824 in the village of Sagandari," &c. The birth-place of the poet is Sagandari and not Sagandari. Is this a printer's error? The quotation from Shakespeare's *Macbeth* which appears in page 204, is faulty. In page 42 (footnote) Mr. Dutt says :—"An English translation of this work (Mahabharata) was undertaken and nearly completed by the late Pratap Chandra Rai. His widow has piously undertaken to complete this work." But the question is who is the translator of this famous work? The celebrated person, who, after Herculean labour and at great self-sacrifice has Englished the Mahabharata, so long chose to remain behind the screen. Hitherto the reader was groping in the dark. It is well, therefore, that the veil has been withdrawn. A Sanskrit scholar and a lawyer, Babu Kisari Mohan Ganguli was eminently fitted for the task. He has placed not only all India but the whole world in ever-lasting debt. His erudition, his Job-like patience, his inspired pen helped him to continue, if not to begin, and complete the grand work. The Englished Mahabharata has made the names of its publisher and translator immortal in the annals of the world. Poor Pratap Chandra Rai was not destined to see the completion of his gigantic project. He was snatched away by the cruel hand

of Death in the midst of his glorious undertaking. So in his death-bed, with a longing lingering look behind, he implored the translator to finish the Mahabharata. Sreemati Sundaribala Dasi, the widow of Pratap, by sacrificing a considerable portion of her *Stridhan*, fulfilled the promise which she made before her beloved lord, not to leave a stone unturned for completion of his project. Hers is equally a heroic sacrifice, considering that she inherits nothing but widowhood by her husband's death.

In page 222 Dutt writes :—"Bankim Chandra was the first B.A. in India." Is this correct? The fact is, Bankim was one of the first batch of B.A.'s of the Calcutta University. There were others who took the degree in the same year with him. Mr. Dutt writes in page 184 :—"The *Sans Saucbi* theatre was established in Chowringhee early in the century." This is clearly a mistake. The building of the theatre was completed in May 1840 and opened in March 1841.

Professor Horace Hayman Wilson, M.A., F.R.S., the Father of the Indian Drury, was the originator of that theatre from which the name of the Theatre Road was derived. He had no connection whatever with the *Sans Saucbi*. He left India for good in 1833. Mr. Joskim Hayward Stocqueler, the founder and Editor of the *Englishman*, was a great encourager of the *Sans Saucbi*. Gentlemen of "blue blood," monarchs of officialdom, sons of Mars, and others "as valiant in courage as gentle in birth" flocked to Wilson's banner as amateurs and, the performances were so successful that on alternate Friday evenings in the winter season, you would see all ranks of people collected in the Calcutta Drury more regularly than in churches on Sundays. Tickets were highly priced, Rs. 8 for the box and Rs. 4 for the pit, and yet there was scarcely a single seat unoccupied when the door opened, about an hour before the performance, which was always advertised to commence on the arrival of the Governor-General, who had a box reserved for himself. This theatre did yeoman's service in its days. It created a genuine interest in the native mind for dramatic performances in proper form, which led to the formation of the Belgachia theatre, where the first brilliant fruits of the Hindoo College played eminent parts as dramatic personages.

Mr. Dutt's version of the genesis of the Bengalee language from *Prakritic* source is based upon a contestible ground. Professor Max-Müller and Babu Padmanav Ghosal—a Sanskrit scholar whose opinion is entitled to more weight, are disposed to think that the Bengalee language took its first impetus from Sanskrit and not from *Prakrit*. Mr. Dutt calls Pandit Prem Chandra Tarkabagish as Prem Chand Tarkabagish (*vide* p. 152). Pandit Tarkabagish never signed his name in Mr. Dutt's way, and, therefore, I think, we have no right whatever to make his name a misnomer by calling him Prem Chand Tarkabagish, though it is a more familiar sound. Mr. Dutt does no full reverence to the Maharaja of Pathuria-ghata. He has lowered him down by calling him "Maharajah Sir." Where is "Bahadur"? As our author is a high-official he ought to distinguish the very fine line of demarcation and of honour between "Maharajah" and "Maharajah Bahadur," though there may not be anything like "Bahaduri" on either's part. The person of the "Maharajah Bahadur" class is a man of greater honour in the Government Darbar than one of "Maharajah" only.

With these words, and with the blessings of a Brahmana on Mr. Romesh Chundra Dutt who may have some respect still for the descendant of a Rishi, I take leave of his book. The Earl of Beaconsfield said,—"Those who love best, should criticize best." I love Mr. Dutt with my whole heart. I have, therefore, criticised him in a really friendly feeling. All that I contend for is that an author of Mr. Dutt's scholarship should value accuracy of statement. Slipshod work should never be given by one of his calibre and training. The great Sir Walter Scott himself was open to the charge of offering work after work to the public

without careful revision. "Apollo's venal son" was the sobriquet he earned from Byron in his celebrated satire. Of all calumnies, this seemed to stick to him. Mr. Dutt is an over-worked official. That he has still time to devote his energies to the writing of books is, no doubt, to be commended. But he should not, through haste, give crude works to the public. His example may be followed by others. That a man like him should be inaccurate in even his quotations is very much to be deplored. The public can ill afford to see only a book-maker in him. He should be something more. He should, indeed, be an author in right earnest. Of mere book-makers the public have enough. Every person of sense cannot but regret to see Mr. Dutt entering the field of text-book literature, manufacturing English primers not distinguished by particular merit, or histories with very little original matter. Such competition in the post of a well-paid Civil Servant, with poor pedagogues desirous of adding to their income, seems to be undignified.

S. C. SANYAL, M.A.

OUR LONDON LETTER.

15th May.

Imperial Parliament.—Two events of first class importance have taken place since the last mail went out. On the early morning of the 14th inst. the great division on the education scheme of the Government took place, and the second reading was carried by the record majority of 267. This enormous majority was due to the Irish members, both Parnellites and anti-Parnellites having been compelled by their priests to throw over Sir William Harcourt for the time being and support the hated Government of Lord Salisbury and Mr. Balfour. No one can foresee the consequences of this great division. Some think it has for ever destroyed Mr. Gladstone's old age delusion of Home Rule. Never again will the Radicals and the Irish party act together in complete union. The political parsons, denounced by the Emperor William as "monstrosities," the Rogers, the Cliffords, the Hughes, the Berrys, are for the moment out of court. With them there is nothing but wailing and gnashing of teeth! Fortunately for the cause of progress, the British working man has sense enough and independence enough to assert himself. He cares nothing for the fulminations of the Gladstonian pulpits. The names I have given are representative. They form an ecclesiastical party as repellent to good, sound, honest Protestantism, as the veriest priest of the Church of Rome in the wilds of Connaught. Hence their delirium! Mr. Hughes has a paper of his own, and in it he has invoked all the pains and penalties of hell fire against those who refuse to bow the knee at his dictation.

The other matter of supreme importance was Mr. Chamberlain's masterly speech, as Secretary of State for the Colonies, in the House of Commons, on Friday evening, the 8th. It was a great speech, and the proof of it is found in the fact, it has had a most irritating effect, both on Oom Paul and the German press. There is no doubt that, at the present moment, Mr. Rhodes is under a cloud. I do not speak of the crocodile affectation of virtue on the part of Mr. Labouchere. Every one knows the value to be put upon his opinion. Whether he is praising or denouncing—no matter what the subject may be—the universal sentiment is "It is only Labby's way," and no one but the Radical boot-makers of Northampton care a two penny daum (to use the favourite expression of the great Duke of Wellington) what Labby's opinion on any subject may be. But, among all self-respecting citizens it is felt that Mr. Rhodes has to prove himself innocent of the charges Oom Paul has brought against him. Did Mr. Rhodes, as Prime Minister of the Cape Parliament, and as a member of the Privy Council, connive at Jamieson's raid? Did he say what was true or false, when he assured Her Majesty's High Commissioner—Sir Hercules Robinson—that he knew nothing of it? These are questions that must be probed to the bottom. All Mr. Chamberlain asks is that judgment be suspended until his (Mr. Rhodes') guilt or innocence be proved in legal form. All Englishmen acknowledge his illustrious services in building up our Empire in Africa—that is, all but poor conceited Labby. The terrible misfortune is the necessarily prolonged delay in bringing Jamieson and his officers to final trial. For while Mr. Chamberlain offered a joint commission of both Houses of Parliament to investigate the affairs of the South African Company, it was believed that such an investigation could not be undertaken until the issue of the great assize was determined. It is understood the trial will take place before a special court composed of the Lord Chief Justice of England and two of his most eminent colleagues. But this cannot be before July, and the Houses of Parliament will be dispersing just as the final judgment is arrived at. So it will be November before the Joint Committee of Lords and Commons can begin its work. It is in this prolonged delay that the danger lies.

It is notorious that Oom Paul hates Mr. Rhodes with a hatred it would require Milton's pen to delineate. You can almost imagine you hear Oom Paul ejaculating

I do hate him as I hate the devil,
to put it in the form of Ben Johnson in his famous play "Every man out of his humour."

France.—One can only say of France that it is in a state of unrest. The new Ministry is not expected to last, and when the appeal is made to the country at large, it will probably be for President Faure to fight for his own. Many of the best friends of France must mourn now more than ever the untimely death of the Prince Imperial. Had he been in life, he would assuredly now have been Emperor. The crimes and blunders of the *coup d'état* could not have been visited on him. As for the Bourbons, the hatred of the French peasantry—a hatred passed on from sire to son for generations—will never be overcome. The follies of Louis the XIVth and the shocking immorality of Louis the XVth are as vividly known in every French peasant's home, as the latest foibles of Mons. Bourgeois, or M. Hanotaux. The future, the near future will possibly bring about strange developments.

Russia is wholly engrossed with the approaching coronation, *Italy* with her Abyssinian blunders and her fatal financial impasse. *Turkey* is in sore straits, and the wretched Sultan fears from hour to hour the same fate will overwhelm him as that of the late assassinated Shah of Persia.

Persia makes me remind my Indian friends that our minister at Teheran bears a name specially honoured in India, Sir Mortimer Durand. In the troublous future, and against the machinations of Russia, Sir Mortimer will require all the grand courage and fearless diplomacy of his illustrious father.

The difficulty between *Spain* and *America*, over Cuba, is for the moment happily settled.

Turning from politics to social matters, London is now in all its glory. The lilac, laburnum, chestnut, May and other blossoms are at their very brightest and best. We have had a spell of almost Indian heat, and the country is crying loudly for rain. But, just at the moment, London will bear comparison with any capital in the world, and socially everything ought to please the London tradesmen. The approaching marriage of the Princess Maud of Wales, is attracting a wonderful amount of interest not only on her own account, but because of the lavish loyalty of all to her gracious mother.

The opening of the Hotel Cecil between the Strand and the Embankment, gives London the largest Hotel in the world or nearly so. Its 700 bed rooms are all occupied. Already complaints of charges are appearing in the "Times." One unfortunate for half a small lobster, bread and butter with a pint of ale had to pay 7/ for his lunch. I am afraid you and I, Mr. Editor, will have to give it a wide berth.

22nd May.

An all-night sitting of the House of Commons! That is to-day's great news. It is too early to ascertain the reason of it. Naturally the Government wished to have the Agricultural Rating Bill out of Committee before rising for the Whitsuntide.

Like a good "Old Indian" I am always afoot by 5 and after my *chata bazree*, I go out for a long walk. To-day was a lovely summer morning, and when strolling in Hyde Park, I was amazed to see the light burning in one of the Towers of Westminster indicating that the mill was at work. I went down and beyond hearing five members—including the worst man that ever sat in the House of Commons, Dillon—I could get no rationalist account of the procedure.

I went down again at one o'clock, and found the House had risen for the Whitsunday holidays till Monday week.

The awful member for Battersea—Mr. John Burns—the persistent advocate of an eight hours Bill, was no doubt among the obstinate and insolent minority. I spoke to an old friend, a policeman, and he told me that he had been on duty seventeen hours, probably extended to twenty-four before the House rose. But, as the police do not contribute to Mr. Burn's salary, he will, doubtless, leave them religiously alone. After the House resumes on Monday week, we shall be thrown into all the horrors of a battle over the Education Bill.

As I surmised in my last, the Irish vote on behalf of the Government has completely broken up the alliance between Irish Nationalists and the Radical members of the House. Had that grand old man General Gordon been in life, he might well have said to the selfish octogenarian of Hawarden Hustle, "Khartoum is avenged." The saying is, there are only two men who believe in union boom—Mr. Gladstone and his son Herbert.

Thank God the role has been played out and for many years to come we shall not see Master Herbert in any ministry.

How true was Lord Palmerston's sagacity in foretelling Mr. Gladstone would be the ruin of the Liberal Party. No man hates Scotch Presbyterianism more than he does, as you can find for yourself in the life of Hupe Scott of Abbotsford, or in Bishop Wilberforce's life, and yet for political purposes Mr. Gladstone yields himself to the Scottish Presbyterians, while these last out of hatred to the Established Church of Scotland, banded together as Free

Church and United Presbyterians, to destroy the grand old historic Church of Scotland, though the last election has given these "reverend monstrosities" their quietus.

Spain and Cuba.—An exceedingly interesting and instructive article appeared in the "Times" of the 14th.

France.—The new Government has hardly settled down yet.

Russia.—Is wholly occupied with the Coronation festivals, after which the young Emperor will be expected to show that he has a good head on his shoulders. To any of your readers who wish to know what manner of man he is, I cannot do better than refer them to Mr. Stead's remarkable article in this month's "Review of Reviews."

Home News.—As I write death sentence has been pronounced on the Muswell Hill murderers, as also on the Whitechapel murderer. Complain as you like about our London police, they are often to the front when called upon it.

India.—How are your prospects of famine in the North West Provinces? Many Conservatives are hardly fired by the determination to charge on the Indian revenues the ordinary cost of the troops sent to the Soudan. The Government ought undoubtedly to have dealt with the question as it does when Imperial troops are sent to India.

I have nothing more to add today, but keep us well informed as to the actual facts of the famine, and generally on all questions on which your late illustrious guide, Dr. S. C. Mookerjee would have given us "light and leading."

Official Paper.

THE ROAD CESS—A CESS FOR ALL PURPOSES.

No. 1284 L.S.-G., dated Calcutta, the 30th March 1896.

From—H. H. Risley, Esq., C.I.E., Secy. to the Govt. of Bengal,
Municipal Dept.,

To—The Commissioner of the Orissa Division.

I am directed to acknowledge the receipt of your letter No. 32 T., dated the 17th January 1896, with which you submit copies of correspondence which passed between your predecessor and the Director of Public Instruction, on the subject of the educational allotment of the District Board of Balasore for the year 1895-96. You give reasons for differing from Mr. Cooke on this subject, and you go on to recommend that in this and other districts, where the Local Self-Government Act is in force, formal recognition should be accorded to the principle "that the proceeds of the road cess should be spent on roads, bridges, and water channels only, and that education and medical charity should be supported from other sources of income." In order to give effect to this principle, you propose that a separate account should be kept of the income derived by the Boards from road cess and of the expenditure incurred by them on the roads.

2. In reply, I am to point out that your letter discloses some misapprehension of the legal aspects of the question which you raise. The Proclamation relating to the expenditure of the road cess, which was issued under Sir George Campbell's orders in 1873, had reference mainly to section 90 of Bengal Act X of 1871. It stated in popular language that the funds raised under that Act would be spent within the district on the local roads, canals, and rivers, and would not be diverted to any other purpose. It gave, however, no pledge that the law would never be changed, and in fact, seven years later, a material change was introduced. By section 109 of Bengal Act IX of 1880, the objects on which road cess funds might be spent were substantially enlarged, so as to include the payment of leave allowances, gratuities or pensions, the planting of trees by the roadside, the improvement of the supply of drinking water, and the provision or improvement of drainage. At the same time the limitation to objects within the district, on which stress was laid in the Proclamation of 1873, was expressly extended, so as to enable the District Road Committee to construct, take charge of, or contribute towards any means and appliances for facilitating communication within the district, or between the district and adjacent districts.

3. The Bengal Local Self-Government Act of 1885 effected a further change. The second schedule of that Act, read with section 2, remodelled section 109 of Bengal Act IX of 1880. Nearly the whole of the first clause, making the cost of collection and valuation and the indemnification of the Collector a first charge on the District Road Fund, was re-enacted, and the rest of the section was replaced by a provision laying down that "the balance, after payment of such expenses, shall be credited to the District Fund of the district." Section 53 defined the application of the District Fund, and the fifth clause of this section made the fund applicable to "the payment of expenses incurred by the District Board in the performance of the duties imposed by this Act." In other words, while the Cess Act of 1880 had authorised the expenditure of road cess on pensions, water-supply, and drainage, the Local Self-Government Act of 1885 made a further departure from the

principles of the Act of 1871, merged the road cess in the District Fund, and added pounds, education, medical relief, sanitation, vaccination, famine relief, the destruction of noxious animals, fairs, and agricultural exhibitions to the list of objects to which the fund might be applied. From that time forward the income of the District Board, from whatever sources derived, has been one fund and may legally be spent on any purpose provided for in the Act.

4. The view of the law, which is explained at length above, is that which has been taken by the Government on various references which have been made from time to time on the subject. It is a mistake to suppose that the orders issued in 1888, settling the educational expenditure of different districts and allotting grants from Provincial revenues, contemplated any separation of road cess funds from the general incomes of the Boards. The form in which those orders were passed was determined by considerations of financial convenience, and has no bearing on the general question now raised by you. At the same time, although under the law the District Boards, subject to the direction of the Commissioner, possess ample discretion as to the purposes upon which they may spend the District Fund, the Lieutenant-Governor considers that, on grounds of expediency and quite apart from any legal obligation, it is desirable as a general rule that an amount approximately equivalent to the proceeds of the road cess should be devoted to the objects which the Legislature had in view when Bengal Act IX of 1880 was passed. Special attention is urgently called for at present to the improvement of the supply of drinking water. Under section 48 of the Local Self-Government Act the Commissioner can exercise full control over the District Board budget, and it is for him to see that effect is given to the principle laid down so far as the special conditions and needs of the district admit.

HAPPIEST OF ALL.

THERE is no time in the twenty-four hours when one ought to feel so thoroughly satisfied and content as immediately after a good, hearty meal. And all healthy persons do feel so. The body's demands have been met, and we are easy and comfortable, as though we had paid off an old dun and had money left. We are accessible, humane, and good natured. Then, if ever we will grant a request without grumbling. "True benevolence," says a crusty old friend of mine, "is located in a capable stomach recently filled."

Yes, but what of the incapable stomachs, of which there are so many?—stomachs that disappoint and plague their owners, till the act of feeding, so delightful to others, becomes an act to avoid the necessity of which they are almost willing to die? Ah, that is quite another thing. These poor souls are they who say, as Miss Wallace says in this letter of hers, "I was no longer to be counted among those who have pleasure in eating. Far from it. As for me I was afraid to eat. I felt the need of food, of course—the weakness and sinking that accompanied abstinence—but what was I to do? The moment I ate, my distress and pain commenced. No matter how light the repast was, nor how careful I was not to hurry in taking it, the result was the same. The distress and gnawing pains followed, with discomfort in the chest, and a sense of choking, as if some bits of food had lodged there and were irritating me."

"So objectionable and repugnant to me was the act of eating that for days together I didn't touch a morsel of solid food, subsisting entirely on milk and soda water. Owing to this enforced lack of nourishment I got extremely weak, and about as thin as I could be. I must not forget to say that this happened to me, or rather it began to happen in July, 1886, when I was living at Wellington, in Shropshire. It came on, as you may say, gradually and not with any sudden or acute symptoms. I found myself low, languid, and tired. Then came the failure of my appetite and the other things I have named."

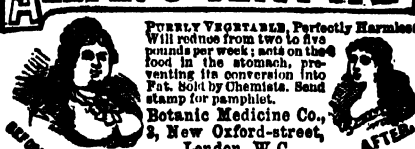

"I took the usual medicines for indigestion, but they had no good effect. After six months' experience of this kind of misery I read in a book about Mother Seigel's Syrup as a remedy for this disease, and got a bottle from Mr. Bates the chemist, in Wellington. Having used it a few days I felt great relief, and when I had consumed two bottles I was entirely well. Since then I have heartily commended Mother Seigel's Syrup to many friends, who have invariably been cured, as I was. You have my permission to publish my letter, if you desire to do so. (Signed) Minnie Wallace, Nurse, The Union Workhouse, Oldham, February 22nd, 1895."

In a communication dated January 8th, 1895, Mrs. Henrietta McCallam, of 40, Downfield Road, Walthamstow, near London, states that her daughter Emma fell ill in the spring of 1886 with the same symptoms described by Miss Wallace. She craved food, yet, when it was placed before her, she turned from it almost with loathing. "As time went on," so runs the mother's letter, "my daughter became so weak she could hardly walk. Neither home medicines nor those of the doctors did any good. Her sufferings continued for over eight years."

"In June, 1894, she began taking Mother Seigel's Syrup, of which we had just read in a little book that was left at the house. In a week she was better, and in less than two months she was enjoying better health than ever before. She has since ailed nothing and can eat any kind of food. (Signed) (Mrs.) Henrietta MacCallam."

"Happy," sings Homer "were they who fell under the high walls of Troy." Happier are they who have never fallen under the crushing weight of indigestion or dyspepsia. Happiest, perhaps, of all are they who have been lifted up by Mother Seigel's remedy and placed where once again they can eat, drink and be merry. And if all these could be gathered together they would make a greater host than the Greek, post ever dreamed of.

ALLAN'S ANTI-FAT

PURELY VEGETABLE, Perfectly Harmless.
Will reduce from two to five pounds per week; acts on the food in the stomach, preventing its conversion into Fat. Sold by Chemists. Send stamp for pamphlet.
Botanic Medicine Co.,
8, New Oxford-street,
London, W.C.

Music for the Million!

BEECHAM'S MUSIC PORTFOLIO.

The cheapest collection of Music ever issued.

The Portfolio consists of 8 volumes, each of which contains:—

30 of the most popular Songs and Airs of the day, each of which is worth more than the price charged for the whole volume, viz., 3½ annas post free; this price, it should be mentioned, does not nearly cover cost, but the Portfolio is placed before the public at a loss, as a further advertisement of the fact that—

"BEECHAM'S PILLS"

ARE

"Worth a Guinea a Box,"

Only a limited number of volumes will be issued and in order to avoid disappointments intending purchasers should register their orders at once.

APPLY TO

G. ATHERTON & CO.,

POSTSCRIPT.

After paying the expenses of the publication, the surplus will be placed wholly at the disposal of the family of the deceased man of letters.

Orders to be made to the Business Manager, "An Indian Journalist," at the Bee Press, 1, Uckoor Dutt's Lane, Wellington Street, Calcutta.

OPINION ON THE BOOK.

It is a most interesting record of the life of a remarkable man.—Mr. H. Babington Smith, Private Secretary to the Viceroy, 5th October 1895.

Dr. Mookerjee was a famous letter-writer, and there is a breezy freshness and originality about his correspondence which make it very interesting reading.—Sir Alfred W. Corft, K.C.I.E., Director of Public Instruction, Bengal, 26th September, 1895.

It is not that amid the pressure of harassing official duties an English Civilian can find either time or opportunity to pay so graceful a tribute to the memory of a native personality as F. H. Skrine has done in his biography of the late Dr. Sambhu Chunder Mookerjee, the well-known Bengal journalist (Calcutta: Thacker, Spink and Co.); nor are there many who are more worthy of being thus honoured than the late Editor of *Reis and Rayyet*.

We may at any rate cordially agree with Mr. Skrine that the story of Mookerjee's life, with all its lights and shadows, is pregnant with lessons for those who desire to know the real India.

No weekly paper, Mr. Skrine tells us, not even the *Hindoo Patriot*, in its palmiest days under Kristodas Pal, enjoyed a degree of influence in any way approaching that which was soon attained by *Reis and Rayyet*.

A man of large heart and great qualities, his death from pneumonia in the early spring in the last year was a distinct and heavy loss to Indian journalism, and it was an admirable idea on Mr. Skrine's part to put his Life and Letters upon record.—*The Times of India*, (Bombay) September 30, 1895.

It is rarely that the life of an Indian journalist becomes worthy of publication; it is more rarely still that such a life comes to be written by an Anglo-Indian and a member of the Indian Civil Service. But, it has come to pass that in the land of the Bengali Babus, the life of at least one man among Indian journalists has been considered worthy of being written by an Englishman.—*The Madras Standard*, (Madras) September 30, 1895.

The late Editor of *Reis and Rayyet* was a profound student and an accomplished writer, who has left his mark on Indian journalism. In that he has found a Civilian like Mr. Skrine to record the story of his life he is more fortunate than the great Kristodas Pal himself.—*The Tribune*, (Lahore) October 2, 1895.

For much of the biographical matter that issues so freely from the press an apology is needed. Had no biography of Dr. Mookerjee, the Editor of *Reis and Rayyet*, appeared, an explanation would have been looked for. A man of his remarkable personality, who was easily first among native Indian journalists, and in many respects occupied a higher plane than they did, and looked at public affairs from a different point of view from theirs, could not be suffered to sink into oblivion among some

attempt to perpetuate his memory by the usual expedient of a "life." The difficulties common to all biographers have in this case been increased by special circumstances, not the least of which is that the author belongs to a different race from the subject. It is true that among Englishmen there were many admirers of the learned Doctor, and that he on his side understood the English character as few foreigners understand it. But in spite of this and his remarkable assimilation of English modes of thought and expression, Dr. Mookerjee remained to the last a Brahman of the Brahmans—a conservation of the best of his inheritance that wins nothing but respect and approval. In consequence of this, his ideal biographer would have been one of his own disciples, with the same inherited sympathies, and trained like him in Western learning. If Bengal had produced such another man as Dr. Mookerjee, it was he who should have written his life.

The biography is warmly appreciative without being needlessly laudatory; it gives on the whole a complete picture of the man; and in the book there is not a dull page.

A few of the letters addressed to Dr. Mookerjee are of such minor importance that they might have been omitted with advantage, but not a word of his own letters could have been spared. To say that he writes idiomatic English is to say what is short of the truth. His diction is easy and correct, clear and straightforward, without Oriental luxuriance or striving after effect. Perhaps he is never so charming as when he is laying down the laws of literary form to young aspirants to fame. The letter on page 285, for instance, is a delightful piece of criticism: it is delicate plain-speaking, and he accomplishes the difficult feat of telling a would-be poet that his productions are not in the smallest degree poetry, without one may conclude, either offending the youth or repressing his ardour.

For much more that is well worth reading we must refer readers to the volume itself. Intrinsically it is a book worth buying and reading.—*The Pioneer*, (Allahabad) Oct. 5, 1895.

The career of "An Indian Journalist" as described by F. H. Skrine in the *Indian Civil Service* is exceedingly interesting.

Mookerjee's letters are marvels of pure diction which is heightened by his nervous style.

The life has been told by Mr. Skrine in a very pleasant manner and which should make it popular not only with Bengalis but with all those who are able to appreciate merit unmarred by ostentation and earnestness unspoiled by harshness.—*The Muhammadan*, (Madras) Oct. 5, 1895.

The work leaves nothing to be desired either in the way of completeness, impartiality, or lifelike portrayal of character.

Mr. Skrine deals with his interesting subject with the unflinching instinct of the biographer. Every side of Dr. Mookerjee's complex character is treated with sympathy tempered by discrimination.

Mr. Skrine's narrative certainly impresses one with the individuality of a remarkable man. Mookerjee's own letters show that he had not only acquired a command of clear and flexible English but that he had also assimilated that sturdy independence of thought and character which is supposed to be a peculiar possession of natives of Great Britain. His reading and the stores of his general information appear to have been, considering his opportunities, little less than marvellous.

One of the first to express his condolence with the family of the deceased writer was the present Viceroy, Lord Elgin. Mookerjee appears to have won the affection not only of the dignitaries with whom he came in contact, but also of those in low estate.

The impression left upon the mind upon laying down the book is that of a good and able man whose career has been graphically portrayed.—*The Englishman*, (Calcutta) October 15, 1895.

The career of an eminent Bengali editor, who died in 1894, throws a curious light upon the race elements and hereditary influences which affect the criticisms of Indian journalists on British rule.

The "Life and Letters of Dr. S. C. Mookerjee," a book just edited by a distinguished civilian in Calcutta, takes us behind the scenes of Indian journalism.

It is a narrative, written with insight and a

complete mastery of the facts, of how a clever youth gradually grew into one of the ablest leader-writers in Bengal, and still more gradually matured into one of the fairest-minded editors that western education in India has yet produced. If the training and experience which develop the journalist in England are sometimes varied, they seem in India to have an even wider range.

But the object of this notice is to show how a great Bengali journalist is made; space forbids us to enter upon his actual performances. They will be found set forth at sufficient length, and with much felicity of expression, in Mr. Skrine's admirable monograph. It is characteristic of the noble service to which Mr. Skrine belongs, that such a book should have issued from its ranks. Dr. Mookerjee was no optimist. One of his brilliant speeches contained the following sentence:—"India has neither the soil nor the elasticity enjoyed by young and vigorous communities, but presents the arid rocks and deserts of an effete civilization, hardly stirred to a semblance of life by a foreign occupation dozing over its easily-gained advantages." This was true of the pre-Mutiny India of 1851. If it is no longer true of the Queen's India of 1895, we owe it in no small measure to Indian journalists like Dr. Mookerjee who have laboured, amid some misrepresentation, to quicken the "semblance of life" into a living reality.—*The Times*, (London) October 14, 1895.

"IMPROVED UNDAUNTED"

WATCH. Rs. 7.

Guaranteed three Years.

Strong, accurate, pretty, small, open-faced, nickel silver, keyless, short winding, patent, "NEW STYLE IMPROVED UNDAUNTED" watch, with hand setting mechanism, secondhand, for Doctors, ornamental bold dial, for Rs. 7 V. P. P. with an extra glass, spring, pretty box and full three years' guarantee. Warranted to stand the roughest use. Runs more than 28 hours with one winding. Will last a life time. Easily repairable. Others sell at double our rates. One watch free for the purchase of 8 at a time. Mr. Jno. Dickson of Haputal Railway, from Ceylon says:—It keeps splendid time and never stopped although it sustained hard knocks and jerks. x Dr. H. Moore of Royal Artillery from Pondicherry says:—I sold it for Rs. 16. x Pte. W. Hopkins of Sussex Regt. from Dumfries says:—I have sold it for Rs. 20. x Mr. T. B. Scott of Patna Opium Department says:—The watch you sent me some seven years ago is still keeping very good time.

Jewelled Ring Rs. 1-8-0. Real

Silver Watch Rs. 13. Real

Solid Gold Watch Rs. 24.

Pretty electro cased gold chain Rs. 1-8-0. Fashionable electro cased Gold Ring set with scientific diamonds, Rubies, Emeralds, at Rs. 1-8-0. Mr. G. Smith, Salt Inspector from Sankutia, says: "A German valued the diamond ring at Rs. 50 and ruby at Rs. 30." Key winding, Government stamped, solid silver hunting case, Royal watch with extras and full three years' guarantee, for Rs. 13. Pte. G. Hawkes of 2nd York Light Infantry from Puraudhar says:—For the first one I got Rs. 25; the second one I sold to a Sergeant for Rs. 28. x Pte. H. C. Bishop of L. F. L. Regt. from Kamptee says:—A Corporal offered Rs. 30 for the very same watch. Gentlemen's open faced, keyless *real solid gold watch* Rs. 30; ladies' Rs. 24; both with extras and guaranteed for 3 years. Mind they are guaranteed to be of real solid gold. No agents kept, all goods sent only by us from Bombay per V. P. P.

SPECIFICS

for all ordinary diseases, like Fever, Cough, Asthma, Phthisis, Diabetes, &c., including diseases brought on by irregularities of kinds. Catalogues, containing full accounts of diseases and remedies, are transmitted on application. Prescriptions, with or without medicines, sent to every part of India and Ceylon, Cape Colony, and the British Isles, on receipt (by post) of full accounts of diseases.

Thousands of unsolicited Testimonials from every quarter.

CATARRH,

Hay Fever, Catarrhal Deafness.

A NEW HOME TREATMENT.

Sufferers are not generally aware that these diseases are contagious, or that they are due to the presence of living parasites in the lining membrane of the nose and eustachian tubes. Microscopic research, however, has proved this to be a fact, and the result is that a simple remedy has been formulated whereby these distressing diseases are rapidly and permanently cured by a few simple applications made at home by the patient once in two weeks. A pamphlet explaining this new treatment is sent on receipt of 2½d stamp by A HUTTON DIXON, 43 & 45 East Bloor St. TORONTO, Canada. *Scientific American*.

CALCUTTA, SATURDAY, JUNE 20, 1896.

WHOLE NO. 730.

COSSACK CRADLE-SONG.

DURING the night one of the men sang us some wild Cossack songs, one of which I had often heard the women crooning parts of before. Whether it was that the wild forms and scenes that were round me lent them a beauty the words do not really possess, or whether there is in fact some charm in this cradle-song of a warlike race, in some things not unlike our borderers of two centuries ago, it seemed at the time very impressive. I will therefore try to help my readers to judge for themselves, from a translation of Poushkin's verses, which, if it does not convey all the spirit of the original, is at least a close transcript of the words and metre.

The words 'bai-oosh-kie-baiou' are merely the refrain of the song, and as untranslatable as our 'lullaby,' so that I have left them in the original.

From scraps of songs which I have from time to time heard crooned in the Crimea and elsewhere, I should almost imagine that Poushkin's words here translated are only a remodelled and completed form of some popular cradle-song in use in his time among the Cossacks.

I am sadly afraid the Cossacks are no longer the romantic persons they were when the poet wrote of them. 'Richard's occupation's one' may be said of them. There is no one left for them to fight, and their existence as Cossacks would lack an object were it not for their duties as postmen. They are as rough as ever, but not, I should say, as ready with their weapons. Their love of cattle-lifting can no longer be legitimately gratified, and I fear I have cause to add that it has degenerated to the level of petty pilfering.—Clive Philipps-Volley, late British Vice-Consul at Kertch.

Sleep, my darling boy, serenely,
Bai-oosh-kie-baiou,

While the still moon, calm and queenly,
Gleams thy cradle through.

I will rise and tell thee legends,
Chaunting rhymes thereto ;

Ah, thine heavy eyes are closing,
Bai-oosh-kie-baiou.

'Neath the rocks grim waves are sweeping—
O'er them glides the Turk :

Comes the vengeful Tscherkess creeping,
Whets an hungry dirk.

Peace ! thy father, battle-hardened,
Keeps watch keen and true.

Sleep then, darling, sleep securely,
Bai-oosh-kie-baiou.

Know thou, too, that days are nearing,
Loud with war's alarms.

Thou shalt spring to horse unfearing,
Bearing warrior's arms,

I'll weave charms upon thy saddle
With a silken clue :

Sleep, my baby, sleep, my heart's blood,
Bai-oosh-kie-baiou.

Cossack to the core I read thee,
Hero-like thou'lt stand :
To the field myself I'll lead thee—
Child ! dost press my hand ?
Ah, the bitter tears in secret,
Tender mothers rue ;
Sleep, my angel, stilly, sweetly,
Bai-oosh-kie-baiou.

Ah, the bitter grief, the sorrow,
Comfortless to wait !
Each morn praying for the morrow
All night guess thy fate.
I shall dream thy days are wasted,
Pining fond and true—
Sleep—cares all as yet untasted—
Bai-oosh-kie-baiou.

Round thy neck, my boy, I'll fasten,
Ere thy path be trod,
Relics rare thy life to chasten,
And to lead to God.
Tender heart, grow strong for peril,
Be to mem'ry true !
Now, sleep on—wild days are coming—
Bai-oosh-kie-baiou !

WEEKLYANA.

TODAY Her Majesty begins the sixtieth year of her reign. There was only one English monarch, George III., who had reigned three months more and lived to the age of 82. Queen Victoria is now in her 78th year. Second in age and in length of reign to only one English king, she is also the oldest reigning Sovereign with the exception of one—the King of Denmark, who is older by about 11 months. The Queen-Empress of India has been a widow over 34 years. May she yet live and rule us long !

OF the many accessories which combine to make the Czar's coronation memorable, not the least is the manifesto issued on the occasion. The present Czar's manifesto begins thus :—

" Be it known to all ye our faithful subjects, after we, by the will and grace of Almighty God, had fulfilled our sacred coronation to-day and had received the holy unction, we knelt at the throne of the King of Kings with humble and earnest imploring that He might vouchsafe to bless our reign, to the welfare of our beloved country ; strengthen us in the fulfilment of our sacred oath ; and enable us to continue the work handed down to us by our crowned predecessors of completing the Russian nation and promoting religious faith, good morality, and true enlightenment. Inasmuch as we recognise what all our faithful subjects stand in need of, and in particular turn our eyes upon the wretched and heavy-laden, whether their case be through their own fault or through forgetfulness of duty, our heart impels us to grant them also the utmost possible relief, so that, entering upon the path of a new life on this memorable day of our coronation, they may gladly be able to take part in the general jubilation of my people."

Then are enumerated fifteen different classes of amnesties and

Subscribers in the country are requested to remit by postal money orders, if possible, as the safest and most convenient medium, particularly as it ensures acknowledgment through the Department. No other receipt will be given, any other being unnecessary and likely to cause confusion.

remissions of punishment. First of all, arrears of taxation in European Russia and Poland are remitted, and the land tax is reduced by one-half for a period of ten years. Then come remissions or reductions of all fines, together with the striking out of State claims in various places. Next, all convictions for petty offences punishable by reprimand, fines up to 300 roubles, arrest, or imprisonment without loss of certain social rights are remitted, the exceptions being robbery, embezzlement, misappropriation, usury, extortion, fraudulent bankruptcy, and offences against honour. The exiles are not forgotten. Those banished to Siberia after serving twelve years, and those banished to remoter Siberian Governments, after serving ten years from the date of their arrival, are permitted to choose their place of residence anywhere except in capital cities or provinces with seats of Government. They are, however, not to be restored to civil rights. Criminals who are interned in Siberia or the remoter Governments, or who are bound to remain in a fixed place of residence, will have one-third of their sentences remitted. For such sent to penal colonies, the term of residence necessary for obtaining freedom will not be ten but four years. Sentences of penal servitude are reduced by one-third, and life sentences commuted to twenty years. Many other punishments are also ameliorated and sentences reduced.

The Westminster Gazette reports that the Prince of Wales has been left £1,000,000 sterling by Baron Hirsch. It is the first time that a member of the Royal Family has come in for a windfall. Years back, a crazy individual named Neild left Her Majesty a legacy variously estimated at from £500,000 to £1,000,000. The Prince has now a grant of £76,000 a year, and the Princess £10,000. The other sources of income are the receipts from the Duchy of Cornwall and the estates at Sandringham and in Ayrshire. There are also some military emoluments.

LORD Roberts is an indefatigable cyclist. Will cycling be a feature in the next war, great or small?

A TOBACCO journal states that the falling off in the demand for cigars will amount to 70,000,000 cigars, and this loss is generally credited to cycling.

AMERICAN shoe-makers state that the feet of women are getting bigger, but more healthy, owing to cycling, tennis, and other out-door exercises.

AFTER inquiry into the comparative merits of European and American armour, the contract for Russian armour has been given to the American Carnegie and Bethlehem Companies.

A POLISH engineer has invented a portable crematory, having the appearance of an army baking oven. It is intended to avoid the danger of epidemics from burial of large numbers of men. Burning is undoubtedly the safest disposal of the dead.

ELECTRICITY is being utilized for detection of artificial diamonds. A small disc of aluminium is attached to the spindle of a small motor. A clamp with a flat spring provided with an adjustable screw, holds the article to be tested. It is then moistened and placed in contact with the rapidly revolving disc. In the revolution the genuine stone shews no brilliancy, while the counterfeit produces brilliant metallic marks.

A WRITER in *Truth* says:—

"The London man of former generations, by which I mean the West End man, led a comparatively quiet life, and having had a classical education read every book that came out, went to every new play, and became the recognized judge and patron of literature and arts. The conditions of today have entirely changed the West End man in this respect. He now seldom reads anything but the news of the Stock Exchange quotations.

It is the West End woman who reads, and therefore the majority of authors write to suit her taste. Even admitting the contention that the women of our time are better cultivated and more experienced in such matters than they were formerly, the tone of the literature of today shows how injurious is the altered condition of things. A quarter of a century ago every year some book or books were published which from that moment had to be added to the standard literature of the language. Now years pass by without one such work being produced. As a matter of fact, at this moment the judgment of the provinces and of the colonies is of more value than that of the West End in this respect; for the men in the former have the leisure to

read and the ability to discriminate for themselves. The best literary representations of our generation have not been made by first obtaining the approval of the West End, but by first obtaining popularity in the provinces and in the colonies. The London literary reputations have mostly been attained through what is popularly called 'log-rolling.'"

"COMMERCE," an illustrated weekly journal of London, writes:—

"Don Quixote de la Mancha was surely never more enthusiastic over the manifold perfections of his Dulcinea del Toboso than is the *Times* over its Cecil Rhodes."

THE *Times* wrote:—

"Our policy in South Africa through a series of years has rested and, as Mr. Chamberlain has recently pointed out, still rests, on a twofold basis. We have proclaimed in words and shown by our acts that we are resolved to assert ourselves as the paramount Power throughout that region."

To this *H.* replies in *Commerce*:—

"Had the remark been made by a half penny braggadocio journal I could have better understood it. But to read such stuff in the first journal of the British Empire is, to put it mildly, astounding. We certainly have 'proclaimed by words' that we are resolved to assert ourselves in South Africa, but how dare the *Times* assert with any regard for truth that we have 'shown ourselves a paramount Power throughout that region.' We have done nothing of the sort, a fact which recent events have only too clearly shown. It is ridiculous to make assertions at which Englishmen must blush, and make even our well-wishers laugh in their sleeves. I do not wonder that *de Labruyere* said cynically that the highest reach of a news-writer is an empty reasoning on policy and vain conjectures on the public management. Then follows the servile eulogy which is a disgrace to a highly-placed English journal, remembering the object of the encomium has done his utmost to damage the reputation of the British nation in the eyes of the whole world."

THE same writer continues:—

"It is with no small amount of indignation I append the following excerpt: 'To his (Mr. Cecil Rhodes) foresight and his promptitude the Cape and the Empire owe that rich inheritance for all ages to come. Had he not seized it for her British South Africa would have been shut out for ever from all possibility of fulfilling her national aspiration of expansion to the north. But the statesman who secured for her this great field for future effort did not work for his own race alone. By a long course of legislation and administration in the Cape Colony he proved that it was his ardent desire to build up the men of English blood and the men of Dutch blood into one people.'

I will take the extracts in parts and analyse them. First there is the mention of his 'foresight and promptitude to which the Cape and the Empire owe that rich inheritance,' etc. Mr. Cecil Rhodes is possessed of foresight and promptitude which he uses for his own ends, being an opportunist of the worst description. The Cape and the Empire have to thank him today for the 'rich inheritance' of tarnished honour—ay, and it hurts me to write it—inglorious enterprise to which, thank God, our country, but for his machinations, would have been a stranger. The second in the *Times'* panegyric of its favourite which I will analyse, is 'The statesman who secured this great field for future effort did not work for his own race alone.' No. The statesman—or why not have put promoter, oh *Times*?—did not work for his own race alone. He, bless and save you, did not put his faith entirely in Dukes, in companies, in shares, in money-making! No. He aimed higher. Land grabbing was his game, and what though the covert was composed of human beings—flesh and blood equal to yours, though black, oh, my white brethren—he was determined to have it, though he had to wade, neck deep, in blood to get it. This, the *Times*, hard *Times*! does not mention. 'By a long course of legislation,' continues my contemporary, 'in the Cape Colony he proved that it was his ardent desire to build up the men of English blood and the men of Dutch blood into one people.' Was the like hypocrisy ever heard, save from a Tartuffe or a Uriah Heep? Cecil Rhodes' desire was to sow the seeds of dissension and cold-blooded treachery, and—now he reaps the harvest of his ill-doing. This my contemporary does not see—will not see in fact. It therefore behoves us all, as Englishmen and Englishwomen, eager to follow the higher doctrines of a wide intellectuality and generous impulse, not to follow in the narrow lines of interested and mendacious journalism, otherwise our better judgment will be subverted and our nobler instincts dragged in the mire by closely attending to the tenets of false prophets who have their own interests to save."

A HORSE will, it is said, eat in a year nine times his own weight, a cow nine times, an ox six times, and a sheep six times.

THE jewels of the Shah of Persia are believed to be the most valuable in the world. There is one sword-scabard which is covered with diamonds, not a single stone being smaller than the nail of the little finger. A huge and splendidly brilliant emerald is almost the gem of the collection; on it are engraved the names of many kings who have possessed it at one time or another. The *Kohinoor*, now in the crown of Queen Victoria, was in the last century the property of the Shah.

If Volapuk is not to be the language of the world, the English bids fair

to be the *lingua franca* of Asia. In Siam, English is the trade language of all the nationalities.

THE mail this week was delivered one day late, that is, the day after the mail left Calcutta. Next week, it is expected in time on Tuesday.

IT has been computed that every day there is one suicide in the Punjab. In the town of Calcutta, last year, in the jurisdiction of the Commissioner of Police, there were 66 cases against an average of 81 during the preceding 4 years.

THE Act to provide for the protection of Muhammadan Pilgrims, passed by the Lieutenant-Governor of Bengal in Council, received the assent of His Honour on the 17th April, 1896, and having been assented to by His Excellency the Viceroy and Governor-General on the 27th May, 1896, was first published for general information in the *Calcutta Gazette* of the 10th June 1896, from which date the law came into operation in Calcutta. It is open to the Local Government to extend the Act to any other place in the Province of Bengal. The working is entrusted to the Commissioner of Police, who "shall from time to time grant licenses empowering persons to act as pilgrim brokers." Power is reserved in the Local Government from time to time to "make rules to regulate the grant of such licenses and to prescribe the conditions to be embodied therein." We do not see that the Act prescribes any fee, but we are not sure that no fee will be charged. A higher fee than the Police Act allows is levied on licenses for native musical processions in streets, and a license is refused if no additional payment demanded for Police is made. The Police Commissioner may very reasonably ask for a payment to meet at least the cost of a license under the Pilgrims Act. A person who, without a license, acts as a pilgrim broker, or who lends to another person a license granted to himself, commits an offence under the Act for which the maximum punishment is a fine of two hundred rupees. The Police Commissioner is not empowered to inflict the fine, but "the penalties to which masters, owners and agents of ships are made liable by this Act shall be enforced only on information laid at the instance of the Commissioner of Police." The same fine of Rs. 200 overtakes a licensed pilgrim broker if he

- (a) commits a breach of any of the conditions of his license; or
- (b) purchases for or sells to any pilgrim a passage-ticket by any ship to which the Native Passenger Ships Act, 1887, applies, at any time before notice has been given by the master, owner or agent of the ship, under section 7 of that Act, of the time at which it is proposed that the ship shall sail; or
- (c) purchases for or sells to any pilgrim a passage-ticket by any ship, unless the proposed time of sailing is printed on such ticket; or
- (d) charges any pilgrim a sum in excess of the cost-price of any passage-ticket, or of any provisions or other articles, purchased for him, or receives from him any fee or commission on account of any such ticket; or
- (e) receives from the master, owner or agent of any ship, or from any railway-servant, any fee or commission in respect of the sale of any passage-ticket for a pilgrim, exceeding five per centum of the price of such ticket; or
- (f) purchases for any pilgrim a passage-ticket on which there is not printed or stamped the price charged for the passage according to the class of accommodation secured; or
- (g) by fraud or false representation, or by any false pretence whatever, induces any person to purchase a pilgrim's passage-ticket.

A "pilgrim" is defined to mean a Muhammadan who is proceeding to or returning from the Hedjaz; "pilgrim broker" means a person who buys and re-sells, or sells on commission, or takes any reward for the purchase or sale of, passage tickets, whether by sea or railway, for pilgrims.

A CONTEMPORARY, a great respecter and defender of the cow, writes:

"The *phuka* process is beneficial alike to the cows subjected to it and the society. The *goulas* are, notwithstanding this, sent to jail for resorting to this process for milking a cow which has lost its calf. And why? Is it because the number of idiots in the world preponderate (*sic*) those who have some sense? A cow, when it loses its calf is apt to get rheumatism, and it is necessary, to protect it from the disease to relieve it of its superabundance of milk. By this process, a most wholesome drink in the world is obtained, and thus is lost to society by these senseless prosecutions. It is suggested that the process is painful to the cows. But has any one ever tested this statement? How is it then that cows permit themselves most willingly to be subjected to the process if it is painful to them? Nay, the cows do more. They show an impatience to be relieved of their milk by this process. All these any one can see who has eyes, and who will take the trouble to see it. The *phuka* process came to be condemned in this way. There was a prosecution and a witness was brought forward before Mr. Marsden, the then Magistrate. The witness a veterinary

Surgeon deposed that he fancied that the process was painful to the cows. When questioned he said he had dealings with horses but nothing to do with cows. All the subsequent *phuka* prosecutions are based upon this extraordinary evidence of the European Surgeon. Is there not one Magistrate who has the good sense to see, that before he punishes a *goula* for having resorted to this process it is his bounden duty to satisfy himself that it is really painful to cows?"

The statements are misleading if not a wilful perversion of facts. Our contemporary, like the famous "Doctor of Error," the late Raja Rajendralala Mitra, who thought that it not only caused no pain but also by titillation imparted a pleasurable sensation to the animal, is a defender of the process condemned by all Hindus. Painful or exhilarating, it has been made penal by law and magistrates are bound to punish the offence according to the law.

NOTES & LEADERETTES,

OUR OWN NEWS

&

THE WEEK'S TELEGRAMS IN BRIEF, WITH OCCASIONAL COMMENTS.

CHOLERA is spreading in Egypt and the epidemic has now reached Assouan.

THE Emperor William has sent a telegram to the members of the Institute of British and Naval Architects who were lately visiting Hamburg and Berlin in which he hopes that the cordial reception given them in Germany has proved to them that "blood is thicker than water." He has also sent to the 1st Royal Dragoons, of which he is Colonel, a wreath to decorate the colours of the regiment on Waterloo day.

IN the House of Lords, on June 12, Lord Salisbury, in reply to a question, said that Dongola was the present objective of the Nile expedition. He would not, he said, pledge Government to a forward policy beyond Dongola this or any year, but he did not consider Egypt was made duly safe until her flag was floating over Khartoum. He added that General Kitchener had a free hand to Dongola, but was instructed not to go beyond. He warmly praised the conduct of the Egyptian troops in the late engagements. Mr. Curzon, replying to a question in the House of Commons, said he believed the expense of the Nile Expedition would not reach half a million for some time.

A DEPUTATION of the Associated Chambers of Commerce waited on Lord Salisbury, and asked the support of Government for making trade routes to China either by building or guaranteeing railways. Lord Salisbury replied that he was unable to assist any railway outside British territory, but that if a powerful and solvent Company was formed Government would do their utmost to assist in carrying a railway to the edge of British territory, and that done, there was not the slightest doubt the line would be able to penetrate foreign territory whenever desirable.

DR. Jameson, Sir John Willoughby, the Hon. Henry Frederick-White, the Hon. Robert White, Mr. Raleigh-Grey and the Hon. Charles Coventry have all been committed to stand their trial, and the rest of the prisoners have been discharged. For Dr. Jameson and his five fellow prisoners, bail has been accepted in the sum of two thousand pounds each on their own recognizances and one thousand pounds in one security each. Sir Edward Clarke said that Dr. Jameson assumed complete responsibility of the whole affair, and the others merely obeyed his orders. Lord Russell has consented to transfer to the High Court the trial of Dr. Jameson and his colleagues. The trial will not commence before the 20th July.

THE court-martial held at Asmara on General Baratieri has acquitted him of the charges brought against him, while deploring that the command of the Italian forces in Erythrea was entrusted to an incompetent leader.

DEAFNESS. An essay describing a really genuine Cure for Deafness, Singing in Ears, &c., no matter how severe or long-standing, will be sent post free.—Artificial Ear-drums and similar appliances entirely superseded. Address THOMAS KEMPE, VICTORIA CHAMBERS, 19, SOUTHAMPTON BUILDINGS, HOLBORN, LONDON.

BOTH Yamagata and Li-Hung-Cheng have been enthusiastically received at Berlin. In handing his credentials to the Emperor William, the Chinese envoy said that the relations of China with Germany were more conspicuously friendly than with any other Treaty Power. He thanked Germany for her powerful assistance in the last year's negotiations for the retrocession of the Liaotung Peninsula. In reply, the Emperor hoped for a still further development of the friendship between Germany and China, for the welfare of both countries, and desired Li-Hung-Cheng to convey to the Emperor of China his thanks for sending a Mission to Germany, and subsequently conferred on Li-Hung-Cheng the Grand Cross of the Red Eagle. Li-Hung-Cheng also lunched with the Emperor and Empress at Potsdam, Prince Hohenlohe and the Members of the Chinese Legation, besides other notables, being present on the occasion. Li-Hung-Cheng paid a visit to Frankfurt-on-the-Oder, and had a grand reception, the streets were decorated and he was warmly cheered. A parade of troops was also held, after which he lunched with the officers. Li-Hung-Cheng, interviewed at Berlin, denied that a secret treaty existed between Russia and China, but admitted that a Russian railway was to be built through Manchuria. The parleying between Li-Hung-Cheng and Baron Marschall, the Foreign Minister, regarding the commercial concessions sought by Germany commenced on the 18th. Marshal Yamagata had too an audience of the Emperor on June 17, at Potsdam. Prince Hohenlohe had paid him on June 15 a prolonged visit. The Japanese Field Marshal does not visit England and Canada, but sails back for Japan immediately.

FOUR hundred British Blue Jackets attended the Mass, on June 14, in the Sistine Chapel, at St. Peter's, Rome. The Pope was present and blessed the audience. As he left all rose, cheering and waving their hats. The men were afterwards entertained at an excellent dinner in the corridor adjoining St. Peter's.

A MEETING of Unionist members was held in the Foreign Office to consider the situation in Parliament. Mr. Balfour urged the party to facilitate the passing of Government measures, specially the Education Bill. He hoped the House would be able to adjourn by the middle of August, and re-assemble in January. The meeting undertook to support the Government.

THE American Republican Convention met at St. Louis. Mr. Fairbanks, who was appointed temporary chairman, said the party would resist any attempt to degrade the currency to the level of the Indian and Chinese currency. He urged his audience to restore the protective tariff, and maintain the highest standard of value. His remarks were received with applause. The platform of Convention, as drafted, opposes the unlimited coinage of silver except by international agreement which it will strive to promote. Meanwhile, it upholds the existing gold standard and maintains silver paper currency on parity with gold and demands. It is strictly for a protectionist policy, and discriminating duties and for building up a Merchant Marine. It also upholds the Monroe doctrine and demands the protection of American Missionaries in Armenia. It sympathises with the Cuban struggle for independence and favours the granting of belligerent rights to the rebels. The Convention has nominated Mr. McKinley for the Presidency on the first ballot, and adopted the Republican platform by an immense majority. The Monroe doctrine plank is very emphatic that to permit any increase in the present European dominion in America there is no pretext, and hopes for an eventual and entire withdrawal of European rule.

AT a banquet at the Mansion House to Bankers and Merchants, Sir M. Hicks-Beach made a speech in which he said that the gigantic fabric of British credit was based on a gold standard, and he believed the vast majority of Bankers and Merchants desired to maintain it.

DEAFNESS COMPLETELY CURED! Any person suffering from Deafness, Noises in the Head, &c., may learn of a new, simple treatment, which is proving very successful in completely curing cases of all kinds. Full particulars, including many unsolicited testimonials and newspaper press notices, will be sent post free on application. The system is, without doubt, the most successful ever brought before the public. Address, Aural Specialist, Albany Buildings, 39, Victoria Street, Westminster, London, S. W.

THE week has been a terrible one with reports, from various corners of the world, of disasters of kinds.

The Cape mail steamer Drummond Castle, bound for London from the Cape with 247 souls on board, struck on a rock, off Ushant, at midnight, on June 17, and sank in three minutes. Of the 247 only 3 lives were saved. The good Queen of England has telegraphed her deep distress at the disaster.

An earthquake and tidal wave in the north-east coast of Japan, have destroyed the town of Kamashi, drowning ten thousand people and sweeping away many other towns.

The Marquis de mores, the head of the French exploring expedition to the Egyptian Soudan, has, with his party, been massacred by a Tripolitan tribe.

The steamship Nonowai which arrived at San Francisco on the 10th May last, reported a wholesale massacre of traders and missionaries at Manning's Straits, in the Solomon Islands. It is also stated that the traders killed were afterwards eaten by the savages.

The *New York World* publishes a telegram from Caracas stating that a sanguinary conflict has taken place between the British and Venezuelans at Barima.

Advices from the Cape state that a fresh outbreak of natives has taken place between Umtali and Salisbury, and that two native police and three whites have been murdered.

A telegram from Rangoon says that the native town of Mogok has been destroyed by fire. The Government offices and the European quarter escaped.

THE much desired monsoon has burst. It broke at Onty with some violence, felling trees, flooding rivers, and dismantling huts. The rain has been continuous, but not heavy, for the last four days. A heavy thunderstorm passed over Madras. The wind was very violent and the steamer Dunera snapped her mooring chain. She was, however, removed without any damage. A coffee shop at St. Thomas's Mount was struck by lightning, and a Bombardier of the Royal Artillery considerably injured. Other men in the shop were thrown to the ground and rendered temporarily unconscious. After some excessively hot days heavy showers have fallen at Benares. At Calcutta, the rains are continuous for the last 3 days. From private letters we learn that there has been a copious fall in the Burdwan district and the prospects of crops have improved. A letter dated Dacca, the 17th, says "the weather is close, we expect rain every moment."

THE numbers on relief works in the North-Western Provinces have fallen to 144,000; of whom 17,000 are gratuitously relieved. Besides these some 20,000 are on village relief works. Nearly 8,000 persons are on relief works near Lahore, about 32,000 in Central India, chiefly in Bundelkud and Gwalior, and about 12,000 in the Rajputana States.

THE following is a translation of the letter written by the Hon'ble Prince Sir Jehan Kadr Mirza immediately before his death to Moulvi Abdul Jubbar, Khan Bahadur, C.I.E. :-

"God the Preserver! Full of merits, best of friends and a pilgrim to both the sacred places, may God prolong your life and enhance your virtues. After what is due by me (i. e., respects), my object in writing to you is to inquire about your health. In these days when the heat is excessive, the climate changeable, and various diseases are prevalent in the country, you have preferred to reside in Burdwan, and I have no information of that place. On this account I am very anxious in the present unfavourable state of my health in which you saw me last. May I therefore ask you that until I have obtained a personal interview with you, you will, during your absence, be so good as to continue to favour me with a line or two respecting your health and to relieve me from anxiety? You will excuse the trouble which this request of mine entails on you. You will also let me know when you may return safely to Calcutta. In the words of the poet, I say that, although my mind is happy at the recollection of yourself, there is no relief to the eyes which long to see you. My constitution is good by the blessing of God, but the pain in the back and the difficulty of breathing in consequence have made me much weak and spiritless as you saw me. I have neither sleep at night nor rest in the day or night. I am unable to do any work, even to read or write. With great difficulty I have written these few lines. With Salaam, Mirza Jehan Kadr, 16th April, 1896."

May God forgive him!

In the Resolution on the Annual Report on the Police Administration of the Town of Calcutta and its suburbs for the year 1895, occurs the following passage :

"Mr. Pearson acknowledges the great assistance rendered by the Honorary Magistrates generally, and especially by those who, at some self-sacrifice, attended at a moment's notice to form a Bench on the default of others. Sir Alexander Mackenzie desires also to record his appreciation of the excellent services rendered voluntarily to Government by the Honorary Magistrates, and his thanks are in particular due to those gentlemen who have been specially named by Mr. Pearson. The number of Honorary Magistrates who sat once or oftener was 88, the same number as in the previous year, and the average number of sittings attended by each rose from 11.6 in 1893 and 13 in 1894 to 14.5 in 1895. His Honour, however, regrets to observe that many gentlemen sometimes absented themselves without giving notice of their inability to attend."

The concluding expression of regret might have been spared if the Local Government were aware of the printed form of invitation by the Chief Magistrate. We reproduce one letter issued this month :

"From the Chief Presidency Magistrate, Calcutta,

To.....

Honorary Presidency Magistrate.

Calcutta Presidency Magistrate's Court,
The June 1896.

Sir,—I have the honor to inform you that there will be a criminal bench-sitting on—lay, the—June 1896, at 12 o'clock noon, and to invite your attendance thereat.

Should it be convenient for you to attend on that day, I shall feel obliged by your informing me accordingly at your earliest convenience.

I have the honor to be,

Sir,

Your most obedient Servant,

T. A. PEARSON,

Chief Presidency Magistrate, Calcutta."

Honorary Magistrates are not required to intimate their inability to attend. Yet they are sometimes taken to task for omitting to do so. Mr. Pearson is not peremptory, like some of his predecessors, in his demand for explanation for any fancied omission, or so rude as to threaten all pains and penalties to a defaulting colleague in his death bed. Nevertheless, he does not omit to visit on his willing associates the sins of his office.

A CORRESPONDENT from the Hooghly district writes :—

"The phenomenal hot wind and shower of blood at Jharkhand, is a story and a fable. The place is 8 miles from Jehanabad on the bank of the River Darkishore and on the border of the Burdwan District. If anything of the nature had occurred, I would have heard of it. From enquiries of the people I learn that no such occurrence took place.

There was, however, the barbarity of hook-swinging at the last Charak festival, in village Salehpore, 5 miles south of Jehanabad. A man was found swinging round a Charak tree with a cloth tied round his waist. The cloth covered two iron hooks, about 3 inches long, piercing the back of the man. The wound was slight and it did not shew that the man was a hardened *Charaki*. There was a large gathering of people and *Sanyasis*, and religious zeal was high. As soon as the true fact was suspected, the cruel go-round was stopped by authority. Further investigation shewed that the 2 hooks were sacred from long use and were kept by 2 Gowalas (milkmen) of the village, and that every year, for the last 20 years, 3 persons from the three villages of Salehpore, Moharakupore and Ramnagar were pierced with these 'sacred hooks.' They have got the temple of Kedarnath Siva in the village, as also a brickbuilt house close by for 'Jhap' or jumps. I don't know how far these are allowed nowadays. There is, however, a feeling in the country that such practices have been prohibited. But there has been no prosecution and next year the cruel swinging may be repeated. Believing that it is a thing of the past, I made enquiries. Everybody said that Government had stopped it, but none could quote chapter or verse—law or order. I asked some old Pleaders and they told me that some order was promulgated by Government by notification published in accordance with the present section 144 of the Criminal Procedure Code. If so, any one infringing the order and practising hook-swinging, makes himself liable to a prosecution under section 188 of the Indian Penal Code for disobeying Government order duly promulgated. This seems to be reasonable—and very probable. But no body can tell when this order was issued and where it is to be found. Have you any information on the subject?"

There is no law. The practice has been stopped in Bengal by a Resolution of the Local Government in the Judicial Department, dated Fort William, the 15th March, 1865. It seems that, notwithstanding the prohibition, hook-swinging, excepting for a year or two, has continued in the particular village in the Division of the Commissioner of Burdwan. We reproduce the Resolution :—

"Resolution.—The practice of Hook-swinging and other self-torture, such as Bauphora and the like, in public at the Charak festival,

which has been either voluntarily discontinued or authoritatively suppressed in most parts of India, still prevails in many districts of the Lower Provinces of Bengal.

2. These practices are cruel to those who suffer hurt from them, whether of their own will or otherwise, and revolting to humanity. They also present a demoralizing public spectacle and tend to keep alive among the people a feeling of indifference to the sufferings of their fellow creatures and to the value of human life. They have long been discountenanced and discouraged by the Government and its officers, as well as by the more enlightened, intelligent, and respectable Hindus. An influential body of Hindu gentlemen has lately recommended that they should be suppressed, and one of the Hindu Members of the Council of the Lieutenant Governor has still more recently brought forward a project of law for that purpose.

3. The measures which have hitherto been taken to discourage Hook-swinging, though partially successful, have in many places failed to produce any perceptible diminution of it, and it accords therefore with the instructions given in the despatch of Her Majesty's Secretary of State for India, dated the 24th February 1859, that more decided steps should be taken. In now adopting such a step the Lieutenant-Governor is supported, not only by a sense of what is due to the feelings of all classes of Her Majesty's subjects, but by a decided expression of enlightened opinion on the part of the leading members of the Hindu community.

4. All Magistrates of Districts in the Lower Provinces are accordingly hereby required, under the powers vested in them by law—whenever they shall consider that such direction is necessary to prevent annoyance to persons lawfully employed, or danger to human life, health, or safety—to direct any person to abstain from the act of Hook-swinging, or other self-torture, in public, and from the abetment thereof, or to take such order with property in his possession or under his management as may serve to prevent the commission of the act. Persons who disobey any such injunction should be prosecuted and punished according to law.

5. All Commissioners of Divisions and Magistrates of Districts in which Hook-swinging prevails, are further required to make known to the public that the Government regards the practice with abhorrence; to enlist the sympathy and co-operation of influential landholders and other members of the Native community in its prevention; and to warn all who are concerned, or are likely to be concerned, in it, that if they persevere they will make themselves liable to legal punishment.

6. It is to be understood that this order is not intended to authorize or justify any interference with the religious observances of the Charak festival, or with the popular amusements, other than Hook-swinging and its attendant cruelties, usual on that occasion."

Of the many benefits of British rule in India, not the least are the abolition of suttee or burning of wives in the funeral pyre of their husband, infanticide, the sitting in *dharma*, and the suppression of hook-swinging. It is an anachronism that hook-swinging should still be found in any village of Bengal.

AKIN to hook-swinging, is the boring of the nose and ears. It too requires suppression. Boring of the ears of boys in Bengal, is, we believe, at a discount, if it has not entirely ceased. Girls are still subjected to the cruelty and disfigurement. When will that cease? Social reformers cannot have a better subject for their operations.

WE are glad to find that our article in the last number—"Competitive Examination not a sound Test"—has struck a responsive chord in a valued quarter. An old member of the Service bears his testimony thus :—

"I was really in ecstasies when I read the article. It echoed all that I often thought on the subject. There are at this time a few among the Mahomedan officers in the Executive or Judicial line with whom a man of principle would care to associate. To speak the truth, the highest Mahomedan judicial officer in the country does not enjoy such respect as the old Principal Sudder Amm was commanded. They were not very learned in the law, but they generally did substantial justice, and, if they erred, the public never questioned their good faith. They would do nothing against their conscience to please the executive."

We have not sounded the alarm too early. There is corruption in the air. The Subordinate Judge of Gonda, Moulvi Ikbal Ali, is being prosecuted on charges of bribery and corruption. The Subordinate Judge of Bahraich, Syed Hyder Mehdi, is under suspension. There is also a case in Bombay and another in Madras. Bengal has had its share when a member of the subordinate judicial service was

removed. It is now the turn of the other branch of the service, hitherto free of all stain. Two of its members are under suspicion. A departmental enquiry, we believe, in one instance has just been concluded.

WE give some more particulars about the famous Jamaluddin.

His own version was that he was an Afghan as was his father, whose name was Feroze. His mother was of Arabia and so he claimed Arabic as his mother tongue. He was taught Persian by his father, a good scholar. His native place was Sadabad (not Saidabad) and he belonged to a respectable family of Sayyids there. Sadabad is not near Hamadan, but it is a place in the hilly district of Konar in Afghanistan. He became Vizier when Muhammed Azam was enthroned Amir of Cabul and had much influence with him. When the Amir was defeated by Sher Ali and obliged to take to exile, the Sheik was at Cabul. As he was a Sayyid, there was risk of his being killed, as they were contriving means to get rid of him. Amir Sher Ali's Vizier, Muhammad Rafik, advised him to leave the country as it was not safe for him to continue there. So he left Cabul and came to India. This was some time before the mutiny of 1857. He was not allowed to mix with the Ulema, yet he spent his time usefully. From India he went to the Hedjaz where he studied the history of the country and the peculiar customs and manners of the Arabs. His next trip was to Constantinople, where the Sheik-ul-Islam stood in his way. He made much of a paragraph in Jamaluddin's lecture and charged him with the belief that the Koran was not of divine origin but a production of art.

Jamaluddin did not go to Bhopal when he left Hyderabad, nor did he receive any money present there. Sir Salar Jung gave him no doubt three thousand rupees, as he was found to be a deserving scholar by the report of men like Mahsin-ul-Mulk Moulvi Mahd Ali, Moulvi Nazir Ahmad, and other scholars who had invited him to a grand dinner with the special object of testing his merits.

He did not leave Egypt, as it is stated, one year after Tewfik came to the throne. They did not allow him such a long time. He was expelled just 17 days after the event brought about by his efforts, as he used to say openly. Arabi Pacha was a mere Colonel then, a man of no significance, nobody caring two pence for him. The Sheik knew him only by sight. He left Egypt before there was any sign of the mutiny. He left it some three years before that memorable event. His European adventures are well known.

The much maligned Afghan is no friend to the British. He is an open foe to them. He makes no secret of his hate. Determined to weaken English influence in every Islamic country, he loses no opportunity to compass his end. Many trace his hand in Turkey's attitude in the Armenian question.

LAST week the deaths in Calcutta numbered 231, against 235 and 257 in the two preceding weeks, which was higher than the corresponding week of last year by 56. There was a rise in the mortality from cholera, that is, 48 deaths against 33 and 44 in the two preceding weeks; the number is also higher than the average of the past quinquennium by 34. There was no death, however, from small-pox, there was one in the previous week.

REIS & RAYYET.

Saturday, June 20, 1896.

ASANITATION CESS FOR RURAL BENGAL.

SIR GEORGE CAMPBELL *redivivus*.

SIR Alexander Mackenzie came to Belvedere, in succession to the restless Sir Charles Elliott, with an assurance of rest. He commenced his reign in Bengal in popularity which was increasing day by day. He was attentive to every particular calculated to please his people. He never did an act or expressed an opinion which might run counter to popular wishes. The popular agitators had had their day and were fattening more and more. Every question in Council, however unreasonable, met with a sympathetic response. Everybody was welcome to him and he had a good word for everybody. He shewed himself in every public place and passed hours in

Evening and Garden parties. Private Native receptions in a season of public mourning were enlivened by him with snatches of old songs. There was hardly a Lieutenant-Governor who was more beloved. But that love was not destined to last long. The country was surprised by the earnestness shewn by his Government in enquiring into the threatened scarcity of water on an ordinary outcry. The District Officers wondered what could have moved the Government to such unusual activity. The reports, submitted weekly, shewed that there was nothing unusual in the state of the country. They disclosed the nakedness of the land—the absence of a perennial water supply. Moved by the distress, the Lieutenant-Governor is anxious to remedy the evil.

How to do it? Aye, there's the rub! He is for a cess for water, and the country which had hoped that the Governor would give it water for the asking, finds that he is willing to do so, but not as a free gift. It is not, however, prepared to receive the benefit on that term. The agitators are in a fix. They can clamour for redress of all kinds of grievances, fancied or real, if not called upon to pay for any improvement or removal of any want or wrong. They have put their heads together and are endeavouring to find an escape, either by making the Government pay or leaving the country to its present state. Unless the Bengal Government modifies its proposal, it will, we are sure, be not long before meetings are held all over the country to discourage Sir Alexander out of his course. Their credit would have been great if the Governor had contented himself with the district reports which gave no cause for general alarm and made no case for any exceptional measure. The Magistrates had enough funds under their control to meet the scarcity such as it was. The patriots cannot sit idle when a new tax is imposed. Sir A. Mackenzie has shewn no obstinacy in the matter, and he may retire from the present business and take up another for a memorial of his rule. We are sure he has not the persistency or pertinacity of Sir George Campbell. That model ruler, who had studied India in all its tenses, as ruler of the Lower Provinces, prepared, in 1872, a model Bengal Municipalities law, as a corollary to the Road Cess law, on which he had set his heart, which municipal law, while providing for local self-government, laid down the rates and taxes for all time. He repealed all previous Acts and framed one law, whole and complete in itself, which would require no tinkering or further consolidation. That law passed by the Bengal Legislative Council included all possible modes of taxation and defined all possible purposes of a municipal fund. The comprehensiveness of the plan was staggering. It convulsed the whole country, and the Supreme Government found it necessary to veto the Bill. The author, however, was so much enamoured of it that he smarted under the castigation, and, by way of protest, left all his labours over the Bill bound in a volume as a treasure or store house for his successors to draw their inspiration from. We reproduce the objections of Lord Northbrook to the Bill. They may serve many useful purposes at the present moment, when there are propositions for fresh municipal taxation and expansion of the objects to which municipal or local funds are to be applied.

The Bill has received His Excellency's most careful consideration. He has postponed his decision for some time, in order that he might make himself thoroughly acquainted both with the provisions of the existing law and with the proposed changes, and

I am directed to express his regret that he feels it to be his duty to withhold his assent from the Bill. In accordance with the 40th section of the Indian Councils' Act, 1861, I am directed to signify, for the information of His Honor the Lieutenant-Governor, the reasons which have determined His Excellency to take this course.

The Bill consolidates and amends the Acts relating to municipalities in Bengal, and contains, in addition, new provisions of which the following are the most important :—

Power is given to the Lieutenant-Governor to make regulations under which in all municipalities members may be elected to form a portion of the governing body.

Taxes upon trades and callings,—processions,—articles,—ferries, roads, and navigable channels—and boats moored, are made legal in first and second-class municipalities, subject to the sanction of the Lieutenant-Governor.

Provision for elementary education out of municipal funds may be made obligatory upon first and second-class municipalities.

The purposes to which municipal taxation may be applied, in first and second-class municipalities, are extended to include the support or relief of the poor in times of exceptional distress and scarcity.

A revised code of conservancy regulations is enacted which, with the sanction of the Lieutenant-Governor, may be brought into operation in first and second-class municipalities.

In first and second-class municipalities the management of the police is vested in the Chairman of the Municipal Commissioners, subject to the general control and direction of the Magistrate of the district; and the action of the Municipal police is confined to the area of the municipality.

Provision is made for the creation of third-class municipalities in the rural districts; the tax to be levied in these third-class municipalities is made applicable to conservancy purposes and to education; and the arrangement made in 1870 with respect to chakran lands is altered.

His Excellency is of opinion that there are valid objections to several of these provisions.

His Excellency cannot give his assent to those portions of the Bill which allow the provision of elementary education to be made obligatory upon first and second class municipalities. It appears to him that the proposed alteration of the law relating to the police requires careful consideration by the Government of India before it can with propriety be introduced into Bengal. He does not concur in the proposal to apply municipal funds to the relief of the poor even in exceptional cases, for he considers that such cases should be met by a contribution from the provincial or imperial revenues. In consequence of reports which have recently been received of the operation of Act VI of 1870, he entertains great doubts as to the suitability of the powers given to punchayets under that Act; he thinks, therefore, that further experience is required before the functions of such punchayets are increased, or municipal institutions further extended to the rural population.

But apart from these objections to particular portions of the Bill, His Excellency can only regard the whole measure as calculated to increase municipal taxation in Bengal, and he believes that such an increase is unnecessary and inexpedient at the present time. The reports which the Government of India have received from local officers in Bengal since the passing of the Bill, and which were not before the Lieutenant-Governor when the Bill received His Honor's assent, support the opinion which His Excellency entertains upon this subject.

It is true that many of the provisions of the Bill to which His Excellency objects are permissive, and depend for their introduction upon the exercise of the powers committed to the Lieutenant-Governor of Bengal. The present Lieutenant-Governor has expressed his intention to use with great caution and reserve the powers which would be placed in his hands; and His Excellency cordially agrees with the sentiments expressed by His Honor that it is unwise "to push too far sanitary and other regulations which may effect some future good at the cost of great individual vexation." And that in introducing such regulations we must recollect "not only that our knowledge of these subjects is yet imperfect, but also that much regard must be had to the habits and feelings of the people which, even in Europe and still more in this country, are opposed to great innovations in matters affecting their daily lives in their homes and neighbourhoods;" but, while entirely concurring in these views, His Excellency must, in dealing with the Bill, look rather to the powers which it confers than to the extent to which for the present it is proposed to make use of those powers. If he objects to any material provisions contained in a proposed law, for which his assent is required under the Indian Councils' Act of 1861, it is not sufficient for His Excellency to be informed that the officer in whose discretion their introduction is vested considers that action should be suspended or deferred. No feeling of confidence in the discretion of any one man in whose power the administration of a law may for the time being be placed, would, in His Excellency's

opinion justify him in assenting to a measure, to any essential provisions of which, if fully brought into operation, he entertains such serious objections as he does to some of those which are contained in the Bengal Municipalities Bill.

While, however, His Excellency has felt it to be his duty, for the above reasons, to withhold his assent from the Bill, he fully recognizes the fact that it contains many useful amendments of the existing law with respect to municipalities in Bengal; and the discussions which have taken place in the Legislative Council of Bengal have satisfied him that some changes in that law might be made with advantage.

His Excellency cordially concurs with the opinion expressed by the Lieutenant-Governor that "he had rather see a little done voluntarily by the people themselves through their representatives than a great deal done under pressure from above," and that "his view is to prefer a little done voluntarily to a great deal done unwillingly and in a discontented spirit." His Excellency believes that, under Act VI of 1868 and the District Road Cess Act of 1870, sufficient powers now exist for the introduction into Bengal of a system under which municipal and local affairs may gradually come to be administered by bodies in which the people are represented, and any proposal which the Legislative Council of Bengal may make to amend Act III of 1864 in the same direction would command His Excellency's favourable consideration.

It might also, in His Excellency's opinion, be desirable to amend the present law so as to enable municipalities under Acts III of 1864 and VI of 1868 voluntarily to contribute in aid of education within their districts.

While His Excellency regrets that the great labor which has been bestowed by His Honor the Lieutenant-Governor and the Legislative Council of Bengal upon the preparation of this Bill will not produce any immediate results, it is not his desire to interpose an obstacle to improvements in the municipal law of Bengal, provided that such improvements are not accompanied by any material increase of taxation, or by changes so extensive as those which are embodied in the present Bill.

Sir George Campbell was "specially anxious so to mould the present Bill that it may, as it were, meet and fit into the Road Cess Bill, so that the two should form together a complete, and, as far as may be, final scheme of local taxation." The Road Cess Act has, from time to time, been improved upon to include objects foreign to it. Its scope has been considerably enlarged. The fund raised under it, is now so controlled by Government that it may be applied to any purposes. The present Lieutenant-Governor is willing that no further great diversion be made from the objects of the original law, while he is anxious that new sources of income must be found to promote village sanitation and water supply. Sir George Campbell was for a finality in local taxation, if certain permissive rates were sanctioned, which it would be in his power to introduce as occasion required. Lord Northbrook was never so wise as when he refused to assent to a law which gave vast discretionary powers to a lieutenant to introduce new taxes of sorts. It is the bane of modern legislation to reserve large powers, including the authority to legislate, to Local Governments. We have had painful experience of the misuse of those powers. Sir Charles Elliott exercised such reserved authority in a manner which caused amazement in India and England and almost ruined his career as Lieutenant-Governor of Bengal. Sir George Campbell justified his Bill on the grounds, among others, that his "object has been throughout not an increase of taxation but the introduction of a system of self-government" and that "if the Bill had been carried out *bona fide*, and in the spirit of its provisions, it would not have led to increase in the rate of taxation. The little burden which may have been imposed for education would have been met by the relief that would be given in the cost of maintaining the police." "Low as our local taxation is, my own wish was not to speedily increase the rate of taxation, but to present to the people of Bengal a system of voluntary taxation, which they

might eventually have extended over a greater area and to new objects really acceptable to them." He also gave his reason why he made certain taxes compulsory. Because, he said, "you would not find the people too ready to tax themselves."

The Bill was not allowed to be made law. But it exists in all its glory, and succeeding Governors have not been slow to profit by it. Another of Sir George's explanations is:

Act VI of 1870, while providing for villages a full municipal constitution and a uniform mode of taxation similar to that adopted in towns, confined the expenditure to the maintenance of watchmen only. The Lieutenant-Governor is very unwilling to do anything that may savour of forcing taxation on these rural communities, and he has proposed no compulsory taxation whatever beyond the old obligation to maintain a watchman. But he has been repeatedly struck by the great want of drinking water in many Bengal villages, and by the efforts of the people to obtain it, and by their not unfrequently expressed readiness to contribute to the cost, if some arrangement could be made. He has also thought, as above explained, that many villages may be willing to co-operate with Government to re-establish that ancient indigenous institution of Hindu villages, the guru or village schoolmaster. Knowing how native to the soil of India are village municipal institutions, and how much these rural communities are in the habit of doing for themselves in many parts of the country, the Lieutenant-Governor thought that he could hardly be wrong in recommending to the Council the arrangement which they have accepted, viz., to permit rural municipalities to spend their money, if so inclined, for the supply of drinking water, the support of village schools, and petty conservancy purposes, and for these purposes to raise their taxation to a point not more than 25 per cent. in excess of that hitherto prescribed for the payment of watchmen only.

Sir Alexander Mackenzie makes a similar proposition.

OUR LONDON LETTER.

May 29.

Great Britain.—The Whitsuntide recess has afforded us a relief from Parliamentary proceedings, but when the House of Commons meets again on Monday, the 1st June, we shall be thrown into the mighty vortex of the Government Education Bill. The quarrel between the Irish party and the "political monstrosities" (to use the Emperor William's words) such as Guinness, Rogers and H. P. Hughes grows in virulence, and Home Rule is a thing of the past never to be revived in the time of the present generation. Sir W. Harcourt has taken advantage of his Whitsuntide retreat at Malwood to write an insolently offensive letter about Mr. Balfour. Let us grant the closure of debate on any first class Bill is an anachronism, but who first set the example? Mr. Gladstone himself, who by virtue of his slavish majority closed debate on the Irish Home Rule Bill. To him belongs the disgrace of closing by compartments, as it is called, and if Mr. Balfour adopts the same tactics on the Education Bill, he will be following the example set by Mr. Gladstone and Sir W. Harcourt himself. When you have to deal with an unscrupulous minority led by such men as Harcourt and Labouchere, the closure must be enforced if Parliamentary Government is not to be reduced to a sham and a fraud.

On the 9th proximo the four outstanding criminals, Mrs. Dyer, Peaman, Fowler and Wilson are to expiate their crimes on the scaffold.

The General Assemblies of the Church of Scotland and of the Free Church are holding their annual revels in Edinburgh. The interest to India of the Free Church Assembly lies in the fact that the moderator is Dr. Miller, Principal of the Mission College, Madras. It is very difficult to know what Dr. Miller's beliefs are. According to the Rev. Dr. Denny, a leading clergyman of the Free Church, Dr. Miller treats Jesus Christ as little better than Mahomed. I have never seen any refutation of Dr. Denny's scathing attack in the "British Weekly," and to have such a man as Dr. Miller presiding over the General Assembly of the Free Church is enough to torture the soul of the great Chalmers and the other leaders who, in 1843, sacrificed all for a firm belief in the divinity of Christ.

How far the present leaders of the Free Church have departed from the gospel views of Gordon, Welsh, Caudlish, Cunningham and others, it is difficult to realise, and twenty years hence, or in a shorter period of time the manhood of Scotland will refuse to follow men who, having signed the Confession of Faith to secure their ordination, treat their adhesion with a mental reservation of denial, only equalled by the Jesuit Fathers of the Church of Rome.

France.—The new ministry is not likely to last long and the Government will soon be in the throes of financial difficulties.

French Rentes are equivalent to our consols but very differently held. Owing to the thrift of the French people, vast sums are held by the peasantry, and for years past every successive Government has pledged itself in the strongest way that the Rentes would not be taxed. It is now proposed to tax the Rentes, and if it does not lead to a social revolution it would certainly lead to a financial one.

Russia.—I need say nothing about the wonderful ceremonies at Moscow in connection with the crowning of the Emperor, as the fullest details will be found in all the newspapers.

Turkey.—A much more serious difficulty for the Sultan arises out of the present position of things in Crete. In the case of the Armenian massacres the country was inaccessible to the Powers of Europe, but in the case of Crete every Power has already sent a war vessel to protect the Christians against the fanaticism of the Muhammadans. The question of the future of Crete will be one of great perplexity to the Governments of Europe. Russia would no doubt like to possess it so as to yield her a *point d'appui* in the Mediterranean which she does not, at present, possess. But inasmuch as Greece has a prior claim, owing to the great majority of the inhabitants being Greeks, the probability is that the Governments of Europe, with or without the sanction of Russia, will make it over to Greece under a guarantee.

Spain and Cuba.—Spain is still in the midst of tremendous difficulties with regard to the state of things in Cuba and the question of her relations with America is not yet by any means settled.

Africa.—Affairs connected with the Transvaal are still surrounded with the greatest difficulty. At the dinner given to Mr. Chamberlain by the Constitutional Club, when he made use of the expression that Great Britain would allow no Power to interfere with her suzerainty over the Transvaal, the whole company rose to their feet, cheered enthusiastically and waved their handkerchiefs. Should German intrigues lead us to active hostilities in the Transvaal, no doubt we will look to our loyal native soldiery in India to take the brunt of the work.

THE LEATHER INDUSTRY OF THE PUNJAB.

By Mr. Arthur J. Grant, Junior Secretary to Financial Commissioners, Punjab.

(From the "Journal of Indian Art and Industry.")

I.—LEATHER-WORKING CLASSES.

The profession of working in leather, always unsavoury, is considered in India to be particularly unclean, and the persons engaged in this occupation have at all times in its history been looked down upon as a degraded class, in some cases actually outcast and excluded from participating with others in the rites of their nominal religion, and in other cases only admitted on sufferance to do so. Although it is impossible to trace with any certainty the origin and history of the class of leather-workers, still we can find out something as to their state and position in old times. At the period of the Institutes of Manu the rigidly exclusive principles of caste, as it became later on, were not yet established. There were, however, the divisions of the people into Brahman, Kshattriya and Vaisya (all pure Aryans), and the fourth class of Sudras which included aboriginal tribes and descendants of mixed marriages between the Aryans and the aborigines. In this four-fold division undoubtedly no one above the rank of a Sudra would have followed such a dirty and unpleasant occupation as working in leather. It is probable that the persons who actually undertook this kind of work belonged partly to the lowest class of descendants from mixed marriages. In the Institutes of Manu an attempt is made to trace the class of workers in each industry back to some particular hereditary origin. The class of 'Karavaras' or leather workers was held to be the issue of the mixed marriages of 'nishadas' with 'vaidikas,' thus representing a mixture of Brahman, Vaisya and Sudra. This derivation is of course merely fictitious, but it serves to shew that leather-workers then, as now, belonged to a despised section of the community. Their humble descent and the degrading nature of their occupation combined to bring the 'Karavaras' down to a very low position on the list of castes given in the Institutes of Manu, the only classes considered inferior to them being 'halalkhors,' 'chandals,' sweepers, executioners, and 'cannibals.' In spite of their low rank, however, it is interesting to note that the annals of mediæval Hinduism afford an instance of a member of this class being singled out for individual distinction in the faith. This was Rai Das, Chamar, who was chosen as one of the twelve disciples of Ramanand and is revered as such by the Ramanandi sect of the Vaishnavas, while the Raidasis called after him are still the principal division of the Chamar caste.

After the time of Manu, the caste system became rigid and the leather-workers were stereotyped into a despised and outcast section of the community bound by blood and descent to a hereditary profession which was regarded as degraded and impure. Since then, however, caste organisation has again undergone great changes, and at the present time, though leather-workers continue

to be looked upon as a low and menial class, still they share in common with all other ranks, in consequence of the relaxation of the rigidity of the old caste system, the possibility of raising themselves either individually or as a class to a higher position in the social scale. Caste was based at first upon the principle of community of blood. Then the principle of common occupation was recognised. Thus certain persons come to form a certain caste because they were engaged in the same occupation, not because they were of the same real or nominal descent. But there still remained the notion of the hereditary nature of occupation, and until this was done away with, and while it was thought that the son of a tanner must necessarily be also himself a tanner, the bounds fixed to castes were as rigid and immutable as under the old fictitious theory of common descent. Eventually this last idea of the heredity of occupation also became relaxed, and now it is possible within certain limits for individuals or whole castes by changing their occupation and manner of life to remove themselves gradually from one rank to another and improve their position in the community. In the case of leather-workers, however, there are other obstacles which stand in the way of any attempt to rise in social rank, and which are the more difficult to be overcome as they are connected with religious prejudices which are so powerful in the East. Chamars are impure in the sight of Hindus because they eat the flesh of cows and dead animals and work in leather, which is unclean; and the Sikhs, who are even stricter in their reverence for the cow than the Hindus, exclude them on the same grounds. But in spite of these difficulties the modern principle of the mutability of caste has extended even to the case of these classes. In the Punjab Census Report for 1881, Mr. Ibbetson says: "Among the artisan and menial tribes, the process (of changing occupation and with it caste) is common. One Chamar takes to weaving instead of leather-working and becomes a Chamar-Julaha; presently he will be a Julaha pure and simple; another does the same and becomes a Rangreta or a Bunia." The religious difficulty does not stand in the way nearly so much in the Western Punjab, and especially the North-West Frontier, where the population is Mussalman, as it does in the East and South-East Punjab, where the people are nearly all Hindus. And it may be noticed that in some parts of the Frontier, as Dera Ismail Khan leather-workers from down-country who have settled there have taken tone from their surroundings, and though they were originally Hindus have now nearly all become Mussalmans. Changes in caste among Mussalmans represent little more than changes in social position, and are not accentuated by religious considerations. On this point Mr. Ibbetson writes: "In fact the difference between a Pathan who took to weaving on the frontier and a Rajput who took to weaving in the Delhi country would be precisely that between caste in India and social standing in Europe. The degradation would not in the case of the former be ceremonial or religious, nor would it be hereditary, save in the sense that the children would be born in a lower condition of life; but the immediate and individual loss of position would be as real as among the strictest castes of the Hindus. Thus we find men on the frontier of all castes engaging from poverty or other necessity in all occupations except those of an actually degrading nature." It is, however, noticed in a report now received from the Kohat district that Pathans who have taken to leather-working, though they retain the name of Pathan, are not able to intermarry with other Pathans who have not been connected with a menial occupation of this kind. In all parts of the Punjab there is undoubtedly growing up the modern feeling of toleration which recognises prosperity and allows respect to wealth wherever it may be found, and in Lahore and other places the heads of native firms of saddlers or shoe-makers, who are in a good way of business, enjoy a considerable degree of social position. A native Extra Assistant Commissioner gives a fancy picture of the rise in the social scale of a Mochi's family in the Punjab. He becomes well-to-do and calls himself a Khoja: his son gets on well at school; so the father, besides leather articles, keeps in his shop other small things such as pens, paper, knives, &c., and the boy is called "son of a merchant:" the son passes his examination and becomes a "sheikh:" now the father drops shoes altogether and sells a better class of article or turns contractor: and the son finally gets himself called "Khan Sahib" and soon blossoms out into a "Sayyid," whose ancestors came from Afghanistan with Mahmud of Ghazni.

II.—LEATHER—PREPARATION AND MANUFACTURE.

The skins ordinarily used for tanning in the Punjab are those of the buffalo, bull or cow, sheep and goat. Besides these the skins of horses, asses and camels are sometimes worked up; and in special parts the skins of other animals also, such as the wild cat, fox, snow leopard, grey and brown squirrel, jackal, bear, karth, gural and barking deer, are occasionally made use of.

Buffalo hide is most esteemed for its strength. It is very durable, but it is too thick and stiff to be suitable for all kinds of work. It is most used for the thick soles of country-made shoes, and together with ox hide is also employed in harness-making and

saddlery, in the manufacture of huqas, khopas, naras, tobras, charsaahs, petis, bokas, &c. Buffalo hides raw cost between Rs. 4 and Rs. 6, and when dressed they are worth Rs. 5 to Rs. 7. When sold by weight the raw hide fetches from Rs. 10 to Rs. 18 per maund, the price being less in the hot than in the cold weather, as the tanning is not then so certain. The following passage is extracted from a note on the Cawnpore Government Tannery:—

"Buffalo is the only available hide that will produce leather thick enough for harness work in this country; but there is no doubt that much of the inferiority of country leather arises from the pooriness of the skin of that beast. It is poorly fed, not generally cared for, and usually killed when too old to breed or give milk. The hide of the male buffalo is too coarse and it gets such bad treatment in the plough or cart that it is generally full of sores and goad marks. In large towns there is a market for buffalo beef for the low caste and poorer Mussalman population, and also for grease, but the younger and better cattle are rarely slaughtered; it is from these slaughtered animals that the local tanners select their hides for the finer uses of harness, saddlery, and accoutrements. Many good hides are ruined by butchers in flaying from inefficient arrangements in the slaughter houses and from injudicious use of their tools."

The skins of bulls and cows are called "goka." The leather made from them is not quite so strong as buffalo hide leather, but is stout enough for most purposes. Raw skins of this kind fetch from Rs. 2 to Rs. 5, being on the whole slightly less valuable than buffalo skins. Dressed they are worth from Rs. 3 to Rs. 6 each. There is sometimes a distinction made between the skins of bulls and cows, the former being considered tougher and rather more valuable. This class of hides is much exported to England and extensively used there for boot and shoe upper leather, for which it is much esteemed. Much damage is done to the hides by branding on the butts and shoulders.

Sheep skins are called 'mesha' and goat skins 'khal,' or together they go under the generic term of 'nari.' The leather made from them is much finer and more supple than that from buffaloes' and bulls' hide, and is used for such purposes as making uppers of shoes, covering boxes and wicker work baskets, making bellows, stockings, gaiters, and book binding. Goat leather is esteemed much the more highly of the two, as it is stronger and more durable. Sheep and goat skins are bought up largely from village butchers and sweepers by the Khatiks who, as already noticed, are a special class whose occupation consists in the tanning of these kinds of skins. They are also sold in considerable quantities by butchers to merchants from Delhi, who purchase them for the home market. The value of a raw sheep skin is from 6 annas to 12 annas, and when tanned they fetch only from 8 annas to Re. 1 each. Goat skins are worth from 10 annas to Rs. 1½ raw, and from Re. 1 to Rs. 2 when dressed. In Lahaul, where sheep are very plentiful, a prepared sheep skin is worth only 4 annas.

Of the other skins which are less commonly used: camel skins are employed principally for making 'kuppas,' stout leathern jars, or for patching up holes and weak spots in other kinds of hides. For this purpose they are not regularly tanned. The skins are worth from Re. 1-8 to Rs. 3 only. They are also exported from some districts of the Punjab to Lahore and Amritsar, where they are said to be used for packing tea exported for the Central Asian market. Horses' skins are said to yield a very thin and weak leather and are very seldom worth the trouble of tanning. They are worth from Re. 1 to Rs. 2 only in their raw state. Asses' skins fetch from 8 annas to Re. 1 when raw. They are seldom tanned locally, but are sometimes sent to Delhi and Peshawar, where they are made into shagreen. Deer skins are worth from 6 to 8 annas; leopard and bear skins from Kulu, and Kangra about Rs. 2-8 and Rs. 1-8 respectively, barking deer about Rs. 2; gural Rs. 2; and karth Rs. 3. These latter all come from Kulu. In Peshawar are to be had wild-cat skins (known as 'Soghar' and 'samor'), and fox skins (shahzade), many of which come from Russia. Here also snow leopard skins and skins of the grey and brown squirrel are sometimes brought in from Kabul. Foxes' and jackals' skins are sent in some quantities from Rawalpindi to Peshawar to be dressed there. Scented "Russia leather" is also to be obtained at Peshawar at a price of Rs. 20 to Rs. 30 per skin, but it is not a local product.

The skinning of animals is generally performed by the butcher if they are slaughtered for food, and by the sweeper if they die a natural death. The method of skinning practised in the Punjab is as follows in the case of buffaloes or oxen. The carcass is first laid on the ground on its back; its legs are then held up and the hocks and hoofs are removed. A slit is then made in the skin along the full length, from the mouth to the tail; the skin on the inside of the hind-legs is also slit down to the root of the tail, and the skin of the fore-legs to the chest. The skin is then removed with a knife. When it has all been taken off one side the carcass is turned over and the skin of the other side is removed. The hide is then spread out on the ground and rubbed with salt, wood ashes or 'kalar' (saline efflorescence),

It is then left to dry for a couple of days, being put in the sun in the cold weather and in the shade in the hot weather. The dried skins are then rolled up in bundles and put away in that state for sale or for future tanning. Sometimes, when the salt has been rubbed in, the skin is laid out flat on the ground, and a board ('chaukat') placed upon it so that the edges of the skin project all round. In these projecting portions of the hide holes are made and a leather rope being passed through them, the skin is laced up tight on to the board. The board with the skin on it is then put up against a wall or some such place to dry.

In the case of sheep and goat skins, the method of skinning is first to remove the head and hang up by the hind legs to a convenient tree or a prepared tripod; slit open the skin on the inside of the hind-legs to the root of the tail; then draw the skin off whole, the hand alone (not a knife) being used to separate the skin from the flesh. A distinction is sometimes made between skins which have been removed by butchers and those taken off by village sweepers or Chamars, the former being called 'qasibi' and the latter 'ganwari.'

The process of tanning the different kinds of skins varies considerably, and a separate description of the methods employed in each case is necessary. The general features of the system of tanning bull and buffalo hide are similar all over the Province, but slight variations of treatment occur in some districts, mostly owing either to the presence locally of some particular product which has been found useful for tanning purposes and which is not available elsewhere, or else to the difficulty of procuring some of the ordinary materials for tanning as used in other districts. There are a large number of distinct processes in tanning a skin of this class.

The first process is to steep the skin in water (generally in a village pond or 'chappar') for about twelve hours to soften the skin. This helps also to remove the salt if the skin is one which has been dried and salted, and is not taken 'green' from the slaughter house. It is then soaked in a vat [called 'baingar' (Sialkot), 'vegar' (Rawalpindi), 'nand' (Rohtak)] containing generally a solution of lime and 'sajji' (carbonate of soda). For 'sajji,' 'reh' or saline efflorescence is sometimes substituted. It remains in this solution some days to loosen the hair and to soften the surface of the skin, and should not be taken out until the skin becomes 'plumped up' and begins to be covered with a white fungoid growth, or as the natives say, until it becomes 'khamir' or ferments.

It is then taken out of this solution, and the third process is to remove with a 'fleshing knife' ('rambi,' 'ranpi,' 'kharpi'), the fat and inner skin ('jhilli,' 'gadud,' 'chichra'). The outer hair is also taken off either with the same scraper or with a potsherd ('tikri') or piece of nitrified brick ('jhanwa'). The inner skin and fat which is removed is generally wasted, though it is sometimes employed as manure. It is never made use of in the Punjab for glue, as is done in England. Some dexterity is needed in removing the inner flesh, as the knife used has a sharpened edge, and a slip may shave too deep and cut into the hide.

The fourth process is to steep the skin, after being cleaned and scraped, in another vat ('nand,' 'malni,' 'kun') containing the bark of the 'kikar' or 'babul' tree (Acacia arabica). In the Hazara district the bark of the 'chir' (Pinus longifolia) is substituted for 'kikar' bark. Another variation also practised in the Hazara district is to substitute the leaves of the 'amla' (Embolia officinalis) or the root of the 'ber' Zizyphus jujuba). The skin remains in this solution for three or four days. In the Gujranwala district, between the third and fourth processes as just described, there is an intermediate process which consists of steeping the skin in water mixed with leaves of the 'madar' (Callotropis gigantea) and 'pharwan' tree in order to remove all traces of the 'sajji' and lime. The fourth process is repeated three times, the skin being wrung thoroughly dry between each steeping and then placed in a fresh solution. The usual method of wringing a skin dry is to place it round a thick forked branch firmly embedded in the ground called ('kasn'), and then twist it tightly with a stick so as to squeeze out all the moisture. These operations, which are gone through in order to remove all traces of lime from the skin, correspond to the English process of 'bating.' The use of lime in tanning is generally considered to be an evil, but a necessary one; it is not good for leather, but the hair and flesh must be removed, and there is no safer way of doing so. The plan of sweating the hides and producing partial decomposition, which is adopted in some places, would be too dangerous in a climate like that of India. After time has done its work all traces of it in the texture of the hide have to be rapidly obliterated, and the process whereby this is effected in the English method is called 'bating,' "the hides being thrown into a 'grainer' in which bran and water have fermented. The various mixtures described above as used for this fourth process take the place of the 'grainer.'

The skin after the third bath as above is washed, and then comes the fifth process. The skin is sewn up with 'munj' string in the shape of a sack and hung up on a tripod ('chara,' 'trikali')

head downwards over a vat. The interior is then filled with the bark of the 'kikar' tree chopped fine, and water is poured on both inside and outside the skin. The mixture of water and bark is sometimes known as 'atura' or 'tarsa.' After some time (generally a period of about twelve hours), during which the skin has been kept constantly wetted, fresh water being poured in from the top as the old water trickles through the pores into the vat below, the skin is reversed in position, the opening which was at the top being sewn up, and a fresh small opening made in what is now the upper part of the skin-sack. The same process as before is now repeated, and this goes on for two or more days till the tannin has thoroughly penetrated the skin all over. During this watering process the same water is used over and over again, being taken up from the vat below as it drops into it. By this treatment the tannin goes right through the hide, but it has not time to make the chemical combination which, according to English ideas, is considered so essential for the leather. Tanning done in India on the English methods takes nine months to a year for a buffalo hide, four to six months for cow hides, and one to two months for sheep and goat skins. The above is a description of this process as generally practised, but there are many local variations and modifications of it in particular districts.

WHAT BATES WANTED TO KNOW.

"I shall be obliged if you can answer me one question," said my friend Bates, as he lay on the couch one day in my room nursing his aching leg. "Why does exposure to wet or cold bring on an attack of rheumatism at one time, when a like exposure for a score of times leads to no such result?"

Before I set down in writing the answer I gave him I wish you would read the following letters, as no doubt the authors of them will be interested in the same point.

"In November, 1892," says the one, "I had an attack of rheumatic fever, and was confined to my bed for four weeks, during which time I suffered fearfully. I had awful pains all over me; my joints swelled up, and I was so helpless I could not raise my hand to my mouth. After the fever left me I was extremely weak, and so emaciated I was little more than skin and bone. A large lump, the size of an egg, formed on my elbow, and my fingers were almost drawn out of joint. I cannot describe the suffering I had to bear. The doctor ordered me various medicines, and cod liver oil, but they had no effect. In February, 1893, I read in a small book about the remarkable success which had followed the use of Mother Seigel's Syrup in cases of rheumatism, and got a bottle from Messrs. Leverett and Fry, High Street. After taking it two weeks I was better, and in about a month more all rheumatic pains had left me, and I was strong and well as ever. You may publish what I have said. (Signed) John H. Kent, 9, Randall Street, Maidstone, Kent, January 30th, 1895."

"For many years," says the other, "I had been subject to liver complaint and indigestion. I was habitually heavy, weak, and weary. My appetite was poor, and all food gave me pain and fullness at the chest and around the sides. I had so much pain and tightness of the chest that I could not endure the pressure of my clothing upon it. Although not laid up, I was seldom free from pain or a sense of discomfort. In the summer of 1893 I began to suffer with rheumatism, which affected my arms and shoulders until I had not the power to lift my hand to my head. I tried all sorts of liniments, embrocations, and rubbing oils, but got no benefit from any of them."

In August, 1893, my friend, Mrs. Owen, told me how much good Mother Seigel's Syrup had done her for rheumatism, and I got a bottle from the Drug Stores in St. Ann's Road. In a few days I was much better, and in less than a month afterwards all pain had left me; and I am happy to say I have never had any return of the rheumatism since, but have enjoyed the best of health in every respect. In common thankfulness for my speedy and wonderful deliverance, I willingly consent to the publication of this hurried statement should you wish to make that use of it. (Signed) (Mrs.) L. S. Cole, 6, Albert Road, South Tottenham, London, August 16th, 1895."

Before answering the question of my friend Bates (who was a chronic rheumatic) I asked him one: "Why does a lighted match, dropped into the road, die out harmlessly, but when dropped into a hayrick, set up a conflagration?"

"Any fool can answer that," he said. "Because in the one case there is nothing for the fire to catch hold of, while in the other there is."

"Exactly," I responded. "Now see. Indigestion and liver complaint (the second consequent on the first) continue to produce a virulent poison in the blood called uric acid, practically insoluble in water. This acid, which is a solid, enters the tissues, and sets going a hot inflammatory fire. That is rheumatism. It does what a silver would—only the acid is a *poison* silver."

"When the indigestion and the liver trouble are not very bad, and the kidneys and sweat glands of the skin are acting fairly well, this acid is carried out of the body about as fast as it is formed. Exposure *then* brings on no rheumatism. But, *per contra*, when the stomach and liver are in bad condition, the acid forms faster than the kidneys and skin can carry it off. *Then* expose yourself, get cold or wet, hamper the skin and kidneys still more, and the poison acid spreads through your muscles and joints like the fire in the dry hay. You understand? Very well. The longer the cause persists the more frequent the rheumatic attacks. That is why chronic dyspeptics are apt also to be chronic rheumatics. Feed off dyspepsia, or cure it by the use of Mother Seigel's Syrup, and you and the rheumatism will have no dealings. Neglect it, and suffer every time you catch cold."

That was my answer to Bates, and he said there seemed to be sense in it.

Music for the Million!

BEECHAM'S MUSIC PORTFOLIO.

The cheapest collection of Music
ever issued.

The Portfolio contains 240 of the most popular Songs and Airs of the day divided equally into 8 volumes the price of each of which is 3½ annas post free, or Rs. 1-12-0 for the complete series: this price, it should be mentioned, does not nearly cover cost, but the Portfolio is placed before the public at a loss as a further advertisement, if any were needed, of the fact that

"BEECHAM'S PILLS"

ARE

"Worth a Guinea a Box,"

The Portfolios are now ready, and, as only a limited number will be issued, intending purchasers are recommended to

APPLY AT ONCE TO

G. ATHERTON & CO.,

3, New China Bazar-street,
CALCUTTA,

Agents for THOMAS BEECHAM, of
St. Helens, Lancashire.

N.B.—Terms: Cash with order: quantities of not less than one complete Portfolio, or 8 volumes per V.P.P., if desired.

posal of the family of the deceased man of
letters.

Orders to be made to the Business Manag-
er, "An Indian Journalist," at the Bee
Press, 1, Uckoor Dutt's Lane, Wellington
Street, Calcutta.

OPINION ON THE BOOK.

It is a most interesting record of the life of
a remarkable man.—Mr. H. Babington Smith,
Private Secretary to the Viceroy, 5th October
1895.

Dr. Mookerjee was a famous letter-writer,
and there is a breezy freshness and originality
about his correspondence which make it
very interesting reading.—Sir Alfred W. Corft,
K.C.I.E., Director of Public Instruction, Bengal,
26th September, 1895.

It is not that amid the pressure of harassing
official duties an English Civilian can find
either time or opportunity to pay so graceful
a tribute to the memory of a native personality
as F. H. Skrine has done in his biography of
the late Dr. Sambhu Chunder Mookerjee, the
well-known Bengali journalist (Calcutta :
Thacker, Spink and Co.); nor are there many
who are more worthy of being thus honoured
than the late Editor of *Reis and Rayyet*.

We may at any rate cordially agree with Mr.
Skrine that the story of Mookerjee's life, with
all its lights and shadows, is pregnant with
lessons for those who desire to know the real
India.

No weekly paper, Mr. Skrine tells us, not
even the *Hindoo Patriot*, in its palmiest days
under Kristodas Pal, enjoyed a degree of in-
fluence in any way approaching that which was
soon attained by *Reis and Rayyet*.

A man of large heart and great qualiti-
es, his death from pneumonia in the early
spring in the last year was a distinct and
heavy loss to Indian journalism, and it was
an admirable idea on Mr. Skrine's part to put
his Life and Letters upon record.—*The Times*
of India, (Bombay) September 30, 1895.

It is rarely that the life of an Indian journal-
ist becomes worthy of publication; it is more
rarely still that such a life comes to be written
by an Anglo-Indian and a member of the
Indian Civil Service. But, it has come to
pass that in the land of the Bengali Babus,
the life of at least one man among Indian
journalists has been considered worthy of
being written by an Englishman.—*The*
Madras Standard, (Madras) September 30,
1895.

The late Editor of *Reis and Rayyet* was a
profound student and an accomplished writer,
who has left his mark on Indian journalism.
In that he has found a Civilian like Mr.
Skrine to record the story of his life he is
more fortunate than the great Kristodas Pal
himself.—*The Tribune*, (Lahore) October 2,
1895.

For much of the biographical matter that
issues so freely from the press an apology is
needed. Had no biography of Dr. Mookerjee,
the Editor of *Reis and Rayyet*, appeared, an
explanation would have been looked for. A man
of his remarkable personality, who was easily
first among native Indian journalists, and in
many respects occupied a higher plane than
they did, and looked at public affairs from a
different point of view from theirs, could not
be suffered to sink into oblivion without some

attempt to perpetuate his memory by the usual expedient of a "life." The difficulties common to all biographers have in this case been increased by special circumstances, not the least of which is that the author belongs to a different race from the subject. It is true that among Englishmen there were many admirers of the learned Doctor, and that he on his side understood the English character as few foreigners understand it. But in spite of this and his remarkable assimilation of English modes of thought and expression, Dr. Mookerjee remained to the last a Brahman of the Brahmins—a conservation of the best of his inheritance that wins nothing but respect and approval. In consequence of this, his ideal biographer would have been one of his own disciples, with the same inherited sympathies, and trained like him in Western learning. If Bengal had produced such another man as Dr. Mookerjee, it was he who should have written his life.

The biography is warmly appreciative without being needlessly laudatory; it gives on the whole a complete picture of the man; and in the book there is not a dull page.

A few of the letters addressed to Dr. Mookerjee are of such minor importance that they might have been omitted with advantage, but not a word of his own letters could have been spared. To say that he writes idiomatic English is to say what is short of the truth. His diction is easy and correct, clear and straightforward, without Oriental luxuriance or striving after effect. Perhaps he is never so charming as when he is laying down the laws of literary form to young aspirants to fame. The letter on page 285, for instance, is a delightful piece of criticism: it is delicate plain-speaking, and he accomplishes the difficult feat of telling a would-be poet that his productions are not in the smallest degree poetry, without one may conclude, either offending the youth or repressing his ardour.

For much more that is well worth reading we must refer readers to the volume itself. Intrinsically it is a book worth buying and reading.—*The Pioneer*, (Allahabad) Oct. 5, 1895.

The career of "An Indian Journalist" as described by F. H. Skrine of the Indian Civil Service is exceedingly interesting.

Mookerjee's letters are marvels of pure diction which is heightened by his nervous style.

The life has been told by Mr. Skrine in a very pleasant manner and which should make it popular not only with Bengalis but with all those who are able to appreciate merit unmarred by ostentation and earnestness unspoiled by harshness.—*The Muhammadan*, (Madras) Oct. 5, 1895.

The work leaves nothing to be desired either in the way of completeness, impartiality, or lifelike portrayal of character.

Mr. Skrine deals with his interesting subject with the unfailing instinct of the biographer. Every side of Dr. Mookerjee's complex character is treated with sympathy tempered by discrimination.

Mr. Skrine's narrative certainly impresses one with the individuality of a remarkable man.

Mookerjee's own letters show that he had not only acquired a command of clear and flexible English but that he had also assimilated that sturdy independence of thought and character which is supposed to be a peculiar possession of natives of Great Britain. His reading and the stores of his general information appear to have been, considering his opportunities, little less than marvellous.

One of the first to express his condolence with the family of the deceased writer was the present Viceroy, Lord Elgin. Mookerjee appears to have won the affection not only of the dignitaries with whom he came in contact, but also of those in low estate.

The impression left upon the mind upon laying down the book is that of a good and able man whose career has been graphically portrayed.—*The Englishman*, (Calcutta) October 15, 1895.

The career of an eminent Bengali editor, who died in 1894, throws a curious light upon the race elements and hereditary influences which affect the criticisms of Indian journalists on British rule.

The "Life and Letters of Dr. S. C. Mookerjee," a book just edited by a distinguished civilian in Calcutta, takes us behind the scenes of Indian journalism.

It is a narrative, written with insight and a

complete mastery of the facts, of how a clever youth gradually grew into one of the ablest leader-writers in Bengal, and still more gradually matured into one of the fairest-minded editors that western education in India has yet produced. If the training and experience which develop the journalist in England are sometimes varied, they seem in India to have an even wider range.

But the object of this notice is to show how a great Bengali journalist is made; space forbids us to enter upon his actual performances. They will be found set forth at sufficient length, and with much felicity of expression, in Mr. Skrine's admirable monograph. It is characteristic of the noble service to which Mr. Skrine belongs, that such a book should have issued from its ranks. Dr. Mookerjee was no optimist. One of his brilliant speeches contained the following sentence:—"India has neither the soil nor the elasticity enjoyed by young and vigorous communities, but present the arid rocks and deserts of an effete civilization, hardly stirred to a semblance of life by a foreign occupation dozing over its easily-gained advantages." This was true of the pre-Mutiny India of 1851. If it is no longer true of the Queen's India of 1895, we owe it in no small measure to Indian journalists like Dr. Mookerjee who have laboured, amid some misrepresentation, to quicken the "semblance of life" into a living reality.—*The Times*, (London) October 14, 1895.

"IMPROVED UNDAUNTED"

WATCH. Rs. 7.

Guaranteed three Years.

Strong, accurate, pretty, small, open-faced, nickel silver, keyless, short winding, patent, "NEW STYLE IMPROVED UNDAUNTED" watch, with hand setting mechanism, secondhand, for Doctors, ornamental bold dial, for Rs. 7 V. P. P. with an extra glass, spring, pretty box and full three years' guarantee. Warranted to stand the roughest use. Runs more than 28 hours with one winding. Will last a life time. Easily repairable. Others sell at double our rates. One watch free for the purchase of 8 at a time. Mr. Jno. Dickson of Haputal Railway, from Ceylon says:—"It keeps splendid time and never stopped although it sustained hard knocks and jerks." x Dr. H. Moore of Royal Artillery from Poonamallee says:—"I sold it for Rs. 16. x Pte. W. Hopkins of Sussex Regt. from Dumdum says:—"I have sold it for Rs. 20. x Mr. T. B. Scott of Patna Opium Department says:—"The watch you sent me some seven years ago is still keeping very good time."

Jewelled Ring Re. 1-8-0. Real

Silver Watch Rs. 13. Real

Solid Gold Watch Rs. 24.

Pretty electro cased gold chain Re. 1-8-0. Fashionable electro cased Gold Ring set with scientific diamonds, Rubies, Emeralds, at Re. 1-8-0. Mr. G. Smith, Salt Inspector from Samkutia, says:—"A German valued the diamond ring at Rs. 50 and ruby at Rs. 30." Key winding, Government stamped, solid silver hunting case, Royal watch with extras and full three years' guarantee, for Rs. 13. Pte. G. Hawkes of 2nd York Light Infantry from Parandhar says:—"For the first one I got Rs. 25; the second one I sold to a Sergeant for Rs. 28. x Pte. H. C. Bishop of L. F. L. Regt. from Kamptee says:—"A Corporal offered Rs. 30 for the very same watch. Gentlemen's open faced, keyless real solid gold watch Rs. 30; ladies' Rs. 24; both with extras and guaranteed for 3 years. Mind they are guaranteed to be of real solid gold. No agents kept, all goods sent only by us from Bombay per V. P. P.

SPECIFICS

for all ordinary diseases, like Fever, Cough, Asthma, Phthisis, Diabetes, &c., including diseases brought on by irregularities of kinds. Catalogues, containing full accounts of diseases and remedies, are transmitted on application. Prescriptions, with or without medicines, sent to every part of India and Ceylon, Cape Colony, and the British Isles, on receipt (by post) of full accounts of diseases.

Thousands of unsolicited Testimonials from every quarter.

CATARRH,

Hay Fever, Catarrhal Deafness.

A NEW HOME TREATMENT.

Sufferers are not generally aware that these diseases are contagious, or that they are due to the presence of living parasites in the lining membrane of the nose and eustachian tubes. Microscopic research, however, has proved this to be a fact, and the result is that a simple remedy has been formulated whereby these distressing diseases are rapidly and permanently cured by a few simple applications made at home by the patient once in two weeks. A pamphlet explaining this new treatment is sent on receipt of 2½d stamp by A HUTTON DIXON, 43 & 45 East Bloor St. TORONTO, Canada.
Scientific American.

WEEKLY NEWSPAPER

AND

REVIEW OF POLITICS LITERATURE AND SOCIETY

VOL. XV.

CALCUTTA, SATURDAY, JUNE 27, 1896.

WHOLE NO. 731.

JOHN HUGGINS AT THE EPPING HUNT.

With Monday's sun John Huggins rose,
And slapped his leather thigh,
And sang the burden of the song,
'This day a stag must die.'

A'as! there was no warning voice
To whisper in his ear,
'Thou art a fool for leaving *Chepe*,
To go and hunt the *deer*.'

Then slowly on through Leytonstone,
Past many a Quaker's box—
No friends to hunters after deer,
Though followers of a *Fox*.

And many a score behind—before—
The self-same rout inclined ;
And, minded all to march one way,
Made one great march of mind.

* * * *

Now Huggins from his saddle rose,
And in his stirrups stood ;
And lo! a little cart that came
Hard by a little wood,

In shape like half a hearse—though not
For corpses in the least ;
For this contained the *deer alive*,
And not the *deer deceased* !

Now Huggins, standing far aloof,
Had never seen the deer,
Till all at once he saw the beast
Come charging in his rear.

Away he went, and many a score
Of riders did the same,
On horse and ass—like High and Low
And Jack pursuing Game.

A score were sprawling on the grass,
And beavers fell in showers ;
There was another *Floorer* there,
Beside the Queen of Flowers.

* * * *

Away, away he scudded, like
A ship before the gale ;
Now flew to 'Hills we know not of,'
Now, nun-like, took the vale.

'Hold hard! hold hard! you'll lame the dogs,'
Quoth Huggins. 'So I do ;
I've got the saddle well in hand,
And hold as hard as you !'

But soon the horse was well avenged
For cruel smart of spurs,
For riding through a moor, he pitched
His master in the furze !

Now seeing Huggins' nag adrift,
A famer, shrewd and sage,
Resolved, by changing horses here,
To hunt another stage.

So up on Huggins' horse he got,
And swiftly rode away ;
While Huggins mounted on a mare,
Done brown upon a bay.

And off they set in double chase,
For such was fortune's whim,
The farmer rode to hunt the stag,
And Huggins hunted him !

And lo! the dim and distant hunt
Diminished in a trice ;
The steeds, like Cinderella's team,
Seemed dwindling into mice.

* * * *

Now many a sign at Woodford town,
Its Inn—vitation tells ;
But Huggins, full of ills, of course
Betook him to the Wells.

When thus forlorn a merry horn
Struck up without the door—
The mounted mob were all returned ;
The Epping hunt was o'er !

And many a horse was taken out
Of saddle and of shaft ;
And men, by dint of drink, became
The only '*beasts of draught*.'

For now begun a harder run
On wine, and gin, and beer ;
And overtaken men discussed
The overtaken deer—

And how the hunters stood aloof,
Regardful of their lives,
And shunned a beast whose very horns
They knew could *handle* knives.

DEAFNESS. An essay describing a really genuine Cure for Deafness, Singing in Ears, &c., no matter how severe or long-standing, will be sent post free.—Artificial Ear-drums and similar appliances entirely superseded. Address THOMAS KEMPE, VICTORIA CHAMBERS, 19, SOUTHAMPTON BUILDINGS, HOLBORN, LONDON.

Subscribers in the country are requested to remit by postal money orders, if possible, as the safest and most convenient medium, particularly as it ensures acknowledgment through the Department. No other receipt will be given, any other being unnecessary and likely to cause confusion.

And one how he had found a horse
Adrift—a goodly gray !
And kindly rode the nag, for fear
The nag should go astray.

Now Huggins, when he heard the tale,
Jumped up with sudden glee ;
'A goodly gray ! why, then, I say,
That gray belongs to me !'

And let the chase again take place
For many a long, long year—
John Huggins will not ride again
To hunt the Epping deer !

MORAL.

Thus pleasure oft eludes our grasp
Just when we think to grip her ;
And hunting after happiness,
We only hunt a slipper.

WEEKLYANA.

DESCARTES' tercentenary will be celebrated in France by the publication of a complete edition of his works.

THE French Government will continue the pension of twenty-five thousand francs a year to Louis Pasteur's widow.

"PEDALEURS" and "pedaleuses" are the terms employed by Parisians for he and she cyclists.

MISS Annie Weldon, of New Cross, was knocked by a van and killed at Nunhead, while cycling. Mr. Ritchie, President of the Board of Trade, sprained his ankle while amusing himself on his bicycle during the Whitsuntide recess at Welders, his seat in Buckinghamshire.

AN Englishman named Jefferson has started on a bicycle ride to Irkutsk, Siberia. His machine and baggage weigh sixty pounds.

FRANCE has imposed a tax on cycle. Curiously the dealers in the machine have not to pay it. Government messengers are also exempted. It is time, we think, that the cycle should be taxed in Calcutta.

DR. Hammond, of Baltimore, cut short convulsions of children by turning them upon the left side. In a case of continuous convulsions, more or less severe, for twenty-four hours, the change brought immediate relief. Epileptics too receive much benefit from the same movement cure.

THE East Wing of the new building of the London Homœopathic Hospital, opened by the Princess Mary Adelaide, Duchess of Teck, has been named the Princess Mary Wing.

LORD Beaumont, who, while out shooting and climbing a field gate, died of his own gun exploding, left no male heir. The Queen has been pleased to confirm the late Peer's title to his elder daughter, the Hon. Mona Josephine Tempest Stapleton, an infant born in August 1894. She, as Baroness Beaumont, swells to nine the number of ladies who are Peeresses in their own right.

THE subject of the essay of the Le Bas Prize of 1897 is : "The Probable Future Effect of the Religious Forces now at Work in India."

THE Rev. Hugh Price Hughes writes to the *Daily Chronicle* :—

"It is quite evident now that both Mr. Gladstone's Bills are as dead as Queen Anne. We have had a decisive object lesson, which proves that the Irish Romanist party is incapable of justice to English Non-conformists, and therefore much more incapable of justice to Ulster. It may safely be predicted that no Liberal Party in England will ever again propose a Home Rule Bill which does not give far more ample security for religious justice in Ulster, as well as absolute guarantee

for the exclusion of Irish intervention in purely English business. Henceforth Ireland has no claim to special treatment."

THE Conservative German organ, the *Kreuz Zeitung*, regards the annexation of Madagascar by France as a new diplomatic defeat for England. "It considers M. Hanotaux's change of front to be mainly due to his desire to treat English interests in Madagascar in the same way as England treated French interests in Burma, but adds that the annexation of Madagascar may possibly be intended by France as a reprisal for the despatch of Indian troops to Suakin. Were England less incorrigible, concludes the journal, she might, perhaps, grow wiser by dint of misfortune, but, as it is, her arrogance and self-conceit render it quite likely that she will attempt to indemnify herself in some other part of the world for her defeat in Madagascar."

DR. Weill has presented to the French Academy of Medicine a rare anatomical curiosity in the person of a Roumanian Jew, aged thirty. "He is the only one of his kindred who has ever been afflicted with myostis or progressive ossification. The first symptoms were presented twelve years ago ; on the right side of the dorsal region the ossification was ascendant, and the consequent lesions on the left side of the spine were descendant. Four years ago the malady ceased to extend, but it had reached the nape of the neck, and caused such stiffness that the sufferer looked like a statue. He walked with extreme difficulty. It was not easier for him to move his arms than his legs. The muscles were attacked at the points of insertion in the bones. Ossified ramifications of the bones advance far into the muscles. The head is turned leftwards, and held by muscular ossification in that attitude. The jaws are ankylosed. The whole muscular system of the posterior portion of the trunk is hard and bony as the shell of a crab or lobster. The doctors do not know what to think of this strange malady."

AS in the previous, in this week the mail could not be delivered here on Tuesday.

THE rate of exchange for compensation allowance for the second quarter of 1896-97 has been fixed at Rs. 2-3/32d., the percentage of salary admissible on that account being Rs. 13-13-9 approximately.

THE Lieutenant-Governor, accompanied by the Hon'ble C. W. Bolton, Chief Secretary, Mr. A. H. Gayer, Private Secretary, and Captain G. C. Ross, Aid-de-Camp, will be on tour the whole of next month and half of the month following, starting from Darjeeling on Wednesday, the 1st day of July. After a stay of 2 days at Calcutta, he goes, starting from Howrah, on Sunday the 5th, at 20-57 railway time, to Gaya on the 6th, thence to Bankipore, Muzaffarpur and Darbhanga. On the 16th, embarking at Semaria Ghat on yacht *Rhotas*, he makes a river tour to Monghyr, Bhagalpur, Berhampore, Rampur Bonlia, Pabna, Faridpur and Dacca. Thence by rail and river to Mymensing, Narainganj, Chandpur, Comilla and Chittagong. On his return trip he takes in Barisal, Khulna and Jessore, reaching Calcutta on Friday, the 14th day of August at 5-0 railway time. The departure from Darjeeling, the arrival and departure from Calcutta and arrival at Calcutta will be private.

SIR Alexander Mackenzie has called a meeting of the Bengal Legislative Council for the 11th July at Calcutta, to which he has summoned the several members. According to the published programme of his tour, the Lieutenant-Governor will leave Bankipore and arrive at Muzaffarpur on that day and halt there the next day. It is not expected therefore that he himself will be present at the Council meeting.

AT the next Criminal Sessions, commencing on Wednesday, the 1st day of July, the Chief Justice, Sir Comer Petheram, will preside.

THE *Calcutta Gazette* of June 24 publishes the Draft Rules for grant of certificates to Compounders. The draft will be taken into consideration on or after the 1st August 1896, when any objections or suggestions which may be made by any person and received before that date will also be considered. The rules are made by the Lieutenant-Governor in exercise of the powers conferred by section 252 of the Bengal Municipal Act (III of 1884) and section 368 of the Calcutta Municipal Consolidation Act (II of 1888), respectively.

Is this announcement a notice for enforcement of the sections of the Acts? The Calcutta law requires that every shop or place kept for the retail sale of drugs not being also articles of ordinary domestic consumption, shall be registered; that the license granted shall be displayed in a conspicuous part of the premises; and that no person shall compound, mix, prepare, dispense, or sell any drug in any registered shop or place unless he be duly certified as a fit person to be entrusted with such duties under rules made for that purpose by the local Government.

A keeper of an unlicensed shop is liable to a fine of Rs. 100. Any uncertificated compounder, mixer, preparer or seller of any drugs in a registered shop is punishable with a fine of Rs. 50 for each offence, and any owner, occupier or keeper of any such shop who employs an uncertificated person for such duties, renders himself open to a fine of Rs. 200 and forfeiture of his license. The restrictions do not apply to the sale of drugs used by practitioners of indigenous medicines when such drugs are not sold in a shop or place where medicines are dispensed upon prescription.

The mofussil law is substantially the same. In fact, it is taken *verbatim* from the Calcutta Act. Under the Bengal Municipal Act, the drugs are explained to be those recognized by the British Pharmacopœia. Do homœopathic dispensaries come under the law? They dispense drugs recognized by the British Pharmacopœia but their preparations are not according to its directions.

A GERMAN doctor has found that apple is a cure for drunkenness. That is hardly a discovery. Spirituous drinks create a taste for all kinds of acids. With a distaste for all other food, a toper is fond of acids only. It is nearly 20 years that another German doctor started the theory that all food should be eaten raw, which would drive away all diseases and end the curse of civilized communities—intemperance. He also thought clothing a mistake.

..

"WHISKY ROOT" is an American plant of the cactus (*mansa*) family. Like the drink of its namesake, it can produce intoxication. The Indians of the southern Texas cut the "buttons" into small pieces and chew them. The juice thus extracted and taken in cheers and inebriates the American Indians, who, under its influence, sit for hours enjoying the beautiful visions of colour and other manifestations.

..

IN his last (May) number of the *Calcutta Journal of Medicine*, Dr. Sircar remarks:—

"My persuasion is, that when not strictly appropriate, homœopathic medicines do produce pathogenetic effects and produce the very morbid conditions for which they are truly homœopathic, but which not really existing are brought about by them in patients whose constitutions have been rendered sensitive by disease. In the treatment of all diseases, and of cholera in particular, routine practice is most disastrous. I look upon the recent unfavourable results of the homœopathic treatment of cholera in Calcutta and elsewhere, as due to this cause. Every case requires the strictest individualization, or bungling and failure must be the result. Every epidemic, if scrutinizingly studied, would be found to differ in some essential characters from previous epidemics. This is the reason why in one epidemic Camphor, in another Arsenic, in a third Veratrum, in a fourth Sulphur, &c., is found to succeed, and no other. It is absolutely necessary that the character of an epidemic, the genius epidemicus, as it is called, should be studied with care, in order that the work of prescribing may be both accurate and comparatively light. Of course it must be remembered, that this should not dispense with the study of each individual case in order to determine its own peculiarities, but the genius epidemicus having been ascertained, such study would be easier than it could otherwise be."

How few practitioners wait to study the disease of their patients! They run and prescribe.

AT a Meeting of the Vienna Medical Society, Professor Exner read a paper on the Function of Hair, in which he remarked:—

"There is a group, such as the eyelashes and eyebrows, for instance, which are sensorial organs, possessing tactile functions, and moreover serve as a protection to the eyes. In places where two integumentary surfaces are in contact such as in the axillary region, &c., they act as rollers and facilitate the gliding of the integumentary surfaces on each other. A third function of the hairs consists in the equalization of surface temperature. The hair of the scalp protects the head against external cold, and also prevents the loss of heat through the very low thermal conductivity of the hair cylinders and of the cushion of air intermingled with them."

Hair is not only a protection and a guard in the two instances first and last mentioned, but an ornament as well. In the third, it has its uses, but the experience of all countries and nations and even individuals does not agree.

NOTES & LEADERETTES,

OUR OWN NEWS

&

THE WEEK'S TELEGRAMS IN BRIEF, WITH OCCASIONAL COMMENTS.

DR. Leyds has telegraphed to Mr. Chamberlain, strongly pressing for prosecution of Messrs. Rhodes, Beit and Harris, directors of the Chartered Company, and greatly regretting the delay about the enquiry into the Jameson raid. He also urges the complete transfer of the Chartered Company's territory to Imperial rule. Will that be a change for the better?

A further despatch from the Transvaal Government affirms that the recent despatches were animated by no hostile spirit, the Transvaal Government merely desiring to co-operate with Great Britain in promoting peace and confidence in Africa.

LI-HUNG-CHANG has engaged two officers of the German army to establish a military school in China on the German model. He had a two hours' conference with the German Foreign Secretary at Berlin, and discussed fully the interests of Germany and China. It is stated that the bases were agreed upon for a future international policy. He was entertained at a public banquet at Stettin, whence he proceeded to Kiel, where he had an official reception. Splendid festivities awaited him at Hamburg but he was confined to his house with a bad cold. He was able, on June 25, to pay a two hours' visit to Prince Bismarck at Friedrichsruh. It is stated that he has given extensive orders to Krupp works at Essen, and Vulcan works at Stettin.

THE rebellion in Mashonaland is spreading, and the natives are massacring the whites in outlying farms in Salisbury and Mazoe districts. There was a severe fighting between the rebels and a party escorting women and children. All outlying whites have been ordered into laager at Salisbury, where there is scarcity of men. Colonel Carrington is sending Beal's and Spreckley's columns to Salisbury, and has summoned 200 Mounted Infantry from the Cape. He has also ordered the 7th Hussars and Mounted Infantry at Mafeking to Mafeking to Mafeking. The Resident at Fort Victoria reported that the natives there were wavering, and that he hoped to overawe them by a display of force. The Natal Contingent routed two thousand Mashonas after severe fighting on Monday near Hartley. There is a strong feeling at Capetown owing to the massacre of several well-known families by the rebels, and the Cape Assembly have petitioned the Government for aid to the Volunteers who are accustomed to active warfare for the suppression of rebellion. The latest news is that the rebels have surrounded Fort Charter and looted Marindella, where they seized 25,000 cartridges. During the fighting, Lieutenant Bremner 20th Hussars, who was serving as a Volunteer, was killed.

ADVICES from Syria state that a rising has taken place among the Druses, who have annihilated four companies of Turkish troops and captured several guns. In the Hauran district several Turkish battalions are surrounded by the rebels. The Turkish authorities are despatching troops from Salonica to the scene of the disturbance.

A MEETING of the Cabinet was held, on June 20, to consider afresh the steps to be taken with regard to the Education Bill. Mr. Balfour's proposal to adjourn in August and leave the completion of the Bill until January was found impracticable, and the Government hesitated whether to persist in the whole measure, notwithstanding numberless amendments, or reduce it to a simple aiding of the voluntary schools. The hesitancy of the Government is much criticised by the Unionist press, who blame Mr. Balfour's leadership. In the House of Commons, on June 23, Mr. Balfour announced the withdrawal of the Bill, and in doing so admitted that he had miscalculated the extent of the opposition to the measure. He proposed to reintroduce the Bill at the beginning of January. Sir William Harcourt said he would refrain from exulting over the Government, but observed that the opposition to the Bill also emanated from the Unionist party.

CHOLERA is decreasing in Alexandria and Cairo but increasing in the

provinces. A case of cholera has occurred among the Indian camp followers at Suakin.

THE *World's* telegram about the conflict between the British and Venezuelans is contradicted. The Venezuelans have, however, arrested and conveyed to their territory Mr. Harrison, a Government official who was directing the making of roads on the British side of the Schomberg line. America, at the instance of Sir Julian Pauncefote, is using her good offices to procure the release of Mr. Harrison.

THE French Chamber of Deputies has by a large majority passed the Bill for the annexation of Madagascar.

DEATH of the Emperor of China's mother is announced. This news of our border Empire comes to us from England.

THE Powers have proposed to the Porte that a Christian Governor be appointed in Crete, and that a general amnesty be proclaimed on summoning the Cretan Assembly. They have also recommended the execution of the Halepa Convention of 1878.

THE Lords have read for the second time by a majority of twenty-nine votes the Bill for marriage with a deceased wife's sister. When will they pass it?

A TURKISH outbreak took place at Van on Monday, in which many Armenians were killed, and many took refuge in the British Consulate.

THE Commission appointed to enquire into the financial relations between England and Ireland have reported that Ireland is over-taxed to the extent of two and three-quarter millions sterling annually.

THE treaty between Japan and Belgium has been signed at Brussels.

THE Suakin Expedition is justified. The Sudan refugees, arriving in the Egyptian camp, report that the people are eager for freedom from the Dervish rule. Our Viceroy's despatch regarding the Charges question has reached Lord George Hamilton. It is stated that a number of Ministerialists are prepared to vote against charging India with the cost.

THE Czar is suffering from an attack of jaundice.

WITH a record fall of nine inches of rain in five hours, Darjeeling has just passed through a fearful visitation. Telegrams of the 26th report: "The Monsoon has broken in Darjeeling with disastrous result. The Sonada Mission has fallen in. The missionaries are supposed to have been buried alive. Particulars are not yet to hand. Dr. Dore's out-offices at West Point have been buried by a landslip, and a sweeper buried alive. Mr. J. Macarthur's house at Glenburn was in extreme danger owing to severe landslips around. Holly Lodge, occupied by Mr. Bruce Manson, Conservator of Forests, was also in great danger. Fifty-two slips occurred along the new Lebong road. Traffic has been suspended. At Singamari a woman drawing water from the Jhora was buried but was extricated and removed to hospital, where she lies in a precarious condition. A portion of the Observatory Hall, above Darjeeling High School for Girls, fell during the night with a loud crash on to the Mall below. There was also a heavy fall in Birch Hill Road below the abovementioned school. The Mall and Birch Hill are blocked. Below Saint Paul's School on the Calcutta Road a huge slip took place, 1,000 feet of water-piping being carried away.

There was also a bad slip on the hill on which stands Vernon Lodge. Two nights of rain will decide its fate. There is extreme scarcity of drinking water in the station. A house called Dun's Location was buried last night. The inhabitants, Native Christians, were extricated this morning and sent to hospital. The owner of the house was found dead. Seven enormous slips have occurred between Darjeeling and Ghoom. The rails were carried away in some instances. The mail train was despatched daily from Ghoom, there being no train from Darjeeling. Dun's Location was sold four days previously and the money paid in. The wall and billiard room of the

Planters' Club have come down. The monsoon is never known to have burst here with greater violence. The damage is greater than that of five years put together. It is estimated that two hundred landships have taken place, and that twenty inches of rain have fallen in the last three days, of which the ten which fell last night, did all the damage. There is a fancy dress ball to-night but some outside guests are unable to attend owing to roads being impassable. The weather shews signs of clearing.

The Upper Alloobarie Tea Estate has almost been destroyed. The damage to it and Rungaroon is estimated at sixty thousand rupees.

The road is partially blocked. Some residents are cut off from the rest of the town for the present. Eight hundred feet of water pipes are washed away. One mehter Lapcha woman has been crushed to death. There is no down mail to Darjeeling to-day. The up mail runs to-day as far as Ghoom, whence the letters are despatched to Darjeeling by runners."

DURING Tuesday and Wednesday, a small cyclone with heavy rain blew over Karachi, over seven inches of rain being recorded. The Byari river rose in flood, and two persons were drowned. Much damage was done to house property. The steamer Dwarka was caught in the cyclone, and had to remain off the port for twenty hours before she was able to enter the harbour.

WE learn from Manipur that the price of rice has suddenly gone up from Rs. 2 to Rs. 7 and that a famine is apprehended. Cholera is also raging outside the British Reserve, being confined chiefly to the lower classes. One Babu, however, has been lately carried off. The local authorities are reported to be taking all necessary precautions.

ALLAHABAD has scarcely passed through a hotter summer than this year. The heat was terrific and rains have held off for months. There is no rain yet, though the prevalence of dust-storms for some days together has slightly reduced the heat.

THERE is great improvement in the state of the crops generally. The number on relief works in the North-West Provinces, including those on village works, has fallen to 112,000 persons; 20,000 persons are still on works in Gwalior and Bundelkand and 11,000 in Rajputana.

ANOTHER turn of the screw and another reduction in the interest of Government loans! The success of the present $3\frac{1}{2}$ per cents. has emboldened the Finance Minister to attempt another permanent source of income. The Viceroyalty of Lord Elgin will be remarkable for its financial policy. "His Excellency the Right Honourable the Governor-General in Council," so runs the notification, "has resolved to borrow four hundred lakhs of rupees for the public service in the following manner:

Promissory Notes will be issued for the said amount, bearing interest at the rate of three per centum per annum, payable half-yearly on the 30th day of June and the 31st day of December. The notes will be in the Form annexed to this Notification and they will not be discharged before December 31st, 1916, nor until the expiration of three months after notice of payment to be published in the Government Gazette," when, we are sure, the present $3\frac{1}{2}$ will be discharged or converted into 3 per cents.

Tenders for the new loan for the whole or any part thereof will be received to noon of Wednesday, the 22nd July, when they will be publicly opened. They must be for sums of Rs. 500 or multiples of Rs. 500. Each tender must be accompanied by a deposit of not less than one-hundredth, or, if the tender be for less than five lakhs of rupees, then for not less than one-fiftieth part of the tender.

The recorded minimum rate at which tenders will be accepted will, before the tenders are opened, be placed upon the table in a sealed envelope, but will not be declared unless some tender is rejected only because it is below the recorded minimum.

Tenders at the recorded minimum rate and at rates above the recorded minimum rate will be accepted in the order of the rates tendered, beginning with the highest rate; the amount allotted at the lowest rate at which tenders are accepted will be divided amongst those who have tendered at this rate in proportion, as nearly as may be found convenient, to the amounts of their tenders; provided that

no allotment will be issued if the amount distributable on any tender is less than Rs. 500.

The successful tenderer is required to pay the first instalment, not exceeding 35 per cent., on or before 7th August; the second, not exceeding 35 per cent., on or before 9th September; and the balance on or before 9th October 1896.

DR. E. W. Chambers, Coroner of Calcutta, having obtained leave without pay for six months, has proceeded "home," and the Hon'ble Nawab Syed Ameer Hossein is once more Magistrate and Coroner. On Dr. Chambers' applying for leave, the question was raised whether the Coroner was a law officer of Government and, we believe, decided in his favour before he was granted leave. In view of the Nawab's turn for leave after the return of Dr. Chambers, Mr. Mookerjee, who has converted himself into a Roy and delights to call himself Dhuba, has been paying special court to Sir John Lambert, K.C.I.E., with whom practically rests the appointment of Presidency Magistrates, and has earned his confidence. Those, not in his good books, however qualified otherwise, have little chance of being stipendiary magistrates of the town.

AN Honorary Magistrate of the Baranagar Bench is just now under a cloud, being charged, along with a youngster of his age by a Hindustani woman, with forcible confinement and the commission of forcible adultery. The case was instituted in the Court of Mr. S. D. Roy, but subsequently, we understand, an application has been made for its transfer to any other court that the District Magistrate might deem fit, on the ground of Mr. Roy's personal friendship with the chief accused.

THE *British Medical Journal* reports:—

"At a meeting of the Edinburgh Royal Society on Monday, April 6th, a communication on bacteria in milk as supplied to the city of Edinburgh, and the relative efficiency of different methods for their removal or destruction, was made by Drs. Hunter Stewart and J. Buchanan Young. The authors stated that the cowhouses of this country were not kept with anything like the care of those in Denmark and Holland. The cows were not groomed, the cowhouses were not flushed with water, the hands and clothing of the milkers were not properly attended to, nor were the cows' teats properly cleaned. Since November 1894, 300 samples of milk had been examined from fifty dairies scattered throughout the city. It was found that at three hours after milking there were in winter on an average 24,000 bacteria per cubic centimetre. In spring and early summer 44,000; in late summer and autumn 173,000. It was found that in dairies supplied with milk from the country the average number of micro-organisms five hours after milking was 41,000 per cubic centimetre, while in dairies supplied with milk from town byres the average was 352,000 per cubic centimetre. The importance of having cowhouses outside the city was strongly emphasised. The various modes of sterilising milk were discussed, and it was pointed out that the great objection to the use of sterilised milk was the change of flavour and the alleged increased indigestibility. The conclusions were that milk kept for one hour at 212° in bottles hermetically sealed remained sterile for more than a month, and was quite sweet and palatable, though it had a boiled taste; that milk heated by means of Dr. Cathcart's apparatus remained quite sterile for forty-eight hours, though the boiled taste was marked; that milk kept for thirty minutes at 158° F. was quite sterile at the end of twenty-four hours, and contained very few microbes at the end of forty-eight hours. In all these three methods the micro-organisms of tubercle and diphtheria were certainly killed. Scalding at 176° F. with every precaution kept the milk sterile for twenty-four hours, but in carrying out this process on a large scale there was considerable risk of postscalding contamination, so that there was no guarantee that the bacillus of tubercle and diphtheria, if present, was destroyed."

How miserable the cowsheds at Calcutta! There is no grooming of the cows, no attempt at cleanliness of any kind. The animals are huddled together in a space not sufficient to contain half of them. The law gives the Municipal Commissioners ample powers, but they find they are powerless, in that they cannot exercise them. The Commissioner of Police has urged the Chairman of the Corporation to look to the matter. Mr. Williams is anxious to improve the sheds. He ordered prosecutions through the Police. The Chief Magistrate ordered heavy fines, but the other stipendiary Magistrate with a kind heart passed lenient orders, while the Honorary Magistrates were incorrigible. The fines ordered by them are scarcely punishments, not to say deterrent. In his despair, Mr. Williams appealed to the Local Government. The correspondence that passed between the Chairman and the Chief Secretary is instructive:—

"From—H. C. Williams, Esq., C. S., Chairman of the Corporation of Calcutta, To—The Chief Secretary to the Government of Bengal. I have no doubt that the attention of the Government of Bengal has been at times drawn to paragraphs in the newspapers concerning

the insanitary state of the numerous gowkhanas in Calcutta and its suburbs. The responsibility of the state of affairs mainly rests with the Municipality, whose officers have been very lax in dealing with the disgraceful state of affairs; but the Magistrates are also by no means free from blame. Some Magistrates, it is true, when cases are proved against offenders under section 336 of Act II of 1888, do give suitable fines; but I find that very many content themselves with inflicting merely nominal fines; and as the business is very profitable, the offenders go on as they did before. The number of unlicensed cowsheds in Calcutta is simply incredible. Comparatively few persons are punished, and when they are convicted the punishment should, in my opinion, be decidedly deterrent. Cases get adjourned on some pretext or another. The owner steadily absents himself, and the law is very much in favour of the offender. When the law is revised as it will be, I imagine, before very long, both sections 335 and 336 will have to be altered. The second clause of 335 has, I am told, been construed to hold that a man may keep an unlicensed shed for April and May, even though he is not an old licensee. I am trying to find a case in which this view of the law has been taken. The second clause of section 336 is also unworkable. The Commissioners have no place where they can store cattle, and their trying to make use of this section has, I believe, led to more than one disturbance. All, however, that I would now ask Government to do is to point out to Magistrates, particularly the Honorary Magistrates, that a fine of annas 8 to Rs. 2 is not a fitting punishment for those whose offences tend to contaminate the public health as much as those found guilty under section 336 of Act II of 1888.

From—C. W. Bolton, Esq., Offg. Chief Secretary to the Government of Bengal, To—The Chairman of the Corporation of Calcutta.

I am directed to acknowledge the receipt of your letter No. 1138, dated the 15th May, 1896, regarding the insanitary condition of the numerous Gowkhanas in Calcutta and its suburbs. You state that the number of unlicensed cowsheds in Calcutta is very great owing largely to the fact that Magistrates content themselves with inflicting merely nominal fines on persons convicted under sections 335 and 336 of the Calcutta Municipal Consolidation Act II of 1888.

In reply, I am to say that the Lieutenant-Governor agrees with you in considering that exemplary punishments are called for to check this nuisance. You should instruct the subordinates of the Corporation who prosecute cases under section 336 of the Act to bring to the notice of the trying Magistrates, whenever it appears necessary to take this course, the serious mischief, from a sanitary point of view, done by the offenders, and press for severe punishment."

The reply is well conceived. While it ought to spur the Magistrates to their duty, it saves them the humiliation of dictation. This is statesmanship.

THE Hon'ble Dewan Bahadur Justice Subramani Iyer, C.I.E., Judge of the Madras High Court, having been presented with a copy of '*An Indian Journalist*,' not only handsomely acknowledged the gift of the Life of his friend, but followed up his thanks with substantial appreciation by a cheque of Rs. 50, in aid of the object Mr. Skrine has in view. The Indian mind, however enlightened, is not always up to the English standard of thankfulness and appreciation, and we publish the small matter, which may not be agreeable to the Judge, that others may learn.

THE Vice of a neighbouring District Board is at his clean work again. Having got at the top, he cares not for the ladder by which he rose, and, having threatened the terrors of the law to an unsympathetic journal, he himself, in the eve of another election, feels free to forge silver fetters with a rival's love.

REIS & RAYYET.

Saturday, June 27, 1896.

THE BENGAL CONFERENCE.

THE Indian Congress is necessarily a huge organization, and, by yearly repetition, bids fair to be National. It was a mistake to begin it without the Mahomedans. But we are sure, as years roll on, they will find equal interest in it with the Hindus and other nationalities. It is no Hindu movement for any Hindu Revival. Its aims are political, and it excludes social and religious questions religiously. Notwithstanding, by its sessions in the various Presidencies and chief cities, it has given an impetus to social intercourse between the different parts of the Indian Empire, and that promiscuous intercourse is a great help to religious toleration. If then, of late, there have been religious riots between Hindus and Mahomedans, one reason, we should think, is the exclusion, by themselves or the organizers of the great movement, of the

Mahomedans. Another cause is what is called the present Hindu Revival. We see in it no advancement of the Hindus as a nation. It rather takes them back to what they have long left behind in the march of progress. It cannot live long, if we are not to go backwards. Those who rejoice in it must not be forgetful of its reaction. They are no true patriots who fan this religious flame. The absurdity of the rage is beginning to manifest itself in Hindu ice, Hindu soap and other articles of daily use and consumption. This blind religious zeal and that estrangement between the two most important sections of the Indian community are great impediments to our national progress and the usefulness of the Congress.

The Congress aims at what every educated Indian had striven for in the past and what it will be his duty to try in the future. The platform is common to all. The exclusion from its range of all subjects other than political, is a welcome to all comers. The institution of Provincial Conferences is another attempt to preserve its integrity, and to make it truly national or imperial. In the gradual disappearance, under the progressive British rule, of the old bonds of unity between individuals and clans and sects and communities, the Congress is a great school, in which, if properly managed and maintained, you have the making of a nation. Unless you are prepared to revive the old bonds, you cannot ignore the new.

Whether the Congress is worked on this basis, it is not our present business to see.

Following the Government of the country, the governors of the Congress have divided its government into Imperial and Provincial. Those anxious to maintain the distinction, have taken objection to the Krishnaghar or the second Bengal Conference, in that it discussed what ought to have been reserved for the sittings of all the Presidencies. The chair at the Conference was taken by the Honble Guruprasad Sen, of Bankipore. It was at first offered to Maharaja Jagadindra Naryan Roy, of Nator. He declined the honour on grounds of social etiquette. As descendant of Rani Bhabani, he could not come to Krishnaghar except on the thrice-repeated invitation of the Maharaja of Krishnaghar and with his whole retinue—an expensive business. Nor was the Maharaja of Krishnaghar prepared, for a matter not social, to welcome him on those terms. Maharaja Kshitish Chunder was not himself present at the Conference, though he showed his sympathy by subscribing to the Fund of the Conference and otherwise aiding it. He at first refused the use of his Natmandir, where the sittings were held, unless the Reception Committee guaranteed that there would be no seditious oratory. The guarantee was not enforced and he attended the Evening Party given by Mr. Monomohun Ghose, Chairman of the Reception Committee, at his house to the delegates.

The house of the Pal Chowdhuries of Ranaghat, the second in the Nadia District, was represented by Baboo Ganendranath. There was at first no disposition to recognize his position in the programme of the opening day. The omission was rectified and he was asked to propose Babu Guruprasad to the chair. Another zamindar of the district, who had attended the distant sittings of the Congress, could not be present and was represented, as freely expressed in the Conference Camp, by his carriage and pair. If the remote Assam sent a delegate, the nearer districts of Hugli, Burdwan and Dacca were unrepresented. The Committee had more than the ordinary

difficulties to contend against. For convenience of a chosen few, they changed the days for the sittings to the inconvenience of many, and those few did not turn up. There was objection from the quarter represented by the *Sanjibani* to join the Conference unless the connection of the Secretary, who, with Baboos Baranashi Roy, Bishambhar Roy, Basanta Kumar Chatterjee, Pleaders, and Baboos Prosonno Kumar Chaudry and Phanibhushan Mookerjee (a student), worked hard for the success of the Conference, was severed. The demand could not be acceded to and the Sadharan Brahmos and those who thought with them kept away. It also devolved upon the Committee to arrange a meeting of the two Bengal rival orators, once friends, that they might be friends again.

Krishnaghar was all hospitality to the delegates, who, one and all, are profuse in their admiration for the excellence of the arrangements made for their reception. Babu Surendranath Banerjee was of course the central figure of the Conference, the chief actor in the whole performance, from beginning to end. He, after his wont, monopolized the principal speaking at the Conference, although a day was reserved for him, when the students presented him an address. The Conference concluded, in the after performance, with a reconciliation between the two orators Babu Surendranath Banerjee and Mr. Lal Mohun Ghose.

A significant omission, evidently an oversight of the Committee who proved equal to any emergency, was the absence of a printing press. The delegates and speakers were much inconvenienced for want of printed resolutions to be moved and seconded.

THE DERBY.

The Overland Mail writes:—

"It is not unlikely that for twenty-four hours the Prince of Wales felt more satisfaction from the proud position of being a winner of the Derby than from that of being Prince of Wales. So much is the honour of gaining the 'Blue Ribband of the Turf' coveted that to a Prince deprived by circumstances of the possibility of winning distinction, no less than distraction, on the fields of War and Statesmanship the pride and emotion which come to a Derby winner must be something of a peculiarly exceptional and agreeable character. He has won the honour too like an English sporting gentleman, and not like a speculative financier, with a horse bred on his own estates, and is therefore all the more legitimately entitled to be warmly congratulated on his victory. The public, who have come to look upon the Prince of Wales as one of the most genial of State institutions, showed by their demeanour on Wednesday, not only at Epsom, how thoroughly they like him, how cordially they sympathise with him in his joys, as they have in the past with his sorrows.

"The story of the race is told in another column, but the following bit of graphic description which we take from the *Standard* is well worth reproducing:—

"The scene which followed the victory of the Prince of Wales's horse almost surpasses description. As Persimmon went past the post nearly every silk hat in the Club Enclosure was sent into the air, and thousands of hats from every part of the course followed suit. A roar which swelled into a torrent broke upon the air, and as the number was hoisted a noise, the like of which Epsom Downs has never known, seemed to envelope the course. In an instant the course from Tattenham Corner to the paddock became a mass of blackness, and so dense was the crowd that men were carried off their legs. All seemed drunk with excitement, and when the Prince appeared on the steps, holding his hat, the enthusiasm reached a climax. He descended the steps, and went out on the course, still hat in hand, to meet the winner. So vast was the throng, that it was nearly five minutes before Persimmon got in, each horse having to be preceded by a mounted constable. Two constables in front and one behind protected the hero of the day, led by Marsh, his trainer, whose face was that of a man who is enjoying the supreme moment of his life. All the time Lord Marcus Beresford stood without a hat, biting a cigar as if his life depended upon it. When, at last, the horse arrived,

DEAFNESS COMPLETELY CURED! Any person suffering from Deafness, Noises in the Head, &c., may learn of a new, simple treatment, which is proving very successful in completely curing cases of all kinds. Full particulars, including many unsolicited testimonials and newspaper press notices, will be sent post free on application. The system is, without doubt, the most successful ever brought before the public. Address, Aural Specialist, Albany Buildings, 39, Vctoria Street, Westminster, London, S. W.

he went to speak to Marsh, and the latter gave the rein to the Prince, who, with his hat in his hand, led his first Derby winner into the unsaddling enclosure. The cheers were almost hysterical now, and the spectacle was one which has known no parallel on any racecourse in the world. The Prince shook Marsh's hand a dozen times, and when Watts dismounted he shook his also. Porter, his old trainer, was similarly greeted, and so were many hundreds of others. The cheering had known no break from first to last: but when the 'All right' was called, there was scarcely a man on the course with a hat on his head. The Prince appeared at the top of the steps, and bowed repeatedly to the mass below him—a mass numbering, perhaps, 50,000 people; and he would have been of stone, had he not shown how much he was moved. The whole experience was one of a lifetime."

The Derby is the great national carnival of England, and the Prince of Wales was the hero of the day. He could not have been in touch with his people in a better way.

This is not the first time that a prince of the blood royal has won the Derby. The year of the first Derby is 1780. In 1788, the then Prince of Wales won it with Sir Thomas. His brother the Duke of York won it twice, with Prince Leopold in 1816 and in 1822 with Moses. The first winning horse was Diomed. English horse-racing, we are told, "was established in the reign of James I, with nearly all the rules for training, physicking, carrying weights, and running for prizes, as at present. A silver bell was the annual prize; hence comes the proverb 'to bear the bell.'" The bells have gradually given way to bowls, or cups, or to money. It was Benjamin Disraeli who first called the "Derby" stakes "the Blue Riband of the Turf." "In 1840, her Majesty the Queen with Prince Albert visited Epsom races. In this year the Derby was won by Mr. Robertson's Little Wonder, and the Prince presented Macdonald, the jockey who rode the winner, with a gold-headed riding-whip in honour of the royal visit." Sensation upon sensation, in 1820, the Derby was run during a hurricane, and in 1839 and in 1867, the start was made in a snow-storm. Another memorable year was 1844, when the stakes were adjudged, owing to a fraud, in the Court of Exchequer, when Baron Alderman, who tried the case, remarked that if the perpetrators of the fraud were tried and convicted before him, he would have passed the sentence of transportation for life.

The founder of the present breed of English race-horses was the wonderful Eclipse. He was born during the great eclipse of 1766, and was bred by his royal owner the 'Duke of Cumberland, who, dying shortly after, he, along with his master's stud, was sold. When 4 or 5 years old, Captain Dennis O'Kelly, who was rendered famous in the sporting world as the owner of Eclipse, purchased half of him for 250 guineas and afterwards paid another 750 guineas for the other half. The following epistle from Eclipse to King Fergus is recorded in a book of sporting anecdotes:

"Dear Son,—I set out last week from Epsom, and am safe arrived in my new stables at this place. My situation may serve as a lesson to man: I was once the fleetest horse in the world, but old age has come upon me, and wonder not, King Fergus, when I tell thee I was drawn in a carriage from Epsom to Canons, being unable to walk even so short a journey. Every horse, as well as every dog, has his day; and I have had mine. I have outlived two worthy masters: the late Duke of Cumberland, that bred me, and the Colonel with whom I have spent my best days, but I must not repine; I am now caressed not so much for what I can do, but for what I have done, and with the satisfaction of knowing that my present master will never abandon me, to the fate of the *high-mettled racer*!

"I am glad to hear, my grandson, Honest Tom, performs so well in Ireland, and trust that he, and the rest of my progeny, will do honour to the name of their grandsire,

ECLIPSE.

"Canons, Middlesex.

"P.S. Myself, Dungannon, Volunteer, and Vertumnus, are all here. —Compliments to the Yorkshire horses."

Eclipse could gallop a mile in a minute. His

fleetness was due, as was discovered at the post-mortem on his body, to his heart weighing 13 pounds. One of his hoofs, set in gold, is preserved by the Jockey Club, and is annually run for at Ascot Races, and thus it passes annually from owner to owner of the winning horse. The famous horse lies buried in the park of Canons, near Edgware. "For many years Eclipse lived in retirement from the turf, but in another way, as a 'sire,' a source of large income to his master at Clay Hill, near Epsom, whither many strangers resorted to see him. They used to learn with surprise—for the practice was not common then, as it is now—that the life of Eclipse was insured for some thousands of pounds."

Charles Greville, Clerk of the Privy Council, author of "Memoirs" that bear his name, and a frequenter of the races, writes in his book under date May 27, 1833:—

"All last week at Epsom, and now, thank God, these races are over. I have had all the trouble and excitement and worry, and have neither won nor lost; nothing but the hope of gain would make me go through the demoralising drudgery, which I am conscious reduces me to the level of all that is most disreputable and discreditable, for my thoughts are eternally absorbed by it. Jockeys, trainers, and blacklegs are my companions; and it is like dram-drinking; having once entered upon it, I cannot leave it off, though I am disgusted with the occupation all the time. Let no man who has no need, who is not in danger of losing all that he has, and is not obliged to grasp at every chance, *make a book* on the Derby. While the fever it excites is raging, and the odds are varying, I can neither read, nor write, nor occupy myself with anything else.....I had considerable hopes of winning the Derby, but was beaten easily."

Racing may have many advantages. But the "plunging?" If that cannot be checked, it is no legitimate sport, however exciting. The concomitant evil, gambling, has extended to India and invaded the Zenana. We do not, like the Puritans and the Evangelicals, class horse-racing with the theatre and the nautches, but, we must confess, we cannot view with equanimity the accessory danger.

OUR LONDON LETTER.

June 5.

Great Britain.—The Imperial Parliament reassembled after the short Whitsun recess on Monday. This week is devoted to minor Government Bills, of a more or less non-contentious character. On Tuesday, a vote was taken as to whether the House of Commons should adjourn over the Derby day, and the strange spectacle was witnessed of the Nonconformist conscience supporting the motion. It was not because these ultra-straight-laced bigots wished to see the great race run, but simply to try and defeat what is called the "Church Benefices Bill." The principal object of the Bill is to strengthen the hands of the Bishops in dealing with clergy who may have misconducted themselves. The Bill is in charge of Lord Salisbury's eldest son, Viscount Cranborne. It has already been before a grand Committee, and has been thoroughly threshed out. The only chance of its becoming law, was to have it pushed forward on Wednesday, and the only objection on the part of the Nonconformists was that it was calculated to do the Church of England a signal service. This miserable dog-in-the-manger policy was happily defeated. I am sorry to say some representatives of the Low Church party of the Church of England aided and abetted the Nonconformists. Sir Edward Clarke did yeoman's service. Three members have put down ninety amendments out of a total of one hundred and twenty. The first clause contains forty-nine lines, and in a four hours' discussion only ten lines had been considered.

The loss of two Unionist seats as Frome and Wick do not count for much. The Radical who got in for the former, made a ridiculous statement about Mr. Chamberlain, who, on his attention being called to it, wired, "No one but a knave would make such a statement, and no one but an idiot would believe it."

On Monday the stern work of the session will commence, when the House goes into Committee on the Education Bill. You will remember the second reading was carried by the record majority of 267. This was due to the entire Irish party supporting the Government, and, as I said in a recent letter, it has sounded the death knell of Home Rule.

The cleavage between the Irish party and the Radicals is now complete. The Nonconformists had a great gathering at the

Memorial Hall, Farringdon-street, the other evening when Guinness Rogers, Clifford, and Hugh Price Hughes came well to the front. Clifford thought it seemly and becoming to call the Bill "damnable." A fine exemplar he must be of the teaching of the meek and lowly Nazarene. And yet I am told his church is thronged every Sunday, his poor hearers believing he has a divine message.

The same with Rogers and Hughes. How true was Carlyle's estimate of his countrymen—"mostly fools." But the outstanding event of the meeting was that Mr. Gladstone's name was hissed and hooted at. He has written a marvellous letter, *more so*, on the question of the validity of English Church orders. His old friends of the Nonconformists see in this letter an underhand attempt to promote Roman Catholicism in England. Hence the wailing and gnashing of teeth. Poor old man, what a pity for his fame he did not join the majority before the fatal 1886!

The papers will show you what an enthusiastic ovation the Prince of Wales received yesterday on his horse—Persimmon—winning the blue ribbon of the turf at Epsom.

Mr. Fletcher of the "New Age" will no doubt have some very caustic remarks to make about the Prince and Lord Rosebery, but Mr. Fletcher might just as well try to remove Mont Blanc, as to abolish the inherent love of horse-racing among all classes of society here.

France.—The most interesting event to you in India is Lord Dufferin's farewell speech at the dinner of the British Chamber of Commerce. He is retired under the superannuation rules, 70 being the age applicable to ambassadors. The speech was one of great brilliancy, and has afforded immense satisfaction not only to the British colony in Paris, but to all ranks of French society from President Faure and his ministers downwards. He is to be succeeded by Sir Phillip Currie, who has had such a thankless office, as our ambassador at Constantinople.

Russia.—I need not dwell on the frightful catastrophe that cost over 3,000 peasants their lives. It forms a most melancholy episode in a series of great fetes connected with the coronation.

Spain and Cuba.—A most instructive article on the state of affairs in Cuba appeared in the "Times" of the 3rd instant from its "special correspondent" at Havanna. It is the record of a melancholy history of misgovernment. Spain of today is evidently no colonizer, and under her rule or rather misrule the fairest of the West India islands is going—if indeed it has not already gone—to wreck and ruin.

Cret.—A very few days should bring matters to a final crisis, and this time the Porte will be made to feel that the combined Powers of Europe will not allow the Sultan to play fast and loose

with his Christian subjects. Russia itself has notified its intention of protecting the Greek Christians against the Turkish soldiery. Seeing the Czar is Head of the Greek Church he could do no less.

Africa.—After a wearisome suspense Oom Paul has liberated nearly all the prisoners. He is thwarted in his generous feelings by Dr. Leyds and others of the executive, but the country is with him and he must triumph in the end.

We are having real Bengal hot season weather at present, and the long continued drought is telling on the hay harvest and the fruit cultivation. During the first four months of this year, we have had only 5 inches of rain against 10 of last year. On Wednesday evening—the Derby day—we had half an hour's heavy downpour, and in that half hour more rain fell than in April and May together.

It will interest your readers to know that the Indian Institute at Oxford is now completed. His Highness the Thakur Sahib of Gondal gave a munificent subscription of £4,500. It is to be opened on the 1st of July by the Secretary of State for India. Sir Monier Williams may well be congratulated on the completion of what cannot fail to give a wonderful impetus to Oriental studies at Oxford.

In the "Indian Magazine" for this month is a very interesting list of natives of India in this country for the purposes of study. I notice there are 16 Hindus studying Law, 10 preparing for the Indian Civil Service, 6 for Medicine, and of these 27 reside in London, 7 in Edinburgh, 12 at Cambridge and only one at Oxford. I was not prepared to learn that there are 23 Mussulmans—mostly from Behar—all residing in London and preparing for the Bar. Of Parsis there are 35, mostly in London. Madras, as usual, makes a very poor show with only 12. The Punjab shows 41, two of them, I am glad to see youngsters at Harrow. Burmah actually sends 9, all given over to the Law. A very interesting information is that "The number of Indian ladies in England increases year by year. At present several are here for the education of their children; others have come for medical or literary study, while several accompany their husbands simply for a visit to this country."

Public Paper.

THE BENGAL MUNICIPAL VADE-MECUM.

Bengal Municipalities Bill 1872,

passed by the Bengal Council

but not assented to by the Governor-General.

THE LIEUTENANT-GOVERNOR'S EXPLANATION OF THE MEASURE.

From the Officiating Secretary to the Government of Bengal with the Lieutenant-Governor on Tour, to the Secretary to the Government of India, Department of Agriculture, Revenue, and Commerce.

I am directed to acknowledge your letter No. 138 of 30th September, with enclosed petitions (herewith returned) regarding the Bengal Municipalities Bill, and to submit, for the consideration of His Excellency the Viceroy, the Lieutenant-Governor's observations on the subject, together with a reprinted and corrected copy of the Bill, in the final printing of which the typographical errors pointed out by you had unfortunately occurred owing to the illness and departure of the Secretary to the Bengal Council immediately subsequent to the passing of the Bill.

2. The Lieutenant-Governor observes that of the three petitions forwarded by you, the first is of a general character objecting to the whole Act, and it may almost be said to all municipal taxation; the second deals to some extent with general provisions of the Bill, but more especially with the provisions respecting *chakran* or service lands in connection with third class, or village municipalities; and the third is confined to this latter subject. It will therefore be most convenient to observe, first, on the general character and provisions of the Bill, and second on the village municipalities and the *chakran* lands.

3. One of the petitions contains a charge of hasty legislation. To this objection at least the proceedings of the Bengal Council in regard to the Municipalities Bill are not properly open. There probably never was a Bill submitted to the Council which was more thoroughly subjected to public criticism, in respect of which the native public more fully and intelligently availed themselves of the opportunity thus given, and in dealing with which more regard was had to the criticisms, objections, and suggestions contained in very numerous petitions addressed to the Council as the outcome of much discussion and agitation. The main and essential provisions of the Bill as it now stands were presented to the public at the very earliest period of the session, and the modifications subsequently introduced, which were not mere matters of drafting, were to a very great degree made in deference to the views of the native public as set forth in the petitions and repre-

The Indian Association for the Cultivation of Science.

(Session 1896-97.)

The new Session of the Association commences from July next, and will be opened, on Friday, the 3rd July, by the Honorary Secretary, with an Introductory Lecture with special reference to the New Photography.

Lectures during the Session will be delivered in Physics, Chemistry, and Biology.

The Association has been affiliated to the Calcutta University up to the First Examination in Arts. This step has been taken purely for the benefit of the students, who are to appear at that examination. The attendance at its lectures will now count, and students will have no excuse to neglect to avail themselves of these lectures, which, from their thoroughly experimental character, will enable them not only to understand their text books, but to acquire such a mastery over methods and principles as to prepare them for making independent investigation.

It is needless to say that though the Institution for the present has been affiliated up to the F. A. standard only, the lectures will be such as to be fully useful to those who are preparing for the B. A. examinations.

An examination, written and practical, in the subjects of Physics, Chemistry and Biology lectured upon at the Association, will be held after the session is over. Anyone, who has attended the lectures of the Association, will be admitted to this examination.

The Jorindra Chandra book prize of Rs. 20, founded by the Hon'ble Justice Gooroo Dass Banerjee, and a silver medal by the Chaitanya Library, will be awarded to candidates who will stand first and second, respectively, at the examinations in Physics and Chemistry, provided that the number of marks obtained by each of them does not fall short of one-third of the full marks.

Dr. Nilratan Sircar has very generously offered to give a microscope to the candidate who passes first in the examinations in Biology. The Association will give a silver medal to the candidate who is second in these examinations.

To render the lectures accessible to students of the humblest means, small (almost nominal) fees will be charged for each subject. Thus Rs. 4 only for Physics; Rs. 4 for Chemistry; Rs. 6 for both Physics and Chemistry; Rs. 6 for Biology. The charge for a single lecture is 4 Annas.

MAHENDRA LAT. SIRCAR, M.D.,
Honorary Secretary.

June, 1896.

ventations above alluded to. The whole Bill and all the petitions on the subject were very carefully dealt with by a very strong committee in which the native element in the Council was in very large proportion. The session was protracted to a very unusual length in order to deal fully and thoroughly with the Bill. It would be impossible that every modification in detail should be re-submitted for a very lengthened period to the criticisms of the public at large; but in the various stages of the Bill the Lieutenant-Governor was most careful (as he always thinks it his duty to be) that the rules framed to secure due deliberation were fully carried out,—he in no degree suspended or curtailed them,—on the contrary, after all the amendments had been duly considered, the Bill was postponed to another sitting, with special leave to members of the Council to bring forward fresh amendments—a permission of which one of the native members fully availed himself. Several of his final suggestions were accepted by the Council, as had been many which he and others had before made, and many proposed by the Government to meet the wishes of the petitioners and others.

4. The result of this very careful handling of the matter has been, the Lieutenant-Governor hopes, to render the measure as acceptable to the people of Bengal as any measure of the kind could well be. It has been fully admitted by those who most opposed the measure that it has been greatly improved by the modifications made between the introduction of the Bill and its final passing by the Council. Since the Bill reached this latter stage there has been a very marked subsidence of agitation on the subject, so much so as to have almost surprised the Lieutenant-Governor. In fact, in the three months which have since elapsed, he is not aware of a single public meeting or public petition or remonstrance of any kind, and till the receipt of the petitions now sent he did not know that there were any. The Lieutenant-Governor cannot hope that everyone can be entirely content with any measure involving taxation, but he really sees reason to hope that the attention which has been paid to popular remonstrances, and the care which has been taken to render the measure as little as possible vexatious or capable of undue tension for the purposes of excessive taxation, have gone very far to disarm opposition. He is inclined to think that in fact there has sprung up in Bengal a considerable class whom education and enlightenment and civilized habits have rendered capable of appreciating the advantages of good municipal administration, and who give the Government some credit for really intending to carry out its promises with a view to introduce local self-government as far as possible. He hopes that such men are not disinclined to give the measure a fair trial, while many others feel that it is at any rate not more exacting or more vexatious than the existing Acts.

5. In one of the petitions it is said that the Bill was unnecessary, inasmuch as the existing Acts are amply sufficient. The list of twelve Acts wholly and two more partially repealed by schedule A of the present Bill will sufficiently show how much consolidation of the great variety of Municipal Acts in force in Bengal was necessary. Something more than consolidation was necessary, because all these Acts were drawn by different hands on different principles, and generally without the least relation to one another. Besides various local and special Acts, the two old Acts of general character, XXVI of 1850 and XX of 1856 are very different in their scope and provisions, both from one another and from the subsequent Acts; while of the principal of the later Municipal Acts, viz., III of 1864 and VI of 1868, it may be said that if they had been drawn by men from different planets, they could hardly have been more differently framed. Yet each of the Acts might be introduced into any town at the discretion of the Government of the day, and in fact in some places one and in other places another had been introduced all over the country. There was the most extreme variety of municipal constitutions. While the attempt has now been made to weld the whole of these discordant Acts together, with provisions taken from the Madras and other Municipal Acts, into one harmonious whole, the opportunity has at the same time been taken to review and regulate the whole subject of municipal administration and taxation according to our latest lights.

6. The Lieutenant-Governor has been specially anxious so to mould the present Bill that it may, as it were, meet and fit into the Road Cess Bill, so that the two should form together a complete, and, as far as may be, final scheme of local taxation. In this scheme he has tried to adjust the much vexed and much discussed questions of cesses for roads and education, so as to apportion the minimum of necessary burden fairly on all classes, and to leave scope for voluntary expansion hereafter in such way as to avoid, if it be possible, the imposition of any further local cesses.

7. Perhaps it may be necessary in some degree to apologize for the length of the present Act. Not only is it a great measure of consolidation, embracing a great variety of subjects and various grades of municipalities, but also the Lieutenant-Governor may say that much of the length is due to the strictly legal habit which

prevails in Bengal, and to almost jealous way in which the powers of the executive are limited and hedged in with a view to quiet the susceptibilities of a critical native public. As representing the executive, the Lieutenant-Governor would have been well content with a much shorter and rougher Bill which would have left much more to his discretion, as in the Municipal Acts for some other provinces. But he has no doubt that under the circumstances of Bengal it is better that everything should have been regulated in the fullest detail.

8. The plan adopted of detailing the various taxes which may be imposed at the option of the municipalities, and making separate provisions for each in all particulars, necessitates a succession of special provisions which occupy a great part of the Bill, but all or most of which will not be in force in any one municipality.

9. Again, a very large portion of the Bill (Parts X and XI) is taken up with municipal regulations, in respect of which the plan followed in former Acts has been adopted; that is to say, none of these regulations take effect of their own force in any municipality, but such portion of them as may be fitted for the requirements of and may be desired by any town municipality may from time to time be introduced by the Government, and may be similarly withdrawn if found inconvenient or inapplicable. Village municipalities are wholly exempted from all these regulations. In respect of them no discretion is left with the Government. With reference to these regulations, the Lieutenant-Governor takes the opportunity to say for himself that he is very far indeed from desiring to push too far sanitary or other regulations which may effect some public good at the cost of great individual vexation. On the contrary, he is inclined to introduce any regulations of this kind with great caution and reserve, feeling not only that our knowledge of these subjects is yet imperfect, but also that much regard must be had to the habits and feelings of the people, which, even in Europe and still more in this country, are opposed to great innovations in matters affecting their daily lives in their homes and neighbourhoods. The Lieutenant-Governor has pledged himself to the greatest moderation and the fullest regard for the wishes of the inhabitants in respect of these regulations, and he has no doubt that if the Bill becomes law, they will not be abused by his successors.

10. Allowing for the space occupied by the details of what may be called alternative taxes and optional regulations, the Lieutenant-Governor hopes that the Bill is not longer than was under the circumstances really necessary, and he trusts that in skilful hands it has been arranged in so methodical a manner that the provisions for different places and different subjects are clearly and easily distinguishable, and the parts applicable to any municipality or class of municipalities may be very easily taken out and separated from the rest.

11. Attempts have been made to throw doubt on the reality of the desire to give a liberal measure of self-government to Bengal municipalities by suggesting that there is no sufficiently definite provision for the election of municipal Commissioners, and by asserting that all real power will be monopolized by the Magistrate as Chairman. As respects election, the Lieutenant-Governor has very fully explained in the Council that he has not thought it possible, while the matter is in so experimental a stage, to regulate elections by exact provisions of law, but he has in the clearest terms pledged himself that, so far as it may rest with him, the system shall have the fairest possible trial under the most liberal rules that can be applied to any municipality fitted for and willing to receive elective institutions. As respects the power of the Magistrate, who is ex-officio Chairman, it may be admitted that at present that power is generally great,—in some cases too great or too much exercised, the Lieutenant-Governor thinks; but at the Lieutenant-Governor's personal instance a very important change has been introduced in the present Bill, enabling the elected Vice-Chairman to exercise the powers of Chairman in the absence of the Chairman, which will practically make the Vice-Chairman the real head of all municipalities except those at the head-quarters of the Magistrates. Another provision enables the Chairman to delegate all or any of his powers to the Vice-Chairman even at places where he is himself resident, a provision which the Lieutenant-Governor hopes will be largely used.

As respects then the whole question of freedom of self-government, nothing can be more positive than the assurances which the Lieutenant-Governor has given that, so far as lies in his power, no effort shall be wanting to render the municipalities self-governing bodies. He has nothing more at heart, believing as he does that municipal government is the shape in which a measure of freedom may best be given to and exercised by the people of this country in the present stage of their national existence. He has said, and he repeats it, that he had rather see a little done voluntarily by the people themselves through their representatives, than a great deal done under pressure from above.

12. After all, however, it is as a question of taxation that a measure of this kind will be most immediately judged, and the Lieutenant-Governor now turns to that part of the subject. He would specially call attention to this, that, differing from the Acts.

in force in or proposed for some other provinces, as strict maximum limit of taxation is laid down for each class of municipality. The Lieutenant-Governor will first explain the considerations with regard to which these maxima were fixed.

13. As the Bill stands, there are certain subjects for which it is compulsory on municipalities to provide by taxation, and there are other subjects for which it is optional with them to raise and spend money.

14. It always has been compulsory on all municipalities, under all the Acts, to maintain a sufficient police for their protection and for the maintenance of order. This obligation is maintained subject to the understanding that the superior officers of police will be provided by Government, the municipalities being by the provisions of the Bill only bound to maintain a force sufficient to keep the peace, keep watch and ward, and perform the duties of inferior officers of police.

15. All town municipalities are wholly exempt from the provisions of the Road Cess Acts, and pay nothing whatever in that shape for the maintenance of roads, canals, and other communications. It is manifest that they must have their fair share of this burden, and after much consideration the Lieutenant-Governor came to the conclusion that the best and most convenient plan was to adopt the system which he knows to have been followed in some European countries, viz., simply to place on municipalities the obligation to make and maintain the portions of district roads passing through their boundaries.

This arrangement was accepted by the Council. The arterial provincial roads will be maintained from provincial funds, in country and town alike; but when a district road approved by Government and paid for from district funds passes through a town, the town will be bound to maintain the communication within its limits. This does not apply to village municipalities, since they contribute to the District Road Fund.

16. The only remaining obligatory provision is in respect of education, and the compulsory obligation in this respect will be, the Lieutenant-Governor believes, very light. From this provision also village municipalities are wholly exempt. It has not been thought desirable to force them to pay for education. It is rather hoped that by offering them some contribution on the part of Government they may be induced voluntarily to contribute very small sums towards providing the simplest education. With respect to towns, the Bill enacts that, if elementary education is not available to the children of the residents at a fair cost, the Government may compel the municipality to provide it. It is, however, the Lieutenant-Governor's strong belief that there are scarcely any towns of the character to which this provision can be applied in which primary instruction of an indigenous character is not available, and he thinks that this obligation will hardly be felt. It is also provided that the Lieutenant-Governor may direct town municipalities to contribute towards the expense of elementary vernacular schools where the lowest rate of fee is charged; but such contributions shall in no case exceed one-sixth of the available balance of the municipal fund which remains after providing for the police, so that no heavy burden can be imposed under this provision.

17. It will thus be seen that the Bill goes but a very little way in the direction of forcing expenditure for education upon towns. The Lieutenant-Governor's hope and belief is that the rest will come voluntarily in due time. There is among the people of most towns in Bengal a real and earnest desire for education, and for education of a kind beyond that afforded by the primary vernacular schools. The people have shown a disposition to make considerable efforts to help themselves in this respect, and the grant-in-aid system has been in such cases extremely successful, enabling them to establish, with Government assistance, many very well managed and effective schools. It is believed that very many municipalities will gladly avail themselves of the optional clauses of the Bill to establish superior schools partly supported by municipal funds, and that provision may thus be made for meeting a demand every way worthy of encouragement, without putting on Government a too heavy and increasing burden which, with its other obligations, it can hardly undertake. It may not unfrequently happen that a municipal school, with some Government aid, may with great economy and no loss of efficiency take the place of an expensive Government school.

18. If then under the arrangement above described the towns provide superior schools, and aid primary schools within their limits so far as may be necessary, while the Government is able to give such assistance towards village schools as will induce the people of very many villages to establish primary schools, we may make a great step towards the solution of this great educational problem.

19. Comparing the obligations of the municipalities under the compulsory provisions of the present Bill with those heretofore existing, we find that in villages they remain the same, without any change whatever, being still confined to police only. In towns a further obligation is now imposed to maintain district roads passing through their limits, that being the necessary complement to the Road Cess Act. But since already they generally maintain the principal roads, the additional burden thus thrown on them will

not in practice be heavy. The obligations in respect of education above explained are also new, but the compulsory provisions on this subject, as has been shown, will in no case involve any very heavy burden.

On the other hand, it is the Lieutenant-Governor's decided hope that under the new Act some reduction may be effected in the cost of the municipal police, which has hitherto been by far the heaviest burden. He is inclined to think that hitherto the officers of the regular police may have imposed on towns a force of a character somewhat too high and expensive. The present Bill will give the municipalities a much greater voice in the appointment of, and a much more effective control over, the police for whom they pay than they have hitherto had, and they may be able by utilising them to save considerably in other ways. The total cost of municipal police is also strictly limited to a very moderate maximum.

On the whole, then, if some expense be incurred for roads and education, while some saving is effected in police, the Lieutenant-Governor hopes that there will in practice be very little addition to the obligatory burdens on the municipalities.

[To be continued.]

WHAT BATES WANTED TO KNOW.

"I shall be obliged if you can answer me one question," said my friend Bates, as he lay on the couch one day in my room nursing his aching leg. "Why does exposure to wet or cold bring on an attack of rheumatism at one time, when a like exposure for a score of times leads to no such result?"

Before I set down in writing the answer I gave him I wish you would read the following letters, as no doubt the authors of them will be interested in the same point.

"In November, 1892," says the one, "I had an attack of rheumatic fever, and was confined to my bed for four weeks, during which time I suffered fearfully. I had awful pains all over me; my joints swelled up, and I was so helpless I could not raise my hand to my mouth. After the fever left me I was extremely weak, and so emaciated I was little more than skin and bone. A large lump, the size of an egg, formed on my elbow, and my fingers were almost drawn out of joint. I cannot describe the suffering I had to bear. The doctor ordered me various medicines, and cod liver oil, but they had no effect. In February, 1893, I read in a small book about the remarkable success which had followed the use of Mother Seigel's Syrup in cases of rheumatism, and got a bottle from Messrs. Leverett and Fry, High Street. After taking it two weeks I was better, and in about a month more all rheumatic pains had left me, and I was strong and well as ever. You may publish what I have said. (Signed) John H. Kent, 9, Randall Street, Midstone, Kent, January 30th, 1895."

"For many years," says the other, "I had been subject to liver complaint and indigestion. I was habitually heavy, weak, and weary. My appetite was poor, and all food gave me pain and fullness at the chest and around the sides. I had so much pain and tightness of the chest that I could not endure the pressure of my clothing upon it. Although not laid up, I was seldom free from pain or a sense of discomfort. In the summer of 1893 I began to suffer with rheumatism, which affected my arms and shoulders until I had not the power to lift my hand to my head. I tried all sorts of liniments, embrocations, and rubbing oils, but got no benefit from any of them."

In August, 1893, my friend, Mrs. Owen, told me how much good Mother Seigel's Syrup had done her for rheumatism, and I got a bottle from the Drug Stores in St. Ann's Road. In a few days I was much better, and in less than a month afterwards all pain had left me; and I am happy to say I have never had any return of the rheumatism since, but have enjoyed the best of health in every respect. In common thankfulness for my speedy and wonderful deliverance, I willingly consent to the publication of this hurried statement should you wish to make that use of it. (Signed) (Mrs.) L. S. Cole, 6, Albert Road, South Tottenham, London, August 16th, 1895."

Before answering the question of my friend Bates (who was a chronic rheumatic) I asked him one: "Why does a lighted match, dropped into the road, die out harmlessly, but when dropped into a haystack, set up a conflagration?"

"Any fool can answer that," he said. "Because in the one case there is nothing for the fire to catch hold of, while in the other there is."

"Exactly," I responded. "Now see. Indigestion and liver complaint (the second consequent on the first) continue to produce a virulent poison in the blood called uric acid, practically insoluble in water. This acid, which is a solid, enters the tissues, and sets going a hot inflammatory fire. That is rheumatism. It does what a silver would—only the acid is a *poison* silver."

"When the indigestion and the liver trouble are not very bad, and the kidneys and sweat glands of the skin are acting fairly well, this acid is carried out of the body about as fast as it is formed. Exposure then brings on no rheumatism. But, *per contra*, when the stomach and liver are in bad condition, the acid forms faster than the kidneys and skin can carry it off. Then expose yourself, get cold or wet, hamper the skin and kidneys still more, and the poison acid spreads through your muscles and joints like the fire in the dry hay. You understand? Very well. The longer the cause persists the more frequent the rheumatic attacks. That is why chronic dyspeptics are apt also to be chronic rheumatics. Fend off dyspepsia, or cure it by the use of Mother Seigel's Syrup, and you and the rheumatism will have no dealings. Neglect it, and suffer every time you catch cold."

That was my answer to Bates, and he said there seemed to be sense in it.

Music for the Million!

BEECHAM'S MUSIC PORTFOLIO.

The cheapest collection of Music ever issued.

The Portfolio contains 240 of the most popular Songs and Airs of the day divided equally into 8 volumes the price of each of which is 3½ annas post free, or Rs. 1-12-0 for the complete series: this price, it should be mentioned, does not nearly cover cost, but the Portfolio is placed before the public at a loss as a further advertisement, if any were needed, of the fact that

"BEECHAM'S PILLS"

ARE

"Worth a Guinea a Box,"

The Portfolios are now ready, and, as only a limited number will be issued, intending purchasers are recommended to

APPLY AT ONCE TO

G. ATHERTON & CO.,

3, New China Bazar-street, CALCUTTA,

Agents for THOMAS BEECHAM, of St. Helens, Lancashire.

N.B.—Terms: Cash with order: quantities of not less than one complete Portfolio, or 8 volumes per V.P.P., if desired.

POSTSCRIPT.

After paying the expenses of the publication, the surplus will be placed wholly at the disposal of the family of the deceased man of letters.

Orders to be made to the Business Manager, "*An Indian Journalist*," at the Bee Press, 1, Uckoor Dutt's Lane, Wellington Street, Calcutta.

OPINION ON THE BOOK.

It is a most interesting record of the life of a remarkable man.—Mr. H. Buntington Smith, Private Secretary to the Viceroy, 5th October 1895.

Dr. Mookerjee was a famous letter-writer, and there is a breezy freshness and originality about his correspondence which make it very interesting reading.—Sir Alfred W. Corfit, K.C.I.E., Director of Public Instruction, Bengal, 26th September, 1895.

It is not that amid the pressure of harassing official duties an English Civilian can find either time or opportunity to pay so graceful a tribute to the memory of a native personality as F. H. Skrine has done in his biography of the late Dr. Sambhu Chunder Mookerjee, the well-known Bengal journalist (Calcutta: Thacker, Spink and Co.); nor are there many who are more worthy of being thus honoured than the late Editor of *Reis and Rayyet*.

We may at any rate cordially agree with Mr. Skrine that the story of Mookerjee's life, with all its lights and shadows, is pregnant with lessons for those who desire to know the real India.

No weekly paper, Mr. Skrine tells us, not even the *Hindoo Patriot*, in its palmiest days under Kristodas Pal, enjoyed a degree of influence in any way approaching that which was soon attained by *Reis and Rayyet*.

A man of large heart and great qualities, his death from pneumonia in the early spring in the last year was a distinct and heavy loss to Indian journalism, and it was an admirable idea on Mr. Skrine's part to put his Life and Letters on record.—*The Times of India*, (Bombay) September 30, 1895.

It is rarely that the life of an Indian journalist becomes worthy of publication; it is more rarely still that such a life comes to be written by an Anglo-Indian and a member of the Indian Civil Service. But, it has come to pass that in the land of the Bengali Babus, the life of at least one man among Indian journalists has been considered worthy of being written by an Englishman.—*The Madras Standard*, (Madras) September 30, 1895.

The late Editor of *Reis and Rayyet* was a profound student and an accomplished writer, who has left his mark on Indian journalism. In that he has found a Civilian like Mr. Skrine to record the story of his life he is more fortunate than the great Kristodas Pal himself.—*The Tribune*, (Lahore) October 2, 1895.

For much of the biographical matter that issues so freely from the press an apology is needed. Had no biography of Dr. Mookerjee, the Editor of *Reis and Rayyet*, appeared, an explanation would have been looked for. A man of his remarkable personality, who was easily first among native Indian journalists, and in many respects occupied a higher plane than they did, and looked at public affairs from a different point of view from theirs, could not be suffered to sink into oblivion without some

attempt to perpetuate his memory by the usual expedient of a "life." The difficulties common to all biographers have in this case been increased by special circumstances, not the least of which is that the author belongs to a different race from the subject. It is true that among Englishmen there were many admirers of the learned Doctor, and that he on his side understood the English character as few foreigners understand it. But in spite of this and his remarkable assimilation of English modes of thought and expression, Dr. Mookerjee remained to the last a Brahman of the Brahmins—a conservation of the best of his inheritance that was nothing but respect and approval. In consequence of this, his ideal biographer would have been one of his own disciples, with the same inherited sympathies, and trained like him in Western learning. If Bengal had produced such another man as Dr. Mookerjee, it was he who should have written his life.

The biography is warmly appreciative without being needlessly laudatory; it gives on the whole a complete picture of the man; and in the book there is not a dull page.

A few of the letters addressed to Dr. Mookerjee are of such minor importance that they might have been omitted with advantage, but not a word of his own letters could have been spared. To say that he writes idiomatic English is to say what is short of the truth. His diction is easy and correct, clear and straightforward, without Oriental luxuriance or striving after effect. Perhaps he is never so charming as when he is laying down the laws of literary form to young aspirants to fame. The letter on page 285, for instance, is a delightful piece of criticism: it is delicate plain-speaking, and he accomplishes the difficult feat of telling a would-be poet that his productions are not in the smallest degree poetry, without one may conclude, either offending the youth or repressing his ardour.

For much more that is well worth reading we must refer readers to the volume itself. Intrinsically it is a book worth buying and reading.—*The Pioneer*, (Allahabad) Oct. 5, 1895.

The career of "An Indian Journalist" as described by F. H. Skrine of the Indian Civil Service is exceedingly interesting.

Mookerjee's letters are marvels of pure diction which is heightened by his nervous style.

The life has been told by Mr. Skrine in a very pleasant manner and which should make it popular not only with Bengalis but with all those who are able to appreciate merit unmarred by ostentation and earnestness unspoiled by harshness.—*The Muhammadan*, (Madras) Oct. 5, 1895.

The work leaves nothing to be desired either in the way of completeness, impartiality, or lifelike portrayal of character.

Mr. Skrine deals with his interesting subject with the unflinching instinct of the biographer. Every side of Dr. Mookerjee's complex character is treated with sympathy tempered by discrimination.

Mr. Skrine's narrative certainly impresses one with the individuality of a remarkable man.

Mookerjee's own letters show that he had not only acquired a command of clear and flexible English but that he had also assimilated that sturdy independence of thought and character which is supposed to be a peculiar possession of natives of Great Britain. His reading and the stores of his general information appear to have been, considering his opportunities, little less than marvellous.

One of the first to express his condolence with the family of the deceased writer was the present Viceroy, Lord Elgin. Mookerjee appears to have won the affection not only of the dignitaries with whom he came in contact, but also of those in low estate.

The impression left upon the mind upon laying down the book is that of a good and able man whose career has been graphically portrayed.—*The Englishman*, (Calcutta) October 15, 1895.

The career of an eminent Bengali editor, who died in 1894, throws a curious light upon the race, elements and hereditary influences which affect the criticisms of Indian journalists on British rule.

The "Life and Letters of Dr. S. C. Mookerjee," a book just edited by a distinguished civilian in Calcutta, takes us behind the scenes of Indian journalism.

It is a narrative, written with insight and a

complete mastery of the facts, of how a clever youth gradually grew into one of the ablest leader-writers in Bengal, and still more gradually matured into one of the fairest-minded editors that western education in India has yet produced. If the training and experience which develop the journalist in England are sometimes varied, they seem in India to have an even wider range.

But the object of this notice is to show how a great Bengali journalist is made; space forbids us to enter upon his actual performances. They will be found set forth at sufficient length, and with much felicity of expression, in Mr. Skrine's admirable monograph. It is characteristic of the noble service to which Mr. Skrine belongs, that such a book should have issued from its ranks. Dr. Mookerjee was no optimist. One of his brilliant speeches contained the following sentence:—"India has neither the soil nor the elasticity enjoyed by young and vigorous communities, but present the arid rocks and deserts of an effete civilization, hardly stirred to a semblance of life by a foreign occupation dozing over its easily-gained advantages." This was true of the pre-Mutiny India of 1851. If it is no longer true of the Queen's India of 1895, we owe it in no small measure to Indian journalists like Dr. Mookerjee who have laboured, amid some misrepresentation, to quicken the "semblance of life" into a living reality.—*The Times*, (London) October 14, 1895.

"IMPROVED UNDAUNTED"

WATCH. Rs. 7.

Guaranteed three Years.

Strong, accurate, pretty, small, open-faced, nickel silver, keyless, short winding, patent, "NEW STYLE IMPROVED UNDAUNTED" watch, with hand setting mechanism, secondhand, for Doctors, ornamental bold dial, for Rs. 7 V. P. P. with an extra glass, spring, pretty box and full three years' guarantee. Warranted to stand the roughest use. Runs more than 28 hours with one winding. Will last a life time. Easily repairable. Others sell at double our rates. One watch free for the purchase of 8 at a time. Mr. Jno. Dickson of Haputal Railway, from Ceylon says:—"It keeps splendid time and never stopped although it sustained hard knocks and jerks." Mr. H. Moore of Royal Artillery from Poonamallee says:—"I sold it for Rs. 16. x Pte. W. Hopkins of Sussex Regt. from Dundun says:—"I have sold it for Rs. 20. x Mr. T. B. Scott of Patna Opium Department says:—"The watch you sent me some seven years ago is still keeping very good time."

Jewelled Ring Rs. 1-8-0. Real

Silver Watch Rs. 13. Real

Solid Gold Watch Rs. 24.

Pretty electro cased gold chain Rs. 1-8-0. Fashionable electro cased Gold Ring set with scientific diamonds, Rubies, Emeralds, at Rs. 1-8-0. Mr. G. Smith, Salt Inspector from Sanikulia, says:—"A German valued the diamond ring at Rs. 50 and ruby at Rs. 30." Key winding, Government stamped, solid silver hunting case, Royal watch with extras and full three years' guarantee, for Rs. 13. Pte. G. Hawkes of 2nd York Light Infantry from Puraudhar says:—"For the first one I got Rs. 25; the second one I sold to a Sergeant for Rs. 28. x Pte. H. C. Bishop of L. F. L. Regt. from Kamptee says:—"A Corporal offered Rs. 30 for the very same watch. Gentlemen's open faced, keyless *real solid gold watch* Rs. 30; ladies' Rs. 24; both with extras and guaranteed for 3 years. Mind they are guaranteed to be of real solid gold. No agents kept, all goods sent only by us from Bombay per V. P. P.

SPECIFICS

for all ordinary diseases, like Fever, Cough, Asthma, Phthisis, Diabetes, &c., including diseases brought on by irregularities of kinds. Catalogues, containing full accounts of diseases and remedies, are transmitted on application. Prescriptions, with or without medicines, sent to every part of India and Ceylon, Cape Colony, and the British Isles, on receipt (by post) of full accounts of diseases. Thousands of unsolicited Testimonials from every quarter.

CATARRH,

Hay Fever, Catarrhal Deafness.

A NEW HOME TREATMENT.

Sufferers are not generally aware that these diseases are contagious, or that they are due to the presence of living parasites in the lining membrane of the nose and eustachian tubes. Microscopic research, however, has proved this to be a fact, and the result is that a simple remedy has been formulated whereby these distressing diseases are rapidly and permanently cured by a few simple applications made at home by the patient once in two weeks. A pamphlet explaining this new treatment is sent on receipt of 2½d stamp by A. HUTTON DIXON, 43 & 45 East Bloor St. TORONTO, Canada. *Scientific American*.

WEEKLY NEWSPAPER

AND

VOL. XV.

CALCUTTA, SATURDAY, JULY 4, 1896.

WHOLE NO. 732.

BY MRS. D. OGILVY.

Religion here is gay withal
In many a gilded weed ;
Her mimic flowers, her tapers tall,
Are emblems of her creed.
False blossoms and deceptive lights,
The censor and the shrine,
The pageantry of heathen rites,
Befit a Roman line.

Thy gardens and thy palaces,
Thy pictures and thy choirs,
Thy fountains and thy chestnut-trees,
Thy butterfly attires——
Oh, Paris ! if this world were all,
What better fate could be,
From pleasant morn till evening's fall,
Than thou dost offer me ?

But yet I know thy fantasies
With overpowering charm
Too soon the careless spirit please,
And stun the soul's alarm ;
Duty, with all its stern demands,
In popped sleep is laid,
And life flits by our folded hands
A vision's empty shade.

Pleasure may not be man's chief good,
Though transient joys it give ;
As sap is bound in healthy wood,
Care flows in all who live,
Nourishing them for realms above,
High hope and glorious aim,
More perfect knowledge, purer love,
And a new holy name.

So be it, city of the gay !
No more in thee I'll drown
Remembrance of a darkened day,
Or of the warning frown.
The funeral cup, O house of grief !
Brims with a nobler wine ;
The laughter of the fool is brief :
Let not his mirth be mine !

—*Fraser's Magazine.*

WEEKLYANA.

The great Indian question for Parliamentary debate is the payment of the Indian troops told off for the Suakin expedition, that is, their daily pay, food, &c., and the Government of India consider that "except as far as it is destined to be the actual invasion of Abyssinia by Her Majesty's Indian troops," the university of the sudden urgent necessity, the revenues of India need an exploration for the consent of both Houses of Parliament be applicable to any military operations carried on beyond the external frontier of such possessions by her Majesty's forces charged upon such revenues." The matter has been fully discussed in India and in England in all its bearings. The Government of India have said their say. It now remains for the final word to be passed whether poor India is to be saddled with any, however insignificant, part of the cost of the expedition. We will not be surprised if the decision goes against her. Precedents or arguments may not be waiting to justify the imposition. For the moment, however, public feeling, both in India and England, is against it. Our London correspondent refers to the article on the subject by the writer in the *Times* on Indian Affairs, who with his usual ability summarises the whole question and makes his own pronouncement in these words :

"The Indian Press acknowledges the patriotic interest which India, in common with the other colonies and dependencies of Great Britain, has in the stability of our position in Egypt. But it points out that, while Great Britain has a still larger interest in the stability of our position in India, she contributes not a penny to the military maintenance of our position in India. The loss of the Sudan is nothing to India compared with what the loss of India would be to Great Britain, yet India is to be charged with the daily pay of the Indian regiments sent to recover the Sudan, while Great Britain charges to India the uttermost farthing for the British troops sent to India. The request of India is that the joint interest of the colonies and dependencies in our position in Egypt shall be fairly appraised and apportioned, and not be thrust upon India alone: Ceylon, Hong-kong, the great Australian colonies, and the other dependencies and settlements of Great Britain in the East have with India a common interest in the protection of the Suez Canal. On India falls the costly permanent burden of securing for Great Britain the Asiatic approach to the Canal at

Subscribers in the country are requested to remit by postal money orders, if possible, as the safest and most convenient medium, particularly as it ensures acknowledgment through the Department. No other receipt will be given, any other being unnecessary and likely to cause confusion.

Aden. That might be fairly taken as a discharge in full of India's liability arising out of her joint interest, and any extra troops required for Egypt might be charged to the other colonies and dependencies, or defrayed by Great Britain if she feared to do so. Yet, as the Indian newspapers point out, the other colonies and dependencies 'have not been asked to send a single regiment to the Sudan.'

We have tried to eliminate any violent expressions of feeling. Such violent expressions tend to obscure the real issue. But it would be wrong to conceal the fact that the question 'has evoked the strongest indignation amongst Europeans and natives alike.' It must be remembered, however, that Lord George Hamilton merely follows a precedent which it would be difficult for any Ministry to disregard, unless supported by a strong expression of public opinion. Each occasion on which Indian troops have been borrowed by Great Britain seemed at the moment entirely exceptional, and in most cases India was made to defray their daily pay. In certain cases Great Britain refunded the cost in whole or part; as by a grant of five millions sterling to India for the 1878 expedition (Afghanistan), of £500,000 for that of 1882 (Egypt), or by payment of the whole cost as in the China expedition of 1859-60, and for the Indian troops sent to Malta in 1878. The intensity of feeling and the grave apprehension with which the action of the British Government is now being watched in India arise from the conviction that the present occasion cannot be regarded as accidental, and that it must form the precedent for regulating subsequent cases. If the Government should insist on establishing that precedent, it will harden an occasional injustice into a permanent wrong. The issue has been placed before Parliament in the clearest terms by Lord George Hamilton's proposed resolution and by the amendments of Mr. John Morley and others thereto.

It is not in reality a question for the Government, but for the nation. The British nation has the power to saddle the Indian taxpayer with this inequitable charge. Has the British nation the public virtue to abstain from doing so? It is always possible to find precedents for the ignominious course. In the present case it is particularly easy to do so. It is equally easy to obscure the real question by diverging into side issues, as was done by a correspondent in our columns last week. The question was not whether India should lend troops for Egyptian service 'precisely on the same terms, pecuniary and otherwise,' as she allows post-office clerks or railway labourers to go to tropical Africa. It was whether the British Government could justly take troops from India without paying their daily wages, while in every other branch of administrative or industrial employment payment has to be made. Nor will the plea avail that the troops are not needed in India, and may therefore be employed at India's cost in Africa. That plea would do us more harm in India than if we were forcibly to take the money and to say nothing. For the standing complaint in India is that the Indian military expenditure is inflated and kept up at an undue height to suit the exigencies of British policy rather than to meet the needs of India herself. The list of occasions on which troops have thus been taken from India is already a long one, and suffices to give some colour to this complaint. If it were now to authoritatively go forth that the Indian Army is maintained at a standard which permanently suffices for British emergencies as well as for Indian defence, it would falsify the statements made by successive Viceroys and successive Commanders-in-Chief in India during the past 25 years.

Unless Lord Salisbury's words in 1867 have been misrepresented, it is little likely that any such plan had then to deal with a real emergency. Madras Oct. Rs. 20. x had then to partition Indian troops in seven years the risk of which Salisbury took the risk of which he should regulate such transactions. When, as Mr. Fawcett against charging the pay of the troops to India, he said:—

"I do not like India to be looked upon as an English barrack in the Oriental seas from which we may draw any number of troops without paying for them. It is bad for England, because it is always bad for us not to have that check upon the temptation to engage in little wars which can only be controlled by the necessity of paying for them. If this garrison which we keep in India is, as all Indian authorities assure us necessary for maintaining that country in security and peace, that garrison ought not to be rashly diminished. If, on the other hand, it is too large, and India can for any length of time conveniently spare these troops, then the Indian population ought not to be so unnecessarily taxed."

It is sincerely to be hoped, since the question has ceased to be an accidental one, and the decision of Parliament at the present must become the precedent for the future, that the principles which Lord Cranborne laid down in 1867 will weigh with Lord Salisbury in 1896. Many things have changed since then. But the temptation to shift burdens unfairly to the shoulders of the Indian taxpayer has not changed, and the difficulty of securing justice for India is almost as great as ever. It will form one of the historical triumphs of the Conservative party if, after having given to India the Queen's proclamation, which is the charter of the Indian races, and the recent Councils' Law which serves as the basis of Indian legislation by representation, they now join with all other parties in securing this great act of financial justice to India. But it will be a still greater national triumph. For it will be the victory of the nation's sense of what is right over its power to do wrong."

The military expenditure of India is growing every year. The Army Services in 1877-78 amounted to Rx. 17,300,484. For 1894-95, the figures, including the cost of special defence works, are 23,912,000. In the two years 1879-80 and 1880-81, during the campaigns in Afghanistan, the expenditure went up as high as 22,580,715 and 28,932,497. It gradually fell in 1884-85 to 16,963,803 and, next year, the year of Russian scare, it again rose to 20,097,779. Since 1886-87, it is steadily increasing. The revenue of the Government of India for 1894-95 is put

down at Rx. 92,024,900, which is about four times the military expenditure. Indeed, the Indian Empire is growing to be military.

THE Sahara is not a complete barren desert. In the Algerian portion, in 1892, there were 9,000,000 sheep, 2,000,000 goats and 260,000 camels. The oases had 1,500,000 date palms.

THE newest article "made in Germany" is the mirror that will not break, made of celluloid tissues instead of glass. The front and the back both are made of the same material. Practically, they are durable double mirrors. Do they reflect as clearly as the *Indian Mirror*?

AMERICA, like Europe, has its cremation associations. The number of incinerations in the former from 1876 to 1894 is given at 3,670 against 19,700 in the latter.

THE late war has stirred China to activity. In Chinese Manchuria, a railway line has been completed from Tientsin to Shanhaikuan, a distance of about two hundred miles.

LANCASHIRE has launched upon a new industry—the manufacture of silk from wood pulp. It was originally devised in France, in 1893, by Count Hilaire de Chardounet, at Besancon. The Lancashire manufacturers have made arrangements with the Count to produce the wooden silk in England. Will the new silk be any food for the wood-fetter?

"DON QUIXOTE" was first published in 1605. It has since run through 1,324 editions; namely, 528 in Spanish, 304 in English, 179 in French, 99 in Italian, 84 in Portuguese, 45 German, 18 Swedish, 9 Polish, 8 Danish, 6 Russian, 5 Greek, 3 Roumanian, 4 Catalanian, 1 Basque, and 1 in Latin.

THE supply of codliver oil from Norway is gradually diminishing both in quantity and in quality, from the decrease in the number of the fish and the inferiority of the liver. Thus, in 1893, the yield was 26,813 barrels; in 1894, 18,500; 1895, 1,2630. Generally the oil is used to replace the loss of fat, for which purpose Indian Kavirajas prescribe *anuritafras*. Simple fat in any form, as ghee, butter, or lard, serves the same end. Dr. Gulkin, of St. Petersburg, after experimenting on healthy young men, has come to the conclusion that the average assimilation of butter amounts to 97.3 per cent. of the quantity ingested; that of lipanin 97.21; and that of cod liver oil 97.12. 2. Therefore, butter is assimilated the best, the second best is lipanin and third codliver oil. 3. Codliver oil has no peculiar assimilability. 4. Therefore butter is the best, being, again, cheaper and more savoury. 5. Lipanin being expensive has no especial advantage over butter. 6. The admixture of free fatty acids with neutral fats does not increase the assimilability of the latter.

Ghee does not differ essentially from butter. It is, however, said that codliver oil contains an infinitesimal quantity of iodine, for which it is sometimes preferred.

IN the 22 public days of June, 41,651 persons, namely, 414 male and 144 female Europeans, and 31,379 male and 9,714 female Natives of India, visited the Indian Museum, the average daily attendance being 1,601.

THE *Sunday Times*—no religious journal—is once more in Court, on the old familiar charge of defamation. Sensation upon sensation, the Reverend F. Moyle-Stewart of the Union Chapel before closing with the boy Culloden had his attention turned to the veteran Gasper. On Tuesday an application was made to the Chief Magistrate who is still enquiring into the charge of highway robbery against Culloden, for a summons against Mr. D. M. Gasper, printer and publisher of the *Sunday Times*. There was also an application for a warrant to search Mr. Gasper's premises for the manuscript of the subject matter of the charge. The Magistrate took time till next morning for making his order, when

"His worship said: A summons may be served under sections 500 and 501, but in regard to section 502, I understood you to say that you did not buy the paper from the office.

Mr. Leslie: I am advised that it is quite enough.

The Magistrate: From whom did you buy it?

Mr. Leslie: From a vendor in Bow Bazar Street; but I may be able to get direct evidence from the office.

The Magistrate: That would be too late, as it would be after the summons was served. You can take a summons under sections 500 and 501.

Mr. Leslie: I will not make the application for a search-warrant, as it would be too late now.

The Magistrate: It would be better not.

A summons was issued under section 500, that on or about the 12th June 1896, in Calcutta, the accused made and published in the *Sunday Times* certain imputations that the complainant 'was not a novice in the art of fabrication,' and 'an expert at such games as signing other peoples' names,' meaning thereby that the complainant was a forger and an habitual forger; and under section 501 that on the same day, the defendant published such defamatory matter in the *Sunday Times*, knowing and having good reason to believe the same to be defamatory. Section 502, which was refused, was in regard to offering for sale the number of the *Sunday Times* containing the defamatory matter."

The anxiety of Mr. Leslie to get at the manuscript reminds us that in comparatively olden days, no person could be proceeded against for defamation without that evidence of offence. At least it was thought so. The modern law and its administration in more recent years have much simplified matters. Anybody and everybody, however distantly connected with a newspaper, may be hauled up in even the most distant corner of the empire, farthest from the place of publication, and punished for what may be complained of as defamatory to an individual, living or dead, or a community of many. The contagion has spread to newspapers and to Government also. Prosecutions for defamatory statements in private or unpublished official or demi-official communications, both written and verbal, are increasing in numbers, and the Courts issue processes for the mere asking.

NOTES & LEADERETTES,

OUR OWN NEWS

&

THE WEEK'S TELEGRAMS IN BRIEF, WITH OCCASIONAL COMMENTS.

At a meeting of the Chartered South African Company a resolution of the Board was adopted accepting the resignations of Messrs. Cecil Rhodes, Beit and Harris. The Board warmly eulogizes Mr. Rhodes, and regrets deeply that the events of December last, of which the Company were ignorant, enforce the acceptance of his resignation. Mr. Rhodes will continue in Rhodesia and aid the Company in the administration of the country.

THE *Times* Paris correspondent states that Russia is about to propose the settlement of the Egyptian question by the neutralization of Egypt under the guardianship of concerted European Powers.

MR. Harrison has been released by the Venezuelan Government.

THE Tiflis paper reports that an attempt has been made to murder the Shah at Teheran, but it was frustrated, and the assailant arrested.

THE Italian Government has decided to recall a number of troops from Africa. The Duke of Sermoneta, speaking in the Chamber of Deputies, said the Triple Alliance, close friendship with Great Britain, and good relations with all the Powers were the cardinal points of Italian policy, the object of which was to maintain the *status quo* and preserve peace. The Chamber has by a large majority passed a vote of confidence in the Cabinet. Marquis Rudini, who spoke on the same lines as the Duke of Sermoneta, said it was necessary to retain Kassala as a safeguard to Italy's rightful interest in the Egyptian question.

THE Deceased Wife's Sister Bill has passed through Committee in the House of Lords. The Land Rating Bill passed through the report stage in the House of Commons after an all-night sitting, owing to the obstructive tactics of the Opposition. It was read a third time by a majority of 150 votes.

A PAPAL encyclical has been issued on the unity of the church which

tends to show by implication that it is not possible to recognize Anglican orders.

ADVICES from Crete state that Georgi Pacha, Prince of Samos, the new Governor, has arrived at Canea, and that the Christian Deputies refuse to attend the Assembly. Fighting still continues in Western Crete. The Ambassadors of the Powers consider the nomination of a Christian Governor is nullified by the retention of Abdullah Pacha as Military Commander of the Island with a superior rank.

THE death is announced of Mrs. Harriet Beecher-Stowe. She had passed her 84th year and had retired from her active life into a pretty house in one of the secluded and beautiful parts of Hartford, Connecticut. She will live in literature as the authoress of "Uncle Tom's Cabin."

UMRA KHAN of Jandoul who was permitted to pass through India on his pilgrimage to Mecca, is not allowed, on return to India, to leave it. His brother Hussain Khan, is, however, free to return home under police guard.

THE Lieutenant-Governor returned to Calcutta on Thursday. Sir Alexander Mackenzie will not be able to preside at the Bengal Legislative Council summoned by him for next Saturday. It is necessary that the amendments proposed for the Municipal law should be made immediately for revision of the rules under it for the next election at the end of the year.

HERE is another appreciation of our article "Competitive Examination not a Sound Test" (*R. & R.*, June 13, 1896). Our correspondent is a Zemindar and holds a service under Government:—

"I was really delighted to read your article 'Competitive Examination not a Sound test' in your issue of the 13th June. It said the very thing we have been thinking on the subject since sometime. You have taken it up just at the proper time. We cannot but be too grateful to you for it and we eagerly expect to see the existing system changed and the old one re-introduced as soon as possible."

IN America the Oriental languages are largely studied. Prof. Whitney gave a special impetus to Sanskrit. The Semetic, especially Hebrew and Assyrian, are now in favour. Edward Robinson's studies of Syriac, Aramaic, and the devotion of Drs. Peter and Hilprecht to Assyrian, are destined to bear important results.

In the summer of 1895 the university of the State of Pennsylvania, at Philadelphia, organised an exploration of the ruins of Nippur, now called Nuffar, in the northern part of Babylonia under the direction of the two doctors. Mr. G. H. Haynes, known for his labours at the American excavation of Assas, was the business manager, steward and photographer. Mr. Field, an architect, and Dr. Harper, another Assyriologist, also accompanied the expedition. Materially helped by the Turkish authorities, though seriously thwarted by the Affedj Arabs, they made a good harvest.

In the following year Haynes alone conducted the exploration. The terraces of the temple of Belus were gradually cleared of the accumulations of thousands of years. The platform of the first king of Ur, built about 2800 B.C., was reached. Bricks made for the great Sargon, about 3800 B. C., who extended his mighty empire to the Mediterranean, were unearthed. The stone bearing, in cuneiform characters, the curse of the king, 'whoever carries away this inscribed stone shall be exterminated root and branch and his seeds for ever by the gods Bel, Schamasch and Ninna,' on the threshold of the temple, was taken away. The exploration has cost nearly seventy-one thousand dollars.

The classification and publication of the results have been entrusted to Dr. Hilprecht, who intends to issue the report in four series, each consisting of from ten to fifteen volumes. He will be assisted by other students of the Semitic language. Two volumes prepared by Hilprecht have already appeared, three are in the press, and seven in course of preparation which will include a history of the expedition.

Thirty thousand tablets have been found, belonging to the first dynasty of Ur (about 2800 B.C.) and the Cossean period (1725-2800 B. C.). Many names of unknown or little known kings have also

been discovered, including a great number of seals and seal cylinders, used by kings and governors. The tablets bear two hundred closely written Aramaic, Hebrew and Mandaic characters which will give an insight into the biblical Jewish literature. Thousands of enamelled and plain clay vases, playthings, weapons, weights, articles of gold, silver, stone, iron, bronze and a collection of human skulls forming a unique and rich collection will find their way into the series.

The study of Assyriology as that of a complete dead language and nation, is more difficult than that of the Indian languages. The Sanskrit is not entirely without any modern representative in the country in which it once flourished. Assyria is dead, but India lives. The expedition made a hazardous journey of thirty days along the Euphrates and across the Arabian desert before reaching Bagdad. The castle built by Kungabzu, about 1300 B.C., containing the ruins of Akarkuf and the quays of Nebuchadnezzar (605-562 B.C.) on the right bank of the Tigris were first examined. The labours ended in the swamps of Nuffar.

We read in an Anglo-Indian paper—the *Statesman*—that “Of the five Marwarees who were charged by Inspector Forsyth with overstaying the prescribed hour of their pass for a marriage procession, one man was fined Rs. 50, and the others were discharged.” The *Englishman's* account, equally short, gives more information, though not all to fully understand the matter: “In the case in which Inspector Forsyth charged five Marwaris with continuing to parade a musical procession through the streets of Burra Bazar after the expiration of the period for which a license had been granted, four of the accused were discharged. The fifth, Mohan Lall, was fined Rs. 50.” Another accused had been discharged at an early stage of the prosecution. We believe the license was granted to Mohan Lall and the others were prosecuted as abettors. The maximum fine is Rs. 100, and the details of the case, which are not given, must have been too bad for even the Northern Division Magistrate to order such a heavy punishment.

We do not notice the case for the conviction and the punishment, which might have been deserved. We mean to draw attention to the arbitrary system of granting passes for native musical processions. The Marwaris were defended by Counsel assisted by an experienced Magistrate-Attorney, and we had hoped they would lay bare the rottenness. It does not appear that the defence was directed to any attack of the kind. But how do they do business in the Police office? It is optional with the Commissioner of Police to allow such a procession or not. That option, however, is made to act on a demand for payment for Police, for which claim, without justification, there is no legal sanction, unless the constantly repeated action during the last 20 years has converted it into a customary. We do not know what was the fee paid for the license on which the Marwari has been convicted and fined. If it was more than Rs. 2, it was an illegal permit and we are not sure that the conviction on an illegal document is good. Over the statutory Rs. 2, the Commissioner of Police levies two higher fees of Rs. 5 and Rs. 10, at his own will, besides an extra charge for police, according to the recommendation of the Divisional Superintendent and probably the length of the applicant's purse.

We have seen (*R. & R.*, May 16, 1896) that the Commissioner of Police, who has constituted himself the Dictator of Calcutta, is authorized by law for every license granted by him to levy a fee of Rs. 2 only, and that he may, “subject to the orders of the Lieutenant-Governor, make rules for the conduct of all assemblies and processions in the public roads, streets, or thoroughfares, prescribing the routes by which, the times at which, such processions may pass; and may give licenses for the use of music in the streets on the occasion of native festivals and ceremonies” (sec. 62, Calcutta Police Act.) and that there are no orders by Government nor regulations under the section. Under the penalty clause of the section, “every person violating the condition of such license, shall be liable, on summary conviction before a Magistrate, to a fine not exceeding one hundred rupees.” The law itself lays down no conditions but has delegated that power to the Local Government, which has not, as we have said, exercised it. Is it then competent to the Commissioner of Police to fix the hours for a license and is a Magistrate justified in punishing a man for breach of such a condition?

The attention of Government having been drawn, sometime back, to the two unsanctioned higher fees of Rs. 5 and Rs. 10 charged for native musical processions, the Commissioner of Police had explained

that they were necessary to cover the cost of Police accompanying the processions. What is the explanation for the fresh every-day-increasing demand for the same purpose? The Northern Division Magistrate has let slip an opportunity for righting a wrong. With his stretch of authority, the Commissioner of Police levied a fee of Rs. 16 for permission to break horses on the maidan. Three or four years back, a horse-trainer, refusing to pay, was prosecuted. But the Magistrate, finding no law for the charge, dismissed the case, and since then the fee has not been demanded from any trainer.

It may not be generally known that Babu Preo Lal Dey, son of Rai Bahadur Kanye Lal Dey, enjoys a little monopoly in even these days of keen competition in trade. The monopoly is about the supply of non-alcoholic lime-juice to emigrant vessels sailing from the port of Calcutta. The history of the manufacture of this drink is not without interest. In October 1881, owing to an outbreak of scurvy among them, the Asiatic crew of the ship “Plassey” refused to take lime-juice fortified with spirit. The suppliers, Messrs. Ahmuty and Co., Harton and Co., Shama Charan Dutt and Co., and Mr. Preo Lal Dey, were asked by the Government of Bengal, at the instance of the Shipping Master, whether they could turn out an antiscorbutic without the aid of spirit or alcohol. The first three of the firms confessed their inability to do so. Only Mr. Preo Lal Dey, who, it is believed, had got the recipe from an American chemical journal, offered his services. Accordingly, under the Merchant Shipping Act, his manufacture was gazetted as fit for use on board passenger vessels of every description. Sometime after, Messrs. Shama Charan Dutt and Co. were declared as authorized suppliers. Having entered into competition with the Rai Bahadur's son, Dutt and Co. continued to supply the non-alcoholic lime-juice till 1894, when they complained to Government of unequal treatment at the hands of a subordinate Custom House officer, the Inspector of Antiscorbutics. Reports were called for, with the result that the complaining firm, instead of obtaining a remedy, lost the privilege of supplying the article. After this, there was a change in the constitution of the firm, in consequence of which two junior partners took up this particular business. They have applied to Government for the privilege, submitting a sample of their manufacture. The application was referred to the Customs Collector for enquiry and report. The matter, we think, is now pending before the Government of Bengal in the Marine Department. The following passages from a supplementary petition addressed by the parties to Government, disclose a state of things which ought not to exist:—

“We regret to state that the present Inspector of Antiscorbutics, to whom our petition has been referred for report, showed undisguised symptoms of hostility towards us. On a previous occasion he had made an attempt to discover the secret of our manufacture. He was then plainly told that his questions could not possibly be answered. This time also he made a similar attempt. We were obliged to tell him that we would not answer his questions. Indeed, he is a very subordinate officer of Government. Having discovered our secret he may set up a manufactory himself, or assist some friend or relative of his to do so. Supposing him, however, to be the very pink of honour, he cannot expect us to lay before him what it cost us both money and trouble to discover, and what is as yet known to only one person besides us, viz., Babu Preo Lal Dey. Finding himself baffled in his endeavours to penetrate our secret, he resolved to throw every difficulty in our way. From the remarks he made in our presence it seemed to us that he doubted our knowledge of analysing our own output. He even went so far as to doubt the knowledge of chemistry possessed by Babu Satish Chunder De, under whose close supervision our article is manufactured, although the Babu is an M.A. of the Presidency College in Chemistry and an M.B. of the Medical College, Calcutta.

We are surprised at the treatment we received from the Inspector of Antiscorbutics. He himself is no chemist. He is perfectly unable to analyse a sample of our manufacture. At least, the Government has no confidence in his knowledge of chemistry and analysis. Non-alcoholic lime-juice, by whatever person supplied, under the present regulations, requires to be analysed by the Government Chemical Analyser before it can be regarded as possessed of the standard virtues.

We beg humbly to submit that no question regarding our own knowledge of chemistry or analysis can be relevant in a matter of this kind. Our manufacture is supervised by a respectable chemist, a graduate of high merit in chemistry, whose educational qualifications are very much superior to those of Babu Preo Lal Dey who is not a graduate of any University. If the article turned out by our manufactory be pronounced by the Government Chemical Analyser to be of the standard quality, that should settle the question, regardless of the fact that those who find the money for such manufacture are not themselves as good chemists and analysers as the Inspector of Antiscorbutics desires to harp upon.

We beg further to submit that even if the privilege be accorded to us by our name being gazetted under the Act, that does not settle

the matter finally; each time that we manufacture the article and offer it to companies owning vessels, it will have to be examined by the Government Chemical Analyser before acceptance by those companies. The interests, therefore, of passengers proceeding by vessels are protected as jealously as anybody can wish. If the sample we have submitted with our petition be pronounced by the Government Chemical Analyser to be of the standard quality, the Government cannot very well refuse to gazette our name under the Act. If at any subsequent time the Government Analyser pronounces any particular output of our manufactory to be below the standard it is we that lose the costs of manufacture."

THE Secretary of State opened the Indian Institute at Oxford University. He eulogised the Indian Civilians, and said the Institute, by encouraging the study of Indian subjects, would deepen Great Britain's hold on the affections of the Indians. The *Times* eulogises the speech of Lord George Hamilton which, it says, however, may be contrasted in India with acts showing how regardless England is of the Indian interest when clashing with political expediency at home. It adds that it is understood that Government, notwithstanding the protest of the Government of India, still intends to charge the Indian Exchequer with the pay of the Snakin Contingent.

Yesterday, the Government of India published the decision of Her Majesty's Government as communicated by cable on the 1st instant by the Secretary of State for India. It runs in these words:

"Your despatch of the 2nd of June regarding the expenses of the Snakin force. After full consideration by Her Majesty's Government and in Council we have decided to adhere to the decision already communicated. A despatch goes by the next mail to the following effect:—It lays down the principle that military aid will be freely given between Great Britain and India as circumstances permit, and that if the Government lending troops has special interest in the object of the operations it should in one way or another bear a portion of the burden. It argues that the Government of India has special interest in transit by the shortest route to and from the United Kingdom; that this involves the maintenance of an orderly and settled Government in Egypt, and that this is among the principal objects of the present operations. It points out that no additional expenditure is thrown on India, and that arrangements have been made for a strict limit as to time. If the troops are needed beyond the 31st of December the whole question will be again carefully considered. It expresses regret that I am unable after full consideration to concur in your views. Owing to parliamentary considerations the Blue-book containing your letter and my reply must be published forthwith before it is possible for a full text of my reply to reach you. I have, therefore, telegraphed the summary as above."

On the 2nd, the papers were laid on the table of the House of Commons. The *Times*, commenting on them, "regrets the overruling of the protest of the Viceroy and the Council, and charges Lord George Hamilton with inconsistency in applying the principles urged by the Treasury. India's interest in the Soudan affairs is only contingent and remote, and India adequately contributes in respect thereof by lending her troops."

The *Englishman* is indignant:—

"A strange fatality appears to follow the present Secretary of State in all his relations with India. One would imagine that he had deliberately set himself to do everything in his power to render himself unpopular. Of course if he goes on long enough in this way he will by and bye crush all opposition. People will see, as we are beginning to see, that it is no use talking, and Lord George Hamilton will congratulate himself upon the spirit with which he has carried out his high-handed policy. But he will have done an extremely foolish thing if he convinces the Indian public that it has nothing to expect from his justice. The wound may be borne in silence, but it will sink deep, and it may show again long after the noble Lord and his colleagues have forgotten it."

There is feeble hope that the final authority will rule otherwise.

THE Maharaja of Cooh Behar, accompanied by his European Private Secretary and his Native Physician, has started for European waters for a cruise in search of health shattered by shooting in the Assam jungles.

THE session of the Science Association opened last night with an Introductory Lecture by the Secretary with special reference to the New Photography. Dr. Sircar shewed photographs taken by himself by the X rays and took two towards the conclusion of the lecture. He regretted that the audience was not larger and said how a prominent member of society and the Association, whom he had asked to be present, excused himself on this plea and that to be absent from a lecture, with experiments, on the newest discovery which has thrown all former light into darkness. Another gentleman whom he wanted to honour, along with Dr. Bannerjee, with photograph, by the mysterious light, of his name in the lecturer's own hand by white lead on black wood, unaccountably kept himself away.

Next Friday, at 7 P. M., Dr. Sircar will take up the subject of Hent. On Wednesday, the 8th, at 5 P. M., Baboo Rajendra Nath Chatterjee will begin his subject with Properties of Matter.

THE following is the list of cases on the calendar of the third criminal sessions of the High Court which commenced on Wednesday under the presidency of the Chief Justice:—

"Empress vs. Sheikh Abdool, committed by Mr. T. A. Pearson, for theft; Empress vs. Runglall Shah, committed by Niwab Syed Ameer Hossein, for attempt to murder and voluntarily causing grievous hurt by a dangerous weapon; Empress vs. Abdool Ghani, Mahomed Ebrahim, and Sheikh Wazir, committed by Mr. T. A. Pearson, for kidnapping or abducting a woman and abetment of the same; Empress vs. Mahomed, Ghasee, and Choika Madrasee, committed by Mr. T. A. Pearson, for murder, culpable homicide, and voluntarily causing grievous hurt by a dangerous weapon; and Empress, on the prosecution of Messrs. Rilli Brothers, vs. Dwarkanath Gupta, committed by Mr. T. A. Pearson for abetment of forgery, for abetment of dishonestly using as genuine forged documents, and for cheating and thereby dishonestly inducing delivery of property."

In the first case, the prisoner, who was undefended, pleaded not guilty, and was, on the unanimous verdict of guilty by the jury, sentenced to six years' rigorous imprisonment. The offence consisted in the clandestine removal of an umbrella and a chapkan from the dogcart of a European named Harris, who having driven to his office had sent his dogcart home in charge of the syce. The syce, while leading it, roused by the cry of another syce, turned round and saw the prisoner running away with the articles from the dogcart. But how came the chapkan, not a European article of clothing, in Mr. Harris' possession seems not to have been explained.

The second prisoner Runglall was charged with attacking with a knife a public woman on her refusing to live with him, hacking her on the back of the head, knocking her down, sitting on her chest and trying to draw the knife across her throat. The prisoner pleaded not guilty to all the charges. The jury were of opinion that he was guilty of causing hurt and the Judge sentenced him to 18 months' hard labour.

The trial of the three Mahomedans on charges of kidnapping or abducting a married Hindu girl was taken up the same day and concluded yesterday. They all claimed to be tried and were ably defended by Mr. Woodroffe, Jr., a chip of the old block. The girl not answering to her name when called as a witness, a contempt warrant was ordered. She did not turn up and the trial closed without her. Mr. J. G. Woodroffe would not call any witness for the defence, and, without giving the prosecution the opportunity for the last word, addressed the Jury. The Judge then charged the Jury, who, after a short deliberation, found the first prisoner guilty of kidnapping a minor, and the second and third of abetment of the same offence. Sir Comer Petheram deferred passing sentence till Monday.

REIS & RAYYET.

Saturday, July 4, 1896.

THE AGRICULTURAL AND MINERAL RESOURCES OF INDIA.

TWO CHAPTERS OF THE STATISTICAL ATLAS.

INDIA is essentially an agricultural country. It has been estimated that the total annual crops of British India are drawn from an area of nearly 250 million acres, which crops, again, support some 221 millions of people.

The agricultural products of India are, indeed, varied. But the startling fact is that "some 50 or 60 of our most generally grown plants came to us, within historic times almost, from other parts of Asia, or from Africa and Europe. Of this nature may be mentioned the onion, leek, rape-seed, cabbage, cauliflower, turnip, pomelo, water-melon, coffee, loquat, soy-bean, ochro, lettuce, flax, linseed, litchi, poppy, field-pea, apricot, plum, peach, apple, betel-pepper, chena, and Italian millet, etc., etc. So, again, within still more recent times America has furnished India with many cultivated plants, such as the aloe, pine-apple, custard-apple, earth-nut, arnotto, capsicum and chillies, papaya, cinchona, pumpkin, sweet-potato, tomato, arrow-root, tobacco, prickly-pear, guava, Cape-gooseberry, potato, Indian corn, etc., etc. Turning from our fields and orchards to the avenues and hedgerows, to the jungles and even forests, we find an equally high percentage of exotics,

Indeed, it might be almost said that from Calcutta to Lahore, 50 per cent. of the *prevalent* cultivated and wild vegetation has been imported by India within historic times." These facts lead to the undoubted conclusion that considerable change and improvement have taken place in almost every aspect of Indian agriculture and horticulture. The possibilities of the future are, again, very great, for it is said "there are few crops in any part of the world which cannot be produced in this country."

The agricultural products of India may be grouped as follows:—

- (a) Food crops (wheat, rice, barley, millets, pulses, sugar, spices, etc.)
- (b) Oilseeds (linseed, rape and mustard, castor, sesamum, ground-nut, etc.)
- (c) Fibres (cotton, jute, hemp, reha, silk, wool, etc.)
- (d) Dyeing and tanning materials (indigo, safflower, *Al*, etc.)
- (e) Drugs and narcotics, etc., (opium, tea, coffee, tobacco, cinchona, Indian hemp, vines and other sources of alcohol, etc.)
- (f) Miscellaneous products (cutch, lac, wild silk-worms, India-rubber, palm-sugar, cocoanut [fibre and oil,] myrobalans, musk, etc.)

The articles last mentioned can hardly be regarded as agricultural crops, but they hold very important positions as a source of wealth. The wild and semi-wild products assume a proportion and an importance in India rare in any other part of the world.

The fabulous "wealth of Ind" has never been obtained to any considerable extent from mineral resources. Mining and manufacturing industries have always played a subordinate part in the history of Aryan civilization. It is true that many famous precious and ornamental stones trace their origin to India. But the mineral resources of a country are not to be measured by any valuable fitful yield at long intervals. We do not ~~mean~~ ^{mean} that India is deficient in minerals. The point is, "India's possibilities in this direction have not been fully ascertained;" and the supplies hitherto obtained are insignificant compared with its agricultural products and its vast area. India has not been surveyed satisfactorily enough to warrant us to speak with confidence as to the exact nature and distribution of its minerals. Speaking broadly, they are confined to certain well-defined areas of particular rock-formations. Of these the *Metamorphic* series of *gneissose* rocks cover a large area in Peninsular India, containing iron, corundum and gold. Gold is nowhere considerable except in Mysore, though it is found in widely separated areas in the N.-W. P., the Punjab, Kashmir, Hyderabad and Burma. Corundum has a unique importance, and is abundant in Southern India. Attempts are being made to treat it as a source of *aluminium*, and if successful, corundum has quite a brilliant future before it. The metal aluminium is remarkably light (sp. gr. 2.6). It is of a silver-white colour, and takes a good polish. Its durability, lightness and high metallic lustre are matters of much importance. It does not rust like iron and, if available in a sufficient quantity, it may very well replace that metal in the building of bridges, &c. The *Transition* formation may

be called the metalliferous series of India, yielding gold, iron, and the associated manganese and copper in the Dharwars of Mysore, Bellary and the Raichur Doab of Southern India; iron with manganese, copper, lead and some gold in the Bijawars of the Central Provinces; iron, copper, lead, gold and some tin in Western Bengal; and copper, lead, iron and inferior gems in the Aravalis of Central India.

Diamonds are found in the Kristna valley side of the Deccan; in the districts of Anantapur, Cuddapah, Karnul; and at Ellore in the Madras Presidency; in Chota Nagpur and the Central Provinces and in Bundelkhand. The *Vindhyan* formations are the chief repository of this valuable mineral. It may be noticed here that the far-famed Golconda has never been known to yield any diamond. It was only the most renowned diamond mart in former times, where gems of distant places found their way for sale.

Copper is a metal of somewhat wide distribution in India and one which has been smelted in many parts of the country. The outturn, however, is very trifling, practically all the copper which is consumed in India being imported from abroad. The ore most commonly met with is *copper pyrites*, often with carbonates, etc., near the surface.

Lead ore is also widely distributed, and in certain parts it would appear to exist in considerable abundance. Some Indian *galena* (the most important lead ore) contains a high percentage of silver.

The *Gondwanas* in the Peninsula contain the principal coal-beds. They radiate from Mohpani in the Central Provinces eastwards to Bengal, south-eastwards to Orissa, and south-south-eastwards to Pranhita-Godavery valley. While the coal of Peninsular India is almost exclusively Lower Gondwana, the coal of extra-peninsular India (chiefly in Assam, Burma, the Punjab and Beluchistan) is almost exclusively Cretaceous and Tertiary. In the relative importance of the different coals, the Lower Gondwana takes undisputed pre-eminence. In it alone have mines on any considerable scale been sunk as yet; and excluding foreign coal, it alone supplies Indian railways and mills with mineral fuel. Next in importance comes some of the Tertiary coal, which occurs in beds of immense thickness in Upper Assam, but which owing to its remote position has not been systematically worked as yet. Some of the Cretaceous coal fields contain large quantities of fuel, but like the Tertiary they have not yet been opened out.

Coal, Iron, Tin, Mineral Oil and Salt form the most important minerals of India. Strictly speaking, India is not rich in tin. But the Malay Peninsula is one of the most important tin-producing regions in the world.

The most notable oil-bearing regions are Burma and Assam. Beluchistan and the Punjab also have just begun to yield mineral oil. In all these provinces, petroleum is found in the older Tertiary rocks.

India is supplied with Salt mainly from four sources, namely, salt imported from abroad, rock-salt yielded by mines in the Punjab, salt manufactured from the salt lakes in Rajputana, and that produced by evaporation of sea water. It is also obtained by evaporating water from salt wells by lixiviating saline earth and as a by-product in the manufacture of salt-petre. Of the various species, the enormous deposits of rock-salt in the Salt Range are the most remark-

DEAFNESS. An essay describing a really genuine Cure for Deafness, Singing in Ears, &c., no matter how severe or long-standing, will be sent post free.—Artificial Ear-drums and similar appliances entirely superseded. Address THOMAS KEMPE, VICTORIA CHAMBERS, 19, SOUTHAMPTON BUILDINGS, HOLBORN, LONDON.

able. The quantity in this Range alone is so considerable that it can supply the whole world, if necessary, for a long time. At the Mayo mines, there are five great beds with an aggregate thickness of 275 feet.

Iron ores are very widely distributed over India, and in many districts enormous deposits, often of great thickness and purity, occur. "Some portions of India, indeed, can well bear comparison with any part of the world in respect to the abundance and quality of their resources in this respect." In former times, the Indians were familiar with several methods of manufacturing iron from the ores. The method even now employed in Madras of manufacturing steel in "wootz" yields a result which is quite astonishing to Europeans. In fact, the Madras steel, produced by the crude native art is in no way inferior to the best made steel in the world. Indigenous iron-manufacture with European skill and experience once resulted in failure, through the selfishness of European iron-manufacturers. "Since the opening of railway communications, the competition of English iron has done much to curtail and in many cases to entirely extinguish the native outturn."

OUR LONDON LETTER.

June 12.

Great Britain. Imperial Parliament.—I was in error when I wrote last week that the House would go into Committee on the Education Bill on the 9th instant. The 9th and 10th have been devoted to the Irish Land Bill, and yesterday the debate on the Education Bill in Committee was begun and is to be continued *de die in diem*. There can be no doubt the Government has attempted too much, hence the frequent impasse. One or at the most two first class Bills are the utmost any Government, however strong, should attempt to pass in a single session. The only good point in favour of the present Government is the very forward state of Supply. When Mr. Balfour introduced the new rules for dealing with Supply, it was on the understanding the session should come to an end as near as possible to the 12th of August. Hence any proposal to run into September, or still worse to have an autumn sitting in November is scouted not only by the Opposition, but by a large number of members who owe and are willing to pay, a loyal allegiance to the present Government.

Some weeks ago I drew your attention to the epidemic of terrible crimes with which London had been afflicted. On the morning of the 9th, the three men, Fowler, Milsom and Seaman, were executed at Newgate, and on the following morning Mrs. Dyer expiated her fearful crimes. No one knows how many poor little infants she did away with, but the police think fifty is within the mark.

As an illustration of popular feeling, I annex an extract from the "Westminster Gazette":

"Last night some disgraceful scenes were witnessed in the neighbourhood of Clerkenwell, Islington, and Cannonbury. Shortly after dusk a band of roughs, about two dozen strong, commenced parading the streets carrying with them effigies of Seaman, Fowler, Milsom, and Dyer, and a large piece of wood shaped like an old fashioned gibbet. Their appearance attracted a large crowd, and they soon formed a procession of some hundreds strong. When they had found a suitable pitch, generally outside a large public-house, they formed in a circle round the gibbet, from which the four dummies were suspended, and commenced singing, or rather shouting:—

Fowler, Fowler, Fowler,
Wasn't he a howler;
He'll never try another dodge
Like he did up at the Lodge.

Seaman, Seaman, Seaman,
Wasn't he a demon
When he took his final leap,
Where he stepped must have been
a treat.

Milsom, Milsom, Milsom,
He says he never killed some.
We know he's very tricky,
So we gave his neck a twichy.

Dyer, Dyer, Dyer,
Stick her up higher.
We hope she soon is going to swing,
And joy to all our hearts 'twill bring.

While this was going on one of the men went round to collect money, and in a good many instances considerable sums were received. The men expressed the intention of renewing the performance to-night, and burning the four effigies in Canonbury-square.

The Murderer's 'Pal.' A gentleman, who on his way to business yesterday happened to stand for a moment in the street outside Newgate Prison before the black flag was hoisted, remarked to his neighbour that the hangman's rope never encircled a more

villainous throat than Fowler's. Thereupon a big fellow in the crowd tapped him on the shoulder and remarked, 'Look here, mister, another word like that and your life will be as short as Fowler's.'

Employment of Indian troops in the Sudan.—You will see this question has come into great prominence, and will have to be met by the Government as one of first class importance. The debate in the House of Commons has been postponed at the urgent request of the Government of India, whose despatch is now on its way home. The point in dispute is, shall the troops that have been sent to Suakin, be charged to the Imperial Treasury, or shall their ordinary pay be still debited to the Indian Exchequer? There is no question at all as to the expenditure, once they leave India, being charged to the Home Government. But is Great Britain or India to bear the charge of their daily pay? Every true friend of India will have no difficulty in saying that the moment Indian troops are drafted for Imperial service, the whole cost and charge, including the ordinary daily pay, should be charged to the Imperial Treasury.

The eminent Anglo-Indian who contributes a weekly article to the "Times" on "Indian Affairs," came out in the issue of the 8th instant with no uncertain sound. The article is one of such vast importance to India that I enclose it, so that you may have the opportunity of placing it before your readers.

In its leading article the "Times" says, "It must not be forgotten that India makes no contribution to the cost of the British Navy, which nevertheless constitutes the main defence of our Eastern possessions against foreign aggression. It cannot be contended, therefore, that the policy of this country tends, on the whole, to deal hardly with India in regard to such questions. Nevertheless, we adhere to our opinion that, whatever may be the technical rights as between the Imperial and Indian Exchequers, it would be most inexpedient to create a precedent for throwing upon the tax-payers of India the whole or the greater part of the cost of protecting external interests in which England and other portions of the Empire are at least as directly implicated. Many years ago, when the present Prime Minister was in the House of Commons, he protested, during the Abyssinian expedition, against treating India 'as an English barrack in the oriental seas, from which we may draw any number of troops without paying for them.'"

The trend of public opinion here is all in favour of India, and I make no doubt the Government of India will carry the day.

I wrote the above before seeing this week's "Punch." The leading cartoon represents India in the person of a pretty dusky maiden, and she says to big burly John Bull: "I have found the men, Sahib! Why should I find the money too?" *John Bull*: "Pon my word, my dear, I really don't see why you should."

This fully corroborates my suggestion as to the trend of public opinion.

Mr. Chamberlain as Honorary President of the Congress of Chambers of Commerce with representatives from all parts of the Empire, delivered a remarkable speech on the 9th instant, by way of welcome. He is an earnest advocate of Federation, of the colonies and the mother country, and he feels strongly this can be brought about, certainly expedited, by the establishment of a commercial union, somewhat on the model of the German Zollverein. He sees many impediments in the way of its realisation owing to the majority of the colonies being strongly protective and Great Britain the champion of Free Trade.

Party feeling runs so keenly here that unfortunately there is little prospect of the question being discussed with calmness. Even the "Westminster Gazette," one of the ablest Radical papers, smells protection in the proposal. Now I would just as soon believe Mr. Gladstone had joined the Baptist Communion, Lord Rosebery had become a sabbath schoolteacher, Mr. Lobouche chairman of the Congregational Union, Sir Charles Dilke president of the Society for the Suppression of Vice—as for one moment think that Mr. Chamberlain would prove false to his Free Trade convictions.

But Mr. Chamberlain is an Imperial statesman, and he sees how in the future the British Empire may have to struggle for its very existence. Hence his consuming desire to see all parts of this great Empire welded into one great Confederacy! He is alive to all the difficulties that beset his proposal. But he has started the question for full and free discussion, and he has laid his countrymen under a debt of obligation for having had the courage and statesmanlike foresight to broach the subject.

The Education Bill.—In my last I drew attention to the language of that screeching Higgins, Dr. Clifford. His language has roused the righteous indignation of Canon MacColl. So another Nonconformist writes to the "Times," "I should like to assure Canon MacColl that the language used by certain Nonconformist ministers in the controversy over the Education Bill is as painful to many of their quieter brethren as it is to his own fair and kindly spirit. To fling about such epithets as 'infamous,' 'damnable' and the like, is to forsake the methods of honourable and decent discussion for that of throwing brickbats. That ministers of religion, when engaging in political controversy, should so often compare

unfavourably as regards manner and temper with the average man of the world is to myself and many others matter of humiliation." Well may the Emperor William designate such men as Clifford as "monstrosities." The beauty of the thing is, his Billingsgate language may much more accurately be applied to his own sermons when a school board election, a county council election, or a general Parliamentary election is going on.

After the fearful pother made over this Bill, it was allowed to glide quietly into Committee last night.

Before leaving the Chair, the Speaker ruled a number of instructions out of order, as they could be moved in the shape of amendments of which there are already 1,335 on the paper. The first division took place on clause 1, Sir J. Gorst declaring the Government considered it the most important part of the Bill. The numbers were, for the Government 262, against 121. The second amendment was rejected by 298 to 125. The Government accepting an amendment of Sir A. Rollic, it was carried by 332 to 83. So far, a good beginning indeed! Doubtless, Dr. Clifford was in the gallery to see what effect his Billingsgate had produced. He must have gone home a woefully disappointed man. Like the famous jackdaw of Rheims, under the anathemas and curses of the Bishops, "no one seemed a penny the worse" for the vituperation of this foul-mouthed dissenting cleric. May it teach him a lesson to be more suave and mannerly, when he again essays to lead his Nonconformist brethren in opposition to the present Government.

Cricket.—I do not pay much attention to sport, but yesterday's was a record match at Lord's, an all England eleven *versus* the Australians. The latter were disposed of for 18 runs, a result due to the splendid bowling of Hearne and another. When stumps were drawn, they were last, in the second innings—for of course they had to follow on—with 176 to make to avert a single winnings defeat. Today they may do better, but it seems almost impossible they should succeed in making 176 runs, with two wickets already lost.

France.—"By the death of M. Jules Simon," says the "Times," "France loses the most cultivated of her public men. He was perhaps the most remarkable of the many examples which the recent history of that country has shown of the professor and literary man in politics." He certainly was a most remarkable man. Born 82 years ago, of humble and obscure parents, he raised himself by virtue of commanding ability, and a character of the strictest veracity, to be Prime Minister of France. The celebrated Victor Cousin early discovered his sterling worth, and made him his assistant in the chair of philosophy at the Sorbonne, and Simon repaid the great philosopher's early kindness, by becoming his most famous disciple, and the ablest exponent of his system of eclecticism. And what redounds to Simon's immortal credit, is, that after having held the great office of Prime Minister of France, he retired from public life, as poor a man as he entered it.

I know of only one great Frenchman of whom the same may be said—the illustrious Guizot.

Troublous times are again, I fear, in store for France, and no more startling news has come out of the blue than the *rapprochement* between the Bourbons and the Bonapartes. Next August, a great gathering is to be held at Brussels, when the ex-Empress Eugenie will be present to endeavour to arrange a matrimonial alliance between a son of the House of Bourbons and a daughter of the Napoleonic dynasty. All events are pointing to a restoration of monarchy, so as to hold in check the vagaries of the ultra Radicals and Socialists.

Egypt.—To the gratification of all loyal citizens of this great Empire—save only the "little Englanders" headed by Mr. Labouchere—the Dervishes were severely chastised on the morning of the 7th instant at Firket. Our victory was complete and redounds to the credit of the Egyptian and Soudanese troops, under the skilful command of the Sirdar—Sir H. Kitchener. The great gain of the victory lies not so much in the number of the killed and the prisoners made,—nor in the loot not inconsiderable—but in the defeat of some of the leading Emirs. 45 out of 50 have been either killed or made prisoners and the Khalifa has received a blow from which he will not easily rally. After the victory at Firket, Major Burn Murdoch pursued with his cavalry and took possession of another important post, Suarda. This is reported to be the strongest Dervish post north of Dongola, and the "pursuit of the Dervishes has for the moment been stopped as their entire force north of Suarda has been either killed or captured, with the exception of about 200 men."

I have left myself no space to write of America, but by the 19th we should see the issue of the great caucus gathering at St. Louis. At the present moment, all is confusion, and no one can say for certain who is likely to get the nomination to the next Presidency. The real question at bottom is the currency, silver *versus* gold, and none of the reputed candidates has the courage to say straight out what his views are. It is believed Mr. MacKinley himself is for a gold basis, but he is afraid to commit himself as the silver vote is nearly as powerful as the gold. However, by this day week we shall know all about it.

The chief party speech of any importance, since my last, was delivered by Sir Campbell Bannerman to the Cambridge Eighty Club, on the evening of the 6th. You may remember he was the author of the celebrated phrase in 1886, "I have found salvation," and it had such an influence on Mr. Mundella, who was wavering on the Home Rule question, he too found salvation, and casting to the winds all their former conscientious convictions, servilely followed the great Dictator, Mr. Gladstone, whither-soever he might be pleased to lead them.

An ample fortune makes Sir Campbell Bannerman a great political authority in his own estimation, but were I a Nonconformist, which, thank God, I am not, I should treat as a piece of gross impertinence the advice he tendered to be done with upbraiding the Irish members for their vote on the second reading of the Education Bill. Men like the Rogers, Cliffords, and Hughes are quite able to protect themselves from the supercilious advice of men like the late Secretary for War.

Public Paper.

THE BENGAL MUNICIPAL VADE-MECUM.

Bengal Municipalities Bill 1872,

passed by the Bengal Council

but not assented to by the Governor-General.

THE LIEUTENANT-GOVERNOR'S EXPLANATION OF THE MEASURE.

[Concluded from page 310.]

20. There remain the voluntary objects of expenditure as laid down in sections 132 and 254 of the Bill, which are a good deal wider in their scope, but still confined by very strict limits of maximum expenditure. As the Lieutenant-Governor has already said, he believes that in many places in these provinces the people will be found to be really inclined to raise and spend money on some of the objects enumerated in the above sections for their own comfort and advantage. But he must here again very earnestly disclaim any intention to force them, or to induce them, by any undue pressure to do so. He repeats once more that his view is to prefer a little done voluntarily to a great deal done unwillingly and in a discontented spirit.

21. The maximum of total taxation in the different classes of municipalities has been fixed with reference to the above considerations. On the one hand it has been sought to obviate alarm and the apprehension of unlimited taxation by restricting it within a very moderate maximum; it being thought better to quiet people's minds in this respect even at the risk of checking large improvements in some instances. And on the other hand such a reasonable margin has been left between the minimum or compulsory expenditure and the maximum, as to leave room for a fair development of voluntary expenditure, sufficient to test that part of the system.

In respect of village municipalities, the Council has thought it right to proceed with extreme caution, and has fixed the maximum total at more than 25 per cent. in excess of the rate hitherto allowed for the watchman alone.

In larger towns this maximum (fixed by section 38) has been raised about 50 per cent. as compared to the maximum prescribed by Act VI of 1868. But it must not for a moment be supposed that the Bill contemplates that the maximum shall in all or most cases be taken. On the contrary, the probability is that it will very seldom be so. The compulsory taxation being generally little, if at all, increased, the raising of the maximum will only enable those municipalities which wish to improve to embark on a certain additional expenditure, if they choose to do so, and so far as they choose to do so, under the strictly and *bonâ fide* voluntary system which the Lieutenant-Governor hopes to see maintained.

It should also be explained in connection with this part of this subject, that under the present laws considerable tracts of country, and many rural villages, have been frequently included in town municipalities, thus giving townships a fictitious area and population; whereas by the present Bill (section 6) town municipalities are strictly confined to real town areas with a defined aggregate and density of population. It results that the total taxation which can be imposed in real towns is probably not greater than under the former Acts in many or most cases.

22. The Lieutenant-Governor will only further here notice the various taxes from among which each town municipality may choose its own mode of taxation. Village municipalities are, as under the existing law, restricted to one tax only, except when they elect or follow their old customs. The taxes are set forth in section 38 of the Bill, and the provisions regarding them are detailed in sections 39 to 116.

23. The first form of tax is what is called a tax on persons, that is, on all persons residing in or owning property within the municipality according to their means and property—provided that no per-

son who does not reside within the limits is to be taxed on any other means than his property within the limits. This tax is to be assessed by the municipal Commissioners, poor persons unable to pay being exempted by them. It is said that this is a rough local income and property tax. In the Lieutenant-Governor's personal opinion, a local tax of the kind is perhaps the least objectionable form of income tax; but be that as it may, he does not seek to justify it on that ground, but solely on the ground that it is the oldest, most used, and in some sense favourite (so far as any tax can be favourite) form of municipal taxation in these provinces. It appears in the early regulations; it is one of the alternative forms of taxation under Act XX of 1856, and it is the sole mode of taxation under the more recent Acts, VI of 1868 and VI of 1870. The Lieutenant-Governor has inquired a good deal on the subject, and he is assured that whenever there is the option between this tax on persons and a house tax, the former is almost invariably preferred. He is told that even in some municipalities where the assessment is nominally on houses under Act III of 1864, it is practically levied according to the means of the occupant. The Lieutenant-Governor could therefore hardly do otherwise than propose this as one of the forms of taxation.

24. The tax on holdings is in fact an assessment on houses, &c., of an annual value of not less than Rs. 6, and at a rate not exceeding 7½ per cent. on the letting value. This tax is taken from Act III of 1864 and some of the local Acts, and does not require explanation.

25. The tax on carriages, carts, and animals, kept within the town, is taken from several of the existing Acts, and is evidently a fair means of supplying a fund, one of the objects of which is the maintenance of roads.

26. The tax on trades and callings is taken from one or two of the existing Acts, and can only be imposed when the tax on persons is not imposed. There are mercantile and business places where most of the people of substance are engaged in trades and callings, and in such cases it will be competent to the municipality, instead of inquiring into people's general means, to impose a license tax as scheduled according to the trade or occupation followed.

27. The suggestion of a tax on processions, such as is now levied in Calcutta and Patna, created much remonstrance from people who feared an undue interference with their social customs. It has therefore been restricted to very narrow limits, and to the case of large and noisy processions which require police regulation, such as may fairly be charged for. Funerals and religious ceremonies other than marriages are exempt, and the tax can only be demanded when more than four musicians, or when elephants, fireworks, or guns, are used. It will probably only be applied in very large and thickly populated towns, such as those above mentioned, where it has worked very well, and where unregulated processions with the accessories mentioned would be most dangerous to the peace.

28. The duties on articles brought into the town or into markets, and the tolls on roads and ferries and on boats, are all in substance different forms of what are called octroi or town duties,—a very old form of local tax, which was and is legal under Act XXVI of 1850. This subject has been so frequently before the Government of India that it is not necessary that the Lieutenant-Governor should discuss it at length. There is no doubt that the system may be much abused if great care is not taken. On the other hand, there is equally little doubt that when properly regulated, under the ample powers reserved to the Government in this respect, it has been found in practice in most parts of India to be the most popular form of municipal taxation. It has not hitherto been tried in Bengal in modern times (though something similar is too often illegally levied by private Zemindars), and Bengal officers seem to be somewhat averse to it. Still, seeing that in Behar and Chota Nagpore we have nearly twenty millions of the Hindustani population, of manners and habits precisely similar to those of the people among whom the system is liked, and that in Bengal proper also it may be found suitable to some places, the Lieutenant-Governor hopes that His Excellency the Viceroy will deem that he was right in recommending, and the Council in accepting, this form of taxation as one which considerable municipalities may try if they prefer it. If the Act is sanctioned, His Excellency may depend on it that the Lieutenant-Governor will be very fully on the watch to guard against the abuses of the system, of which he has already seen a good deal. It is said that most Bengal towns are very straggling and that a customs line round them would be very inconvenient. It is therefore made optional to tax goods only when brought to the established markets, according to the old fashioned system. Ferry tolls are a very old and general institution in Bengal, and a moderate toll on vehicles and animals entering by land, by any road or bridge may sometimes be an easy substitute for regular town duties. In this land of rivers a tax on boats, that is, on vehicles entering by water roads, is a necessary complement to the above system. Some great commercial marts, such for instance as Serajgunge, are almost all boats with very few houses, and yet wharves, roads and other communications are emi-

nently required. The Lieutenant-Governor has pledged himself most emphatically that, if the Bill is passed, he will make very sure that none of these local dues are allowed to degenerate into transit duties.

29. The Lieutenant-Governor now comes to the village municipalities provided for in part XII of the Bill. It is said by the objectors that Act VI of 1870 on the same subject was only very recently passed. This is true, but it is because that Act is so recent, and has scarcely come into operation, that it has been found convenient to weld it into the new Bill with some emendations which the little experience already had shows to be required. That Act of 1870 was only what may be called a permissive Act, authorizing the Government to put the system which it prescribed in force in any villages at its discretion. The Act was only tried experimentally in a few places. In one district where there are no service lands the magistrate has reported favourably of it; in the other districts where it has been tried in a few villages, very serious objections have been taken to it. And this result, coupled with special objections entertained by the Lieutenant-Governor to the provisions regarding service lands, had induced him to stop its further operation; so that, except in the few places above mentioned, it was practically a dead letter. The opportunity has now been taken to amend it in accordance with the experiences which have been gained, and to adapt it to the general code of municipal law contained in the new Bill, while the greater part of its essential provisions are retained and incorporated.

30. The Lieutenant-Governor would wish it however to be very clearly understood that the effect of Part XII of the present Bill, far from being to impose on rural villages a new and complicated constitution unsuited to them is on the contrary to soften the provisions of Act VI of 1870, and to enable the villages to retain their old constitutions without the too great changes (as the Lieutenant-Governor thinks) which that Act required.

Act VI of 1870 provided one uniform constitution and one mode of taxation for all villages to which it might be applied; it introduced new watchmen and disposed of all the old service lands in one way to be noticed presently. In the present Bill, on the contrary, the Council adopted, at the Lieutenant-Governor's instance, a provision which he thinks of extreme importance (section 263), viz., that any existing usage by which the watchman of any village is remunerated may be retained by the Panchayet with the approval of the magistrate of the district, in stead of introducing a new form of taxation. If the watchman is remunerated by service lands, that form of remuneration also may be maintained. The existing watchmen are to be retained if competent.

31. Act VI of 1870, while providing for villages a full municipal constitution and a uniform mode of taxation similar to that adopted in towns, confined the expenditure to the maintenance of watchmen only. The Lieutenant-Governor is very unwilling to do anything that may savour of forcing taxation on these rural communities, and he has proposed no compulsory taxation whatever beyond the old obligation to maintain a watchman. But he has been repeatedly struck by the great want of drinking water in many Bengal villages, and by the efforts of the people to obtain it, and by their not unfrequently expressed readiness to contribute to the cost, if some arrangement could be made. He has also thought, as above explained, that many villages may be willing to co-operate with Government to re-establish that ancient indigenous institution of Hindu villages, the Guru or village school-master. Knowing how native to the soil of India are village municipal institutions, and how much these rural communes are in the habit of doing for themselves in many parts of the country, the Lieutenant-Governor thought that he could hardly be wrong in recommending to the Council the arrangement which they have accepted, viz., to permit rural municipalities to spend their money, if so inclined, for the supply of drinking water, the support of village schools, and petty conservancy purposes, and for these purposes to raise their taxation to a point not more than 25 per cent. in excess of that hitherto prescribed for the payment of watchmen only.

32. There remains the subject of the service lands applicable to the maintenance of village watchmen.

The general subject of service lands is a very large one in Bengal. In all the western districts very many tenures, great and small, are held for services to be rendered against the great marauders of Central India, against border tribes, or ordinary thieves, and for other purposes. Most of these services have ceased to be required or rendered, and it has been a long and constant struggle on the part of the superior landholders, the Zemindars, to appropriate these service tenures, while the holders maintain their right of possession, and the Government to whom, through various gradations, the greater services were due, also claimed an interest in the matter. The Lieutenant-Governor believes he may say that the general result of the litigation on the subject has been that the Zemindars have failed to establish their right to resume these tenures. The subject is, however, one on which the landlord's interests are always very pressing; and it is there-

fore that two of the petitions representing those interests dwell especially on the question involved in the disposal of the lands appropriated to village services.

33. Act VI of 1870, which deals with this subject, was passed amid much difference of opinions. The majority of a committee which sat upon the matter certainly did recommend that, when the remuneration in land was commuted for a cash wage, the land should be made over to the Zemindar on payment of part of the value; but one of the members of the committee, Mr. Rivers Thompson, lately Secretary to this Government, and one of the most able and experienced officers in Bengal, wholly dissented from this part of the report. Moreover, what is most important is this, the original draft proposed by the committee made the commutation of land for money entirely optional and discretionary in these words:—

"In every village wherein the chowkidar is, at the time of the passing of that Act maintained wholly or in part by an assignment of land, it shall be lawful for the Magistrate to direct that such chowkidar shall in future be paid in money in the manner, &c., &c." "and in every such case such land shall be transferred to the Zemindar, subject," &c.

This provision was radically altered as the Bill passed through the then Bengal Council, in which the Zemindars were very strongly represented, and the other parties, village communities and service holders interested in these service lands, were not represented at all. The transfer of all these lands to the Zemindars was not optional but compulsory. Section 48 of Act VI 1870 provides that in all places to which the Act is applied, "all chowkidari chakran lands before the passing of this Act assigned for the benefit of any village shall be transferred in manner, &c., to the Zemindar of the estate or tenure within which may be situate such lands." It was this necessity of putting an end to the old mode of remuneration and transferring the lands to the Zemindars which went far to induce the present Lieutenant-Governor to withhold his consent to the further operation of the Act. It should be added, that though the Zemindars were to pay half the present value of the lands, that value was to be assessed in perpetuity, and could not be enhanced as values rise.

34. His Excellency the Viceroy will see that this was a very thorny subject, but the Lieutenant-Governor is confident that His Excellency will think that the present settlement is one to which it is impossible to object on any equitable ground. Though somewhat complicated in form, it is in reality simple. The right of the Zemindar to any services which he is by custom entitled to demand from the holder of any service lands is still maintained (section 260, clause 2). But the compulsory provision requiring the transfer of the land in all cases to the Zemindar is done away with; it is permitted in all fit cases simply to retain the old and present state of things and the old mode of remunerating the watchman—a provision which is, the Lieutenant-Governor apprehends, not open to objection.

Another provision on this subject to which the representatives of the Zemindars very much object, is one in which the Government has no interest beyond the general interests of equity and justice. In case it be determined to do away with the old watchmen in any village and to substitute watchmen paid and appointed under the new provisions of the law, the Zemindars wish that the land should in all cases be made over to them by law. The Lieutenant-Governor and the Council thought that this would be in fact prejudging the relative rights of the Zemindars and the tenure-holders, and doing for the former the work of resumption which they have hitherto failed to do in the courts. It is accordingly provided that in such a case a discretion shall be allowed to the Magistrate according to the apparent equity of each case, either to make over the land to the Zemindar, subject to payment of half value and to any right or interest which the previous holder may establish, or to make it over to the present holder, similarly subject to the half value (substituted for watchman's service), and also subject to any other duties which the Zemindar is entitled to demand, and to any settlement of their respective rights which the law may warrant. The result is that the Zemindar may enforce any rights which he has by law in a regular way, but that the rights he claims are not enforced by a summary and as it were *ex-parte* law. The Magistrate may "from time to time" inquire into the letting value of the land on which the half value is to be paid, and provision is made for settling disputed questions regarding these service lands generally. Mr. Rivers Thompson, who had originally dissented from the previous arrangement, was unfortunately compelled to leave the country before the present settlement was completed, but Mr. Dampier, an equally capable Bengal officer, returned and took his place; and the present settlement was, the Lieutenant-Governor thinks he may say, heartily acquiesced in by all members of the Council, official and non-official, with the exception of certain limited reclamations on the part of the native members especially connected with Zemindar interest.

35. The Lieutenant-Governor has thought it well to take this opportunity of explaining in some detail the leading provisions of

this very important measure, passed with a singular degree of unanimity after a most thorough, sifting and exhaustive discussion in the Bengal Council. The Lieutenant-Governor feels that the Government and the country are especially indebted to the gentlemen composing the Council for the pains which they bestowed on the work. The heaviest share of the duty fell to Mr. Bernard, who prepared the Bill in the first instance, and on Mr. Beaufort, assisted by the Secretary, Mr. Cowell, who elaborated and completed it; but all the members who sat on the Committee and the Council generally had a large and active share in the reduction of the measure to its present form.

The Lieutenant-Governor is sanguine that His Excellency the Viceroy will think that the members of the Council have earnestly and honestly endeavoured to provide a code of municipal law suited to the circumstances of the country, and which, while not unduly forcing self-government and improvement, or imposing a too strictly regulated taxation, gives much scope for voluntary advance in the path of progressive self-government, and enables the inhabitants of each municipality to choose the form and the measure of taxation which each may deem most suitable to its requirements.

WHAT BATES WANTED TO KNOW.

"I shall be obliged if you can answer me one question," said my friend Bates, as he lay on the couch one day in my room nursing his aching leg. "Why does exposure to wet or cold bring on an attack of rheumatism at one time, when a like exposure for a score of times leads to no such result?"

Before I set down in writing the answer I gave him I wish you would read the following letters, as no doubt the authors of them will be interested in the same point.

"In November, 1892," says the one, "I had an attack of rheumatic fever, and was confined to my bed for four weeks, during which time I suffered fearfully. I had awful pains all over me; my joints swelled up, and I was so helpless I could not raise my hand to my mouth. After the fever left me I was extremely weak, and so emaciated I was little more than skin and bone. A large lump, the size of an egg, formed on my elbow, and my fingers were almost drawn out of joint. I cannot describe the suffering I had to bear. The doctor ordered me various medicines, and cod liver oil, but they had no effect. In February, 1893 I read in a small book about the remarkable success which had followed the use of Mother Seigel's Syrup in cases of rheumatism, and got a bottle from Messrs. Leverett and Fry, High Street. After taking it two weeks I was better, and in about a month more all rheumatic pains had left me, and I was strong and well as ever. You may publish what I have said. (Signed) John H. Keut, 9, Randall Street, Maidstone, Kent, January 30th, 1895."

"For many years," says the other, "I had been subject to liver complaint and indigestion. I was habitually heavy, weak, and weary. My appetite was poor, and all food gave me pain and fullness at the chest and around the sides. I had so much pain and tightness of the chest that I could not endure the pressure of my clothing upon it. Although not laid up, I was seldom free from pain or a sense of discomfort. In the summer of 1893 I began to suffer with rheumatism, which affected my arms and shoulders until I had not the power to lift my hand to my head. I tried all sorts of liniments, embrocations, and rubbing oils, but got no benefit from any of them."

In August, 1893, my friend, Mrs. Owen, told me how much good Mother Seigel's Syrup had done her for rheumatism, and I got a bottle from the Drug Stores in St. Ann's Road. In a few days I was much better, and in less than a month afterwards all pain had left me; and I am happy to say I have never had any return of the rheumatism since, but have enjoyed the best of health in every respect. In common thankfulness for my speedy and wonderful deliverance, I willingly consent to the publication of this hurried statement should you wish to make that use of it. (Signed) (Mrs.) L. S. Cole, 6, Albert Road, South Tottenham, London, August 16th, 1895."

Before answering the question of my friend Bates (who was a chronic rheumatic) I asked him one: "Why does a lighted match, dropped into the road, die out harmlessly, but when dropped into a hayrick, set up a conflagration?"

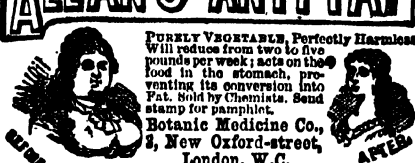

"Any fool can answer that," he said. "Because in the one case there is nothing for the fire to catch hold of, while in the other there is."

"Exactly," I responded. "Now see. Indigestion and liver complaint (the second consequent on the first) continue to produce a virulent poison in the blood called uric acid, practically insoluble in water. This acid, which is a solid, enters the tissues, and sets going a hot inflammatory fire. That is rheumatism. It does what a silver would—only the acid is a *poison* silver."

"When the indigestion and the liver trouble are not very bad, and the kidneys and sweat glands of the skin are acting fairly well, this acid is carried out of the body about as fast as it is formed. Exposure then brings on no rheumatism. But, *per contra*, when the stomach and liver are in bad condition, the acid forms faster than the kidneys and skin can carry it off. Then expose yourself, get cold or wet, hamper the skin and kidneys still more, and the poison acid spreads through your muscles and joints like the fire in the dry hay. You understand? Very well. The longer the cause persists the more frequent the rheumatic attacks. That is why chronic dyspeptics are apt also to be chronic rheumatics. Fend off dyspepsia, or cure it by the use of Mother Seigel's Syrup, and you and the rheumatism will have no dealings. Neglect it, and suffer every time you catch cold."

That was my answer to Bates, and he said there seemed to be sense in it.

ALLAN'S 'ANTI-FAT'

PURELY VEGETABLE, Perfectly Harmless.
Will reduce from two to five
pounds per week; acts on the
food in the stomach, pre-
venting its conversion into
Fat. Sold by Chemists. Send
stamp for pamphlet.
Botanic Medicine Co.,
3, New Oxford-street,
London, W.C.

Music for the Million!

BEECHAM'S MUSIC PORTFOLIO.

The cheapest collection of Music
ever issued.

The Portfolio contains 240 of the
most popular Songs and Airs of the day
divided equally into 8 volumes the price
of each of which is 3½ annas post free,
or Rs. 1-12-0 for the complete series :
this price, it should be mentioned, does
not nearly cover cost, but the Portfolio is
placed before the public at a loss as a fur-
ther advertisement, if any were needed,
of the fact that

"BEECHAM'S PILLS"

ARE

"Worth a Guinea a Box,"

The Portfolios are now ready, and, as
only a limited number will be issued, in-
tending purchasers are recommended to

APPLY AT ONCE TO

G. ATHERTON & CO.,

3, New China Bazar-street,
CALCUTTA,

Agents for **THOMAS BEECHAM, of**
St. Helens, Lancashire.

N.B.—Terms: Cash with order: quantities
of not less than one complete Portfolio, or 8
volumes per V.P.P., if desired.

TEXT BOOKS IN ENGLISH.

By SARADA PRASAD BANERJEE.

POSTSCRIPT.

After paying the expenses of the publication,
the surplus will be placed wholly at the dis-
posal of the family of the deceased man of
letters.

Orders to be made to the Business Manag-
er, "An Indian Journalist," at the Bee
Press, 1, Uckoor Dutt's Lane, Wellington
Street, Calcutta.

OPINION ON THE BOOK.

It is a most interesting record of the life of
a remarkable man.—Mr. H. B. Bingham Smith,
Private Secretary to the Viceroy, 5th October
1895.

Dr. Mookerjee was a famous letter-writer,
and there is a breezy freshness and originality
about his correspondence which make it
very interesting reading.—Sir Alfred W. Corft,
K.C.I.E., Director of Public Instruction, Bengal,
26th September, 1895.

It is not that amid the pressure of harassing
official duties an English Civilian can find
either time or opportunity to pay so graceful
a tribute to the memory of a native personality
as F. H. Skrine has done in his biography of
the late Dr. Sambhu Chunder Mookerjee, the
well-known Bengal journalist (Calcutta :
Thacker, Spink and Co.); nor are there many
who are more worthy of being thus honoured
than the late Editor of *Reis and Rayyet*.

We may at any rate cordially agree with Mr.
Skrine that the story of Mookerjee's life, with
all its lights and shadows, is pregnant with
lessons for those who desire to know the real
India.

No weekly paper, Mr. Skrine tells us, not
even the *Hindu Patriot*, in its palmiest days
under Kripindas Pal, enjoyed a degree of in-
fluence in any way approaching that which was
soon attained by *Reis and Rayyet*.

A man of large heart and great qualiti-
es, his death from pneumonia in the early
spring in the last year was a distinct and
heavy loss to Indian journalism, and it was
an admirable idea on Mr. Skrine's part to put
his Life and Letters upon record.—*The Times*
of India, (Bombay) September 30, 1895.

It is rarely that the life of an Indian jour-
nalist becomes worthy of publication; it is more
rarely still that such a life comes to be written
by an Anglo-Indian and a member of the
Indian Civil Service. But, it has come to
pass that in the land of the Bengali Babus,
the life of at least one man among Indian
journalists has been considered worthy of
being written by an Englishman.—*The*
Madras Standard, (Madras) September 30,
1895.

The late Editor of *Reis and Rayyet* was a
profund student and an accomplished writer,
who has left his mark on Indian journalism.
In that he has found a Civilian like Mr.
Skrine to record the story of his life he is
more fortunate than the great Kistodas Pal
himself.—*The Tribune*, (Lahore) October 2,
1895.

For much of the biographical matter that
issues so freely from the press an apology is
needed. Had no biography of Dr. Mookerjee,
the Editor of *Reis and Rayyet*, appeared, an
explanation would have been looked for. A man
of his remarkable personality, who was easily
first among native Indian journalists, and in
many respects occupied a higher plane than
they did, and looked at public affairs from a
different point of view from theirs, could not
be suffered to sink into oblivion without some

attempt to perpetuate his memory by the usual expedient of a "life." The difficulties common to all biographers have in this case been increased by special circumstances, not the least of which is that the author belongs to a different race from the subject. It is true that among Englishmen there were many admirers of the learned Doctor, and that he on his side understood the English character as few foreigners understand it. But in spite of this and his remarkable assimilation of English modes of thought and expression, Dr. Mookerjee remained to the last a Brahmin of the Brahmins—a conservation of the best of his inheritance that wins nothing but respect and approval. In consequence of this, his ideal biographer would have been one of his own disciples, with the same inherited sympathies, and trained like him in Western learning. If Bengal had produced such another man as Dr. Mookerjee, it was he who should have written his life.

The biography is warmly appreciative without being needlessly laudatory; it gives on the whole a complete picture of the man; and in the book there is not a dull page.

A few of the letters addressed to Dr. Mookerjee are of such minor importance that they might have been omitted with advantage, but not a word of his own letters could have been spared. To say that he writes plain English is to say what is short of the truth. His diction is easy and correct, clear and straightforward, without Oriental luxuriance or striving after effect. Perhaps he is never so charming as when he is laying down the laws of literary form to young aspirants to fame. The letter on page 285, for instance, is a delightful piece of criticism: it is delicate plum-speaking, and he accomplishes the difficult feat of telling a would-be poet that his productions are not in the smallest degree poetry, without one may conclude, either offending the youth or repressing his ardour.

For much more that is well worth reading we must refer readers to the volume itself. Intrinsically it is a book worth buying and reading.—*The Pioneer*, (Allahabad) Oct. 5, 1895.

The career of "An Indian Journalist" as described by F. H. Skrine of the Indian Civil Service is exceedingly interesting.

Mookerjee's letters are models of pure diction which is heightened by his nervous style.

The life has been told by Mr. Skrine in a very pleasant manner and which should make it popular not only with Bengalis but with all those who are able to appreciate merit unimpaired by ostentation and earnestness unspoiled by harshness.—*The Muhammadan*, (Madras) Oct. 5, 1895.

The work leaves nothing to be desired either in the way of completeness, impartiality, or lifelike portrayal of character.

Mr. Skrine deals with his interesting subject with the unflinching instinct of the biographer. Every side of Dr. Mookerjee's complex character is treated with sympathy tempered by discrimination.

Mr. Skrine's narrative certainly impresses one with the individuality of a remarkable man.

Mookerjee's own letters show that he had not only acquired a command of clear and flexible English but that he had also assimilated that sturdy independence of thought and character which is supposed to be a peculiar possession of natives of Great Britain. His reading and the stores of his general information appear to have been, considering his opportunities, little less than marvellous.

One of the first to express his condolence with the family of the deceased writer was the present Viceroy, Lord Elgin. Mookerjee appears to have won the affection not only of the dignitaries with whom he came in contact, but also of those in low estate.

The impression left upon the mind upon laying down the book is that of a good and able man whose career has been graphically portrayed.—*The Englishman*, (Calcutta) October 15, 1895.

The career of an eminent Bengali editor, who died in 1894, throws a curious light upon the race elements and hereditary influences which affect the criticisms of Indian journalists on British rule.

The "Life and Letters of Dr. S. C. Mookerjee," a book just edited by a distinguished civilian in Calcutta, takes us behind the scenes of Indian journalism.

It is a narrative, written with insight and a

complete mastery of the facts, of how a boy youth gradually grew into one of the ablest leader-writers in Bengal, and still more fully matured into one of the fairest-minded editors that western education in India has yet produced. If the training and experience which develop the journalist in England are sometimes varied, they seem in India to have an even wider range.

But the object of this notice is to show how a great Bengali journalist is made; space forbids us to enter up in his actual performances. They will be found set forth at sufficient length, and with much felicity of expression, in Mr. Skrine's admirable monograph. It is characteristic of the noble service to which Mr. Skrine belongs, that such a book should have issued from its ranks. Dr. Mookerjee was no optimist. One of his brilliant speeches contained the following sentence:—"India has neither the soil nor the elasticity enjoyed by young and vigorous communities, but presents the arid rocks and deserts of an effete civilization, hardly stirred to a semblance of life by a foreign occupation dozing over its easily-gained advantages." This was true of the pre-Mutiny India of 1851. If it is no longer true of the Queen's India of 1895, we owe it to no small measure to Indian journalists like Dr. Mookerjee who have laboured, and some misrepresentation, to quicken the "semblance of life" into a living reality.—*The Times*, (London) October 14, 1895.

"IMPROVED UNDAUNTED"

WATCH. Rs. 7.

Guaranteed three Years.

Strong, accurate, pretty, small, open-faced, nickel-silver, keyless, short winding, patent, "NEW STYLE IMPROVED UNDAUNTED" watch, with mind setting mechanism, second hand, for Doctors, ornamental hold dial, for Rs. 7 V. P. P. with an extra glass, spring, pretty box and full three years' guarantee. Warranted to stand the toughest use. Runs more than 28 hours with one winding. Will last a life time. Easily repairable. Others sell at double our rates. One watch free for the purchase of 8 at a time. Mr. Jno. Dickson of Hospital Railway, from Ceylon says:—"It keeps splendid time and never stopped although it sustained hard knocks and jerks." Dr. H. Moore of Royal Artillery from Poona says:—"I sold it for Rs. 16. x Pte. W. Hopkins of Sussex Regt. from Dumbarton says:—"I have sold it for Rs. 20. x Mr. T. B. Scott of Patna Opium Department says:—"The watch you sent me some seven years ago is still keeping very good time."

Jewelled Ring Rs. 1-8-0. Real

Silver Watch Rs. 13. Real

Solid Gold Watch Rs. 24.

Pretty electro cased gold chain Rs. 1-8-0. Fashionable electro cased Gold Ring set with scientific diamonds, Rubies, Emeralds, at Rs. 1-8-0. Mr. G. Smith, Salt Inspector from Saikutta, says:—"A German valued the diamond ring at Rs. 50 and ruby at Rs. 30." Key winding, Government stamped, solid silver hunting case, Royal watch with extras and full three years' guarantee, for Rs. 13. Pte. G. Hawkes of 2nd York Light Infantry from Pundhar says:—"For the first one I got Rs. 25; the second one I sold to a Sergeant for Rs. 28. x Pte. H. C. Bishop of L. F. L. Regt. from Kemptee says:—"A Corporal offered Rs. 30 for the very same watch. Gentlemen's open faced, keyless real solid gold watch Rs. 30; ladies' Rs. 24; both with extras and guaranteed for 3 years. Mind they are guaranteed to be of real solid gold. No agents kept, all goods sent only by us from Bombay per V. P. P.

SPECIFICS

for all ordinary diseases, like Fever, Cough, Asthma, Pthisis, Diabetes, &c., including diseases brought on by irregularities of kinds, Catalogues, containing full accounts of diseases and remedies, are transmitted on application. Prescriptions, with or without medicines, sent to every part of India and Ceylon, Cape Colony, and the British Isles, on receipt (by post) of full accounts of diseases.

Thousands of unsolicited Testimonials from every quarter.

CATARRH,

Hay Fever, Catarrhal Deafness.

A NEW HOME TREATMENT.

Sufferers are not generally aware that these diseases are contagious, or that they are due to the presence of living parasites in the lining membrane of the nose and eustachian tubes. Microscopic research, however, has proved this to be a fact, and the result is that a simple remedy has been formulated whereby these distressing diseases are rapidly and permanently cured by a few simple applications made at home by the patient once in two weeks. A pamphlet explaining this new treatment is sent on receipt of 2½d stamp by A. HUTTON DIXON, 43 & 45 East Bloor St. TORONTO, Canada. *Scientific American*.

VOL. XV.

CALCUTTA, SATURDAY, JULY 11, 1896.

WHOLE NO. 733.

THE KING'S HUNT IS UP.

[The following song is given by Mr. Collier in his "Extracts from the Registers of the Stationers' Company." It is supposed to be the production of a writer called Gray, who was held in good estimation by Henry VIII. and the Protector Somerset, "for making certain merry ballads."]

THE hunt is up, the hunt is up,
And it is well nigh daye,
And Harry our king is gone hunting,
To bring his deere to baye.

The east is bright with morning light,
And darkness it is fled ;
And the merie horne wakes up the morne
To leave his idle bed.

Beholde the skyes with golden dyes
Are glowing all around ;
The grasse is greene, and so are the treene,
All laughing at the sound.

The horses snort to be at the sport,
The dogges are running free ;
The wooddes rejoyce at the merry noise
Of hey tantara tee ree.

The sunne is glad to see us clad
All in our lustie greene,
And smiles in the skye as he riseth hye,
To see and to be seene.

Awake all men, I say agen,
Be merie as you maye,
For Harry our king is gone hunting,
To bring his deere to baye.

ONE TOUCH OF PIGSKIN.

It has been said, and we're prepared the statement to support,
That racing is essentially a democratic sport.
Though Prince, or Peer, or commoner its chief rewards may win,
One touch of pigskin, as it were, makes all the country kin !

And this, no doubt, is why it is the land has lately seen
A loyal outburst so widespread, so genuine, so keen !
The people love to see their Prince come down its sports to share,
And loud his victory acclaim because the fight was fair.
They know 'twas honestly fought out, clear in the light of day,
Fought without feint or falsehood in the good old English way ;
They know that 'twas not money-bags that triumphed in this case—
The Prince himself had bred the horse which won the classic race.
When, then, 'tis said his victory has stronger made the throne,
Right gladly we endorse that view, for 'tis, in fact, our own.
We, too, believe those hearty cheers that rose from British throats,
Have spread a loyal impulse from Land's End to John o'Groats.

For what is it the nation finds ? It finds a Prince content
To occupy himself in ways no censor need resent.
He does not, like that other Prince across the North Sea's waves,
Proclaim himself a demi-god and all his people slaves !
He does not clank his scabbard as he rushes through the land ;
He does not arrogantly scold or rudely reprimand :
He does not cram down people's throats opinions they abhor,
Or stir the army's passions up with whirling words of war !
No, his is that far safer rôle which finds its work each day
In tasks of well-arranged routine and innocent display ;
He, happily, is quite content, discreetly debonair,
The English people's hopes and aims and favoured sports to share.
And that's the reason, we repeat, we have not far to seek
Why all those hats went in the air on Epsom Downs last week ;
The people cheered, as only those in our free England can,
Because their Prince has proved himself so true an Englishman !
—Truth.

WEEKLYANA.

THE discovery, by Dr. Röntgen, of unknown rays penetrating through opaque substances has been followed by another triumph of photography. Thought-reader must now give way to thought-photographer. In a communication to the Paris Académie de Médecine, Dr. Baraduc affirms that he has succeeded in photographing thought. The process is simple. The person whose working of the brain is to be reproduced enters a dark room, places his hand on a photographic plate, and thinks intently of the object of his thought. It must, however, be stated that most of the photographs taken are very cloudy, a few giving the distinct features of persons and the outlines of things. Dr. Baraduc is confident to produce, at no distant date, a photographic image at a great distance. As an earnest of the extent of the marvel he expects to accomplish, it is related that Dr. Istrate, when going to Campana, declared he would appear on a photographic plate of his friend, M. Hasden, at Bucharest. On August 4, 1893, M. Hasden at Bucharest went to bed with a photographic plate at his feet and another at his head. Dr. Istrate went to sleep at Campana, at a distance of 300 kilomètres from Bucharest, but before closing his eyes he willed with all his might that his image should appear on the photographic plate of his friend. And so it appeared. To outsiders, the plate shews a kind of luminous spot and in its midst a trace of the profile of a man.

THEY are determined to find out the missing link between man and his progenitors of the forest. It is about two years that Dr. Eugène Dubois, a surgeon in the Dutch army in Java, while stationed in that island, found separately, embedded in a volcanic tufa, covered by a thick deposit of river sand, at a depth of about fifteen yards, a skull, two teeth and a thigh bone. After an examination of these fossils, dark in colour, thoroughly petrified, and embedded in a matrix so solid as to be removed with difficulty, he believed that they formed parts of a form intermediate between man and the higher apes, which he named *Pithecanthropus erectus*. Brought over

Subscribers in the country are requested to remit by postal money orders, if possible, as the safest and most convenient medium, particularly as it ensures acknowledgment through the Department. No other receipt will be given, any other being unnecessary and likely to cause confusion.

to Holland, they were examined at Leyden by Professor Virchow, Sir W. H. Fowler, Sir W. Turner, Professor O. C. Marsh and other men of science during the meeting of the International Congress of Zoologists in September last. It is reported that, according to Professor Marsh,

"There cannot be any doubt that the discovery is a real one. The antiquity of the specimens is unquestionable. The deposit has yielded other fossils, which indicate that it was formed in the Pliocene Period—perhaps about the age of the Siwalik beds in India—in which, at present, no human remains have been found. To this period belong the so-called 'Craggs' of our Eastern Counties. The skull is imperfect, the upper portion alone being preserved. In general character it resembles that of the chimpanzee, and still more that of the gibbon. It is distinguished from the skull of the gorilla by the absence of cranial ridges, and from that of the orang-utan by its more elliptical form—in scientific terminology, it is dolichocephalic, while the other is brachycephalic. The diverging roots of the teeth give them a simian aspect, but the crowns are less rugose than in existing anthropoid apes. The femur (a left one) is so like a human femur that the two could only be distinguished by a careful comparison. But the skull also differs materially from that of man. The result of the careful study which has been bestowed on the fragments of *Pithecanthropus* is summed up by the latest investigator substantially in these words—that the various specimens apparently belonged to one individual, that the creature was of the Pliocene age, that it was not human, but represented a form intermediate between man and the higher apes, and that its discovery is an event of the first importance to the scientific world."

AT Christie's, on June 13, eighty-two drawings and pictures belonging to the late Sir Julian Goldsmid, M. P., realized 67,342*l.*, or an average of over 820*l.* each. Of these, nineteen pictures fetched 54,453*l.*, namely,

PRINTING machines have been so constructed that they can print, fold, and cut off, after being folded, newspapers, and, when necessary, paste in, as they pass through the machine, supplements being inset. Many newspapers in England, Canada and Australia are printed in Messrs. R. Hoe and Co.'s stereotype web printing and folding machine. A single roll machine will print and fold 4 or 6 page papers at 24,000, and 8 or 12 page papers at 12,000 copies per hour. The largest newspaper presses, the first of their kind, have been built by Messrs. Hoe for the proprietor of the New York *World*. Each of the machines will print, paste, cut, fold, and count 96,000 eight-page papers an hour, or 1,600 a minute. A new process for producing illustrated papers by photography is announced. It dispenses with engravings and "half tone" blocks and even with typography. An exhibition of the process was made at the Royal Society's reception at Burlington House in May last. An account says:—

"Reels of sensitised paper rush through machinery which may be compared in principle with the modern rotary web presses. The place of typographic cylinders is taken by cylinders of transparent 'negative,' illuminated from the inside, which 'print' the sensitised paper with

great rapidity as it passes round them. Thence the web passes through 'developing' and 'fixing' baths, and finally emerges in cut sheets ready for binding. The letterpress is even 'set up' photographically by a kind of type-setting machine so as to produce a negative of each line automatically. It is said that a popular illustrated monthly will, in all probability, be produced by this method before long."

THE first day's sale of the new half penny morning London paper, the *Daily Mail*, amounted to 397,000 copies. It is said that the proprietor, Mr. Harmsworth, spent more than £2,000 in producing trial numbers of the journal, hundreds of thousands of copies having been printed for the purpose of testing the power, speed, and accuracy of the machines. No fewer than 13 Hoe and Foster rotary machines were at work producing the journal from 2 o'clock in the morning until late in the afternoon, which is claimed as a larger number than has ever been employed on any morning paper in the United Kingdom. It is also said that, as a printed product, the first number was free from fault, and it was out in time for the trains.

...

Lloyd's Weekly Newspaper has attained the million circulation.

...

JAPAN is described as a country of the little. The men measure no more than 5ft. 5in., while the women are still smaller. "Japanese trees are dwarfed, and, in fact, all Nature seems to be made in miniature. The chickens are all bantams, and the cats, with their bobtails, look like kittens, while the horses are mere ponies. The houses of the poorer people have but one storey, and the rooms look like those of dolls' houses. The country, though big enough, is pretty rather than grand and you have beautiful bits rather than sublime landscape. It is the same with everything."

"Another striking disillusion is to find the entire absence of colour or architecture, which one associates with the 'far East.' Houses are only built one storey high. This is owing to earthquakes. The average duration of a house in Japan is seven years. No houses are painted. Street after street for miles nothing is found but low, unpainted houses. The effect is not only disappointing but monotonous to a degree of depression. The cities look like busy overgrown villages, without beginning or end. There are no sidewalks and but few horse vehicles. Beautiful colour and architecture do exist, but are the curiosities of the country."

Yet, there is not another country which in modern times made such rapid and remarkable progress as Japan. It beat China in war, and proved itself a Power to be reckoned with by the Powers of the West. Let us now turn from the little Jap the giant-killer to the giant of the far East. Hear what the author, of "'Ti-Ping-Tien-Kwoh,' the History of the Ti-Ping Revolution" writes in his "A Cruise in Chinese Waters":—

"I felt bitterly enough to think that I had given up so much in order to lay my bones in China—that distant, out-of-the-way, outlandish, barbarian country: that remote empire where the compass points south instead of north; where men wear petticoats and women wear trousers; where they shave the head instead of the chin; where pockets are worn outside instead of inside the dress; where bed rooms are on the ground floor instead of up-stairs; where shoes, umbrellas, and lanterns are made of paper; where wooden anchors are used for ships, which are built with square instead of pointed bows; where etiquette commands people to put on the hat instead of take it off; where they write with a paint-brush instead of a pen; where they pray to devils much more earnestly than to gods; where rank and title, instead of being hereditary, is retrospective, and ascends to a man's great-grand-mother, &c., instead of descending to his successors; and where, in fact, not to write a volume of the contrariness and difference to European taste and custom, everything is grotesque, upside down and entirely opposed to Western civilization."

...

IN 1893, a Reading barber obtained £400 damages against the proprietors of the *Hairdressers' Journal* for a libel. Since then the journal published articles imputing that the statement made in the trial were false, and that if the defendants had been allowed to defend the action the result would have been different. This was resented by the barber as a second libel and he recovered another £100 damages from the same defendants.

DEAFNESS COMPLETELY CURED! Any person suffering from Deafness, Noises in the Head, &c., may learn of a new, simple treatment, which is proving very successful in completely curing cases of all kinds. Full particulars, including many unsolicited testimonials and newspaper press notices, will be sent post free on application. The system is, without doubt, the most successful ever brought before the public. Address, Aural Specialist, Albany Buildings, 39, Victoria Street, Westminster, London, S. W.

WE reproduce the despatch of the Secretary of State to the Government of India, regarding the appointment of the Additional Judge to the Madras High Court:—

"I have received the letter of your Government, dated 8th January last, in which the state of the files in the High Court of Madras was discussed. One of the remedies proposed was the enhancement of the pecuniary limit of the City Courts jurisdiction from Rs. 2,500 to Rs. 5,000, but your Excellency in Council has accepted the view of the Madras Government, that this would not afford adequate relief, and that an additional Judge is required to enable the High Court to clear off the accumulated arrears. For this purpose such a Judge will be wanted in the opinion of your Government, as well as the Governor in Council for not less than three years, but your recommendation is that one should be appointed substantively by letters patent on the understanding that he will be absorbed on the next vacancy if the state of the files then admit such a reduction. Having given the matter my best attention in Council, I accept your conclusion that a court consisting of the Chief Justice and only four Puisne Judges cannot be expected to dispose of the arrears, and at the same time cope with current business. I also agree that the suggested enlargement of the City Courts jurisdiction would not meet the immediate requirements of the case. The appointment of an additional Judge is the only alternative, and having regard to the considerable period for which his services will be needed and the impossibility of making a temporary appointment by letters patent, I have come to the same conclusion as your Excellency in Council, namely, that the appointment should be made substantively. The constitution of the Court requires that two of its members shall be barristers while two must belong to the Civil Service of India. I hesitate, therefore, to accept your assurance that the additional Judge, whether barrister or civilian, will be absorbed within three years, but I am nevertheless prepared to sanction the appointment on condition that no officiating appointment is to be made without reference to me, except in case of a second Judge taking leave when one Judge is already absent. It will facilitate the disposal of any such reference if a table showing the state of the files both of the High Court and the City Court at the end of each calendar year is transmitted to this office with any explanation necessary for its elucidation as soon after the close of the year as is practicable.

As regards the City Court, I observe that the majority of the High Court Judges, including the Chief Justice, are in favour of its jurisdiction being enlarged, and this was also the opinion expressed by Lord Cross in his despatch of the 7th January 1892, and reiterated in his telegram of the 23rd February 1892. The City Court has now been working for more than three years, and I understand it has proved a success, and is popular with the classes of litigants for whose benefit it was established. I cannot think the proposed extension of its jurisdiction would seriously prejudice the efficiency of the local Bar. All the more important litigation of the presidency town will continue to come to the High Court as heretofore. I therefore request that when an opportunity offers itself, such as the case of the Act of 1892 coming up for amendment in other particulars, it may be taken, unless your Excellency in Council sees any strong reason to the contrary, to give effect also to the proposal to raise the jurisdiction to Rs. 5,000."

NOTES & LEADERETTES,

OUR OWN NEWS

&

THE WEEK'S TELEGRAMS IN BRIEF, WITH OCCASIONAL COMMENTS.

THE *Times* strongly appeals to the Government to disregard the argument of its clerks and accountants and reconsider the Suakin decision. Victory by a reduced majority, it says, is sometimes more damaging than defeat and the timely withdrawal from the position taken up would strengthen instead of straining the allegiance of its supporters. The *Times* urges the necessity of defining the Imperial obligations of India.

THAT and all other protests, from all quarters, in India and England, have gone for nought. Reuter tells us it is decided; Egypt fights and India pays. Perhaps, it is wise,—it is well, but not the less a pain; India has no further claim on Old England's justice, India's is the victim, and would be again; her eyeballs burn and thro', but have no tears.

Mr. John Morley's amendment, of which he gave notice on 19th May, that it was not expedient to charge India with any portion of the expenses of the Suakin expedition, was rejected by the House of Commons by 275 against 190 votes. Lord G. Hamilton, in moving his resolution reiterated the arguments used in his despatch of 30th June.

Mr. Morley, in moving its rejection, ridiculed the idea that the presence of the Mahdi at Khartoum endangered the safety of the Suez Canal, and said the adoption of the resolution would cause

discontent, and especially when the Indians saw the case against Her Majesty's Government enunciated in the Viceroy's masterly despatch.

Mr. Maclean seconded Mr. Morley's amendment.

Mr. Baunagri said the charge was unjust, and if adopted would cause discontent which would be impossible to gauge in London. India, he added, had not the remotest interest in Egypt.

Sir A. Scoble and Sir W. Wedderburn both spoke similarly.

Sir Michael Hicks Beach said that what was now proposed by the Government was no more than what was proposed in 1885, but was coupled with a statement of future policy more favourable to India than was ever before made. India, he said, maintained that Egyptian affairs were rather of Imperial than of Indian interest, and he never knew a responsible statesman advance a narrower view. The majority of the Council of the Secretary of State, who were equally entitled with the Government of India to decide such a question, held that but for the Indian Empire England would have no interest in Egypt, and it was therefore just that India should share in the cost of defending that interest.

Although Mr. Morley's amendment was rejected by a majority of eighty-five votes, Lord George Hamilton's resolution was carried by a majority of 146 votes, 252 members having voted in favour, and 106 against it. Twenty-one Unionists, including Messrs. Bowles, Bartley and Gibbs, and leading members connected with India voted with the minority, and five abstained from voting. The entire press except the *Standard* condemns the policy of Government as mean and paltry. The Opposition is exultant at the diminution of the Government majority.

SEVEN members of the India Council were in favour of charging India with the cost of the Suakin Expedition, and four against it, namely, Sir Donald Stewart, Sir James Peile, and Messrs. Robert Hardie and LeMarchant.

IN the House of Commons, on July 6, the Hon. Mr. Brodrick, replying to a question, said that no British Regiment had been ordered to advance to Dongola, but the British Garrison in Egypt was available if the Sirdar requires it. Mr. Balfour, in reply to a question, said that Great Britain was lending some Staff Officers to Egypt free of charge, and was also bearing the cost of the transfer of British to Cairo.

LOBENGULA'S son, Nyamanda, who is an active promoter of the present rebellion, has been chosen King of Matabeleland. Colonel Plumer's column attacked the Matabeles on Sunday last, and after seven hours' fighting expelled them from their position, inflicting a loss of 100 killed, and capturing 3,000 cattle and sheep. The loss on the British side was 23 killed and wounded. The British were at first repulsed, but finally drove the enemy out. The column is returning to Bulawayo. The Friendlies at Bulawayo are becoming restless, and it is greatly feared that they will become disaffected. Numbers of white settlers are quitting Matabeleland, deeming the prospects of a livelihood there poor.

SIR Hercules Robinson has been raised to the Peerage.

DURING the discussion in the House of Commons of the Foreign Office estimates, a debate took place on Crete, in course of which the Hon. Mr. Curzon said: "Neither the Christians nor the Mussalmans in Crete were like lambs, but both suffered from bad Government." Great Britain, he said, had acted in complete concert with the Powers and no British isolated action was intended in that quarter. He also informed the House that the Porte had agreed unconditionally to all the points pressed by the Ambassadors of the Powers. The vigorous action taken by the Foreign Consuls is tending to produce virtual peace in the island.

THE Czar, having recovered from his attack of jaundice, made a State entry, on July 4, into St. Petersburg. The ceremony was very brief and shorn of brilliancy.

A STRONG movement among the Silverites is going on at Chicago in favour of the nomination of Senator Teller, who secured the Republican convention which adopted the gold platform. It is believed

that the dark horse may win. The Goldites maintain their reserve, hoping to gain something from the chaotic condition of the parties. The Chicago Democratic Convention opened on July 7. Mr. Daniels, Silverite nominee, was elected temporary president of the Convention by a majority of 200 over Mr. Hill, Goldite candidate. The platform adopted demands the free and unlimited coinage of silver in the ratio of sixteen to one, and condemns the revival of the McKinley Tariff. The planks regarding the Cuba and Monroe doctrine are not settled.

TWENTY-SIX cases of cholera and nine deaths occurred among the Egyptian troops at Wady Halfa on July 5. Three men of the North Staffords have died, one at Wady Halfa and two in the sanatorium camp at Gemai. The disease has also broken out among the Egyptian troops at Assouan and Korosko. Up to the present five deaths from cholera have occurred among British troops on the Nile. The general health of the troops is excellent.

AN alliance of the Balkan States comprising Servia, Bulgaria and Montenegro has been agreed upon.

THE Berlin press, in bidding farewell to Li-Hung-Chang, are markedly cool, and express disappointment at the absence of any orders on behalf of his Government.

The French Chamber of Deputies has rejected the Income Tax Bill of M. Doumer, Minister of Finance, by a majority of twenty-nine. The Government made the matter a question of confidence.

COL. R. S. S. Boden-Powell, in command of the native levy in the last Ashanti war, in his "Downfall of Prempeh," describes the expedition "a smile and a stick."

THE Government enquiry into the charges of corruption and bribery against a Bengal Deputy Magistrate has resulted in a conviction of the innocence of the Baboo. Good. The service should, however, be above suspicion.

MR. Ebenezer Johnstone Barton, M.A., who came out to India in 1860 as a Bengal Civil Servant and retired in August 1887, is dead. By his will he has left £300 for the school at Jessore where he was Magistrate and Collector. Such legacies are a bond of union between the governors and the governed.

DR. K. N. Bahadurji, the chief native private practitioner, both as regards ability and the extent of practice, in Bombay, devoting himself to Indian Medical reform, is for some time trying his best, as the first instalment of that reform, for the separation of the civil branch of the Indian Medical service from the military. With that view he addressed a meeting in Calcutta, and at a public meeting held in Bombay in April last, he was elected to give evidence before the Royal Commission on Indian Expenditure and to place the matter before the British public. Dr. Bahadurji left immediately for England. A letter enclosing copies of the resolutions passed at the Bombay meeting having been forwarded by the Chairman, the Hon'ble Pherozeshah M. Mehta, to Lord Welby, President of the Royal Commission, the Commissioners have requested Dr. Bahadurji "to favour them with a memorandum summarising the evidence which he would propose to put before them, in order that they may be able to judge whether it will be necessary to trouble him to appear personally before them." The subject for investigation by the Commission is a purely financial one, namely, "the administration and management of the civil and military expenditure incurred under the authority of the Secretary of State in Council or of the Government of India," and the Commissioners are doubtful whether the object of Dr. Bahadurji's visit to England fell within the scope of the enquiry. We are sure that, having gone to that extent, the Indian delegate will be able to shew that he is for reform as also for curtailment of expenditure.

LADY Burton, widow of Sir Richard Burton, dying on March 22, left personal estate of the value of 11,766*l*. She made a will bearing date Dec. 28, 1895, leaving various bequests to relatives and ap-

pointing Mr. W. A. Coote, of the National Vigilance Society, and two other persons her literary trustees. They were to publish her autobiography upon which she had been engaged and to continue the publication of her husband's works and not to issue or allow to be issued one coarse or indecent word in connection with her late husband's works. Her executors were further desired, to carry on, at the cost of her estate, any proceedings which might be taken at the instance of the Crown, or the police, or the National Vigilance Society, or, these failing, of the executors themselves, against any person printing or publishing anything objectionable in connection with the works of Sir Richard Burton. As the romantic wife of a romantic husband, she desired that after her doctor had pierced her heart with a needle, a *post mortem* examination should be made and that she should be embalmed in order that her body might be kept above ground by the side of her husband in the mausoleum tent at Mantlake. She also directed that she had bought adjoining the tent a vault for four bodies, and that two places were to be reserved in order that if a revolution should occur in England that arrived at the desecration of the dead, the coffins of herself and her husband might be lowered into the vault.

THE doctrine of *sub judice*, held in such reverence and horror, instead of being an aid, is an obstruction to justice. It excludes information and discussion which may materially assist an enquiry. It is not always possible for parties in a case to hunt up all available evidence. If, therefore, it be the object to arrive at the truth, it is folly to shut out outside criticism. A tolerant interpretation of the doctrine was given in the recent Muswell Hill murder trial. On an application for a rule calling upon the printers and publishers of the *Daily Mail* and the *Sketch* to shew cause, why, for having published a paragraph commenting on the pending trial, they should not be committed for contempt of court, the Lord Chief Justice of England refused it on the grounds that to discuss the paragraph in court would be to increase its prejudicial effect, and that there was no ground for imputing any malice to the writers, or for supposing that they had the least intention to prejudice the fair trial of the defendants. He, however, was not entirely free from the prejudice of the doctrine, and accompanied his refusal with the intimation to those charged with providing news for the benefit of the nation, that it was their duty as well to give no currency to statements and comments which might be prejudicial to any person awaiting trial, or in regard to any matter which might be awaiting adjudication in a court, whether civil or criminal. He further gave the warning that any attempt on the part of any journalist to infringe that rule would be promptly visited with punishment. We may add that the very large powers which the courts claim, ought to be a safeguard against their free and constant exercise so long as the doctrine is not knocked on the head.

THE Judges of the High Courts in India are not decked in wigs and the native Judges of the Bengal High Court have for sometime done away with the dignified turband. The Vakils too find it an inconvenience if not a disgrace to carry the *shamla* on their head when addressing the Court. Most of them cut their hair small and cover only half their head. This too interferes with the free flow of argument. The Vakils' Association, therefore, opened the current official year with an application to the Judges for permission to wear stuff gowns and to discard the *pagri*.

A GENTLEMAN thief, a Chakravarti, was sentenced, on Wednesday, by a Bench of Honorary Magistrates, in the Calcutta Police Court, to one year's rigorous imprisonment. He was caught while he had just extracted a silver watch with gold chain from the breast pocket of another gentleman, a Banerjee, in the Court of the first Judge of the Small Cause Court. The respectable pick-pockets are on the increase. They are a pest to society and deserve to be severely punished. At a preliminary marriage feast in a native house, at the last marriage season, a doctor was relieved of his watch and chain by this gang. They equally made themselves free with the gold watch and chain of an editor at a prize distribution in one of the educational institutions presided over by the Lieutenant-Governor. The Police seems powerless to put them down. An occasional detection or punishment cannot extinguish the species. At a marriage party, three of these were subjected to the punishment reserved for thieves by society, on their being detected, not in the commission of any offence but as of the notorious band.

A EUROPEAN Salvationist, William Brodie, charged with the murder of a native at a village in the Ahmednagar district, and found guilty of culpable homicide not amounting to murder, has been sentenced by the Bombay High Court sessions to seven years' imprisonment.

A SELF-STYLED saviour, a Mahomedan, calling himself Atwaddhar Paramahansa, much greater than the divine Rinkristo, after creating a stir at Howrah, Santragachi and Calcutta, and making many followers, has made himself scarce. We read in the papers of the establishment, in Calcutta, from the commencement of this month, of an educational institution bearing his name. It seems he is not to be forgotten though he has left under a cloud, and is to be forgiven for the outrages committed under the cloak of religion. The Mahomedan Paramhansa prescribed not only for salvation of souls and cure of bodies but possessed more than divine power. There appeared an *avatar* in Nadia to bring back the dead. In the same district, there is a dual divinity, the very sight of which in the Bengali month of Jeyt secures a Hindu wife immunity from widowhood. The run-away Swami professed the power to prolong human life.

ANOTHER *Bhagawan*, an incarnation of the deity, with 15 followers, has been lodged in jail for preaching sedition. Last year, in a small hamlet, named Chalkad, in Thana Tamar, some 50 miles from Rauchi and close to the border of Singhbhum, one Birsa Mandul, a young man of the cultivator class and a resident of Chalkad, assumed the god and proclaimed to the people that his mission was to deliver them from all woes and to establish his own Raj to the supersession of the British. Every day he would climb the roof of his house, and from that eminence, after beating a pair of cymbals, call out: "I am the earth and your father. There will be showers of fire and rain except within the limits of these two rivers, where people may be saved. Those who do not come within will not be saved; my Raj has commenced and that of the Sircar is at end. If the Government will oppose me their guns will turn to wood, and their powder to water. No one is now to obey the Government, but all must obey me. No one is to pay rent to any one but to me, to have their lands rent-free." He gained a number of followers. The Deputy Commissioner of Lohardagga would not tolerate the nonsense. He held a trial and for inciting rebellion sentenced Birsa and 15 of his men to terms of imprisonment varying from two to two and-a-half-years and fines of Rs. 20 and Rs. 50. The Judicial Commissioner of Chota-Nagpur upheld the conviction and sentence, and when there was an application to the High Court for admission of an appeal, Justices O'Kinealy and Banerji refused it. Birsa was more a political agitator than a religious teacher. There is a feeling that he ought to have been put under a Lunacy doctor before being placed under trial or the sentence on him being finally confirmed. The order being passed, let us hope he was as cool as his Judges and that he deserved his fate.

THE Veiled Prophet of Nadia, whose doings we chronicled in our issue of the 22nd February last, is still the observed of all observers.

WE read in the *Army and Navy Gazette* :—

"The illustrated weekly papers furnished by admirable artists like Melton Prior, Sidney P. Hall, C. E. Fripp, Montbard F. Dadd, &c., on the spot with sketches which convey with a force and precision which the descriptive efforts of the best writers cannot possess, the actualities of the events on which the public interest is engaged, deserve great credit for their enterprise, and the public in general take little thought of the trouble and difficulties which the artists encounter in their mission any more than they care about the expenditure which is needed in connection with them; but we confess that we are a little tired of 'Buluwayo' and its heroes and such incidents as 'five scouts clearing out twenty-three natives,' which seems to be shooting them down in a river with perfect impunity like so many cattle. So they may be, but the feats of the butcher are not subjects for an artist's pencil. In contrast to such an exhibition of a human battue, we have 'The Married Ladies' Quarters' in Buluwayo and a drawing of 'The Crow's Nest' in that famous capital, which represents a crowd of women and men with glasses, as if they were on the grand stand at a race meeting. *Basta!* And so of kraal burning and impi hunting. Let the Matabele be overcome, but save some of them to work for you."

Butchery and extirpation of natives seem to be parts of colonizing and empire-founding. It is bad enough to publish overdrawn pictures of barbarous cruelty to inflame and excite vengeance. It is worse to

paint in glowing colours the savagery of civilization—killing men like cattle, unless such scenes are intended to shew up the barbarity, which, in the present instance, they seem not to be. The *Gazette's* gentle protest, though indicating a proper attitude of mind, is not a sufficient condemnation of the vicious taste pandering to depraved feelings.

MR. F. W. Maclean, Queen's Councillor and a Master in Lunacy, has been appointed to succeed Sir Comer Petheram as Chief Justice of the Bengal High Court.

THE three Mahomedans found guilty, last week, at the criminal sessions, of kidnapping a Hindu girl wife and of abetment of the same offence, were sentenced, on Monday, to six months' imprisonment each. The Chief Justice thought there were extenuating circumstances to make the punishment light. The trial of Dwarkanath Gupta on the prosecution of Messrs. Ralli Brothers on charges of abetment of forgery, abetment of dishonestly using as genuine forged documents, and for cheating and thereby dishonestly inducing delivery of property, lasted for full three days. Mr. Dunne, Officiating Standing Counsel, and Mr. J. G. Woodroffe prosecuted and Mr. Allen and Mr. Knight defended the prisoner. Along with Dwarkanath, his son, Susil Chunder, was committed for the same offences, the counts numbering 14. On the application of Mr. Jackson, Sir Comer Petheram decided to try the two prisoners separately. On Thursday, in the forenoon, the Jury, without retiring, returned a unanimous verdict of not guilty in respect of the two counts on which only evidence had been given. Mr. Moumohun Ghose was counsel for the son. On the discharge of the father, the prosecution offered no evidence and a formal verdict of not guilty was recorded. After lunch, the same day, the murder case was taken up. Mr. Dunne and Mr. Swinhoe represented the Crown, while Mr. Allen, Mr. Dobbin and Mr. Gregory appeared for the three prisoners, who all pleaded not guilty. Seven Europeans and two Bengalis were empanelled as special jurors. There was not a single challenge. Yesterday, on account of rheumatism, the Chief Justice was unable to attend Court, and the trial commenced *de novo* before Mr. Justice Rampini.

THE hearing of the charge of defamation against Mr. D. M. Gasper of the *Sunday Times*, arising out of the Stewart-Culloden case pending before Mr. Pearson, has been postponed to Tuesday, the 21st. The Chief Magistrate was unwilling to take it up himself until the main case had been finished. If the prosecutor objected to the delay, Mr. Pearson said, the case would be made over to the Bench. The prospect was not, evidently, agreeable, and, on consent of both parties, the order for adjournment was made.

THE numbers on relief works in the N.W. Provinces have fallen to 48,000 and the village relief works are fast closing.

LAST week, the deaths in Calcutta numbered 222 against 236 and 241 in the two previous weeks. Cholera carried away 23 and there was no death from small-pox.

REIS & RAYYET.

WATER SUPPLY IN BENGAL,

OR

THE EFFECTIVENESS OF PRIVATE LIBERALITY.

THE circular letter of the Government of Bengal to Commissioners of Divisions on the subject of water supply presents points that demand serious discussion. Mr. Secretary Risley begins by stating that, although the scarcity, induced by the continued absence of rain for three years, has to some extent been exaggerated in both official and non-official literature, yet there can be no doubt that large tracts of country may, in years of unusual drought, be in real danger of a serious and wide-spread water famine producing considerable distress and even loss of life. The Government is aware of the fact that a failure of drinking water for both men and cattle is more difficult to deal with than a failure of food-

crops. A break-down of water supply comes suddenly upon us, without, indeed, any such warning as a rise in prices in a scarcity of food-supply. There is, again, no accumulated stock of water to draw upon; nor, if there were, could water be conveyed on a large scale to the distressed area, or at a cost equal to that of the transport of food grains in a season of famine. Then, also, in an abnormally dry season, even if pure water does not fail outright, there is the certainty of people being forced to resort to polluted tanks and wells. Disease, therefore, in all its manifold shapes, is sure to break out at such times. Fully alive as the Bengal Government is to these considerations, it does not require to be told that, to initiate effective action, the question must be dealt with systematically. What is wanted, therefore, is a definite scheme for permanent results, and not a suggestion for temporary relief. Sir Alexander Mackenzie accordingly has ordered an enquiry how far municipalities and villages containing more than 100 houses possess an adequate supply of wholesome drinking water and how to meet the requirements. This is a practical commencement. The existing state of things must be definitely probed before launching into remedial measures. Sir Alexander Mackenzie does not require to be told how difficult it is to ensure correctness of work in this line. There are tanks and tanks, and wells and wells. Second-hand information should not be relied upon, nor should ignorant chowkidars and head-constables or writer-constables be told off for the duty. Statistics gathered perfunctorily are always worse than useless, being, in fact, positively mischievous.

It goes without saying that the task of giving Bengal a perennial supply of pure water is a heavy one, and that a very large expenditure will be required before even appreciable results are produced. We need not wait for statistics for coming to this conclusion. The existing sources towards that end are private liberality, loans under the Land Improvement Act, funds raised by Union Committees under section 18 of the Local Self-Government Act, and lastly the Road cess. Sir Alexander Mackenzie believes that all these sources are insufficient, taken singly or collectively. Even if the receipts from Road cess be increased by such supplemental sources of revenue as pounds, ferries, education, and medicine, the District Boards will not still be in a position to do anything for water supply. This is, no doubt, a very desponding view of the situation. We think, however, that Sir Alexander Mackenzie is not wholly right. The source of private liberality, in a country like India, is not to be despised, particularly when there are religious incentives for awakening it into commendable activity. It is admitted that in times past, land-owners of all grades were active in increasing the supply of drinking water all over the country, and that a large proportion of existing

tanks and wells is due to their munificence. The religious sentiment which inspired these works has, it is said, become weaker than it was. The forced labour also by which many of these were executed is no longer available under the altered state of things brought about by mass education on the one hand and curtailment of the powers of land-owners by the Penal Code and the Criminal Procedure Code. Then, again, more ostentatious forms of benevolence have come into fashion, seriously competing with local works of charity. We believe the Government estimate of the force of every one of these reasons is open to correction. The incentive derived from repeated injunctions of the Hindu Scriptures, though weakened by the godless education of our schools and colleges, has not been weak to the extent imagined. English education has touched as yet a very small portion of the population. There are land-owners in the mofussil, of both sexes, who still believe, as their ancestors did in their days, that of all forms of piety, the excavation of tanks and wells, and their dedication, with proper religious rites, to the use of men and beasts treading on land and of feathery creatures ranging the air, are productive of considerable merit both here and hereafter. The sentiment is not wholly dead that made Maharaja Kirti Chandra Bahadur of Burdwan pardon, and reward with re-employment, a superior official of his establishment, who had embezzled a large sum of money, upon learning that the man had spent the whole of it in excavating a large tank in his native village. The time has not come when imitators, however few, cannot be found of the grandfather of the late Babu Prankristo Chowdhury of Chandernagore,—the first patron of the Bengali poet Bhárat Chandra,—who, casually over-hearing in course of a journey the complaint of certain village matrons about the distance from which they had to fetch water for domestic purposes, dug a tank covering an area of about a hundred biggahs, in the village called Nashibpore within half a dozen miles of Serampore along the road leading to Seakhala and Pátul. The fact is, the sentiment is still in existence in the Bengali mind. Unfortunately, certain circumstances to which we shall presently refer have combined to keep it in a dormant state. Statesmanship is required to awaken it into a living force. Those circumstances have their origin in the alteration that has come over our manner of living. The citadel of conservatism has surrendered to the forces of civilisation. Tastes have been imbibed that are costly to gratify. There have been improvements in food and drink, dress and manner of locomotion, the houses we live in, and the furniture we need for comfort and luxury. A hundred years ago, the personal expenses of a millionaire in the mufussil came up to a figure so low that it would not suffice to-day for an ordinary gentleman of the middle class, not forgetting the change that the rupee itself has undergone in value. The houses that sheltered our grand-sires,—those, that is, who witnessed the political revolution in Bengal,—were for the most part of bamboo and grass. Or, if made of brick and mortar, they were so low and illventilated, with their bull's eye apertures doing duty for windows and door-frames seldom going beyond five feet six in height, that nobody would now think of willingly passing a week within them. Look at the quantity of Burma teak that is now annually consumed in the construction of houses! Look at the quantity of Sylhet

The Indian Association for the Cultivation of Science.

210, Bow-Bazar Street, Calcutta.
(Session 1896-97.)

Lecture by Babu Rajendra Nath Chatterjee, M.A., on Wednesday, the 15th Inst., at 5 P.M. *Subject*: Properties of Matter.

Lecture by Dr. Mahendra Lal Sircar, Friday, the 17th Inst., at 7 P.M. *Subject*: Heat; its Effects.

Admission Fee, Rs. 4 for Physics, and Rs. 4 for Chemistry; Rs. 6 for both Physics and Chemistry; Rs. 4 for Physiology; Rs. 4 for General Biology; Rs. 6 for complete course of Physiology and Biology. The charge for a single lecture is 4 Annas.

MAHENDRA LAL SIRCAR, M. D.,

Honorary Secretary.

July 11, 1896.

lime that is sold at Calcutta for use in the same direction! Look at the department of upholstery or of tailoring. What changes, what costliness, have come over within a few decades! Formerly, carriages and cabs were a luxury with a very few. They have now become a necessity with most. Our people are fast losing the power of walking long distances without fatigue, for which many of them were formerly noted. The introduction of tram-cars with their cheap fares has already made walking a vulgar exercise or the sure indication of an absence of respectability. Add to the expenses incurred in these various directions, the costs of education and medicine. School fees with the price of stationery and books for a single child belonging to the middle class, would come up to a figure really startling to compare with what was incurred by a wealthy zemindar a century, or a century and a half ago, upon a dozen lads of his family. The charges of the doctor, for attendance and drugs, on a single patient, killed or cured, reach a total that sufficed to remunerate a Kavi-raj of the last century for attendance upon and medication of a whole family of invalids from year's end to year's end. Consider next the expenses of marrying the daughters of respectable families. There has been such a rapid increase of expenditure in this direction that the fear is almost legitimate that if the leaders of society do not move in time, the day will soon come when the birth of a daughter in a family of gentle blood will be looked upon as an unmitigated curse. Without pursuing the subject further, we do not hesitate to say that it is this enormous increase of expenditure in every direction, and not a real weakening of the religious sentiment that stands as a stumbling block in the way of private liberality effecting anything considerable towards gratifying the almost universal want in Bengal of good drinking water in seasons of unusual drought.

The suggestion that land-owners in past times had recourse to impressment for executing works of this kind, can scarcely be supported by authentic history. Our own information, derived from careful enquiry, is that the large tanks with which a considerable portion of Bengal, that is to this day known by the name of *Rarh*, is dotted, were excavated during seasons of scarcity, when labour, cheap as it always was, was very much cheaper. The usual rate of remuneration was one cowrie (one-eightieth of a pice) for one basketful of earth raised. Notwithstanding the Famine Code, famine has not become a thing of the past with us. On the other hand, failure of food crops, total or partial, comes upon us more frequently, or at shorter intervals. The price of labour at such seasons goes down, and land-owners, if so minded, can avail themselves of such cheapness for works of this kind on a large or small scale. That the desire is not cherished, is due to the same circumstances that have conspired to partially deaden the religious incentive. Besides those already mentioned, there are others that are connected with what Mr. Risley happily adverts to as the introduction among the people of more ostensible forms of benevolence. Local fame, even when obtainable, no longer satisfies our countrymen. To cite a telling instance that will be remembered by many: a nazim of the Jeypore durbar could not visit his poor *alma mater* at Chinsura and promise, instead of immediately paying down as most people would have done, the magnificent contribution of Rs. 10 in aid of its funds, without his friends trumpeting forth the deed of charity through letters

published in more than one cheap print of the day. Then, again, by the side of land-owners and money-lenders of note, contributing, amid circumstances of widespread publicity, thousands of rupees to some scheme devised by some eminent official and nursed by others of his class with whom his relations are cordial, and rewarded for those very contributions with honours equal to those of the famous houses of Burdwan and Krishnagore, another, even when he has the means, does not feel disposed to spend a few hundreds on such a prosaic and dull object as a tank for the benefit of a few hundreds of his fellow beings. Even if noticed by the "especial" of some inferior print, the circumstance fails to excite any interest among neighbours or abroad. Fully sensible as the Lieutenant-Governor is of the change that has come over the spirit of charity in Bengal, it is not necessary to dilate on the point further.

It would be the height of folly to hold the present administration responsible for the change of which we speak. The inevitable tendency of civilisation is to multiply the comforts of life and make living expensive by creating a taste for them. It is a mistake to suppose that Manchester cloths and Birmingham cutlery are forced upon a people by the thunder of British iron-clads. People have only to see in order to like them, and liking them they must exert for having them. Apart, however, from this necessary increase of expenditure which an improvement in tastes must bring with it, and for which administrative agencies can never be held responsible, there is this much for which one may honestly contend that, for the change that has come over the direction of national charity in Bengal, or, for that matter, in India, the responsibility solely rests with the Government of the country. Englishmen frequently forget that India, in spite of her railways and telegraph wires, and telephone cords, and irrigation canals, and steamers and flats propelled by steam, is still a primitive country. The time has not come for the introduction here of the latest ideas of western reformers. Hundreds of wants, more immediate and imperious, stare one in the face, than those which are prominently brought before the view under official inspiration or encouragement. Where the main body of the people are in want of such a necessary of life as a copious supply of water, a costly sanatorium on a Himalayan peak for a few invalids or restless spirits on the spree, or a widespread organisation engulfing lakhs upon lakhs of rupees for providing women with medical attendants of their own sex, or any other institution whose existence is justifiable more on sentimental than practical reasons and which swallows up the available charity of the land without returning a corresponding benefit, must be held to be pure luxuries. If all these be swept away tomorrow, nobody will be a loser for it, except, perhaps, some enthusiasts that live upon their hobbies. It is open to Sir Alexander Mackenzie to inaugurate a wholesome reform in this direction. Let but the word be spoken that titular distinctions, in Bengal at least, shall no longer be conferred for expenditure on projects of luxury, within six months perceptible results will have been achieved in the direction most needed. The excavation and re-excavation of tanks and wells will begin in right earnest. The religious sentiment, aided by the stimulus of ambition, will promptly accomplish what the State can never hope to do by even a liberal grant in the budget every year. District officers

should be instructed to mix more largely than now with Hindu and Mussulman magnates within their respective jurisdictions. With a knowledge, at once first-hand and accurate, of the requirements of the people such as the projected statistics cannot fail to furnish, Magistrates and Collectors will be able to do much in the way of suggestion and advice.

NOTICE OF BOOKS.

Kavi-Kunja, composed by Amvika Charan Mukerjee, B.A., B.L., published by Atul Krishna Goswamin, from 11, Mahendranath Goswamin's Lane, Simla, Calcutta.

This is, as its name suggests, a collection of poems on various subjects. Bound in pleasing yellow, it consists of 241 pages. The get-up is not bad, considering the price. The short preface tells us that the book is given to the reading public not by the author himself, but by one of his *quondam* pupils charmed by the pieces it contains. In these days when so many immature writers wish to see their compositions in print, one cannot sufficiently commend the author for his unwillingness to appear before the public although many of his pieces are unquestionably specimens of good poetry.

The chief characteristics of the pieces, as they appear at the first sight, are lucidity of thought, sweetness of versification, naturalness of description, and the power of drawing lessons of deep import from common things. Nowadays, mysticism, or rather, unintelligibility, determines the excellence of Bengali poetry. Bengali Byrons and Scotts, without at all displaying the qualities of Byron and Scott, liberally indulge in the mysticism of Shelley and Wordsworth. In imitating, our poets imitate only this and other faults. In their English exemplars there is mysticism or incoherency of idea alone, but in the Bengali poets there is a mysticism of language also. We are glad to see that Babu Ambika Charan is not guilty of the usual vice of his contemporaries. His meaning can always be got with ease. The melody of his lines is almost faultless. His descriptions, again, are not unoften charming.

The pieces, in the present collection, can be distributed under three heads: Original compositions, Adaptations, and Translations. In some of the original pieces the author bewails the loss of a dear wife. A deep tone of grief pervades them. Coming out of the heart, these expressions of a passion, really felt, are sure to be pronounced beautiful by every reader of feeling. They betray the keen sense of personal loss that sometimes reminds us of passages in Tennyson's *In Memoriam*. Some of the pieces have the same passion, though not the same metaphysical tone and consolatory balm as those of Tennyson. They have not the sustained scorn of Shelley's *Adonais*, nor the cold, tender regret of Milton's *Lycidas*. Compared to Milton's sonnet to the Memory of his second wife, one cannot but say that Milton's lamentation, full of classical and mosaic allusions, is, to a great extent, unnatural. Babu Ambika Charan's lamentations are more natural because they are the outpourings of a heart really pierced and lacerated. It redounds to the sincerity of the poet that, as a husband, he has not married again. His loss being irreparable, his ideal pleasure, in his own words, will be,—

“Bhāviyā bhāvanā tār,
Sudhiva premer dhār,

and

“Kāmanā kicchui nāi,
Kevala ihāi chāi,
Jwaliyā jwaliyā kari jivan yāpan.”

The anguish here is keener than what is expressed by the line “I waked, she fled, and day brought back my night.”

His reason, for not marrying, is thus expressed in his own fine lines,—

“Bālyera pranaya, hāya,
Bhulā ki kakhana yāya,
Bādiyācche se pranaya hridayera sanc;
Misiyā sonita sange,
Pasiyācche ange ange,
Chāhileyi bhulihāre pāri vā kemane?

“Yatane bhāviyā āni
Premera murati khāni,
Hridaya sonite tāre karecchi poshana;
Aji tāra singhāsane,
Vasāiyā anya jane,
Valc kinā se murati dite visarjjana?”

Intellectual giants are not unoften seen to be moral pigmies. We have seen men held to be learned and wise, rushing in old age to bring another bride before the time of mourning ends. To them the poet gives this golden advice:—

“Ye jana hārāya nidhi,
Puna ki re tāre vidhi,
Sāgara sinchile tāhā milāya kakhana?
Lobhe yevā punarāya,
Sāgara sinchite yāya,
Bhāle tāra kākakuta mile re takhana.”

Space does not permit us to show the excellence of all such pieces. We cannot refrain from saying that his address to his motherless boy is quite original and full of tenderness.

Some of the original pieces are occasional, as the “Vivaha Upahara.” It is a worthy present by a poet to a friend. Who will not be pleased by the healthy view of woman's heart the poet takes? That heart, the poet says, is like the deep ocean, whose caves bear full many a gem of the purest ray serene.

The “Surya-Mandala,” or encomium on the well-known Tarak Chandra Paramanik of Calcutta, is not, we are sorry to say, above mediocrity. It has all the exaggerations which characterise the general run of Bengali odes of this kind. The “Prabhata-Gan” finely paints the morning scene and the patriotic feelings of an Indian author. The “Trisrota-Tira” or “on the banks of the Trisrota,” betrays, no doubt, considerable capacity for describing nature. But morals drawn at every step mar the beauty of the poem. “To the Magician” is a fine specimen of its kind. The poet shows that the world, its flowers, bees, birds, the evening sky, women, boys, &c., &c., are all great magicians. The delineation of the charms that women and boys have, reveals the author's psychological insight. The “Kamini Kusum,” too, is a fine little bit. The poet's eye, in a fine frenzy rolling, sees in the most humdrum objects qualities unseen by others. Who does not see the sun shine in the heavens every day, and who does not breathe the perfumes the air brings? Yet Vyasa draws a truth of deep import from these commonest of occurrences. He makes use of these to illustrate the silence with which the good man does his work.

Abruban bāti surabhirgandhah sumanasām suchih,

Tathaivavyāgharan bhātī vimalo bhānuramvare.

“Wafting the breath of sweet spring flowers,

Softly the breezes blow;

In silence, too, the bright sun showers

His rays on all below:

And thus they bless the passing hours,

Without parade or show.”

(Rendered by Mr. O. C. Dutt, in the *National Magazine* of December, 1893.)

No wonder, therefore, that Babu Ambika Charan sees in *Kamini* flowers, the virtues of chaste ladies. As to his “Vidhava-Vivaha,” he is not for the remarriage of widows and, therefore, he is an opponent of Pandit Vidyasagar. The gist of his argument is that widow-marriage strikes at the root of that sacred *Pāṭivratya* which is the glory of India. The land of Bharata has never hankered after carnal pleasure. The legislation of the Rishis essayed to ennoble the soul. The very sovereignty of Heaven—the status of Indra—was pronounced by them to be hell. Their ideal of felicity is much higher. It is nothing less than absorption into the Supreme Soul and attainment of Immortality. Why are our so-called social reformers so bent upon securing the gratification of the “secondary appetites” of human nature? The late Bankim Chandra Chatterjee refuted Pandit Vidyasagar by using a similar argument. There are keener and more unbearable miseries around us. Vidyasagar's heart melted only at the thought of the misery felt by widows,—a misery that is scarcely a subject for agitation. The reason why the Pandits could not maintain the field against Vidyasagar, for he is believed to have scored a triumph against them, is that they argued neither from sentiment nor from common sense. The question was discussed from only the scriptural point of view. They tried to twist in their favour the meaning of the celebrated couplet of Parasara by dialectical acuteness. They could not urge Bankim's arguments. To them it was nothing that the number of women in India exceeds that of men several times, whence widow-marriage would rob virgins of husbands. This is not the place to raise the discussion. But we are sure that any one who reads the piece on this subject in the volume before us will pronounce the poet's sentiments to be correct. The poet does not reason. It must be borne in mind that the sphere of poetry is not the same as that of polemic discussion.

The two long pieces “on the marriage of Rati” and “the Self-choice of Saudamini” cannot be reviewed within the space we have at command. We can unhesitatingly say that they are not unworthy of Babu Ambika Charan's genius.

Of the adaptations, that of Goldsmith's *Hermit* is not so fine as that of Kalidasa's sloka---

Casing saha yāti kaumudi,
Saha meghena tadit praliyate ;
Pramadā pativartmagā iti
Pratipannam hi vichetanairapi.

Those of three unclaimed slokas in the four last pages of the volume are excellent.

The translations from various celebrated Sanskrit poets are all well executed. As they are done in verse, they could not but be free. But this enhances their charm, for the curse of Babel, it should be remembered, has fallen with peculiar heaviness on poets.

OUR LONDON LETTER.

June 19, 1896.

Imperial Parliament.---*House of Lords.* Since my last, Lord Salisbury has delivered two important speeches, one on our position in Egypt, the other on Dr. Jameson. In the former he laid down, with his wonted lucidity, our exact policy in the forward movement to Dongola. Dongola is our present objective, and Sir H. Kitchener---the Sirdar of the Egyptian army---has a free hand to act as he deems proper. So far the victory of Firket, and the occupation of Suada, have raised the military reputation of the Sirdar. At Dongola there is to be a pause, but Lord Salisbury was careful to explain that financial considerations only prevented an immediate advance to Khartoum. Once the Egyptian and British flags are floating on the battlements of Khartoum, it will be felt the base and ignominious abandonment of the illustrious Gordon has been avenged.

As to Dr. Jameson, Lords Ripon, Kimberley, and Rosebery were anxious to force the hand of the Government, as to the enquiry promised by Mr. Chamberlain in the House of Commons. But Lord Salisbury resented any action that would at present imperil Jameson's chances of a fair trial, and it passes belief that the three noblemen I have named should, for the sake of a party manœuvre, suggest any step so thoroughly foreign to the innate love of Englishmen to see fair play.

You will see Jameson and five of his officers have been committed for trial by Sir John Bridge---the chief magistrate of London. The other nine have been liberated, and it is said they return at once to Bulway to assist in restoring order in Matabeleland.

It was very like Jameson's heroic nature that he instructed his Counsel, Sir Edward Clarke, to say he accepted the entire responsibility, and that he alone was answerable for any infraction of the law that may be brought home to him.

House of Commons.---Things are not working smoothly. On Monday Mr. Balfour called a meeting of his supporters at the Foreign Office which was attended by between 300 and 400 Unionists. He explained the impossibility of prolonging the session beyond the week ending the 14th August, and the strong repugnance the Government felt to carry the Education Bill by "closure by compartments," although they had the baneful precedent set by Mr. Gladstone in order to carry his now defunct Home Rule Bill. What then was to be done? The proposal is that when the House rises in August, there should be a simple adjournment to about the 13th of January, when its whole time would be given for six or seven weeks to the Education Bill. Neither the "Times" nor the "Standard" approves this arrangement. But the bulk of the Unionist members see in it the only way of being extricated from the impasse into which things have drifted. Undoubtedly there are obvious disadvantages. During the recess the Opposition orators will endeavour to rouse the enthusiasm of their supporters, by every means that malice and misrepresentation can suggest. But, personally, I think this evil may be exaggerated. The country is sound at bottom. It has no sympathy with such a motley crew as now forms H. M.'s Opposition. Of the main portion one half follows Lord Rosebery, the other Sir W. Harcourt. Then there are the "Little Englanders" led by that pattern of all the domestic virtues, Sir Charles Dilke, and his dear friend Mr. Labouchere. The Irish party is split up into three sections. The Dillonites, the Healyites, and the Parnellites, all mutually hating one another and devoting their whole energies to tripping one another up on the floor of the House. To me it seems Mr. Redmond, the leader of the Parnellites, is the most honest among them. Mr. Healy far and away the ablest, and poor Mr. Dillon, in India, would be called a veritable skunk.

There can be little doubt much of the present confusion is due to Mr. Balfour himself. He is apparently not a "heaven-born leader." He is a man of great gifts and of a most genial temperament. Moreover he has the advantage of being exceedingly popular,

not only with his own followers, but also with members of the regular Opposition. It must never be forgotten he is placed in circumstances of singular difficulty, from having no regular Opposition, led by one responsible man, to deal with. Hitherto the Glandstonian or Radical party has, as a rule, acted as a uniform Parliamentary party, welded together under one common leader. The Government of the day has then only to deal with this leader, and, on the whole, the business of the House, in such circumstances, moves along steadily and smoothly. Full opportunities are afforded the Opposition for the discussion of imperial questions, but all is arranged in a spirit of "give and take," behind the Speaker's chair, between the leader of the House and the leader of the Opposition. All this is changed now, and changed very much for the worse, and to the detriment of the business of the country.

Sir Vernon Harcourt cannot answer for the "Little Englander" party, or "independent Radicals." They form a contemptible "rump" and are led by a man whose moral character is held in contempt by every member of the House. All admit his great ability and his power of application. But he committed political suicide when he had to appear some years ago in as scandalous a case as has ever disgraced the records of the Divorce Court. But he has "political gnats and mosquitoes" at his disposal, men of very humble birth, who are proud to lick the shoes of a live Baronet! This is a party contemptible in numbers, but not in ability. On the evening of Monday---the day of the great Unionist meeting at the Foreign Office---Sir Charles Dilke, without consulting Sir V. Harcourt, put forward his parasite, Mr. Dalziel, to move the adjournment which succeeded in wasting two hours of precious time. Then on Tuesday Sir V. Harcourt, Sir H. Fowler, and Mr. Asquith were the culprits, delivering long-winded second reading, instead of short business-like Committee, speeches. All this serves the purposes of obstruction, and yet they would be very indignant if any member of the Unionist party so accused them. This is a matter of grave public scandal. It enhances the tremendous difficulties of the Government, but, what is of infinitely more serious consequence, it inevitably tends to bring the "mother of Parliaments" into contempt as a business assembly. There are still considerable misgivings as to the course suggested by Mr. Balfour, of hanging up the Education Bill in the course of a week or ten days, to be resumed in a January session. The "Times" is very outspoken. "The course decided upon by ministers avoids immediate difficulties, but it prepares greater troubles in the future." * * If the Government persevere in this course, so much of the Education Bill will remain over for consideration when the session is resumed in January, that there will be little hope of carrying, at the best, more than a small fraction of the Bill * * If the measure were relieved of its non-essential provisions and were pressed forward before everything else, if there were a resolution to meet, if necessary, at the end of October and to carry the Bill through, if possible, before Christmas, we believe the Government would have no reason to complain of want of spirit on the part of their adherents. * * The discussion in Committee will be resumed today (Wednesday) upon the first line of the first sub-section of the first clause, to which there are over 16 pages of amendments still to be considered. At this rate it may well be that the second clause will hardly be entered upon when the time is reached at the end of next week for 'breaking off,' to use Mr. Balfour's phrase, the Committee upon the Bill in order to make such progress as the Opposition will deign to permit with other business."

The United States.---It would require a singularly gifted man to follow the ins and outs of the Presidential election. As you know politicians in the States are divided into Republicans and Democrats. As a preliminary step each party holds a grand caucus to determine the choice of a candidate. On this occasion the Republicans meet at St. Louis, and the Democrats at Chicago. The former have been holding their session this week. It is acknowledged on all hands they will eventually carry their candidate and oust Mr. Cleveland from the White House at Washington. Hence the great importance of their nomination. The ground has shifted from day to day, but yesterday's news seems to point to the triumph of Mr. McKinley, the author of the celebrated protection tariff. He has adroitly been keeping himself in the background, leaving to other men to speak for him. The great bone of contention is the question of the currency---How to pronounce a definite policy that will satisfy the monometallist, without disgusting the silverites. Dancing on the tight rope, or crossing Niagara Falls on a rope, seem ludicrously simple, compared to the difficulty of drawing up a Republican "plank."

In the end the following declaration was adopted: "The Republican party declares unreservedly for sound money. We are unalterably opposed to every measure calculated to debase our currency or impair the credit of our country. We are therefore opposed to the free and unlimited coinage of silver except by international agreement between the leading commercial nations of the world, which we pledge ourselves to promote." (These

DEAFNESS. An essay describing a really genuine Cure for Deafness, Singing in Ears, &c., no matter how severe or long-standing, will be sent post free.---Artificial Ear-drums and similar appliances entirely superseded. Address THOMAS KEMPE, VICTORIA CHAMBERS, 29, SOUTHAMPTON BUILDINGS, HOLBORN, LONDON.

last words are put in as a sop to the silverites.) This plank was adopted together with a strong pronouncement in favour of the most severe protection to American industries, and a grand routing of the "Monroe doctrine" by 545 votes to 350, which is declared to be a decisive victory for Mr. McKinley.

All the world knows the politicians of the United States are nothing, if not unctiously devout and pious. Pecksinffs were nothing to them. So you will not be surprised to hear each session was opened with prayers to Almighty God to guide their deliberations, and that no resolution should be adopted what would not be to His glory and the advancement of His Kingdom on earth, particularly in the United States. And so they had a supply of Bishops, white and black, to lead their devotions alternately. What a burlesque the whole thing seems! Would not Carlyle have pronounced it "damnable profanity?" The Mahomedans with their five prayers in the twenty-four hours are not in it with these puritanic, pietistic representatives of the Republican party assembled at St. Louis! And now that Mr. McKinley is the chosen candidate of the Republican party, it would be well if we could know for certain what stamp of man he is. The "Standard" writes of him:--

"He has no fixed opinions on any political question under the sun that ever we could discover---except Protection---but the silver inflationists thought he was their man, and he would gladly have been so---no doubt, if the cat had jumped that way. * It is the victory of commonplace well organised. The chosen man is not a distinguished man in any sense, or a learned man, or a wise one, but he has made himself a popular Governor of Ohio, and knows how to manage the machine."

Lord Kelvin's Jubilee has passed off at Glasgow with great éclat. He received a telegram of congratulation from the Queen and a long letter from the Prince of Wales. After a very distinguished career at Cambridge, he was appointed to the chair of Natural Philosophy in the University of Glasgow, at the early age of 22. He is now acknowledged to be the greatest of living scientists, and second only to Newton. Among other telegraphic congratulations he received one from your Viceroy, while all the great Universities of Europe sent delegates, and the Universities of Calcutta and Bombay were also represented. One who knows Lord Kelvin well, writes of him: "I never knew a man less self-conscious. He is absolutely without affectation or any thought of self importance." His humility "arises from the simplicity and sweetness of a great nature."

Wreck of the "Drummond Castle."---This has created a profound impression all over the country. Only three lives saved out of over 250! We shall probably never know the true cause as the Captain and officers went down with the vessel. But the conjecture is, that owing to a heavy drizzling rain and possibly a fog superadded the Captain failed to make Ushant light. His proper course then would have been to slow down and wait for daylight. But apparently the vessel was going full speed, and the wreck took place in a channel between Ushant island and the mainland, a course peremptorily forbidden by the Board of Trade. It is a most distressing calamity, and some of the narratives are heart-rending. One feels for the venerable Chairman of the Company, as this is the first occasion on which there has been any loss of life in connection with his splendid fleet.

National Indian Association.---The annual meeting of this Association took place yesterday, at the Imperial Institute, your late Legal Member of the Viceroy's Council, Sir Alexander Miller, presiding. I was very sorry to see so few of your countrymen present. There were more native ladies than gentlemen. It was such an excellent opportunity for your friends to testify their appreciation of the devotion of the Hon. Sec., Miss Manning, to the best and most vital interests of India, one would have been glad to have seen a large muster. When Miss Manning arranges a conversazione at the I. A., they turn up in crowds. Yesterday I think all who were present might have been counted on one hand. It is much to be regretted, as it leaves a false impression on the minds of English ladies and gentlemen who have never been in India. The N. I. A. affords a common ground for an interchange of courtesies, but, if your countrymen will stand aloof, in a mood of sullen indifference, the fault is theirs, and, I am afraid, in not a few instances they return to India and speak of the coldness and indifference they met with in London.

This letter is, I fear, already too long, so I reserve comments on Cuba, Crete, and Venezuela until next week. Reuter will, before this reaches you, have informed you of the startling news received yesterday, as to an attack made by Venezuela troops on a British surveying party. Great reticence is maintained by both the Foreign and Colonial Offices, but the general feeling is the news is of a character, so pregnant with great issues, there is a reluctance to publish anything until authentic details reach the authorities here.

Political gnats and mosquitoes.---These are not confined to avowed obstructives in the House of Commons, such as Captain Tommy Bowles on the Conservative side, and Mr. Dalziel on the Radical

The latter is only of interest to you, as having succeeded the late Sir George Campbell in the representation of the Kirkcaldy burghs. The electors of these burghs rejoice apparently in sending "cranks" to represent them. In Sir G. Campbell's case they had a man of considerable gifts and very wide experience. In their present representative they have selected a man of no particular gifts---of no political experience---and whose one outstanding quality is brazen impudence. There are "cranks" hardly ever heard of in the House, but, who, afflicted with the *cacothymia scribendi*, are for ever writing letters to the "Times." Of these, the principal offender is Sir Henry Howarth. A column, three-fourths of a column, and never less than half a column is freely placed at his disposal by the editor of the "Times." Why, no one knows. The waste paper basket is the proper receptacle for his weary, dreary writings, and if only the editor of the "Times" had the courage so to treat two or three of his lucubrations it would probably put an end to his sterile letters, and prove an enormous boon to its readers. The effect upon Sir Henry might be disastrous, but the boon to the public would be more than ample compensation. In the "Times" of the 15th he complains bitterly of the offices in the Government held by the Liberal Unionists. Now out of 20 Cabinet ministers, four belong to Mr. Chamberlain's party, and of minor members of the Government out of 26---six; not so very much out of the way surely, seeing Mr. Chamberlain has a following of 71.

And it has to be remarked that out of the four members of the Cabinet, three are Peers and Mr. Chamberlain himself is the solitary Cabinet minister of the Liberal Unionist party in the House of Commons.

WHAT IS THAT ONE THING?

IT seems like an absurdity, yet it is true all the same. I mean that you might have a cellar full of wood and coal and still shiver with cold; and you *would* if it were not for one thing. "Oh, that is so obvious," you may say. "It was hardly worth while to hint at it. Anybody can see it with his eyes shut. All the better for me then; I shan't have to explain. And by the same sharpness you will be able to pick out the important point in two short letters I am about to copy for you."

The first runs thus: "In December 1890, my daughter (Mrs. M. J. Muther,) got into a low, weak, nervous condition. Do what she would she could not get up her strength. Gradually she wasted away until everyone thought she was in a decline, and had not long to live. In fact, she was so low and dejected *she did not care whether she lived or not*. She was under a doctor for six months, but his medicines did her no good. My husband then said, 'My daughter, I will now see what I can do for you.' What he meant was that he would have her take a medicine called 'Mother Seigel's Curative Syrup.' He had used it himself when he was ill, and thought it might prove as beneficial to her as it had to him."

"Mrs. Muther said she was willing to try the Syrup, although she had little or no faith in its helping one as bad as she was. For if she really had consumption we know there is no cure for that. My husband, however, got a bottle from Mr. Hulme, the chemist, in Rochdale Road, and my daughter began taking it. After the first bottle we saw a great improvement. She could eat, and the food caused her no pain. She continued with this remedy, and gradually gained strength, but it took some time to bring her round, she was so very low and weak. After a time she was able to get about, and never looked behind her. Since then she has been strong and well. We have told many persons how Mother Seigel's Syrup restored her to sound health, and are willing you should publish this statement of the facts. (Signed) (Mrs.) Margaret Watson, 11, Ruby Street, Bury, Oct. 8th, 1895."

"In March, 1893," says the second letter, "I began to fail in health. I could not say exactly what ailed me. I felt low, weak, and tired, and had no strength for anything. My appetite fell away, and what little food I ate gave me great pain at the chest and side. My hands and feet were cold, and nearly all the colour left me. I was often in so great pain I could hardly do any work. I was frequently sick, and could keep no kind of food down."

"I got weaker and weaker, in spite of all that was done, and had to be off my work for seventeen weeks. In this way I went on until November of the same year---1893. Then I happened to read about Mother Seigel's Syrup and what it had done for others suffering like me. I got a bottle of this medicine from Mr. W. Heywood, grocer, in Oldham Road, and after taking only the half of it I felt much better. I could eat without pain, and was stronger and brighter every day. When I had finished the bottle I was quite cured, and have had no return of the complaint since. I have told many others about what the Syrup did for me, and out of thankfulness I am willing my letter should be made public. (Signed) Miss Lydia E. Morton, 1, Greaves Street, Middleton Junction, near Manchester, October 10th, 1895."

Both these ladies say that they were very weak, and that their food---of which they could take but little---did them no good. In the midst of plenty they were actually starving. So much wasted was one of them that it was believed she had consumption. The event showed that they both suffered from dyspepsia, and nothing else. But that was quite enough; and besides it often runs into consumption and other fatal maladies. By setting the stomach right Mother Seigel's Syrup fully cured them both.

Coals and wood are useless without means to light a fire; and bread and meat are as nothing unless we can digest them and make them part of our flesh and bone. That is easy to see and important to remember. And it is its power to help nature work this transformation that makes Mother Seigel's Syrup so wonderful a remedy.

CORPORATION OF CALCUTTA.**LOAN NOTIFICATION.**

THE Commissioners of Calcutta are prepared, with the sanction of the Governor-General-in-Council given under Section 404 of Act II. (B. C.) of 1888, to open a Debenture Loan for Rs. 20,00,000 (twenty lakhs) on the security of the rates, taxes and dues imposed and levied under the Calcutta Municipal Consolidation Act, 1888.

2. The debentures will have a currency of fifteen years from the 1st December, 1896, and will bear interest at the rate of $3\frac{1}{2}$ per cent. per annum, payable on the 1st June and 1st December of each year.

3. The form of the Debentures will be that given in the twelfth schedule of Act II. (B. C.) of 1888.

4. No Debentures will be issued for any sum less than Rs. 500, and above that amount Debentures will be issued only for complete sums of Rs. 100.

5. Tenders for the whole or any part of the above Loan of Rs. 20,00,000 will be received by the Secretary to the Corporation up to 2 o'clock P. M. of Friday, the 7th August, 1896.

6. Each tender must be made out in the form annexed to this Notification, and enclosed in a sealed cover addressed to the Secretary to the Corporation, and superscribed "Tender for Municipal Loan of 1896-97."

7. Each tender must be accompanied by Government Promissory Notes, Calcutta Municipal Debentures, currency-notes or cheques for not less than 3 per cent. of the amount tendered.

8. When a tender is accepted, the deposit, when made in currency-notes or cheques, will be held as a payment in part of the amount tendered, and will bear interest at the rate of $3\frac{1}{2}$ per cent. per annum from the date of acceptance of the tender, provided that the whole amount tendered is paid up in the manner hereinafter prescribed; but no debenture will issue for the sum so deposited so long as the entire amount of the tender is not paid.

9. The deposits on tenders, which may not be accepted, will be returned on application, and no interest will be payable on such deposits. If an allotment after being made is not taken up, and the full amount allotted is not paid as hereinafter prescribed, the deposit will be forfeited.

10. The rate at which a tender is made must be specified in rupees, or rupees and annas; a tender in which the rate is not so specified will be rejected as null and void.

11. The rates stated in a tender must not contain any fraction of an anna. If a rate containing a fraction of an anna is inserted in any tender, such fraction will be struck out, and the tender treated as if the rate did not contain such fraction of an anna.

12. The amount of the accepted tenders must be paid into the Bank of Bengal in the following instalments:—

One-third by the 21st August.

Do. " by the 21st September.

Do. " by the 26th October.

Parties, whose tenders are accepted, will have the option of paying all or any of the instalments before the dates specified above, and will receive interest from the date of such payment.

13. Anticipation interest will be paid on all instalments from the respective dates on which such instalments are paid into the Bank of Bengal to the 30th November, 1896.

14. In the case of two or more tenders at the same rate a *pro rata* allotment will be made (if the tenders are accepted), but no allotment will be issued if the amount distributable on any tender is less than Rs. 500.

15. A minimum having been previously fixed, tenders will be opened by the Loan Committee of the Commissioners at 2-30 P. M., on Friday, the 7th August, 1896, at the Municipal Office.

W. R. MACDONALD,

Secretary to the Corporation.

MUNICIPAL OFFICE:

Calcutta, 29th June, 1896.

FORM OF APPLICATION FOR DEBENTURES.

I hereby tender for Rs. _____ of the Municipal three and half ($3\frac{1}{2}$) per cent.

Debenture Loan for 1896-97, and agree to pay for the same subject to the conditions notified at the rate of Rs. _____ annas for every Hundred Rupees allotted to me.

I enclose Government Promissory Notes, Calcutta Municipal Debentures, currency notes, or a cheque for Rs. _____

Signed

POSTSCRIPT.
After paying the expenses of the publication, the surplus will be placed wholly at the disposal of the family of the deceased man of letters.

Orders to be made to the Business Manager, "An Indian Journalist," at the Bee Press, 1, Uchoor Dutt's Lane, Wellington Street, Calcutta.

OPINION ON THE BOOK.

It is a most interesting record of the life of a remarkable man.—Mr. H. Babington Smith, Private Secretary to the Viceroy, 5th October 1895.

Dr. Mookerjee was a famous letter-writer, and there is a breezy freshness and originality about his correspondence which make it very interesting reading.—Sir Alfred W. Corft, K.C.I.E., Director of Public Instruction, Bengal, 26th September, 1895.

It is not that amid the pressure of harassing official duties an English Civilian can find either time or opportunity to pay so graceful a tribute to the memory of a native personality as F. H. Skrine has done in his biography of the late Dr. Surendra Chunder Mookerjee, the well-known Bengal journalist (Calcutta: Thacker, Spink and Co.); nor are there many who are more worthy of being thus honoured than the late Editor of *Reis and Rayyet*.

We may at any rate cordially agree with Mr. Skrine that the story of Mookerjee's life, with all its lights and shadows, is pregnant with lessons for those who desire to know the real India.

No weekly paper, Mr. Skrine tells us, not even the *Hindoo Patriot*, in its palmiest days under Kristodas Pal, enjoyed a degree of influence in any way approaching that which was soon attained by *Reis and Rayyet*.

A man of large heart and great qualities, his death from pneumonia in the early spring in the last year was a distinct and heavy loss to Indian journalism, and it was an admirable idea on Mr. Skrine's part to put his Life and Letters upon record.—*The Times of India*, (Bombay) September 30, 1895.

It is rarely that the life of an Indian journalist becomes worthy of publication; it is more rarely still that such a life comes to be written by an Anglo-Indian and a member of the Indian Civil Service. But, it has come to pass that in the land of the Bengali Babus, the life of at least one man among Indian journalists has been considered worthy of being written by an Englishman.—*The Madras Standard*, (Madras) September 30, 1895.

The late Editor of *Reis and Rayyet* was a profound student and an accomplished writer, who has left his mark on Indian journalism. In that he has found a civilian like Mr. Skrine to record the story of his life he is more fortunate than the great Kristodas Pal himself.—*The Tribune*, (Lahore) October 2, 1895.

The career of "An Indian Journalist" as described by F. H. Skrine of the Indian Civil Service is exceedingly interesting.

Mookerjee's letters are marvels of pure diction which is heightened by his nervous style.

The life has been told by Mr. Skrine in a very pleasant manner and which should make it popular not only with Bengalis but with all those who are able to appreciate merit unmarred by ostentation and earnestness unspoiled by harshness.—*The Muhammadan*, (Madras) Oct. 5 1895.

The work leaves nothing to be desired either in the way of completeness, impartiality, or lifelike portrayal of character.

Mr. Skrine deals with his interesting subject with the unfailing instinct of the biographer. Every side of Dr. Mookerjee's complex character is treated with sympathy tempered by discrimination.

Mr. Skrine's narrative certainly impresses one with the individuality of a remarkable man. Mookerjee's own letters show that he had not only acquired a command of clear and flexible English but that he had also assimilated that sturdy independence of thought and character which is supposed to be a peculiar possession of natives of Great Britain. His reading and the stores of his general information appear to have been, considering his opportunities, little less than marvellous.

One of the first to express his condolence with the family of the deceased writer was the present Viceroy, Lord Elgin. Mookerjee appears to have won the affection not only of the dignitaries with whom he came in contact, but also of those in low estate.

The impression left upon the mind upon laying down the book is that of a good and able man whose career has been graphically portrayed.—*The Englishman*, (Calcutta) October 15, 1895.

"IMPROVED UNDAUNTED"

WATCH. Rs. 7.

Guaranteed three Years.

Strong, accurate, pretty, small, open-faced, nickel silver, keyless, short winding, patent, "NEW STYLE IMPROVED UNDAUNTED" watch, with hand setting mechanism, secondhand, for Doctors, ornamental bold dial, for Rs. 7 V. P. P. with an extra glass, spring, pretty box and full three years' guarantee. Warranted to stand the roughest use. Runs more than 28 hours with one winding. Will last a life time. Easily repairable. Others sell at double our rates. One watch free for the purchase of 8 at a time. Mr. Jno. Dickson of Haputal Railway, from Ceylon says:—It keeps splendid time and never stopped although it sustained hard knocks and jerks. x Dr. H. Moore of Royal Artillery from Poona writes:—I sold it for Rs. 16. x Pte. W. Hopkins of Sussex Regt. from Dardanelles says:—I have sold it for Rs. 20. x Mr. T. B. Scott of Patna Opium Department says:—The watch you sent me some seven years ago is still keeping very good time.

Jewelled Ring Rs. 1-8-0. Real

Silver Watch Rs. 13. Real

Solid Gold Watch Rs. 24.

Pretty electro cased gold chain Rs. 1-8-0. Fashionable electro cased Gold Ring set with scientific diamonds, Rubies, Emeralds, at Rs. 1-8-0. Mr. G. Smith, Silt Inspector from Sankutia, says: "A German valued the diamond ring at Rs. 50 and ruby at Rs. 30." Key winding, Government stamped, solid silver hunting case, Royal watch with extras and full three years' guarantee, for Rs. 13. Pte. G. Hawkes of 2nd York Light Infantry from Purnanhar says:—For the first one I got Rs. 25; the second one I sold to a Sergeant for Rs. 28. x Pte. H. C. Bishop of L. F. L. Regt. from Kaimette says:—A Corporal offered Rs. 30 for the very same watch. Gentlemen's open faced, keyless *real solid gold watch* Rs. 30; ladies' Rs. 24; both with extras and guaranteed for 3 years. Mind they are guaranteed to be of real solid gold. No agents kept, all goods sent only by us from Bombay per V. P. P.

Novelty in Ayurvedic Medicine. AYURVEDIC PHARMACY.

36, Lower Chitpore Road, Foudhari
Bilaknana, Calcutta.

KAVIRAJ NAGENDRA NATH SEN, Physician, Surgeon, Accoucheur, practises the Ayurvedic system of medicine, after having obtained a diploma at the final examination of one of the Government medical Institutions of the country.

SPECIFICS

for all ordinary diseases, like Fever, Cough, Asthma, Phthisis, Diabetes, &c., including diseases brought on by irregularities of kinds. Catalogues, containing full accounts of diseases and remedies, are transmitted on application. Prescriptions, with or without medicines, sent to every part of India and Ceylon, Cape Colony, and the British Isles, on receipt (by post) of full accounts of diseases.

Thousands of unsolicited Testimonials from every quarter.

CATARRH,

Hay Fever, Catarrhal Deafness.

A NEW HOME TREATMENT.

Sufferers are not generally aware that these diseases are contagious, or that they are due to the presence of living parasites in the lining membrane of the nose and eustachian tubes. Microscopic research, however, has proved this to be a fact, and the result is that a simple remedy has been formulated whereby these distressing diseases are rapidly and permanently cured by a few simple applications made at home by the patient once in two weeks. A pamphlet explaining this new treatment is sent on receipt of 2½d stamp by A. HUTTON DIXON, 43 & 45 East Bloor St. TORONTO, Canada.
Scientific American.

VOL. XV.

CALCUTTA, SATURDAY, JULY 18, 1896.

WHOLE NO. 734.

THE SIKH.

[The following ballad, which originally appeared in an Indian paper, is supposed to represent the feelings of an old Sikh warrior. Attar Singh is the speaker.—David Ross, C.I.E., F.R.G.S.]

I've come to make my salaam, Sahib. My soldiering days are done.
Your father was ever a friend to me; I'm glad to have seen his son.
Well, yes, it's hard to be going! I am an old man now I know,
But I come of a tough old fighting stock, and I find it hard to go—
To feel that my life is over, that my sword must hang on the wall,
Never again to leap from its sheath at the ring of the trumpet call.
I think I could do some service yet, ay, though my beard be white,
For my heart still warms to the tramp of horse, and longs for the
rush of the fight.

Ah well! it comes to us all, Sahib! I am old, I have had my day,
And the young men think me a dotard, and wish me out of the way.
Maybe they're right! When I was young I should have done the same,
But I come of a tough old fighting stock, and the blood is hard to tame.
I think they are not what we were, who were bred in the wild old time,
When every Sikh was a soldier, and Runjit was in his prime.
Before I was out of my boyhood I knew what it was to feel
The joy and shock of the onset, and the bite of a foe's steel.
I rode by the side of my father when we scattered the Afghan hordes,
And I longed for the day when the Khalsa host should roll on the
Sutlej fords.

Not one of us feared for the issue. We saw your Poorbeahs yield
To a half-armed rabble of tribesmen we drove like sheep from the field,
So we longed for the day that we felt must come—an evil day when it
came—

God's curse on the cowardly traitors who sold the Khalsa to shame!
My father fell at Sobraon. There was blood on the old man's sword,
As foot by foot you bore us back to the brink of the flooded ford.
We never broke, though around us the river was choked with dead,
My God! how the grape tore through us from the guns at the bridge's
head.

I had been unhorsed by a round shot, but I found my way to his side,
And I held by the old man's stirrup as he plunged his horse in the tide.
I never knew how the end came, for the fierce stream forced us apart;
But he died, as a Sikh Sirdar should die, with the fight still hot in his
heart.

We saw that the war was over when we formed on the western bank;
The sword of the Khalsa was broken—and the hearts of the bravest
sank.

We were all unused to be conquered: you had taught us the lesson at
last;

But you left us, with arms in your hands, Sahib, to brood on the hopes
of the past;

And we knew we had pressed you sorely, that the game had been almost
won;

And the Sikh blood boiled for another fight ere a year of peace had run.
Well, you know how the train was fired again, you know how the
Khalsa rose;

And if you bore us down at last you found us stubborn foes.

Full thirty years are gone since then, but still my heart beats high

To think how wild the battle raged against the darkening sky.

I led a troop at Chillianwal: they say I led it well;
Near half of us were cold and stiff before the darkness fell.
How clear it all is still! I seem to hear the roar of fight,
And see the fair-haired English come cheering at our right.
And swarms of slavish Poorbeahs, the scorn of the Khalsa's sons;
They were falling fast, and the rush was spent before they reached the
guns;

And then we burst upon them, all winded as they came,
And the shattered line went reeling back, torn through with sword and
flame.

There was little to choose between us that night when the red sun set;
We had taught those hounds a lesson they have never forgotten yet.

Ah! yes, I know how it ended, how the big guns swept us away,
But never a cringing Poorbeah came up to our swords that day.

My God! how I longed to see them, how I longed to hear once more
The shrill short cheer of the charging line high over the battle's roar!

But still the big guns thundered on, and the plain grew like a hell,
As hour on hour upon us poured the stream of shot and shell.

We gave at last—what could we do!—and the Poorbeahs yelled on our
tracks;

But for the guns and the white men they'd never have seen our backs.
But for the guns and the white men we'd have hunted them through
Lahore,

And laid all Delhi in ashes, Sahib, and many a fat town more.

But what is the use of boasting now? My lands were taken away,

And the Company gave me a pension of just eight annas a day;

And the Poorbeahs swaggering about our streets as if they had done it
all;

Curse them!—they wished they had let us be when we got their backs
to the wall.

We were all right weary of years of peace when the murdering cowards
rose,

And never a one of us all but longed for a chance at his father's foes.

* * * * *

I was first man up to the summons, with a score good Singhs at my
heel.

Rare times those were for a soldier, wild months of battle and storm,
And the horse well into the thick of it, wherever we'd room to form.

I rode to Delhi with Hodson; there were three of my father's sons;
Two of them died at the foot of the ridge, in the line of the Moree's
guns.

I followed him on when the great town fell; he was cruel and cold they
said;

The men were sobbing around me the day that I saw him dead.

It's not soft words that a soldier wants; we knew what he was in fight,

And we love the man who can lead us, ay, though his face be white.

I fought in China after that; and now I've lived to see

My grandson ride through Cabul, with a Ghazi at his knee.

Lord! how the people scowled at us, us of the hated race,

Scowl as they will they little love to meet us face to face.

Sherpur? Well, yes, they faced us there—a score or so to one—

And some of them repented it I think before we'd done.

Subscribers in the country are requested to remit by postal money orders, if possible, as the safest and most convenient medium, particularly as it ensures acknowledgment through the Department. No other receipt will be given, any other being unnecessary and likely to cause confusion.

Five days we fought their gathering clans, and smote, and broke, and slew,

And then, the fifth, they bore us back, for we were faint and few ;
And twice five days we stood at bay behind the crumbling wall,
And still they shrunk from the one straight rush that should have finished all.

It came at last, one wintry dawn, before the break of light.
A sudden flare of beacon fires upon the southern height,
A signal shot to east and west, and then with one wild swell
Pealed up from fifty thousand throats the Ghazi's battle yell ;
And the rifle flashes hemmed us round in one broad quivering ring ;
And overhead in fiery gusts the lead began to sing ;
And we clenched our frozen carbines in the darkness and the snow,
And waited, with fast beating hearts, the onset of the foe.....
Just one rush, and all was over. Sullenly they faced us still,
Swarms of stubborn swordsmen gathering round their banners on the hill,

And from field and wall around us, all about the broken plain,
Rose the fitful rifle volleys, rose, and sank, and rose again.
But the battle cry was silent ; and the battle rush was sped ;
And their hearts were cold within them ; and in vain their leaders led ;
And in vain their mullahs cursed them : what they could do they had done,

And we speared them through the open, ere the setting of the sun.

Well, Sahib, I've made the tale too long ; I rode to Kandahar,
And saw once more an Afghan host broken and scattered far ;
And now I'm back in Hindustan, and the times are times of peace,
And I must lay my old sword down, and my fighting days must cease.
The great Sirkar's been good to me, for I've served the English well ;
And my fields are broad by the Ravee, where my father's kinsfolk dwell ;

And all the Punjab knows me, for my father's name was known
In the days of the conquering Khalsa, when I was a boy half grown ;
And since he died, nigh forty years, I've kept his memory bright,
And men have heard of Attar Singh in many a stormy fight.
So I can rest with honour now, and lay my harness by,
And the lands that saw my father born will see my children die.
But still—it's hard to be going. I'm an old man now I know,
But I come of a tough old fighting stock, and I feel it hard to go.
I leave the boy behind me, Sahib ; you'll find him ready and true ;
Your father was ever a friend to me, and the boy will look to you.
He's young, and the ways of men must change, and his ways are strange to me.

And I've said sometimes he'd never be all his fathers used to be.
I wronged him ; and I know it now. When first our squadron shook—
They fought like devils in broken ground, and our spent beasts swerved at the brook—

I saw him turn, with a ringing curse, and a wrench at his horse's head,
And the first of us over the crumbling bank was the boy the old house bred.

I've never sneered at him since then ; he laughs, as a young man will,
When I preach of the days that are long gone by, but the Sikh blood's hot in him still ;

And if ever the time should come, Sahib—as come full well it may—
When all is not as smooth and fair as all things seem to-day ;
When foes are rising round you fast, and friends are few and cold ;
And a yard or two of trusty steel is worth a prince's gold ;
Remember Hodson trusted us, and trust the old blood too,
And as we followed him—to death—our sons will follow you !

SOWAR.

WEEKLYANA.

THEOSOPHISTS have found a reason in favour of cremation. It is "that until the gross material body had disintegrated, the astral form hovered about the place of interment in the shape of a bluish mist." The threat is not sufficient to convert those who bury their dead. The astral form may assume many shapes and—perform miracles. It is some months we received for publication a letter which we preserved for future use, from which we make the following extract. The correspondent assures us that what is related below is not a story or an echo from ghostland :—

"A Bengali gentleman, who holds a high post in the Forest Department, some years ago came to Cawnpore at the house of a relative. He had one of his legs fractured through a fall from his horse. The gentleman with whom he stayed called in the best medical men of the station for attending upon him. The patient, however, grew worse and worse. The surgeons were alarmed. The whole family began to watch their sick relative with anxious care. Some of them expected the worst. One day, it was a hot summer day, the patient happened to be in his bedchamber with only his wife. The doors and shutters had all been closed from inside. The wife, from exhaustion, had sunk into a sound sleep. The patient felt much worse that day. Thinking that he was past human help, he prayed intently for Divine grace. Opening his eyes he saw or thought he saw before him some rays of gentle light issuing through a particular part of the walls of his room. His surprise was very great. Within a few seconds, the rays accumulated and formed a mass of mellow light. Soon it was transformed into a human figure which advanced towards him with slow steps. When very near, his surprise knew no bounds at finding that the figure was no other than his sister-in-law. The patient trembled from feelings he could scarcely analyse. He lay mute. His sister-in-law then addressed him, 'Dear brother ! get up and come with me.' The patient, although he felt that he was, for the time being, in magic land, could not help smiling and said, 'How is it that you ask me to get up and follow you when you know that I cannot move an inch?' The figure, in reply, said, 'Try to get up and you shall be able to get up, I say.' The patient resolved to obey her bidding. He succeeded in getting up not only without assistance, but with perfect ease. The figure then spoke to him, 'Dear brother, have you still any doubt about the power of will force? I know you have little faith in occultism. Your life is valuable and I am commanded by my Guru to come to your succour. You are now cured. Have faith in your own religion. Be never an atheist and always be sure that there is working behind this material world a mighty hidden force.' After this, the figure became transformed into beams of light and vanished from sight. The patient sat in a state of stupor for a while and, when he awoke from it, he found that he had acquired the use of his legs. It was almost a resurrection. He kept the means of his recovery a profound secret for a long time. From that day, however, he became an altered man as regards his faith in occultism."

A PICE vernacular paper suggests the suppression by Government of breast-beating as self-torture, especially "where this is done for the sake of a few annas or pice." It has perhaps no objection when there is a larger payment. Self-torture or self-murder may be illegal, but it has not been abolished by Acts of the Legislature. If, again, self-torture be for gain, by its prohibition, you close a source of living. Mourning is very often a show, and there are various ways to make it known. When you denounce the show, you cannot let escape those who contribute to or abet it, who are equally punishable with the principal performer. Are you prepared to punish them all?

If the showy beating of breasts at the Maharaj is bad, the exhibition now being held at Earl's Court of ascetic Yoga postures is much worse.

We read of a complaint that, at Agra, some Europeans, in spite of protests, photographed from the river a female bathing ghat with its fair occupants. The fair of Ind who expose themselves to the sun, how can they avoid his pencil? The newly discovered X rays threaten to penetrate the walls of the zenana. How to escape that fierce light?

LALA Hurji Mal, a banker of Peshawar, has memorialized the Lieutenant-Governor of the N.-W. Provinces for removal of certain grievances which forced themselves upon him while on a visit to Hardwar, to the fair, as he says, of Nirjala Ekadasi. They are—

That the unclaimed Hindu corpses are either buried or are thrown away into the Ganges by the sweepers without at all being burnt ;

That in spite of the notice dated June 1864 by the Magistrate of Saharanpur, engraved upon a stone in the wall at the Hardwar ghat, prohibiting fishing at or near the ghat, the Municipal Committee of Hardwar recently passed a resolution allowing fishing at Hardwar and Kankhal ;

That there is no waiting-room for the third class passengers at the Hardwar Railway station—a source of great inconvenience, annoyance and trouble to the poor passengers, especially to women and children. That "there is only one window for issuing tickets to all classes of passengers, irrespective of their status as travellers or sex" ;

That pilgrims are not unoften carried in goods waggons without lights, instead of regular third-class railway carriages, packed like herrings.

If every citizen, like the banker Hurji Mal, did his duty, drawing the attention of the proper authority to wrongs committed in his presence or to his knowledge and otherwise assisted in their removal, the country would more rapidly advance without such costly aids as Provincial Conferences and National Congresses.

THE Parsis were formerly, like Hindus, Baboos. Now, as dining on tables with knives and forks, they are so many Esquires. As regards titular distinctions, they share them with Mahomedans as Khan Bahadurs and Shamsul-Ulams. A proposal has been made that a title like Vaiyadhyia Payitee would be more appropriate to a Parsi than that of Shamsul Ulama.

THE Calcutta pipe water has ceased to be saltish but has become less transparent. The last is an annually recurring complaint and is traceable to the season, when the river water is unusually muddy. The present great nuisance of Calcutta is the mosquito. The destruction of open drains saw their extinction. What has caused their reappearance?

MAIKOO LALL, President, Koornai Sadar Sabha, Lucknow, in his "A Treatise on Cholera, Fever and Small-pox, their Origin and Remedy," thinks that cholera is the effect of the east wind on the human system, that fever is caused by exposure and that small-pox is the result of cold. A correspondent of a Bombay paper has been told that "the kite is not to be seen in the place where cholera is raging."

THE *Army and Navy Gazette*, of June 20, remarks:—

"If the statement of *Al Mokattam* is true that the Sultan is suffering from diabetes and that the fact is carefully concealed in Constantinople, fresh troubles may be in store for us in the East. His Imperial Majesty, it is said, was visited by a specialist from Munich, who lately returned to Germany immediately on leaving the Palace, and that he was also visited two days later by another specialist from Paris, who likewise returned to France at once after the visit."

HERE is a note from the same number:

"Why are the Matabele, whom Mr. Rhodes, 'Captain' Laing, 'Captain' Brabant, 'Captain' Stoddart, 'Colonel' Spreckley, 'Captain' Macfarlane, and other captains and men-at-arms, with 'Miepe's men' and other 'friendlies' and valiant allies are engaged in hunting down, to be called 'rebels'? They never acknowledged King Chartered Company or Queen Victoria, and they simply allowed, because they could not prevent, the occupation of their country by the invaders and the Bechuanaland column when Lobengula was overthrown, and made the best of the situation under their new masters till they were impelled into murderous insurrection against them by real or imaginary wrongs, and became enemies, but in no sense 'rebels.' Their 'wild shriek of liberty' will soon be silenced, but Sir F. Carrington's humane orders will put a stop to indiscriminate shooting at sight, and we are glad of it."

AN earlier note concludes with these words:

"Well, let us welcome the descendants of the Pilgrim Fathers (and mothers) who are visiting the old country and appropriating Shakespeare, Bacon, Izack Walton, and Oliver Cromwell—we would even throw in Charles I. and Charles II.—with open arms, but it is just as well to treat as rhetorical flourishes the pious aspirations of the reverend gentlemen who recognise an Anglo-Saxon-American millennium in the visits of American Congregationalists to Farnham Castle. There is one fact that may certainly be laid to the credit of the Puritan Fathers and their descendants, if they like it, and that is the extirpation of the red men of their continent, just as we destroyed the aboriginal population of the Australian continent."

The last is the privilege of the civilized Briton and a part of empire-founding.

THE cycle as a military machine has a bright future before it. A Captain in the French Army has discovered a way of doubling it up for every transport and it has stood a good test. Each machine travelled about 1,200 miles and was 300 times folded up and set going again. The manufacturer of the jointed cycle has further found a workable means of connecting two such machines together so as to make a four-wheeler. He is also confident to convert it into a light waggon for removal of the wounded.

IN all 3,723 Indian troops have arrived at Suakim, with 821 horses, 168 mules, and provisions for three months. The Indian Government have calculated the cost of the contingent at twenty-four lakhs of rupees. Does the estimate include the pay of the soldiers, which, it has been decided, will be a charge on the Indian revenues?

NO news about Dr. Nansen. The governor of Yakutsk reports by cable that the inhabitants of Ustyansk have not heard anything about the Arctic explorer, who was recently reported to be returning after having reached the North Pole. We hope he will have a different fate from Franklin's.

IN the "Leisure Hour," M. Fionvielle, the aeronaut, has a paper on the balloons that voyaged out from Paris during the siege of 1870. Gambetta was accompanied by M. Spuller, one of the survivors of the 169 who took to that mode of transit; 166 balloons carried 169 persons, 3,000,000 letters, 363 carrier pigeons and 5 dogs.

It is intended to hold a universal census in 1900. The proposition was discussed at the International Statistical Institute at Berne.

NOTES & LEADERETTES, OUR OWN NEWS

THE WEEK'S TELEGRAMS IN BRIEF, WITH OCCASIONAL COMMENTS.

PRESIDENT Faure has escaped the fate of President Carnot. On his arrival, on July 14, on the Review ground, Longchamps, a man fired twice from a revolver in the direction of the President's carriage, which luckily did not hurt him. The assailant, whose name is François, was at once arrested, and is believed to be demented.

THE House of Lords has passed the Deceased Wife's Sister Bill by a majority of thirty-eight votes. The Prince of Wales, the Duke of Connaught, the Duke of York, and the Duke of Fife supported the Bill.

THE *Times* says that the late debate in the House of Commons on the Indian contingent at Suakin has had a great result in obtaining the recognition by the British Government of reciprocal obligations of Great Britain and India, which the Indian Government have always urged. The declarations of party chiefs hold out promise of fairer treatment for India, in future, and India may, therefore, now patiently accept the tardy instalment of justice granted. Lord George Hamilton, speaking at Ealing, said the terms for the assistance rendered by the Indian troops at Suakin were better than hitherto, and India would receive help from the Imperial Government on precisely the same terms when required.

MR. Chamberlain, replying to Mr. Redmond in the House of Commons, said he had received a memorial signed by 9,000 Mussalmans of Ceylon, complaining of the dismissal of Mr. Le Mesurier from the Civil Service. The most influential members of the Mussalman community had, he said, abstained from signing the memorial.

MR. Bryan of Nebraska, a former member of Congress, has been unanimously nominated as Democratic candidate for the Presidency on the fifth ballot. Mr. Bland withdrew after leading three ballots. Mr. Bryan is thirty-six years of age and an Extremist. The Stiverite delegates from Massachusetts, New Jersey, New York, Pennsylvania and Wisconsin declined to nominate any candidate on the Chicago platform. The Democratic disruption is complete. Mr. Sewall, of Maine, has, however, been nominated Democratic candidate for the vice-presidency. A number of influential Democrats are alarmed at the decision of the Chicago Convention, and are rallying round Mr. McKinley, who now declares that he is strongly in favour of gold.

THE French Senate has passed the Bill making Madagascar a French Colony.

M. LAURIER, the new Canadian Premier, speaking at the civic reception of Admiral Erskine, commanding the British North American Squadron, said that he would do his duty to the utmost for Canada and the Empire. None, he said, were more loyal to the Crown than the Canadians.

REUTER's correspondent at Bulawayo states that the situation is very disquieting, and that the rebellion seems extending southwards. Several Impis threaten the Tati road between Bulawayo and Bechuanaland, and it is feared the Makalakas will join the Matabeles.

It was arranged with the sanction of the Sultan that the British Consul and a senior British Naval Officer should distribute relief to distressed Christians and Mussulmans in Crete, but a letter from Lord Salisbury informs the subscribers that the proposal has been dropped owing to objections raised by Germany, Russia, France, Austria, and Italy, who fear the misinterpretation of such British action. The Cretan Assembly has opened. Great discord prevailed among the Christian and Mussalman Deputies, and the prospect is gloomy. Grave complications are feared in the island owing to the aggressive attitude of the Turkish troops regardless of the armistice and deadlock between the Governor and the military Chiefs. The Powers have urged on the Sultan that the Turkish troops in Crete should remain on the defensive. The Christian deputies demand a Christian Governor with command of the army and the right of veto, the Porte receiving half the net revenue from the customs.

GOVERNMENT has withdrawn its own amendments to the Irish Land Bill, owing to the protest of Mr. T. W. Russell, member for South Tyrone. The papers deplore this fresh example of vacillation. It is believed that the attitude of the landlords' representatives will prevent the passing of the Bill. The Government's attitude towards India is firm. Following the Commons, the Lords have accepted the Suakin resolution. In the debate Lord Onslow repeated the arguments of Lord George Hamilton in the Lower Chamber. Lord Reay opposed the resolution. He said that the time for driving hard bargains with India had ceased, and would not believe that the Suez Canal was in any way endangered. Lord Lansdowne thought the Suakin charge a just one and India's interest in the integrity of Egypt was not confined to the Suez Canal. Lord Kimberley was not so positive. He deprecated the pressing of such a small matter, and thought Government ought to aim at removing any friction. Lord Northbrook spoke to the same effect and believed the principles of Lord George Hamilton's despatch would satisfy India. Lord Salisbury explained that the movement of Indian troops to Suakin was not directly connected with the Soudan campaign, but with the defence of Suakin or the Southern littoral of the Red Sea, in which India was chiefly interested. The resolution was adopted by a majority of 52 votes.

AN early abandonment of KISSALA by the Italians is expected.

THE *Times* agrees with the article in the *Edinburgh Review* that it is time for England to reconsider her attitude regarding the Egyptian question and say frankly that, while not annexing the country, she cannot pretend to foresee the future when it is unnecessary to remain as the indispensable guardian of Egyptian prosperity and European interest.

UNEASINESS is being felt regarding the shortness of the water-supply in Egypt. The maize crop is threatened, the Nile flood being a fortnight late. That ought to cause uneasiness in India, for the interests of India are bound up with those of Egypt.

LI-HUNG-CHANG will be a guest of the State while in England. He will stay for four weeks and reside in the large mansion taken for him by Government. The British Vice-Consul from China on leave will be attached to the Chinese envoy. We make no doubt the expenses will be made a charge on the Indian revenues.

COMMEMORATIVE medals in bronze and in white metal of the late Reinhold Earnest Rost, L.L.D., M.A., Ph.D., C.I.E., late Librarian of the India Office, and one of the truest friends of India, have been executed by his son, Mr. A. E. L. Rost, the sculptor, and are on view at the sculptor's studio, 20, Newman Street, Oxford Street, W. and at Messrs. Luzac & Co.'s, 46, Great Russell Street, W. C., London. Price, in bronze 5/6 and white metal 2/6. For the life devoted to India, Dr. Rost deserves a memorial in this country. The Presidency towns may, at very little cost, order, of the son, busts of the eminent Orientalist. They will not only be cheap but very life-like. In the meantime, orders should go for the commemorative medals. We hope arrangements will be made in India for their supply.

THERE is no likelihood that the widow of the late Dr. Rost, a permanent invalid, will be granted any pension. Her nationality is in her

way. The sum allotted for pensions is limited by Act of Parliament to £1,200 a year and the First Lord of the Treasury thinks that it should be limited to British citizens. We hope, however, if no pension can be assigned, there will be no difficulty in making a grant later on.

We believe the pension is open to an Indian. In India, we have no Civil List fund, either for pension or grant. The only general recognition of scholarship was the purchase by Government of three copies of books printed in India. The Printing Press Act making it obligatory on every printer to deliver 3 copies of every book printed by him to Government, and on the Government to pay for them, has been altered to make the books free gifts. It is, of course, open to the several Governments and Administrations to patronize a book, but we have recently seen how economical they are in the exercise of that power.

THEY are celebrating the centenary of the discovery of vaccination in Europe and America—at Berkeley, in Gloucestershire, the birth-place of the discoverer, at Bristol, Moscow, Berlin, Baltimore, and Brooklyn.

Son of a clergyman, Edward Jenner, M.D., was born in 1749, and was, as he says himself, "the only one of a long line of ancestors and relatives who was not educated at Oxford." Yet he outshone them all. At the age of twenty-one he became the pupil and assistant of John Hunter, in whose house he resided for two years. Jenner was the first to detect angina pectoris as a disease of the coronary arteries. To this enquiry he was led by the sufferings of his honoured preceptor. Earlier still he had produced some poems one of which, the "Signs of Ruin," ran through several editions. As a naturalist, he contributed to the Transactions of the Royal Society papers on earth worms and their influence in breaking up the soil and fertilizing it for cultivation, on the habits of the cuckoo and other birds, &c. His "Inquiry into the Cause and Effects of the Variolæ Vaccinæ" was published in June 1798. His fame was now established and he did not wish for more. Writing to a friend, he said: "Shall I, who even in the morning of my life sought the lowly and sequestered path of life—the valley and not the mountain—shall I, now my evening is fast approaching, hold myself up as an object for fortune and for fame?" In recognition of his long and disinterested labour, the House of Commons, in 1802, voted him £10,000, and five years after another grant of double the amount. In 1809, a statue of him was erected by subscription at Trafalgar Square, London. The first successful vaccination was on the 14th of May 1796 and his discovery is dated the 19th of July when he wrote the now famous letter which we quote:

"Dear Gardner,—As I promised to let you know how I proceed in my inquiry into the nature of that singular disease, the cowpox, and being fully satisfied how much you feel interested in its success, you will be gratified in hearing that I have at length accomplished what I have been so long waiting for, the passing of the vaccine virus from one human being to another by the ordinary mode of inoculation.

A boy of the name of Phipps was inoculated in the arm from a pustule on the hand of a young woman who was infected by her master's cows. Having never seen the disease but in its casual way before, that is, when communicated from the cow to the hand of the milker, I was astonished at the close resemblance of the pustules. But now listen to the delightful part of the story. The boy has since been inoculated for the small-pox, which, as I venture to predict, produced no effect. I shall now pursue my experiments with redoubled ardour. Believe me, yours sincerely, Edward Jenner. Berkeley, July 19, 1796."

Dr. Jenner died on the 26th of January 1823, at the age of seventy-four. The following epitaph is inscribed on his tomb:

"Within this tomb hath found a resting place
The great physician of the human race—
Immortal Jenner! Whose gigantic mind
Brought life and health to more than half mankind.
Let rescued infancy his worth proclaim,
And lisp out blessings on his honoured name;
And radiant Beauty drop one grateful tear,
For Beauty's truest friend lies buried here."

The efficacy of vaccination has not the universal acceptance which the celebration of the centenary may lead one to suppose. It is not unannounced good. It has been made compulsory by law and maintained by it. There is against it a strong opinion which is gaining ground. It is doubted as a preventive and dreaded as the introducer of many diseases.

MAJOR-GENERAL F. de Winton, the Comptroller of the Household of the Duke and Duchess of York acknowledges, in a letter to the Under-Secretary of State for India, dated York House, St. James's Palace, S. W., May 16, 1896, the receipt of the silver casket presented to them by the European and Native communities of Calcutta and the Province of Bengal. He writes :

"I have duly laid the papers before Their Royal Highnesses, who desire me to convey their thanks to Lord George Hamilton for sending them.

The Casket to which the above refers, has been received and Their Royal Highnesses would feel much obliged to Lord George Hamilton if he would forward to the several communities the very warm expression of thanks of Their Royal Highnesses for the very beautiful present that Calcutta and the Province of Bengal have been good enough to send them."

THE *National-Zeitung* of the 11th June translates the article on the late Barthelemy St. Hilaire that appeared in *Reis and Rayyet* over the signature A. Barth. The editor of the Berlin paper introduces the obituary notice with the words of which we give a translation :

"Barthelemy St. Hilaire.—Under this heading there is in the weekly periodical *Reis and Rayyet* of the 14th March (a periodical that appears in Calcutta) a necrologue written by A. Barth, a member of the French Academy, particularly distinguished by his learning in all matters concerning India. Barthelemy St. Hilaire was known as a prominent statesman, as a highly learned Greek and a distinguished Indianist. He was successively a pupil, a fellow-student and a friend of Eugene Burnouf, Victor Cousin and Adolphe Thiers. He died in Paris, on the 24th of November 1895, at the age of 90."

We are grateful to our distant contemporary for the attention paid to us. Our acknowledgments are also due for the copy of the journal received.

In a letter from Paris, M. Barth makes a correction in the article in *Reis & Rayyet* originally written by himself in French. He writes :—

"The translation is very well done. There is one point where it seems objectionable, the passage where the translator makes me say 'B. St. Hilaire was more a man of wisdom than a man of learning.' A man of learning he was surely, and of great learning. I do not remember my own words in French, but they must have been somewhat as 'than a man of minute and dry learning,' 'than a man of deep and original research.' But it is a mere trifle and does not matter much."

Regarding the article on Mr. Pincott by Dr. Fitzedward Hall (*Reis and Rayyet*, March 21,) the great Indianist of France says it is a "touching notice."

"Pincott I knew by what he wrote in the Journal of the Royal Asiatic Society, some wild speculations on the plan of the Rig Veda Samhita and much better ones on the plan of the Adi Granth. Now I know how much he was an autodidact, the deficiencies of his paper on the Rig Veda appear less surprising."

In the same letter, M. Barth gives a glimpse of his own life :—

"The manifold troubles to be undergone by every man in position and who holds a pen in India, is the same here with us. From the time I am fixed in Paris, I have much less leisure than before, though the work done is not greater for that. Most of my time I am spending for others whom sometimes I did not know the day before. The only part of the year I am my own master, is when, running away, I seek shelter in a lost hamlet on the seashore of our Bretagne."

We are afraid, it is the case in other countries as well. We remember an Anglo-Indian journalist now retired making the same complaint in respect of persons rich enough to pay for the work done for them.

THE Vicerey would not grant Umra Khan an audience, but the ex-Khan of Jandoul has Lord Elgin's permission to return to Cabul. The

Pioneer is sorry that he has not chosen an asylum in India, for, had he done so, he would have been comfortably provided for. Alas ! poor Umra !

UMRA KHAN who had been staying in the Mussaferkhana at the Frere Road, left Bombay on Saturday night by the Ahmedabad mail train under the escort of the Bombay Police. Umra Khan with two others and Mr. Mirza Mahomed Ally, Inspector of the Criminal Investigation Department, occupied a second class compartment, while Umra Khan's followers, about twenty-five in number, occupied four compartments of the intermediate class. Each compartment contained about seven Chitralis and police. The Sepoy policemen forming the escort travelled in plain clothes, but they were required to take their uniforms with them and to use them when necessary. While in Bombay Umra Khan expressed a wish to make some purchases of arms including a very large quantity of ammunition, but he was not permitted to do so. The arms which were taken away from him when he left Bombay for Mecca have been returned to him.

At a meeting, held yesterday in the British Indian Association rooms of lawyers, merchants and others, presided over by Maharaja Narendra Krishna, it was decided to request the Sheriff to call a public meeting to honour the retiring Chief Justice, Sir Comer Petheram. A discordant note was sounded by one of the advocates of the High Court, who thought that it was too much to move the Sheriff for the purpose. Luckily for Sir Comer, he came to Calcutta after the stormy days of his predecessor had blown over, or the meeting would not have the support of the "mischief-makers."

ON Thursday night, the India Club treated Professor Jagadis Chunder Bose, of the Presidency College, who has leapt into fame by his electrical discovery and the patronage of Lord Kelvin, to an English dinner without wines and native songs. The Babu goes to Europe at the expense of the State to make a better study of his own special subject and to improve the laboratory at the Presidency College. He will be away for 6 months, the first three of which he spends on the Continent, and the second in England. He leaves Calcutta next week for Bombay where he takes the steamer *Caledonia*. He will be accompanied by his wife.

At the dinner, 42 covers were laid and Mr. R. D. Mehta, one of the senior members of the Club, presided, who, at the conclusion of the dinner, asked his forty comrades to charge their glasses with the filtered water of the muddy Hughli to drink to the health of the distinguished guest of the evening. While complimenting the Professor on his achievements, Mr. Mehta made the remark—"It used to be said of us that we are a body of mere imitators incapable of original research. Dr. Bose has refuted this calumny." If the chairman was complimentary in the toast, the guest was electrical in the reply. He could not command words to express his gratitude but left those who honoured him that evening to read his thoughts. The inner man, he said, was no longer a secret—the bones, muscles and all and even thoughts were being photographed, and they could see for themselves how much he appreciated their hospitable board spread with dishes from the Hall of all Nations and their good wishes for him and his.

THE week has been notable for four publications, which, notwithstanding the rains and the mosquito, are sure to produce electrical shocks in many quarters. Dr. Jogender Nath Bhattacharyya's "Hindu Castes and Sects" is an exposition of the various Faiths with a new light, which, like the X rays, pierces through darkness and mystery. Mr. Manomohan Ghose, the terror of the country magistracy, has prepared two terrors for Government in the shape of "A collection of opinions of eminent Executive and Judicial authorities from 1793 to 1883" and "A Compilation of (criminal) cases" in which he held a brief or with the facts of which he is otherwise familiar, which collection lays the axe at the root of the boasted English fair-play and justice, and both intended as aids to his contention for separation of Judicial and Executive functions in the Magistrates of British India outside the Presidency towns. To supplement, as it were, the balanced statements of the cautious advocate, Baboo Ram Gopal Sanyal has enlarged his "Record of Criminal

The Indian Association for the Cultivation of Science.

210, Bow-Bazar Street, Calcutta.

(Session 1896-97.)

Lecture by Babu Rajendra Nath Chatterjee, M.A., on Wednesday, the 22nd Inst., at 5-30 P.M. Subject: Properties of Matter (concluded). Hydrostatics.

Lecture by Dr. D. N. Chatterjee, B.A., M.B., C.M. Thursday, the 23rd Inst., at 6 to 7 P. M. Subject: The Protozoa.

Lecture by Dr. Mahendra Lal Sircar, Friday, the 24th Inst., at 7 P.M. Subject: Expansion of Bodies by Heat.

Admission Fee, Rs. 4 for Physics, and Rs. 4 for Chemistry ; Rs. 6 for both Physics and Chemistry ; Rs. 4 for Physiology ; Rs. 4 for General Biology ; Rs. 6 for complete course of Physiology and Biology. The charge for a single lecture is 4 Annas.

MAHENDRA LAL SIRCAR, M. D.,

Honorary Secretary.

July 18, 1896.

Cases, as between Europeans and Natives for the last hundred years," dedicating it

"To the deliverer of an injured land,"
to the Hon'ble Babu Surendra Nath Banerjee.

REIS & RAYYET.

Saturday, July 18, 1896.

REFORM IN MEDICAL SERVICE.

THERE can be no doubt that the people of India are reaping many advantages, direct and indirect, from their British rulers. Apart from the wealth gained by many from trade and commerce, the number is not inconsiderable that is supported by service rendered to the Crown. Civil and military duties are entrusted to many. The very civil service, which had so long been the monopoly of members of the ruling race, has been thrown open to the ruled, though in a shape slightly different. The higher judicial service has begun to be recruited from the lower one, to the advantage of the people of the land. The Indian Vakils have been elevated to the Benches of the several High Courts. In the military line Havildar-Majors and Subadar-Majors are no longer exceptional distinctions. Great Britain has been brought to a closer affinity with India by the two Egyptian expeditions. In almost all departments of the public service Indian subjects are being admitted more liberally than before. Improvements are being made in every direction with commendable zeal. In the subordinate medical service, however, the case is contrary. Nothing has been done to improve its position and prospects. The inertia of rest that distinguishes it seems to be permanent. There was some time ago a change in name. Sub-assistant surgeons have in consequence dropped the particle sub—that telling mark of inferiority—but their actual status remains the same. Dr. Bahadurji's proposal to separate the civil from the military medical service should, no doubt, be carried out. The employment of Assistant-Surgeons in the place of Civil Surgeons to a large extent will no doubt be an improvement, while improving the financial condition of the Government. First grade Assistant-Surgeons can be raised to civil medical officers in districts, without European members of the service suffering any injury.

The position and pay of Assistant-Surgeons have ever been a matter of complaint. The few among them that have attained to any prominence have been differentiated from the unwashed by being classified with the white-washed. Brilliant students of the Calcutta Medical College are not wanting. But a journey to England and the consequent expenditure are the difficulties that stand in the way of their rise. Medical education is sought generally by the sons of the poor middle classes of Indian society. The hardship involved in dissection, *post mortem* examination, and hospital duties deters children of the wealthier section of the community from entering this institution. No other branch of learning presents so many difficulties in its acquisition. Field survey with students in engineering is a matter of comparative ease. After the severe trial undergone by them, threatening danger to life itself from imbibing some deadly poison, if the students happen to pass the final examination, they think themselves quite fortunate.

Generally, dearth of means prevents a passed student

from setting up as an independent practitioner. He has to begin as a supernumerary with a pay of only Rs. 50 per month, and this probationary appointment may run over a year. He that is lucky may, through some influence or other, exerted in the Surgeon-General's office, succeed in winning a post in the third grade, carrying a salary of Rs. 100 a month. After seven years, passed in different stations, he has to pass a departmental examination which, if he passes successfully, will bring him Rs. 150 and promotion to the Second Grade. Another seven years and a second successful examination enable him to rise to the First Grade and a pay of Rs. 200. This is the ordinary course.

The case is different with those who, admitted to the public service, are located in crowded cities and towns. They may then, by private practice, make a respectable income. With them the Surgeon General's office is the one centre of interest. When an office exercises large patronage, people believe in the existence, in it, of such corrupt practices as were lately detected in the office of the Inspector-General of Registration. Sometimes a man in the third grade has been found to officiate as Civil Medical officer. He may even succeed in getting a prize appointment in consequence of his opportunities. Some become fixtures in the metropolis from their first admission to the service. The lectureships in the State medical schools, which always fetch the largest income, are frequently bestowed not for merit but upon a principle of undisguised nepotism. Instances like these enhance the discontent based on inadequate remuneration.

Of all Departments of Government Services the Subordinate Medical is unquestionably the most ill-paid. The bitter feeling is intensified in those who, in consequence of their stations, are unable to avail themselves of private practice. With small hospitals under their care, in out-of-the-way places, they cannot earn anything over their pay unless they seek extra profit from the supply of diet to indoor patients. The contrast becomes glaring between such men and those who hold lectureships in the State medical schools. The latter are allowed to practise without even hospital attendance being insisted upon. The subordinates take advantage, seeing the lax supervision by superiors. The demands of private practice are attended to with greater punctuality than those of hospital attendance. This state of things may be seen in even the Calcutta Medical College. The days of the Cheverses and Chuckerbuttys, of the Fayers, Cutcliffes and Gayers, have passed away. The hospital medicines are rarely of the best. The supervision exercised by native donors has become a thing of the past. The Surgeon-General finds rest in desk work or in sojourns to healthy stations. Genuine or active inspections are becoming rarer and rarer. A few hospitals only are visited, and never without previous notice.

The only argument that can be adduced against enhancement of pay of Assistant-Surgeons, is that they are adequately remunerated by the proceeds of private practice. This is true of only lecturers in medical schools. With the generality of Assistant-Surgeons, their pay is their whole income. Assistant-Surgeons are generally placed in stations where there is not much lucrative business. Localities where private practice may be more favourable, are generally filled with practitioners not

in State employ. Another disadvantage is that the distance of inhabited areas from their stations, as also from one another, are very great. For this reason they cannot visit those localities without neglecting their hospital duties. The morning is taken up by official work. So that their afternoons are their own, which they can spend in any way they like, provided there are no bad cases in the hospital. But this ill suits the patients. Consequently, Assistant Surgeons cannot have much private practice.

Towns and inhabited areas in the interior have generally such bad roads as do not admit of carriages being plied on them. The alternative is the palki, a costlier and slower method of locomotion. It also means much loss of time. In crowded cities with metalled roads locomotion is cheaper and more rapid. For these reasons, Government should frame some clear and well-defined rules for regulating the appointment and transfer of Assistant-Surgeons. It would not be well to leave them to the tender mercies of irresponsible subordinates open to every kind of influence. Apart from these inequalities in the service, its general status ought to be raised. It should be borne in mind that the men are engaged in practising an art that has for its object the alleviation of human sufferings. The privilege cannot be acquired except by reading costly books and journals which require money to buy.

Dr. Bomford, the present Principal of the Medical College of Calcutta, has all on a sudden become a strict disciplinarian. Rules have been promulgated, under the sanction of superior authorities, that will make it impossible for a student of average parts to pass the final examination. If one fails twice in any intermediate examination he will not be allowed to appear again. His future prospects are thus to be ruined by a second failure. Instances are not rare where meritorious students have failed several times before achieving success or winning the diploma.

Some of the Professors themselves of the Calcutta Medical College have been unsuccessful in obtaining medical degrees, though, by passing the service examination, they have secured high appointments in the Medical Service of India. The severity of the present rules will ruin many students who have joined the Calcutta Medical College and who wish to win the final diploma by perseverance, if necessary. No positive harm can result if they are allowed to strive over and over for achieving their purpose. No diploma can be theirs unless they come up to the fixed standard of excellence. Whether they do so in five years or eight, or even ten, is a question that concerns them alone. The public have little interest in it. Those who persevere in the face of repeated failures, do not deserve to be despised. Generally speaking, they acquire more knowledge than those who pass on the first chance. Failure to pass an examination does not necessarily imply an absence of knowledge. As examinations are conducted, success is sometimes more a matter of chance than study. There are candidates that are so flurried in the examination hall that they cannot do their best, although in actual knowledge of the subjects examined they are not a whit inferior to the very flower of their year.

In India there are no separate service examinations. Public appointments depend on the final university examinations. Hence an objection may apparently be taken to the admission of plucked students. But when there is a restriction of age in

the first appointment for public service, the rejection of plucked students cannot be justified. If these fail to win the diploma at the proper age, their admission into the public service will be barred. Nothing more. They may yet earn a living by private practice. The reason of the rule, therefore, is not clear. Has it anything to do with the improvement of the position of the European Apothecaries under training in the same College?

On the first of June last, a paper was read at the Hare Anniversary on the Medical College of Calcutta. The lecturer deprecated the want of sympathy of modern professors compared with those of former times, with those that sit at their feet. Dr. Sircar from the chair pointed out the narrowness of modern medical men. If opportunities are given, the Subordinate Medical Service can produce men like Drs. Ram Narain Dass in surgery and Prasanna Kumar Mitter in midwifery. Indeed, both of them, though belonging to the subordinate service, were better than many members of the upper service. If the rule of rejection passed at Dr. Bomford's instance be not withdrawn, the only way of proceeding should be by calling into existence other medical colleges with the same standard of education with the Calcutta Medical College. This will induce Government to devise a separate service examination. The founding of an institution for teaching medicine may now be tried, though its fruits will appear at a distant date. Recently a College of Physicians and Surgeons has been established for the same purpose under the presidency of Dr. Juggobundhu Bose. The attempt is laudable, and good results are expected. Our wealthy men should endeavour to support it. The scheme may produce men like Dr. Kitasato of Japan. India in medical learning may in future rank with any country in the world.

GUBERNATORIAL TOURS AND LAW COURTS.

AN EX-OFFICIAL VIEW.

I see the Lieutenant-Governor makes very nice speeches in Behar. He seems to be rather frank in his utterances. I like frankness in high officials. It would be a great boon to the people if our Governors were able to ascertain the public feeling in regard to the administration of justice. A certain Emperor of Delhi used to travel incognito for finding out the real grievances of his subjects, but our Governors are surrounded by interested officials and toad-eaters in their rounds. The former try to show the bright side of the picture, while the latter spend their money and energy to get titles and honours. The consequence is that the Governors come back to their head-quarters with erroneous notions of the condition of the people. As a matter of fact, the country now suffers from the uncertainty of the law and the inequitable proceedings of the courts. Now-a-days scarcely two or more persons sit together and do not talk of the arbitrary proceedings of the authorities. Life and property are no doubt safe from marauders and robbers but one's innocence is no longer a safeguard against the clutches of the law. The multiplicity of Courts is a curse to the people. It has been a prolific source of false cases and subornation of perjury. In India where people in the good old time considered themselves bound by conscience to repay the debts of their grandfathers every attempt is made to avoid the payment of just debts by means of false evidence and legal flaws. Again, the Executive Police and Officers of Government are more apt to drag innocent people into Court than to bring the real offenders to justice. The latter generally escape if they are able to engage the services of ingenious legal practitioners and secure the good grace of the Police. Independence of Courts is now a rare quality. There are few officers who would dare

displease the executive authorities and sacrifice their own prospects in life. It is not the public confidence which they now care for. To please a Commissioner of Police or a District Superintendent who is hand and glove with the Magistrate is their study. For specimens of officers of this stamp you are not to make inquiries in the distant mofussil. Your own city abounds with them. Here criminal trials are mostly a farce. The other day His Honor the Lieutenant-Governor asked the municipality to press for exemplary punishment in certain petty cases, but every one knows that a majority of such prosecutions would result in acquittals if there were proper trials. As a matter of fact, the trial of petty cases instituted by the police and other public officers seldom occupies half a minute each. The alleged offenders know that a denial of the charge would entail more trouble and expense than an admission, although they believed in their minds that they were innocent. The sacrifice of goats at the Kalighat temple occupies more time than the trial of petty cases in the Police Courts. Of course, the result is satisfactory to the police and the magistrate earns the good opinion of the head of the police, an opinion worth having, speaking from a selfish point of view.

THE MAHABHARATA.

TO THE EDITOR.

AFTER years of Herculean toil, the English translation of the Mahabharata, published by the late lamented Pratap Chandra Roy, C.I.E., in successive fasciculi, is at last completed. The Mahabharata is a treasury of wisdom and eloquence. The culture and erudition of the Island-born Rishi are reflected in it. Playing upon the heaven-strung *vina* which the Goddess of Poesy, invoked in his opening lines, herself handed over to him, he produced this gigantic epic containing the best account we possess of the heroism and manners of ancient Hindustan. Poor Pratap Chandra was not allowed an extension of days for seeing his work completed. He was snatched away by the pitiless hand of Death in the midst of the undertaking. Pratap Chandra laboured indefatigably for the completion of his self-imposed task, but, alas! the evening of his life had surely come too quickly. Incessant toil and anxiety had gradually broken down his health. Conscious of his approaching end, Pratap Chandra, in his death-bed, before starting for that "undiscovered country from whose bourne no traveller returns," beseeched Babu Kisari Mohan Ganguli,---the translator and his guardian angel,---by clasping his feet, while tears trickled down his cheeks, to finish anyhow the English translation of the Mahabharata and free him from his debt to the subscribers. The translator gave him the required assurance. At this, his friend became tranquil. A few days after, when his hour came, he was fully prepared. Full of hope and thought centered on Krishna, without casting a longing lingering look behind, with the consciousness of having lived a life of usefulness and fellow-feeling for God's creatures on earth, and continually calling upon Vasudeva to give him a place at his feet, this martyr in the cause of the diffusion of Rishi-lore breathed his last. With his mind fixed in contemplation upon Vasudeva, he expired in *Yoga*. Yes, it was *Yoga* of the highest kind, for he had ceased to talk of his worldly affairs. It was thus that his soul left its mortal tenement of clay. He has ascended Heaven, let us hope as Hindus, on a celestial car wearing celestial garlands, with celestial choristers proclaiming his good deed, leaving us on this shore, full of

whips and scorns of time,

The oppressor's wrongs, the proud man's contumely,

The pangs of despised love, the law's delay,

The insolence of office, and the spurns

That patient merit of the unworthy takes.

Death, though as natural to us as birth or age, is always looked upon with dread. It is the shadow that mars our brightest landscape, and casts a depressing gloom over the happiest course of life. It is the poison that lurks in the sweetest cup of enjoyment. It is an inexplicable mystery of existence, which has blinded the keenest eye and baffled the most adventurous mind. But the black waves of this trackless ocean, at whose shore the strongest intellect of the physical man sinks in hopeless despair, offers no resistance to the awakened powers of the human spirit. Poor Pratap Chandra is dead and gone, but his name will live as long as his work will last.

Sreemati Sundaribala Dasi, the unfortunate widow of Pratap, has fulfilled the solemn promise which she had so ungrudgingly made to her departing and beloved lord, at the sacrifice of all her *Sridhan*. The world's adoration is due to this self-sacrificing Hindu

widow. Her name has since spread far and wide. It is to be hoped that the liberal portion of our countrymen will come forward to pay off her debts. I now come to the translator. To those unacquainted with press secrets he remained behind the screen. The general public had been groping in the dark. But the time has come when the veil must drop; the seal of anonymity must be broken. The screen concealing the personality of the individual should be put aside. A Sanskrit scholar of undoubted solidity and possessed, besides, of a good knowledge of the law, Babu Kisari Mohan Ganguli must be held to have achieved lasting fame by translating this gigantic work. His Brahman simplicity, his Rishi-like knowledge, his Job-like patience, and his inspired pen best fitted him for dressing the Mahabharata in an English garb. He has Englished the Mahabharata in a very praiseworthy manner.

Native Opinion (Madras) said many years ago: "We can truly testify to the translation being a very faithful and ably-executed one, possessing no small amount of the beauty and vigour of the great original. Instead of 'dis'ing up Hindu ideas so as to make them agreeable to English taste,' the translator tells us that his 'endeavour has been to give as literal a rendering as possible of the great work of Vyasa;' and we have no hesitation in saying that he has succeeded remarkably well." The *Saturday Review* (London) calls the translation "flowing" and ascribes other merits to it. *The Critic and Good Literature* (New York) states,---"the numbers before us argue well for the ability of the translator." W. E. Coleman, Presidio, San-Francisco, California, says,---"I have examined (the parts received) closely and critically, and I find the translation a very good one." Von R. Garbe, Professor of Sanskrit, Konigsberg, Germany, says,---"I have compared some parts of the translation with the original and found it literal as well as elegant." *Trubner's American, European, and Oriental Literary Record* (new series), pronounces,---"The translator has so far proved himself amply efficient for the task, and his English is idiomatic and clear. His terminology is flowery, and many of his passages are decidedly oriental in character. There is, in fact, a peculiar charm about his pages which cannot fail to fascinate the promiscuous reader, and yet, although the work is at all times pleasant reading, the accuracy of rendering is nowhere sacrificed by the translator to his desire to be entertaining." The above is from the pen of the late Dr. Rost, for it was he who edited the *Record* at the time. Coming to India, the *Hindoo Patriot* believed the first fasciculus of the translation to come from the renowned pen of Professor Max Muller. The truth is not a line of the copy sent by the Professor was adopted. The *Pioneer* said,---"The translation before us appears to be an admirable one." *The Bombay Gazette*: "So far as we are able to judge, the translator has striven to embody in his version the beauties of the original." *The Indian Spectator*: "The rendering appears to be faithful and spirited." Very recently, Mr. Tawney and Professor Cowell, in writing to Mahamahopadhyaya Mahesh Chandra Nyayaratna, characterised the translation as "meritorious." Professor Blumhardt of Oxford wrote,---"I am extremely pleased with the English translation of the Mahabharata. It is excellent." Sir Edwin Arnold wrote,---"I may remark that, comparing several passages of the translation with the Sanskrit, I have found it generally excellent, terse, faithful, and most useful."

I have selected the above opinions at random from the wrappers of the successive fasciculi of the publication. Numerous other expressions of opinion occur of a similar kind.

With Babu Kisari Mohan the English translation of the Mahabharata has throughout been a labour of love. On a late occasion, Sir A. Croft wrote to him, saying,---"I have, as I believe you know, a very high opinion of your ability and your unwearied industry." Sir A. Croft in this short sentence has said what everybody must acknowledge that has ever come in contact with Babu Kisari Mohan Ganguli. To those acquainted with press secrets, the name of Babu Kisari Mohan Ganguli was all along known as that of the English translator of the Mahabharata. The majority of Oriental scholars, and almost all those officials who have helped the work, knew him as the author. Anonymity, with regard to a work going on for so many years, could scarcely be possible. Some years ago, an upcountry journal charged Pratap Chandra Roy with attempting to impose upon the public by putting himself forward as the translator when in reality he was unacquainted with the English language. Poor Pratap was very much moved by this foolish attack. He replied promptly, and crushed the offending journal completely by referring it to the two prefaces with which the first fasciculus was published. One of those prefaces was by the translator, while the other was by himself. The journal admitted its error and apologised to Pratap Chandra Roy for the hasty attack. Indeed, in his correspondence with Oriental scholars he freely named the translator in answer to enquiries addressed to him. He was not a man to plume himself with borrowed feathers.

Babu Pratap Chandra Roy and Babu Kisari Mohan Ganguli, by Englishing the Mahabharata, have not only placed India but the whole civilised world under an everlasting debt. No effort in that direction had been made by any one before, except Dr. Bopp, who, in 1819,

published some specimens, but his lamented and premature death prevented further progress. Professor Goldstucker also had begun collecting materials for giving the world an English translation of the great epic of Vyasa. But the project having been conceived late in his life, death prevented its execution. Fauche's French version, of which ten volumes had appeared when the author died, is rather a rough paraphrase than a translation. Sir Monier Williams published only an analysis of the contents of this great work. That done into English by Babu Kisari Mohan Ganguli and published by Babu Pratap Chandra Roy and his widow is the first complete translation of that immortal work of ancient Indian genius. The Government made Pratap Chandra Roy a C.I.E. If the publisher who finances the work deserved such recognition, the scholar whose pen produced it must be held to deserve it more. Rai Bahadur Bankim Chandra and others were of opinion, and they made no secret of it, that the author should have been honoured before the publisher. As literary men, their sympathies were entirely with a brother collaborateur. It should be remembered, however, that it was an anonymous undertaking. There can be little doubt that the author's turn has come. Sir Alfred Croft, I am sure, will do a simple act of justice in the direction indicated.

Even if no recognition comes from the State, the appreciation of his labours by the whole civilised world is no small reward to Babu Kisari Mohan Ganguli. Few persons among us possess working powers coming up to Babu Ganguli's. Indeed, in this respect, I may not unfitly compare him with Lord Brougham who achieved the singular feat of cleaning off the arrears of the Court of Chancery accumulating for years and years together.

S. C. SANYAL, M.A.

OUR LONDON LETTER.

London, 22nd June, 1896.

Imperial Parliament. The ministry has had its first fall. At the meeting of the Cabinet on Saturday, it was determined to drop the Education Bill for this session. The "Times" still thinks its own plan of an autumn session, commencing in October, would have been preferable. It writes: "The Education Bill has been treated throughout as the principal measure of the session. It was carried on the second reading by a majority unparalleled in the annals of Parliament. * * It was the one measure introduced by the Government which the Opposition declared that they would wreck, and they have wrecked it. * * The disappointment of faithful adherents, the encouragement of unscrupulous opponents, and the shattering of the belief in the leading members of the Cabinet as capable men of business are factors of importance in the development of public opinion. * * Mr. Balfour's position excites much sympathy. His personal qualities have won him the good will of his opponents as well as his followers. His quick intellect and his adroitness in debate have given him a commanding place in the House of Commons whether he is in or out of office. But it is impossible to deny that he is largely responsible for the mismanagement of business which has caused the strongest Government of modern times to make a humiliating surrender to a feeble and discredited Opposition. * * Mr. Balfour is a man of varied interests. Literature, art, philosophy and athletics have claims upon his attention.

But the career of the Parliamentary leader admits of few distractions. Those who have successfully ruled and guided the House of Commons have been absorbed in its life, have been familiar with its personalities and its incidents, however commonplace, and have felt its pulse from hour to hour. We are glad that there is no disposition in any quarter to criticise Mr. Balfour's shortcomings in an ungenerous spirit. His brilliant gifts are recognized by his party, and his capability of exerting them, when he is fairly roused, is beyond dispute. He has had a sharp lesson, and no doubt he will profit by it. Mr. Balfour has to recover his character as a man of business and to restore to his followers the confidence that belongs to a commanding and united majority. This is not beyond his powers. The mismanagement of business in the House of Commons is unfortunate, but it is not fatal, as the Opposition would have us believe." There is sound sterling sense in these observations. The leading Gladstonian evening paper endorses all the "Times" says as to Mr. Balfour's personal popularity in the House, but it adds: "He does not stick to his work. Instead of sitting glued to the Treasury Bench, he has to be fetched in, even in the middle of important crises." This is one feature of his failure as Leader. Lord Palmerston, though over 80, hardly even stirred from the Treasury Bench, once he had taken his seat at 4 o'clock. And, in his days, there was no automatic closure at midnight. The House sat till 1, 2 and even 3. But the grand old man was still at his post. The same may be said of Mr. Disraeli. No doubt it was

a terrible strain, and on that account, he accepted the peerage, so as to be relieved of the constant attendance involved in leading the Commons. And that is what Mr. Balfour must bring himself to do, and while the House is sitting he must abandon his preference for literature, art and philosophy. Another drawback he shares with his uncle is the absence of large and frequent gatherings, of a social character, of his supporters. It is unfortunate Lord Salisbury's grand historic home at Hatfield is within half an hour's drive of King's Cross. As a consequence he goes down from Saturday to Monday, and entertains a select few only.

But Mr. Balfour, with his home at Downing Street, might surely have weekly or at the least fortnightly gatherings of his supporters, and of his Opposition friends as well. Nothing contributed more to Lord Palmerston's social popularity than Lady Palmerston's Saturday evening receptions when all that was best in London society, Lords, Commoners, and men illustrious in literature and art were assembled in the salons of Cambridge House.

23rd June.

Last night, in the House of Commons, Mr. Balfour in a penitential sheet, had to eat the humble pie. He had to abandon the great Education Bill, and he had to explain how in one short week the Government had to make a complete *volte-face* from the position it had taken up at the meeting of the party, at the Foreign Office, on the 15th instant. On the whole he did it well, but all the facts patent last night were equally before him on the 15th. It was no doubt a humiliating position, but he had to make a clean breast of it, and for the present the Opposition have a right to crow, and no cock on its own dunghill will crow more lustily than will Harcourt, Fowler, Morley, and Asquith, during the recess.

Mr. Balfour was guilty of one of those *fauxpas* which bring him so much discredit. The article I have quoted above from the "Times" was on the whole friendly to him, and it is read not only by all the leading public men of this country, but it is also almost the only English paper read by publicists in the various capitals of Europe. But Mr. Balfour prides himself on never reading it, or any other paper. The "Westminster Gazette" very pungently writes: "Mr. Balfour said yesterday that he had not read that morning's 'Times,' and this is only an example of what it is well-known he takes pride in professing to be his practice. * * Is not Mr. Balfour's high and lofty academic tone strangely misplaced? If the whole thing bores him why does he not betake himself to his philosophy and his athletics? Every one is glad to have him Leader of the House, but he must consent to play the game according to the rules. He cannot expect to succeed by an ostentatious neglect of the conditions which all his predecessors have faithfully observed."

Sir Vernon Harcourt was in his glory. He pointed out that the Bill had been destroyed by a staunch Conservative, Sir A. Rollit, the member for Islington. He insisted the first and fatal blunder was in Mr. Balfour throwing over Sir John Gorst, and accepting the absurd amendment of Sir A. Rollit. This last is a man of too great capacity to be bracketed with the Bowles, the Dalziells, and Howarths, but, nevertheless he must be a regular gadfly to the Government. Out of some 1,200 or 1,300 amendments he has appropriated to himself over 80.

Now supposing the House were to divide on each of them, the mere act of walking round the Division lobbies, would consume 2½ working days, indeed you may say 3. Mr. Balfour made some calculations assuming each division would occupy 10 minutes, (20 would be much nearer the mark) from the time the bell begins to ring until the division has been taken, and the House resumed. I have based my calculation on each division consuming quarter of an hour. But, suppose 20 minutes were the average then more than three days would be consumed in dividing only on Sir A. Rollit's amendments. Mr. Labouchere, in his speech, described him ironically as "one of the most modest and unassertive members of the House." These are just the attributes in which he is singularly wanting. He is a solicitor, having a business in the city, and also at Hull. He poses as a great authority on Education, and possibly his eighty amendments are meant to score off against the Government for his not having been offered the post of Vice-President of the Council and virtual Minister of Education, an office so ably filled by Sir John Gorst. Sir A. Rollit's love of publicity is phenomenal and amounts to a mania, somewhat of the same type as Sir. H. Howarth's for writing to the "Times."

26th June, 1896.

Obstruction is rampant in the House of Commons and Sir Vernon Harcourt glories in being its most forward champion. His

DEAFNESS. An essay describing a really genuine Cure for Deafness, Singing in Ears, &c., no matter how severe or long-standing, will be sent post free.—Artificial Ear-drums and similar appliances entirely superseded. Address THOMAS KEMPE, VICTORIA CHAMBERS, 19, SOUTHAMPTON BUILDINGS, HOLBORN, LONDON.

DEAFNESS COMPLETELY CURED! Any person suffering from Deafness, Noises in the Head, &c., may learn of a new, simple treatment, which is proving very successful in completely curing cases of all kinds. Full particulars, including many unsolicited testimonials and newspaper press notices, will be sent post free on application. The system is, without doubt, the most successful ever brought before the public. Address, Aural Specialist, Albany Buildings, 39, Victoria Street, Westminster, London, S. W.

papers are covering him with sickly adulation. The "greatest Parliamentarian of his day" is about the mildest praise bestowed upon him, and he appears to drink it all in with avidity. His henchmen ransack the Dictionary for terms of servile, parasitic flattery. And yet this "great Parliamentarian," Leader of the Opposition, to whom the character of the debates in the House of Commons should be a precious legacy to maintain in its former lustre was twice called to order by the Speaker on Wednesday afternoon. He is really bringing himself down to the level of the Bowles, Dalziells and Stuarts.

Cuba.—The Fates do not appear to favour Spain in her efforts to suppress the rebellion.

Things are rapidly approaching a crisis of the greatest gravity. Spain itself is being denuded of both men and money. The rains have set in, the precursor of yellow fever, and the bulk of the troops being young unacclimatized youths, are expected to fall easy victims, and yield a death rate much more terrible than any that the insurgent forces could inflict. As one of the insurgents said to the *Times* correspondent: "Four new Generals had now arrived to aid them, June, July, August and September." Now as to the finances. The deficit for the ensuing year is estimated at \$82,000,000, say £16,000,000 sterling, which will "have to come out of the Spanish Treasury." This will bring home to the Spanish people exactly what Cuba costs them, and when their taxes are increased to meet this enormous deficit, there will be a very pregnant danger of revolutionary tumults. If Spain would only conquer its pride, and sell Cuba to the United States of America, her day of salvation might be at hand. Things cannot go on as they are now, without the loss of Cuba and possibly a revolution at Madrid. One great evil is the influx of Cubans from the country districts to the towns, especially Havana. All supplies are cut off by the rebels, so that the more than 1,000,000 souls in the towns are dependent on what they can procure from abroad. It is estimated the exports to the end of this year will produce only £2,600,000, including their staple products of sugar and tobacco.

There is really no money in the country, and starvation will drive the people desperate. What a tragic history that is of Spain and her Colonies! Three centuries ago, and now! It is very terrible. Surely of her it must have been written *delenda est Carthago*. And who will trace the causes of this terrible catastrophe? The native Spaniard is to-day as proud as his ancestors of three centuries ago. How have the mighty fallen! Will the boy King ever come to the throne? Were I a betting man, I would lay heavy odds he never will.

Natives of India in Africa.—At a meeting of the East India Association, presided over by Sir Lepel Griffin, a paper on "India and Africa," prepared by Captain Younghusband, C. I. E., was, in his absence, read by Mr. L. Probyn. The drift of the paper was based on the proposition, which every one will accept, that "in Africa there was land needing population, and in India there would be every year a larger population needing land." Captain Younghusband alleged that "ten years hence there would be 30,000,000 more people in India, than there were now, and in another quarter of a century 80,000,000 more." "Tropical Africa could scarcely be a field for settlement for a large white population, and if it were dependent for its developments upon whites alone the development would be very slow and tedious. But, by making use of India for the purpose progress ought to be assured, and the development rapid."

Sir Lepel Griffin, in opening the discussion, made some very judicious remarks: "Africa would depend for development upon forces outside itself, and as the country was obviously unfit for colonization by Europeans it would in time fall more or less into the hands of other races, possibly Indians, probably Chinese." This is far too sweeping a statement, as both Bechuanaland and Mashonaland are favoured with a climate perfectly adapted to the white races. With far more justice Sir Lepel added: "The Indian race was very highly placed in the intellectual rank of races, and he possessed a great many virtues which the Chinese did not, and probably never would possess." On the question of the payment of Indian troops sent to Africa, Sir L. Griffin spoke with no uncertain sound: "No person that was a true friend of India, and who wished well to the British Government at home could possibly be silent. So long as Indian troops were employed in Africa on work which was entirely outside those duties which were laid down in the India Act for the legitimate employment of Indian troops out of Indian revenues, they should be paid the whole of their ordinary pay and the whole of the extraordinary expenses, and not one rupee should be charged to the revenues of India. The matter was one of very great importance, and the honour of England was distinctly involved."

A parliamentary paper has just been published from which I am sorry to see only two members of the Secretary of State's Council had the courage to protest against any charge whatever being made on the revenues of India in respect of the troops sent to Suakin. The two were Field Marshal Sir Donald Stewart, G.C.B., and Sir James Peile, K.C.S.I. Those members who have apparently acquiesced, are General Sir Owen

Burne, Mr. R. Hardie (formally at the head of the Bank of Bengal) Sir A. J. Arbuthnot, Sir C. A. Turner, General Sir A. Alison, Sir C. Crosthwaite, and Sir Stuart Bayley. The despatch of the Government of India has now arrived, and, it is said, Mr. John Morley's motion will come on, in the House of Commons, on Thursday next week. Unfortunately, he belongs to the "little England" party, and objects strenuously to the employment of native troops at all out of India. Had his motion been confined to the question of the financial arrangements, I do not doubt the Government would have had to yield, if it has not already determined to do so, out of deference to the views of the Viceroy's Executive Council. But many who would support Mr. Morley in a defence of the revenues of India, will refuse to follow him into the lobby on the other question.

Rhodesia.—By next mail I hope to be able to send more satisfactory accounts of the state of things in Mashonaland, than I could report to-day. Mr. Rhodes has his work cut out for him, and I fear there must be a great lapse of time before things settle down into the quiet groove that ensued after Loben's defeat. But the authorities here, at the Cape, and on the spot seem fully alive to their heavy responsibilities.

Canada.—This letter has already run to so great a length I must leave over to next week the marvellous result of the general election in Canada. The Conservatives have been completely routed, and Mr. Laurier will take office as the first French-Canadian Premier of the Dominion. Our explanation of his triumph is, that the electors in the Quebec district—mostly of French descent, and Roman Catholics—resented the insolent dragoon-ing of their priests. But I will not go farther into the question to-day.

Crete and Venezuela must stand over till next week.

WHAT IS THAT ONE THING?

It seems like an absurdity, yet it is true all the same. I mean that you might have a cellar full of wood and coal and still shiver with cold; and you *would* if it were not for one thing. "Oh, that is so obvious," you may say. "It was hardly worth while to hint at it. Anybody can see it with his eyes shut. All the better for me then: I shan't have to explain. And by the same sharpness you will be able to pick out the important point in two short letters I am about to copy for you."

The first runs thus: "In December 1890, my daughter (Mrs. M. J. Muther,) got into a low, weak, nervous condition. Do what she would she could not get up her strength. Gradually she wasted away until everyone thought she was in a decline, and had not long to live. In fact, she was so low and dejected *she did not care whether she lived or not*. She was under a doctor for six months, but his medicines did her no good. My husband then said, 'My daughter, I will now see what I can do for you.' What he meant was that he would have her take a medicine called 'Mother Seigel's Curative Syrup.' He had used it himself when he was ill, and thought it might prove as beneficial to her as it had to him."

"Mrs. Muther said she was willing to try the Syrup, although she had little or no faith in its helping one as bad as she was. For if she really had consumption we know there is no cure for that. My husband, however, got a bottle from Mr. Hulme, the chemist, in Rochdale Road, and my daughter began taking it. After the first bottle we saw a great improvement. She could eat, and the food caused her no pain. She continued with this remedy, and gradually gained strength, but it took some time to bring her round, she was so very low and weak. After a time she was able to get about, and never looked behind her. Since then she has been strong and well. We have told many persons how Mother Seigel's Syrup restored her to sound health, and are willing you should publish this statement of the facts. (Signed) (Mrs.) Margaret Watson, 11, Ruby Street, Bury, Oct. 8th, 1895."

"In March, 1893," says the second letter, "I began to fail in health. I could not say exactly what ailed me. I felt low, weak, and tired, and had no strength for anything. My appetite fell away, and what little food I ate gave me great pain at the chest and side. My hands and feet were cold, and nearly all the colour left me. I was often in so great pain I could hardly do any work. I was frequently sick, and could keep no kind of food down."

"I got weaker and weaker, in spite of all that was done, and had to be off my work for seventeen weeks. In this way I went on until November of the same year—1893. Then I happened to read about Mother Seigel's Syrup and what it had done for others suffering like me. I got a bottle of this medicine from Mr. W. Heywood, grocer, in Oldham Road, and after taking only the half of it I felt much better. I could eat without pain, and was stronger and brighter every way. When I had finished the bottle I was quite cured, and have had no return of the complaint since. I have told many others about what the Syrup did for me, and out of thankfulness I am willing my letter should be made public. (Signed) Miss Lydia E. Morton, 1, Greaves Street, Middleton Junction, near Manchester, October 10th, 1895."

Both these ladies say that they were very weak, and that their food—of which they could take but little—did them no good. In the midst of plenty they were actually starving. So much wasted was one of them that it was believed she had consumption. The event showed that they both suffered from dyspepsia, and nothing else. But that was quite enough; and besides it often runs into consumption and other fatal maladies. By setting the stomach right Mother Seigel's Syrup fully cured them both.

Coals and wood are useless without means to light a fire; and bread and meat are as nothing unless we can digest them and make them part of our flesh and bone. That is easy to see and important to remember. And it is its power to help nature work this transformation—that makes Mother Seigel's Syrup so wonderful a remedy.

CORPORATION OF CALCUTTA.**LOAN NOTIFICATION.**

THE Commissioners of Calcutta are prepared, with the sanction of the Governor-General-in-Council given under Section 404 of Act II. (B. C.) of 1888, to open a Debenture Loan for Rs. 20,00,000 (twenty lakhs) on the security of the rates, taxes and dues imposed and levied under the Calcutta Municipal Consolidation Act, 1888.

2. The debentures will have a currency of fifteen years from the 1st December, 1896, and will bear interest at the rate of 3½ per cent. per annum, payable on the 1st June and 1st December of each year.

3. The form of the Debentures will be that given in the twelfth schedule of Act II. (B. C.) of 1888.

4. No Debentures will be issued for any sum less than Rs. 500, and above that amount Debentures will be issued only for complete sums of Rs. 100.

5. Tenders for the whole or any part of the above Loan of Rs. 20,00,000 will be received by the Secretary to the Corporation up to 2 o'clock P. M. of Friday, the 7th August, 1896.

6. Each tender must be made out in the form annexed to this Notification, and enclosed in a sealed cover addressed to the Secretary to the Corporation, and superscribed "Tender for Municipal Loan of 1896-97."

7. Each tender must be accompanied by Government Promissory Notes, Calcutta Municipal Debentures, currency-notes or cheques for not less than 3 per cent. of the amount tendered.

8. When a tender is accepted, the deposit, when made in currency-notes or cheques, will be held as a payment in part of the amount tendered, and will bear interest at the rate of 3½ per cent. per annum from the date of acceptance of the tender, provided that the whole amount tendered is paid up in the manner hereinafter prescribed; but no debenture will issue for the sum so deposited so long as the entire amount of the tender is not paid.

9. The deposits on tenders, which may not be accepted, will be returned on application, and no interest will be payable on such deposits. If an allotment after being made is not taken up, and the full amount allotted is not paid as hereinafter prescribed, the deposit will be forfeited.

10. The rate at which a tender is made must be specified in rupees, or rupees and annas: a tender in which the rate is not so specified will be rejected as null and void.

11. The rates stated in a tender must not contain any fraction of an anna. If a rate containing a fraction of an anna is inserted in any tender, such fraction will be struck out, and the tender treated as if the rate did not contain such fraction of an anna.

12. The amount of the accepted tenders must be paid into the Bank of Bengal in the following instalments:—

One-third by the 21st August.
Do. by the 21st September.
Do. by the 26th October.

Parties, whose tenders are accepted, will have the option of paying all or any of the instalments before the dates specified above, and will receive interest from the date of such payment.

13. Anticipation interest will be paid on all instalments from the respective dates on which such instalments are paid into the Bank of Bengal to the 30th November, 1896.

14. In the case of two or more tenders at the same rate a *pro rata* allotment will be made (if the tenders are accepted), but no allotment will be issued if the amount distributable on any tender is less than Rs. 500.

15. A minimum having been previously fixed, tenders will be opened by the Loan Committee of the Commissioners at 2-30 P. M., on Friday, the 7th August, 1896, at the Municipal Office.

W. R. MACDONALD,

Secretary to the Corporation.

MUNICIPAL OFFICE:

Calcutta, 29th June, 1896.

FORM OF APPLICATION FOR DEBENTURES.

I hereby tender for Rs. _____ of the Municipal three and half (3½) per cent.

Debenture Loan for 1896-97, and agree to pay for the same subject to the conditions notified at the rate of Rs. _____ annas

for every Hundred Rupees allotted to me. I enclose Government Promissory Notes, Calcutta Municipal Debentures, currency notes, or a cheque for Rs. _____

POSTSCRIPT.

After paying the expenses of the publication, the surplus will be placed wholly at the disposal of the family of the deceased man of letters.

Orders to be made to the Business Manager, "An Indian Journalist," at the Bee Press, 1, Uckoor Dutt's Lane, Wellington Street, Calcutta.

OPINION ON THE BOOK.

It is a most interesting record of the life of a remarkable man.—Mr. H. B. Bingham Smith, Private Secretary to the Viceroy, 5th October 1895.

Dr. Mookerjee was a famous letter-writer, and there is a breezy freshness and originality about his correspondence which make it very interesting reading.—Sir Alfred W. Corft, K.C.I.E., Director of Public Instruction, Bengal, 26th September, 1895.

It is not that amid the pressure of harassing official duties an English Civilian can find either time or opportunity to pay so graceful a tribute to the memory of a native personality as F. H. Skrine has done in his biography of the late Dr. Sambhu Chunder Mookerjee, the well-known Bengal journalist (Calcutta: Thacker, Spink and Co.); nor are there many who are more worthy of being thus honoured than the late Editor of *Reis and Rayyet*.

We may at any rate cordially agree with Mr. Skrine that the story of Mookerjee's life, with all its lights and shadows, is pregnant with lessons for those who desire to know the real India.

No weekly paper, Mr. Skrine tells us, not even the *Hindoo Patriot*, in its palmiest days under Kristodas Pal, enjoyed a degree of influence in any way approaching that which was soon attained by *Reis and Rayyet*.

A man of large heart and great qualities, his death from pneumonia in the early spring in the last year was a distinct and heavy loss to Indian journalism, and it was an admirable idea on Mr. Skrine's part to put his life and letters upon record.—*The Times of India*, (Bombay) September 30, 1895.

It is rarely that the life of an Indian journalist becomes worthy of publication; it is more rarely still that such a life comes to be written by an Anglo-Indian and a member of the Indian Civil Service. But, it has come to pass that in the land of the Bengali Babus, the life of at least one man among Indian journalists has been considered worthy of being written by an Englishman.—*The Madras Standard*, (Madras) September 30, 1895.

The late Editor of *Reis and Rayyet* was a profound student and an accomplished writer, who has left his mark on Indian journalism. In that he has found a Civilian like Mr. Skrine to record the story of his life he is more fortunate than the great Kristodas Pal himself.—*The Tribune*, (Lahore) October 2, 1895.

The career of "An Indian Journalist" as described by F. H. Skrine of the Indian Civil Service is exceedingly interesting.

Mookerjee's letters are marvels of pure diction which is heightened by his nervous style.

The life has been told by Mr. Skrine in a very pleasant manner and which should make it popular not only with Bengalis but with all those who are able to appreciate merit unmarred by ostentation and earnestness unspoiled by harshness.—*The Muhammadan*, (Madras) Oct. 5 1895.

The work leaves nothing to be desired either in the way of completeness, impartiality, or lifelike portrayal of character.

Mr. Skrine deals with his interesting subject with the unfailing instinct of the biographer. Every side of Dr. Mookerjee's complex character is treated with sympathy tempered by discrimination.

Mr. Skrine's narrative certainly impresses one with the individuality of a remarkable man.

Mookerjee's own letters show that he had not only acquired a command of clear and flexible English but that he had also assimilated that sturdy independence of thought and character which is supposed to be a peculiar possession of natives of Great Britain. His reading and the stores of his general information appear to have been, considering his opportunities, little less than marvellous.

One of the first to express his condolence with the family of the deceased writer was the present Viceroy, Lord Elgin. Mookerjee appears to have won the affection not only of the dignitaries with whom he came in contact, but also of those in low estate.

The impression left upon the mind upon laying down the book is that of a good and able man whose career has been graphically portrayed.—*The Englishman*, (Calcutta) October 15, 1895.

"IMPROVED UNDAUNTED" WATCH. Rs. 7.

Guaranteed three Years.

Strong, accurate, pretty, small, open-faced, nickel silver, keyless, short winding, patent, "NEW STYLE IMPROVED UNDAUNTED" watch, with hand setting mechanism, secondhand, for Doctors, ornamental bold dial, for Rs. 7 V. P. P. with an extra glass, spring, pretty box and full three years' guarantee. Warranted to stand the roughest use. Runs more than 28 hours with one winding. Will last a life time. Easily repairable. Others sell at double our rates. One watch free for the purchase of 8 at a time. Mr. Jno. Dickson of Haputal Railway, from Ceylon says:—It keeps splendid time and never stopped although it sustained hard knocks and jerks. x Dr. H. Moore of Royal Artillery from Poonamallee says:—I sold it for Rs. 16. x Pte. W. Hopkins of Sussex Regt. from Dumbell says:—I have sold it for Rs. 20. x Mr. T. B. Scott of Patna Opium Department says:—Fine watch you sent me some seven years ago is still keeping very good time.

Jewelled Ring Rs. 1-8-0. Real

Silver Watch Rs. 13. Real

Solid Gold Watch Rs. 24.

Pretty electro cased gold chain Rs. 1-8-0. Fashionable electro cased Gold Ring set with scientific diamonds, Rubies, Emeralds, at Rs. 1-8-0. Mr. G. Smith, Salt Inspector from Samkutia, says: "A German valued the diamond ring at Rs. 50 and ruby at Rs. 30." Key winding, Government stamped, solid silver hunting case, Royal watch with extras and full three years' guarantee, for Rs. 13. Pte. G. Hawkes of 2nd York Light Infantry from Purandhar says:—For the first one I got Rs. 25; the second one I sold to a Sergeant for Rs. 28. x Pte. H. C. Bishop of L. F. L. Regt. from Kamptee says:—A Corporal offered Rs. 30 for the very same watch. Gentlemen's open faced, keyless *real solid gold watch* Rs. 30; ladies' Rs. 24; both with extras and guaranteed for 3 years. Mind they are guaranteed to be of real solid gold. No agents kept, all goods sent only by us from Bombay per V. P. P.

Bilaknana, Calcutta.

KAVIRAJ NAGENDRA NATH SEN, Physician, Surgeon, Accoucheur, practises the Ayurvedic system of medicine, after having obtained a diploma at the final examination of one of the Government medical Institutions of the country.

SPECIFICS

for all ordinary diseases, like Fever, Cough, Asthma, Pthisis, Diabetes, &c., including diseases brought on by irregularities of kinds. Catalogues, containing full accounts of diseases and remedies, are transmitted on application. Prescriptions, with or without medicines, sent to every part of India and Ceylon, Cape Colony, and the British Isles, on receipt (by post) of full accounts of diseases.

Thousands of unsolicited Testimonials from every quarter.

CATARRH,

Hay Fever, Catarrhal Deafness.

A NEW HOME TREATMENT.

Sufferers are not generally aware that these diseases are contagious, or that they are due to the presence of living parasites in the lining membrane of the nose and eustachian tubes. Microscopic research, however, has proved this to be a fact, and the result is that a simple remedy has been formulated whereby these distressing diseases are rapidly and permanently cured by a few simple applications made at home by the patient once in two weeks. A pamphlet explaining this new treatment is sent on receipt of 2½d stamp by A. HUTTON DIXON, 43 & 45 East Bloor St. TORONTO, Canada. *Scientific American*.

REVIEW OF POLITICS LITERATURE AND SOCIETY

VOL. XV.

CALCUTTA, SATURDAY, JULY 25, 1896.

WHOLE NO. 735.

IN MEMORY OF DON CARLO,

Born in Guernsey, September 1875,
Died in London, 19th May 1888.

My trusty friend in lonely years
Thy little life is o'er,
And thou art laid in mother earth
Amid the city's roar.
I watched thee weak and weaker grow
And dim and glazed thine eye,
And though thou only wert a dog,
I wept to see thee die.

While tending thee with loving hand
Thy latest glance was mine,
I have found love in human hearts,
But not such love as thine.
And oft at evening's social hour
I sit in solitude,
And think on all thy blameless life,
So gentle and so good.

Another Dog they brought to me,
Of birth and lineage true,
And in my grief I failed to trace
The virtues found in you.
Companion of my merry moods
And soother of my woes,
The only grief thy life did cause
Was when that life did close.

And mankind's cold and selfish creed
Denies when life shall end,
A compensating future state
For you my faithful friend.
But when I reach the other shore,
And walk the golden street,
May I 'mongst loved and lost ones find
You sitting at their feet.

E. MACKAY.

—The Strand Magazine.

WEEKLYANA.

THE German is fond of the nightingale. It is said a crowd of Bonn students was "hushed into silent ecstasy by one nightingale, which, in 1840, used to make a mile of wood ring with her nightly melody". "It was in the same year that the Prussian authorities, in want of money, ordered the trees round Cologne to be felled and sold. The whole ancient city of Agrippina was alive with terror; the trees abounded with nightingales which the Kölnische burgers adored, and they actually bought the trees standing, and thus preserved them

for the nightingales, and the nightingale music for Cologne." Bechsten has interpreted part of the song of a favourite nightingale. Hark to the note of Philomela!

Mrs. Cavalier (née Sorabji Khursedji Langrana).
Mrs. Pheroze Thomas.
Miss Lena Sorabji.

N.W.P.

Miss Lydia Dutt (Medical).

Punjab.

The Sardrani Umrao Singh.

Cannot a list of Indian ladies, dead or alive, who have visited Europe, be prepared? That would be more welcome. As the commencement of such a record, we give one elsewhere. It is not exhaustive. We shall be glad to receive names. Another list of Indian gentlemen marrying English girls in their country will be equally instructive.

..

THE same journal has a short but pregnant article on "The Capital of India." We quote it entire:

"There are, to all intents and purposes, two capitals—Calcutta for, say, five months in the year; and Simla, roughly speaking, for the other seven.

It was not until the advent of Sir John Lawrence as Governor-General in 1872 that Simla came to oust Calcutta. It is understood Sir John made it a stipulation he should be allowed to make Simla the capital, say, from the beginning of May to the end of September.

Then for the first time was seen the whole executive Government transferred to Simla, with the various Government offices, and the clerical establishment attached to each office.

More than a month every year is lost in the transfer from the plains to the hills, and a very large sum of money is thrown upon the Indian taxpayer.

Looking at it from the Native point of view, one cannot but sympathise with them. I have been led to look into the question by

Subscribers in the country are requested to remit by postal money orders, if possible, as the safest and most convenient medium, particularly as it ensures acknowledgment through the Department. No other receipt will be given, any other being unnecessary and likely to cause confusion.

the publication in a recent number of the well-known Calcutta paper, *Reis and Rayyet*, of an article by its lately-deceased distinguished Editor, Dr. S. C. Mookerjee.

Some of the reasons why the Natives object to the annual migration to Simla are the following :—

1. Its costliness.
2. The removal of Government from the influence of public opinion.
3. The hardship inflicted on the Native and Eurasian employees by separating them from their families for seven months every year.
4. The waste of time in closing the offices in Calcutta, and re-opening at Simla, and *vice versa*.
5. The creation of a separate and privileged class of the Civil and Military Services, whereby, while the bulk remain in the plains, the favoured few enjoy a splendid climate all the year round.
6. That the handsome pay of the Civil Service was calculated expressly on account of the exposure of its members to an exhausting climate.

These are some of the objections put forward by the Natives; and who will gainsay them?

When we consider that the Judges of the High Court, the Barristers, and the Solicitors have to do their hard intellectual work in the trying climate of Calcutta, through the whole of the hot season and rains, bar two months of vacation, the plea that better head work can be done at Simla will not bear investigation.

Moreover, have not the merchants and physicians to do their work in Calcutta all the year round?

There is no doubt whatever the climate of Calcutta is a trying one; but it is incomparably more healthy than it was half a century ago.

It has now a magnificent supply of water, brought down from a point of the Hooghly above Barrackpore, and many a city in Great Britain might well envy it.

Then the drainage is on the latest and most improved principles. I remember, some forty years ago, reading a speech of the late Mr. Russ Donnelly Mangles in the House of Commons, in which he said he had worked in Calcutta for thirty years with hardly a single holiday, and with scarcely a day's illness; and that, too, when Calcutta was dependent for its water supply on the public tanks, and with no system of drainage at all!

What, then, can be done? I am much afraid nothing at all. Large sums have been spent on a new Government House at Simla, as well as on public offices.

But I cannot help thinking the practice previous to Sir John Lawrence's assumption of the Governor-Generalship was the best for India.

That left the Governor-General free to leave Calcutta by himself, accompanied only by his personal staff. And a very reasonable provision that was, as he is always a man of mature years, and has not been acclimatised. Some may object and quote the disastrous effects of such an arrangement, as in the case of Lord Auckland and the first war in Afghanistan. But to-day no such objection would hold good, as the Governor-General is always in touch with the Secretary of State in London by the electric telegraph. And the Government cannot move in any matter of importance without the sanction of the Secretary of State.

Old Indians will remember when Macaulay went out as the first Legal Member of Council, he was stopped at Mudras to take counsel of the then Governor-General—Lord William Bentinck—who, under the peremptory orders of his doctor, was passing the hot season at Ootacamund. But Macaulay did his four years of giant work in Calcutta without leaving it, and, in addition to his legal work, contributed regularly to the *Edinburgh Review*, including his brilliant essays on Clive and Hastings.

Another eminent—according to Macaulay, the most eminent—civilian (Sir T. Metcalfe) did thirty-nine years' incessant work in the plains.

Not only the pay is magnificent, but the leave and furlough rules are equally on an extensive scale. The facilities of travel in these days are, again, no mean consideration against the exodus. Nor has Simla been agreeable to all Viceroys. Viceroy after Viceroy had wished that it were not the summer capital. There are considerations also why Simla life should not be too much indulged in.

DURING 1895, works of public utility constructed by private individuals in the several districts of Bengal cost :—

Public buildings (15)	Rs. 59,133 13 3
Roads (7)	" 1,07,400 0 0
Bridges (4)	" 4,500 0 0
Tanks (172)	" 1,83,038 0 0
Wells (5)	" 2,898 0 0
Bunds (6)	" 11,950 0 0
			3,68,919 13 3
Works costing less than Rs. 500 each			" 1,13,062 8 9
			Total Rs. 481,982 6 0

The amounts for the previous two years are : 1894—Rs. 3,46,424-3-0 and 1893—Rs. 3,95,620-6-0. There is no information how many of the works costing less than Rs. 500 were tanks and wells. That is very material at the present moment. A statement of the number of tanks and wells constructed during the past 25 years and their cost,

equally with the number of existing tanks and wells for which last orders have been made, will be a valuable aid in the discussion for a better supply of water for rural Bengal. We see that during the year 1895, only five wells were sunk at the cost already mentioned and that a maid-servant of Babu Nafar Chandra Pal Chowdhuri of Latuda gave Rs. 800 for a masonry one at Mayapur, district Nadia.

THE Bengal Government has notified that under the Rules for the Management of the Charitable Dispensaries and Hospitals in Bengal, "the pay of an Assistant Surgeon will be assumed to be Rs. 150 per mensem, and that of a Civil Hospital Assistant Rs. 38, and local authorities will be required to pay these sums into the Treasury half-yearly in June and December, irrespective of the actual pay of the officer appointed."

The reason of the rule is thoughtfully published simultaneously :—

"Rule 9 of the Dispensary Manual permits local authorities to appoint medical subordinates of the Government establishment to dispensaries in Class II, and requires them to do so in the case of dispensaries situated at the head-quarters of districts or subdivisions. Under the existing rules these subordinates, whether Assistant Surgeons or Civil Hospital Assistants, are entitled to promotion after seven years' service in their grade, on passing a professional examination. When such promotions occur, local authorities are usually unwilling to accept the increased charge for salary, and Government is asked either to replace the medical officer by one of a lower grade, or to meet the difference in pay from Provincial Funds. The transfer of officers on promotion causes, however, much hardship to them, and more especially affects those in the higher grades, while at the same time it interferes greatly with the efficient management of dispensaries.

2. In order to avoid these disadvantages, it was decided in 1893 that the increased pay to which a medical subordinate in charge of a local fund dispensary becomes entitled on promotion to a higher grade, would be met from Provincial revenues, if the local body could show to the satisfaction of Government that they were really unable, owing to financial pressure, to bear the increased charge. This policy is still pursued in dealing with such cases, but experience has shown it to be wanting in finality, and to cause much inconvenience to Government, the local bodies, and the officers concerned. The Government of India have now expressed their approval of the introduction of a system which is in force in the North-Western Provinces, and under which the contribution by a local body of a fixed sum calculated on the average pay of a particular class of medical officer entitles it to the services of an officer of that class without reference to grade. This system was also recommended by the Committee appointed to report on the questions of the pay, position and prospects of Assistant Surgeons, and the Lieutenant-Governor, after carefully considering the subject, is of opinion that it promises to work more smoothly than the one already in force in Bengal. It will equalise the demands on local authorities, and will secure them from those frequent changes which are unpopular in themselves and disastrous in their effect on dispensary administration. At the same time it will enable Government to provide permanent appointments for senior officers of the service, and thus to remove a long felt grievance of the subordinate medical services."

It is not intended to make the rule hard and fast : "The actual pay and leave allowances of these officers will be a direct charge against the Provincial Revenues in the first instance, and as the allowances of such officers during privilege leave are payable by the local bodies, these should also be calculated for the periods of such leave on the average rate now fixed. Cases where the application of this rule will cause hardship or inconvenience, or will conflict with pledges already given, will be specially considered. The sums annually due on account of the pay and privilege leave allowances of medical subordinates should be paid into the local treasury half yearly."

It may be convenient to Government to charge equally all local authorities irrespective of the quality of the men supplied, but we are not convinced that equal justice will be done to all. The equalization of demand is not necessarily a just demand. The exigencies of service may dictate the transfer of an Assistant Surgeon or a Civil Hospital Assistant in spite of the new rule.

The rule comes into force from the 1st of April, 1897.

MR. J. P. Hewett, C.I.E., having been granted privilege leave for three months, Mr. H. J. S. Cotton, C.S.I., Chief Secretary to the Government of Bengal, on leave, has been appointed to officiate as Secretary to the Government of India in the Home Department. Mr. Cotton had hoped for a Chief Commissionership, and the Home Secretaryship is regarded as the stepping-stone to a higher place.

MOULVI Abdul Jubbar Khan Bahadur, C.I.E., who has succeeded the late Prince Jehan Kadr Mitza, as President of the Mahomedan Literary Society and a Commissioner of the Calcutta Corporation, also fills his place as a Trustee of the Indian Museum. The Khan Bahadur

would not, after his retirement, accept any remunerative service. And he was offered more than one. The offices of a Municipal Commissioner and a Trustee of the Museum being honorary appointments and having been offered, he could not well refuse them.

**NOTES & LEADERETTES,
OUR OWN NEWS
&
THE WEEK'S TELEGRAMS IN BRIEF, WITH
OCCASIONAL COMMENTS.**

THE marriage of Princess Maud to Prince Charles of Denmark was duly solemnised on the 22nd. The scene in Buckingham Palace Chapel was a most brilliant one. All the members of the Royal family were present, besides many foreign guests. The Queen withdrew after the ceremony, and the Prince of Wales presided at the breakfast at which the Marquis and Marchioness of Salisbury, Mr. and Mrs. Gladstone, and Mr. and Mrs. Chamberlain were present.

LORD Salisbury, when laying the Venezuelan papers on the table of the House of Lords, deprecated arbitration at the present stage, and said he felt confident that after the Commission had learned the facts the diplomatic question would be easily adjusted.

Official despatches show that Great Britain and America have not yet reached a common basis of agreement, though both parties are desirous of an amicable settlement.

CHINA has refused the requests of Russia and Germany to establish banks at Peking to transact Government business. Li-Hung-Chang when visiting the Credit Lyonnais at Paris, said China intended issuing a big loan, but wished to treat direct with a large bank without mediation of Consuls or the Minister of Finance.

IN a speech at the United Club, Mr. Balfour said it was impossible, with the existing procedure, for Government to control the House of Commons so as to ensure the smooth and continuous progress of legislation. In the House of Commons, Mr. Balfour brought forward a motion to suspend the standing orders for the remainder of the session in order to enable Government business to be undertaken at any time. The motion was carried by a large majority.

THE Select Committee of the Cape Parliament finds that Messrs. Cecil Rhodes, Beit and Harris were acquainted with Dr. Jameson's intended invasion, of which they were active promoters. Mr. Cecil Rhodes, they say, drafted a telegram stopping Dr. Jameson, but the message was not sent; furthermore the Chartered Company supplied all funds with the knowledge of the London office, and that Mr. Cecil Rhodes afterwards covered the amount with a cheque.

The trial of Dr. Jameson, in London, opened on the 20th before a jury. Sir E. Clarke moved that the indictment be quashed in that it did not state that the Foreign Enlistment Act was operative where the alleged offences were committed. Lord Russell completely upheld the indictment.

It is announced that negotiations have been concluded with German, French and Russian Bankers for a Russian three per cent. gold loan of four hundred million francs.

THE Cuban insurgents have defeated a Spanish column in the Province of Penar del Rio, killing and wounding 14 officers and 300 men, besides capturing the General-in-Command.

THE latest advices from the Nile expedition are that cholera is increasing at the Kosheh Camp. Reports from Suakin state that the Indian troops are suffering somewhat severely from dysentery. Tokar is described as a terribly trying place to live in, sandstorms being continual for 18 hours out of the 24. General Egerton has, it is believed, made more than one attempt to move a portion of his brigade towards Berber, but the authorities have promptly forbidden any such action.

THE *Times'* Hongkong correspondent states that a missionary charges the Japanese with great atrocities in South Formosa, where sixty villages have been burnt, and thousands of inhabitants have been killed. Another telegram from Singapore says that risings among the natives in Formosa have taken place, and that the Japanese are hard pressed.

LI-HUNG-CHANG, being interviewed in Paris, has declared that China desires to hold the balance equal between England and France, and that there is a share for both in the trade of South-West China.

IN a speech, at Liverpool, Lord Charles Beresford said that the Navy was short by twenty seven thousand men of the proper complement for manning the present and future ships. What is the limit of that future?

A STRONG force under Sir F. Carrington, Colonel Plumer, and Captain Laing left Bulawayo on Saturday evening to attack the Matabele in the Matoppo Hill. Sir F. Carrington with a strong force attacked the Matabele stronghold at dawn on the 20th. The enemy offered a fierce resistance until the afternoon, when the position was carried and the Kraal burnt. The enemy lost sixty killed while the loss on the other side was three killed and eleven wounded including Lieutenant Alfred Taylor. On Monday, the Matabele attacked General Laing's column while in laager, and, after a hot fight, were defeated with the loss of ninety killed. The British lost four whites and twenty-five friendlies.

IN the House of Commons, on the 21st, Mr. Roberts moved that the House adjourn to consider the treatment of the Maharaja of Jhullawar. Sir William Wedderburn seconded the motion. Lord George Hamilton said the Maharaja was deposed because he had not complied with the conditions upon which he was allowed to ascend the throne. The motion was eventually withdrawn.

A COMMERCIAL treaty between China and Japan has been signed based on the treaty of Shimonosaki. China grants Japan the Favoured Nation treatment, but Japan refuses to grant the same to China.

DISTURBANCES broke out at Caneg on July 21, necessitating the landing of Austrian and Italian Bluejackets. The British marines had landed on the 18th. The situation in Crete is regarded as serious. Christian deputies are being maltreated by Benghazis.

AT the dinner given by the South African Association on July 22, the Chairman, the Marquis of Lorne, in toasting the prosperity of South Africa, said he believed that the British before long would be as much masters of the Zambesi as the masters of the Nile.

THE new Three Per Cent. Loan has been subscribed three times over. The particulars are:

Aggregate amount of tenders, Rs. 12,02,51,500.

Minimum rate of accepted tenders, Rs. 102-7.

Tenders at that rate received per cent., Rs. 2-9 per cent.

Total amount of accepted tenders, Rs. 4,00,00,000.

Total amount to be received by Government, Rs. 4,12,46,888-2.

Average rate at which Loan is issued, Rs. 103-1-10 1/2.

This is a highly satisfactory result for the Government of India. In three years, the interest on public loans in India has been brought down to 3 per cent., or $\frac{1}{2}$ per cent. less than that on the whole Indian debt in India and in England. Until 1823, the Government of India was unable to borrow at less than 6 per cent.; in that year it borrowed at 5 per cent. and in the following year the rate of interest offered and accepted fell to 4 per cent. In the days of the mutiny the rate went up to $5\frac{1}{4}$. Immediately after, in 1859 the 6 per cent. loans were all converted and paid off; by 1872 the 5 per cents and by 1879 the $5\frac{1}{4}$ were similarly disposed of. The $4\frac{1}{2}$ per cents were reduced to 4 in 1892, and in 1893 the Government issued a small loan as a feeler at $3\frac{1}{2}$ per cent. It succeeded and was followed in 1894 by the conversion of the 4 per cents to $3\frac{1}{2}$. And now, by another successful move the interest is only 3 per cent. The Indian

sterling debt in England was likewise reduced from 5 and 4 to 3½ per cent., in 1889. The current year's sterling loan of £2,400,000 carries interest at 2½ per cent., the tenders amounting to £6,180,000.

The accepted Calcutta tenderers of the new 3 per cent. loan are : Bank of Bengal, Chartered Bank of India, Australia and China, Grindley & Co., Hongkong and Shanghai Banking Corporation, Kanu Ram Dass, Mahomed Yusoof, Midan Mohun Roy, Mohabeer Prasad Sah, Mohun Lall Indar Man, National Bank of India, Ltd., Prosad Das Baral, Pudma Nath Barua, Robert Kelso Hair, Skinner & Co., and H. and A. F. Sturmer.

THE programme of the Lieutenant-Governor's tour for August has been revised. Starting from Dacca at 23.5 railway time on Sunday, the 2nd August, Sir Alexander Mackenzie will be successively at Mymensingh, Narainganj, Madaripur, Barisal, Khulna and Jessore, arriving at Calcutta on Wednesday, the 12th August at 5.0. The Lieutenant-Governor has been obliged, on account of the abnormal lawlessness the Bhagirathi, to give up his visit to Berhampore—to his old district—fixed for the 24th instant.

STARTED by the *Times of India*, the following is going the round :—

"One of the heaviest criminal trials on record in this (Bombay) Presidency has just been brought to a very satisfactory end in the Court of the Joint Sessions Judge of Belgaum, Mr. R. J. C. Lyrd. Thirty-five members of a notorious gang of Border dacoits were committed for trial last December. The case was heard for fifty-one days in all. The voluminousness of the records may best be imagined from the fact that the learned Judge spent three days and (practically) three nights analysing them and digesting them into his charge to the jury. The charge took five and-a-half hours in delivery, and the jury unanimously found all 35 prisoners guilty. The aggregate sentences passed upon them amounted to about six and-a-half centuries. Nevertheless, most of the ringleaders will have to be tried again for murders committed during their outlawry."

The Bombay journal concludes its remark with the words—"The result so far is one on which we may congratulate the public, the jury and the judge." It has no words of praise for the Police or the Dacoity Department and the prosecuting Counsel. But for those who captured the dacoits or made the preliminary enquiry, and those that sifted the evidence and marshalled it before the Court, neither the jury could convict the men nor the judge sentence them so heavily to the satisfaction of the public. The wholesale conviction is, indeed, remarkable. The law and the evidence must have been perfect and complete to allow the escape of not one of the 35 prisoners, and their offence must have been too great for the infliction of punishment only less than the capital and greater than the next highest—transportation for life, which, under the law, can be commuted for imprisonment not exceeding 14 years' duration. The penalty for belonging to a gang of dacoits is transportation for life or 10 years' imprisonment. Some of the prisoners must have been found guilty of greater offence to swell the average rate of punishment to more than 10 years. We are not told, if the men were defended. Even if not, they could not complain, for the Court had devoted, on an average, more than a day and a half to each of them. Our exclamation is—Awful Justice! 35 men prosecuted, all of them found guilty and each sentenced to an average of over 18 years and 6 months' hard labour, and yet many of them to be tried again and punished for more serious offences. Will the patience of the jury, the judge and the public last till then?

BABU Tarini Charan Chatterjee is dead. He was a character and deserves a record. Commencing life as a schoolmaster, he lived to grow and die much greater. A native of the famous town of Nadia, he made himself famous in that town, attaining to the highest unofficial dignity, in the career of a native, opened by Lord Ripon by his local self-government scheme. Mr. Chatterjee was for several years an English teacher of the Sanskrit College, Calcutta, and, in the early days of vernacular education, made money by a geographical primer and a history of India in Bengali. When Mahamahopadhyaya Mahesh Chandra Nyaratna began to dig for the foundation of his power, Tarini, with others of the older staff of the College, retired on one-third pension. He was, however, full of energy and his hands were never idle. At the dismemberment of the family of the lords on earth, he espoused the cause of a widowed Rani—a near relative. The lady was ever after grateful to him, and, to the end of his life, found him a liberal monthly

allowance. Although he never gained a high position in the service of Government, he did not sink as a schoolmaster in his retirement. He continued to be known, as he had been, as "bhugole" or geography, if not geographer, Tarini. The income from his books was respectable. Over and above the allowance he drew from the Rani whose *factotum* he was, he had other odds and ends. In his native town, he, with the aid of a few fellow citizens, established an English school which, soon superseding the cheap missionary school, began to yield him a substantial profit. He held for many years the office of Chairman of the Municipal Corporation of his native town, and held it with an iron hand, which partially accounted for his unpopularity, for, though he was very successful in life and never had to account for what he did, he was more dreaded than loved. His memory will always be associated with the wholesale destruction of the monkeys that infested the town. Considering that Nadia is a holy place, considering that monkeys are almost sacred creatures, and considering how municipalities of other sacred cities find the suppression of the monkey nuisance a tough task, Mr. Chatterjee may be said to have accomplished an impossibility. And he did the massacre in the city of the Vaishnavas without a protest. Tarini Charan's domestic life was, generally speaking, not unhappy. About five or six years ago, its sunshine was clouded by the death of his first wife who was an exemplary lady. He took a second wife in a grown up girl, to disperse the darkness that had overtaken his old age, when he was more than 60. Though the second wife presented him with two children, he never felt himself happy again. Almost confined to bed by a distressing illness, the closing years of Tarini Charan Chatterjee were cheerless.

THAT sorrow is a canker of the heart, capable of shortening life itself, needs no proof. How terrible is the bereavement caused by the death of a friend or relative, is known to him that has felt it. And who is there that has not felt it? What should one do when afflicted by sorrow? Is one to indulge in loud lamentations, or to remain sullen and return laconic answers when addressed? It is generally supposed that the weaker sex is naturally prone to the first, the rougher to the second course. The effect of sorrow is not equal on the two sexes. Women generally succeed in soon disburdening themselves of the heavy weight. Lamentations and tears relieve them. In the case of man who is denied the luxury of tears, sorrow eats into his very vitals. It is interesting to observe how poets have considered the question. We shall quote two poets of two different lands, belonging to different times, and singing in different languages. Let the prince of dramatists be first examined. *Macbeth* addresses *Macduff* who is sorely distressed by the intelligence of the inhuman slaughter of his wife and child and dependants, in these words :—

What, man! never pull your hat upon your brows;
Give sorrow words: the grief, that does not speak,
Whispers the over-fraught heart and bids it break.

Let us see what Bhavabhuti, whose command of language was marvellous,—indeed, whom Speech, to quote his own proud words, obeyed as a submissive wife,—and whose knowledge of human nature was deep, says: *Rama* faints again and again at the sight of objects, in the words of Panchabati, that remind him of his beloved *Sita* whom he has banished in obedience to the senseless cry of some of the citizens of Ayodhya. *Sita*, through the puissance of the river-goddess Ganga, is invisible to *Rama*, while witnessing the indications of his heart-rending sorrow. She exclaims :—

हरी, हरी, अश्रुतो वि पशुक्कण्ड' हरो ।

"Alas! Alas! my husband also is weeping aloud!"—(Tawney.)
Tamasá replies :—

वत्सि, साम्प्रतिकमिवैतत् कर्त्तव्याणि

दुःखितैर्दुःखनिर्वापयामि ;

यतः

पूरोत्पीके तदावन्न परीवाहः प्रतिक्रिया ।

श्रीकृष्णे च हृदयं प्रकाशयितुं शक्यते ।

"My dear child, it is meet that he weep now; those who are afflicted must extinguish their sorrow, [or, rather, indulge in acts capable of extinguishing sorrow.] For, when the flood of a lake has swelled to the full, an emissary is a remedy; and in the agitation of sorrow the heart is supported by lamentation."—(Tawney.)

We leave the reader to judge which of the two dramatists has expressed the fact more poetically. Here, again, is another deliverance of Bhavabhuti on the usefulness of lamentation in heavy grief :—

निवासीकी जीव दुःखमिव चरः क्षमयति ।

* * *

तद्व्याकुली भवति ननु कामी हि वदित ।

"Sorrow for his beloved withers his heart as heat [rather, the season of sweat] a flower. * * * Still, lamentation is truly a gain, for it is owing to it that he still lives [breathes]"—(Tawney.)

We commence with the following the list of Indian ladies who have been to the West. We omit those now residing in Europe whose names are given by the *Indian Magazine and Review* and which will be found in the opening page of this number of *Reis*. We find two omissions in the Magazine—Miss Didabhoi Bahramji and Mrs. and Misses Burjorji Doctor. Its Miss Muneek Didabhai should be Miss Maneckbai Dadabhoi Naoroji :—

The late Maharani Chandra, widow of Maharaja Ranjit Singh and mother of Maharaja Dhulip Singh.

The (deceased) mother of the late King Wajid Ali Shah of Oudh.

The Maharani of Baroda.

The Maharani of Conch Behar.

The late Mrs. Sasipada Banerjee of Baranagore.

Mrs. Satyendra Nath Tagore.

Mrs. Chatterjee, wife of Dr. Nityanand Chatterjee of Cannanore.

Mrs. P. K. Roy.

Pandita Rama Bai.

Mrs. Devendranath Dass, wife of a son of Babu Sreenath Das, Pleader, High Court, Calcutta.

Mrs. Roy, widow of Dr. Gopal Chunder Roy.

The late Mrs. Ganendra Mohun Tagore and her two daughters, one of whom is dead.

Mrs. Greece C. Dutt.

Mrs. Govin C. Dutt and her two highly accomplished daughters the late Miss Oru Dutt and Miss Toru Dutt, the authoress of *Mademoiselle D'Arvers* and *Sheafs gleaned in French Fields*.

Mrs. Manomohan Ghose and Miss Ghose.

Mrs. P. L. Roy.

Miss Chuckerbutty.

Mrs. B. De and daughters.

Mrs. Dwarkanath Banerjee.

Mrs. Jagdis Chunder Bose who has just left Calcutta for Europe with her husband, the discoverer of wave lengths of light and electricity.

Bai Dhunbai Jehangir Readymoney.

Mrs. and Miss Dinshaw Adenwalla.

Mrs. Desai.

Bai Soonabai Merwanji Tarachand.

Mrs. Jehangir Merwanji Tarachand.

Mrs. R. D. Mehta.

Bai Goolbai Didabhoi Cama and daughter.

Bai Jerbai Nusserwanji Patel and daughter.

Bai Dossibai Cawasji Jussavera.

Mrs. Dadabhoi Behramji.

Mrs. Ruttunji Jamshedji Tata.

Bai Aimal Hormusji Wadia.

Bai Avabai Merwanji Bhannugri.

Misses Maneckji Cursetji Judge.

Bai Perozebai Umrigur and daughters (3).

Bai Maneckbai Jehangir Watcha.

Bai Bhicaji Dorabji Cama.

Bai Shreenbai Dorabji Cama.

Mrs. and Misses Framji Cama.

Mrs. Dadabhoi Naoroji.

Bai Maneckbai Nowroji Master.

Miss. Frey Cama.

Miss. Furdoonji Banaji.

Bai Meherbai Ardeshir Vakil.

Mrs. and Miss Dossabhoi Khola.

Mrs. and Miss Merwanji Khureghat.

Bai Shreenbai Muncherji Cama.

Bai Avabai Muncherji.

The late Mrs. Harold Littledale, second daughter of the late Dr. Almarum Pandurang.

IN reporting the visit of the Lieutenant-Governor to Bankipore, the correspondent of a native daily contemporary, says :—

"At 9 P.M. Moulvi Fazel Imam Khan Bahadur in the name of the Mahomedan community of Patna gave an Evening Party in the Bankipore European Club, where preparations on a grand scale were made to accord a befitting reception to His Honour. The party was at first arranged to take place at the residence of Mr. Fazel Imam, but after his Honour's return from Nawab Valayet Ali Khan Bahadur, the Vice-Chairman (Mr. Fazel Imam) received an intimation to the effect that Sir Alexander Mackenzie refuses to be entertained at his house owing to some private reasons, which I for decency's sake do not think it advisable to disclose to the public."

The writer makes no secret that he means more than he says. He also connects the refusal of the Lieutenant-Governor with his visit to the old Nawab, the inference being that at the Nawab's place Sir Alexander Mackenzie learnt, either from the host or from other guest, something to the disparagement of Mr. Fazel Imam which led to the refusal. Nothing could be wider off the mark. The disinclination to go to Mr. Imam's house was communicated to him, through the usual channel, on the 8th instant, at about 5 P.M., in the Commissioner's Bungalow, after the presentation of the addresses to the Governor. It was not till the next morning, the 9th, that Sir Alexander Mackenzie went to the Nawab's after inspecting the Opium Factory. It cannot, therefore, be that the plan to humble the Imam was concocted at the Nawab's. It must have been settled before that visit, if not earlier. The *contratempt* is regrettable. But what is the cause? Our contemporary's correspondent, who seems to know, says it is not to be heard by ears polite. Why then make a fuss about it?

We deeply regret the death, on Sunday last, at the Ranchee Dak Bungalow, at the age of 59 years 11 months and 29 days, of Captain Andrew William Hearsey. He had come down from Mussooree on some legal business. He was about to return and had ordered the pony at Raipur to take him to his home and family, after an absence of some weeks, when the dreadful news reached Mrs. Hearsey that the Captain was no more. He died suddenly. The body will be removed to Mussooree and buried there.

The Hearseys are a large and well known family and the deceased was a prominent member. His short military career was not uneventful and, serving during the stirring days of the mutiny, he had been severely wounded and had won a medal and clasps. Entering the service of the East India Company as an Ensign in 1855, he became Captain in 1864 and retired the next year. During the succeeding 33 years, though no longer a soldier, he never ceased to be a hero. A sturdy citizen, he not only bravely fought for all the rights of a citizen when they were in danger, but, thrusting himself, in the exuberance of animal spirits, into other people's quarrels, he fought for justice to others, irrespective of race and nationality. Through the various vicissitudes of fortune and ills of life, he exhibited a remarkable doggedness and persistency which never failed

The Indian Association for the Cultivation of Science.

210, Bow-Bazar Street, Calcutta.

(Session 1896-97.)

Lecture by Babu Rajendra Nath Chatterjee, M.A., Wednesday, the 29th Inst., at 5-30 P.M. *Subject*: Hydrostatics—Pascal's Law. Barker's Mill.

Lecture by Dr. D. N. Chatterjee, B.A., M.B., C.M., Thursday, the 30th Inst., at 6 to 7 P.M. *Subject*: The Protozoa.

Lecture by Dr. Mahendra Lal Sircar, Friday, the 31st Inst., at 7 P.M. *Subject*: Temperature and its Measurement. Thermometers.

Lecture by Babu Girish Chandra Bose, M.A., F.C.S., M.R.A.S., &c. Saturday, the 1st August at 5-30 P.M., *Subject*: Morphology of Plants—Roots.

Lecture by Dr. Nilratan Sarkar, M.A., M.D., Saturday, the 1st Aug., at 6-30 P.M., *Subject*: The Animal Body.

Admission Fee, Rs. 4 for Physics, and Rs. 4 for Chemistry; Rs. 6 for both Physics and Chemistry; Rs. 4 for Physiology; Rs. 4 for General Biology; Rs. 6 for complete course of Physiology and Biology. The charge for a single lecture is 4 Annas.

MAHENDRA LAL SIRCAR, M.D.,

July 25, 1896.

Honorary Secretary.

to bring him their reward. Of kind heart and genial temperament, full of anecdotes of the great and the small, he was always a welcome companion who could beguile you with pleasant talk for long hours. Learning in suffering what they teach in song, he always respected the feelings of others and sympathised with their sorrows, and always had a ready helping hand for them, whatever their status in life and society. He was familiar with various phases of life and never considered any one too low for being tapped for information. The knowledge he thus gained of men and things kept many in dread of him. It was impossible to know the Captain without loving and esteeming him for his many virtues, chief amongst which was a sturdy independence of character. Nor would Captain Hearsey confine himself to individual concerns or small and unimportant matters. Imperial interests as much occupied his attention. He was the first to suggest a Cheap Reserve for the Indian Army which was followed by the formation of the Imperial Service Corps. With better education and opportunities, he could have left behind him a more enduring name.

With an agile frame, a hardy constitution, ever active, of abstemious habits, who could have thought that he would not survive his 60th year? But hard work had undermined his robust health. He was suffering during his stay at Ranchee; he would not, however, mind it and, in his buoyancy of spirits, caring for no physic or physician, neglected himself, and, rejecting all offers of medical help, died, untended, away from home and family. We grieve for him that is dead, and we grieve also for his widow, for she was always the worthy mate of a heroic husband. We offer our sincere condolences to her and her children. May God grant them strength to bear the blow!

A CORRESPONDENT writing on the 11th instant said—"In our part of the district of Burdwan the rainfall is quite insufficient up to date. Cultivation is carried on with some difficulty. Our village is so situated that a slight rise of the river Aljui carries inundation. The nights are very warm and the effect of the heat is rather unhealthy. It is damp heat that tells upon the constitution of persons who live in houses built in days when free ventilation was little understood."

On the 21st, he reports—"There was a copious fall of rain yesterday in this part of the country. It will do good to the crops."

REIS & RAYYET.

Saturday, July 25, 1896.

WATER SUPPLY IN BENGAL.

THAT the question of water supply in Bengal should ever make an administration truly uneasy and impose on it the obligation of levying a special tax, is, perhaps, the best proof of the dissociation of true statesmanship from the rule under which we live. The geological formation of the country is such, and the soil, with the exception of Ranigunge and a few other tracts, is so interspersed by a network of rivers and rivulets, that a perennial supply of water may be found at only a small depth from the surface. A considerable portion of the country lies under water for nearly half the year, the usual means of locomotion at such times consisting of rafts and boats constructed on the most primitive principle. Speaking of even such districts as Jessore and Hooghly and Nadia and the Twenty-four Pergunnahs, the principal Provincial roads, for the greater part of their length, consist of embankments or *bunds* raised several feet above the general level of the soil. Capable of striking the most careless observer, it is this fact

that led the late Raja Degambar Mitter to express the opinion that Bengal stood more in need of canals than roads for all kinds of locomotion and traffic. Paradoxical as it might seem at the first sight, observation and reflection would show that there is considerable truth in what the Raja very often endeavoured to impress upon those with whom he talked upon the subject. Most of the villages in the interior of Bengal, in even years of average rainfall, look in the rainy season like islands in the midst of wide expanses of water all round. Every traveller who has seen the country during the season of rains has described this feature of the land. That a country so circumstanced should be in want of water in consequence of a drought extending over two or three years, is certainly a matter of surprise. Here no Artesian wells, requiring a depth of three to four thousand feet being reached before finding the sub-soil springs, are needed. In most districts an expenditure of Rupees four or five is needed for sinking a good well, and five or six times that amount for a thin wall of baked pottery for protecting the sides from slipping. A cost of Rupees one thousand only is sufficient for excavating an ordinary tank that will not be dry if un replenished for even three years by sufficient rain-fall. The cost was considerably less a century or so earlier. Tanks and wells have, in this country, been always excavated by the people themselves. Formerly, a permanent supply of water was regarded by every householder as a necessity as imperious as a house for sheltering his family from sun and rain. If a tank needed repairs, those repairs were attended to with as much promptness by the owner as the repairs of the house he lived in. It is not clear how far the Mussulman Government kept the question of water supply before it as an administrative problem. This, at any rate, is well known that particular Mussulman rulers took a pleasure in digging wells and tanks for the benefit of travellers. Shere Shah was not the only Mussulman ruler who distinguished himself in this direction. Mussulman noblemen, again, owning seats in the interior, vied with Hindu Zamindars in creating perennial sources of water supply for the use of the poorer people. Works that are good in themselves always engage the attention of the good even if religion does not utter its commands clearly. The Mussulman religion inculcates the virtue of benevolence as actively as the Hindu Scriptures. Only the forms of benevolence, instead of being definitely shaped as in the latter, have been left to the discretion of the individual. No Mussulman gentleman of means will deem it a waste if money be spent on such useful works as tanks and wells.

We have before this pointed out the causes in consequence of which the descendants of those men who did so much for giving the people permanent sources of water supply are no longer able to tread in the footsteps of their fathers. To those causes we should add one which we did not mention, *viz.*, the enormous increase that has occurred in population. It is a matter of deep regret that till now the question of water supply in Bengal has never engaged the attention of British administrators. If his predecessors had done their duty, Sir Alexander Mackenzie would not have been compelled to rack his brains to-day for finding the means needed to cope with the evil. There cannot be the slightest doubt that more money is needed than what the State can set apart from its present resources for achieving the end in view. The neg-

DEAFNESS. An essay describing a really genuine Cure for Deafness, Singing in Ears, &c., no matter how severe or long-standing, will be sent post free.—Artificial Ear-drums and similar appliances entirely superseded. Address THOMAS KEMPE, VICTORIA CHAMBERS, 39, SOUTHAMPTON BUILDINGS, HOLBORN, LONDON.

lect of a century and a half has to be repaired. The imbecility of successive administrations has to be atoned for and redressed. We sympathise with Sir Alexander Mackenzie in the difficulties that confront him. The soundest advice we can give is that he should not attempt to do much. As the evil has been allowed to accumulate, it should be repaired gradually. Another three years' drought is not before him. His sound Scotch common sense, we hope, will save Sir Alexander Mackenzie from splitting his solid reputation for statesmanship upon any hasty and ill-considered measure. He should rely more on private liberality than on any scheme of taxation. Indeed, the particular scheme that has been proposed looks very much like a beggarly account of empty boxes, as we shall show, in view of the enormous expenditure needed for the mitigation of the calamity over a considerable area. National charity in Bengal should be restored to its old channels. No more diversions should be allowed under official pressure which cannot fail to be mischievous. Sir Alexander Mackenzie cannot possibly be ignorant of the demoralisation that has overtaken the wealthier classes as regards the direction of their charity. Since we last wrote, every body has heard of the handsome contribution, by a gentleman of Howrah, with a *carte blanche* to the Burdwan Commissioner to devote it to any purpose he chooses. No other country can present such a spectacle of utter intellectual helplessness.

Sir Alexander Mackenzie admits that a large sum is needed for achieving the end in view. We are surprised how with such a knowledge he could think of putting forth such an extremely inadequate scheme. We have no mind to refer to the violations of promise about the manner in which the Road Cess has come to be applied. When the Zemindars opposed its imposition on the ground of its being an infringement of the terms of the Permanent Settlement, the Secretary of State, for gilding the pill, declared that its proceeds would be devoted to purposes purely local, so that the rayyet contributing to it would have its benefits brought home to him. At that time, water supply was enumerated as one of the objects of the cess. That object, however, disappeared from the enumeration contained in the later Acts. We have no quarrel with Sir Alexander Mackenzie for a feat of legislative legerdemain perpetrated by a former administration, especially when he is fully willing to give us a portion of the proceeds of that very cess for water supply. Small as the entire proceeds are of the Road cess, a considerable fraction, it is believed, is spent on the maintenance of Provincial roads for relieving the Provincial revenue. The subject is under enquiry. Sir Alexander Mackenzie, however, tells us rather curtly that the enquiry will not lead to perceptible results. We fear this is not quite correct. We think there will be a considerable saving in the cess funds if these are relieved of the burden, wrongly thrust on them, of meeting the expenditure on Provincial roads whose maintenance should form a charge against the Provincial revenue. The Lieutenant-Governor thinks that by making over the ferry receipts to the cess fund something appreciable will be gained though the Provincial revenue will have to bear the sacrifice. It is our deliberate opinion that of all forms of taxation, ferry imposts are, on principle, the most objectionable. Without referring to the state of several ferries in even the metropolitan districts that we know of, and where arrangements

the most primitive are allowed to exist not without danger to life itself, it may be fairly said that, under a civilised rule, such vexatious impediments on locomotion should not be permitted to continue. We fail to see what their justification is, beyond the fact that they have existed from a long time without being challenged by public opinion. This is, however, scarcely the time for agitating for their abolition. We cannot help expressing the hope that when receipts from ferries are looked upon as so important, something will be done to improve their primitive arrangements for the sake of those who contribute to them. Considerable time has to be wasted at most of the ferry ghats before the State lessee appears with his old and rickety raft to row you over to the other side, often in company the most disgusting. No legislative enactment is needed for introducing the reforms we contend for. Magistrates can do much by timely inspections.

Nobody can find fault with the reasons which Sir Alexander Mackenzie urges against the imposition of any further liabilities on the Provincial revenues, even for the sake of rural water supply, than a complete surrender of the ferry receipts. Possibilities are pointed out of a permanent increase of administrative expenditure on the one hand and a permanent reduction of income on the other. Existing resources being shown to be inadequate, Sir Alexander Mackenzie thinks that some comprehensive scheme of further local taxation has become a necessity if real progress is to be made towards solving the difficulty of rural water supply. The project, however, that has been actually put forward is objectionable. It has not even the merit of being adequate for the purpose. It will produce discontent without accomplishing anything material. The Government of Bengal should certainly pause before taking the leap in the direction contemplated.

THE CONDUCT OF THE POLICE TOWARDS THE PEOPLE,

or,

A GLIMPSE INTO MOFUSSIL ADMINISTRATION.

CONSIDERING how large the powers are that are exercised by District Superintendents of Police, it is very desirable to have none but first class men in the post. At present it is not definitely known whence these officers are drafted. It is generally believed that they are cousins, near or remote, of English families having Indian connections. Unable to pass the Civil Service Examination, and destitute of the means also of going through the Universities, they are provided with appointments in India on the strength of a very little knowledge of the Criminal law. Most of them, even when they have seen service, have little or no conception of what evidence is admissible or what not in a criminal trial. They are noted for the thoroughly good understanding they always succeed in maintaining with Assistant and Joint and District Magistrates. They consider Native Deputy Magistrates as officers of an altogether inferior status or grade. In consequence of the perfect harmony of their relations with the Civilian Magistracy, they manage to sit in judgment upon the Deputy Magistracy of their respective districts. As their own fame and prospects depend upon their success in obtaining convictions, and as they are the inseparable companions of European Magistrates, native Deputy Magistrates, if they value the good opinion of their superiors, must have to be exceptionally bold before they can let off an accused person against whom there is some show of evidence. The state of affairs in this direction, under the late regime, had assumed an alarming aspect. Even Secretaries to

Government used to instruct Deputy Magistrates that theirs was not to weigh evidence and come to correct conclusions, but only to convict if the Police prosecuted. It is believed that things have improved under the present administration. Until, however, a complete separation takes place between judicial and executive functions in India, unjust convictions cannot be expected to stop, whatever the vigilance of the superior courts and of the head of the administration for the time being, and however actively the press might exert for exposing the wrong-doings of the inferior Magistracy.

Readers of this journal know the facts connected with the two cases in which Mr. Shirres, the District Magistrate of Dacca, recently signalled himself by pronouncing judgments utterly inconsistent with the law. The High Court, on motion, has set them aside. In the prosecution of Babu Preonath Bysack against the Police for wrongful arrest, the Magistrate, admitting that force had been used, refused to summon the accused. He simply dismissed the complaint as frivolous, evidently thinking that when acts of violence proceed from the Police, it is the duty of every native subject of the Crown to submit to them. The Magistrate has been ordered by the High Court to take up the complaint and proceed with it according to the law. In the other case, *viz.*, that which the Police had brought against the two Bysack brothers and which was followed by a conviction and punishment, the High Court has set aside the conviction as the record is exceedingly defective. If the prosecutors wish, they are at liberty to proceed against the defendants again.

Behind these three cases is a pretty history in which the District Superintendent of Police, who was mainly responsible for the arrest of Babu Preonath Bysack and who had directed the prosecution of the Bysack brothers for having let off fireworks and obstructed the public thoroughfare, figures not very creditably. The facts lie within a nutshell. So far as its Hindu population is concerned, Dacca may be said to be the stronghold of Vaishnavism in East Bengal. The anniversary of Krishna's birth is celebrated by grand shows. All Dacca and his wife takes an interest in them. People flock to the town from far and near. The enthusiasm of the managers of the show is kept up by party-spirit that, in such connection, is not unwholesome, for there are two parties, *viz.*, one of Nawabpur and the other of Tantibazar, who vie with each other in securing as much pomp as possible. The two parties parade their processions on two consecutive days. Richly trapped elephants form a prominent feature of the show. Last year, it was arranged that the Nawabpur procession should come out first. The date fixed by the Magistrate, Mr. Beatson-Bell, was the 15th August 1895. There was heavy rain the whole of the previous night which continued till 9 o'clock of the morning of the appointed day. The procession, therefore, could not issue. The Magistrate, informed of this, appointed the next day, intimating at the same time that a fresh petition might be made if the weather proved foul. There was rain on that day also, with the consequence that many articles of exhibition were very much damaged, made as they were of coloured paper. The Government elephants that had been brought out had to be sent back. No embroidered housings could be put on them for fear of damage from the heavy rain.

After the rain had ceased, Mr. Orr, the District Superintendent of Police, and Mr. Beatson-Bell, the Magistrate, seated on one elephant, called upon the leaders of the Nawabpur party to make fresh arrangements for taking out their procession that very day. As the damage done could not be repaired within less than three days, it was not possible to obey the Magistrate. On the morning, however, of the next day, *viz.*, the 17th, Mr. Orr sent word through a Police officer that the procession should be brought out that day. At the same time, it was said that they would not have Government elephants if they failed to do what he directed. They requested the Police officer to see for himself and report as to whether it was possible for them to obey the direction or order. They sub-

mitted a petition to the Magistrate for fixing the next Monday. Their prayer was rejected. Mr. Orr again tried to have his order carried out, using the potent threat about the Government elephants. The District Superintendent was then in charge of the Khedda. He added that if the Tantibazar party also failed to bring out their procession on the day that would be appointed for them, they also would not get the elephants. Being only men the Nawabpur party could not work a miracle. The threats of Mr. Orr notwithstanding, they failed to do his bid. Their prayer for Monday having been rejected by the Magistrate, the Divisional Commissioner was appealed to. Removed from the atmosphere of local prejudices, the Commissioner asked the Magistrate to give the applicants one more chance, with which the latter complied with reluctance, fixing Monday the 19th August as had been prayed for. There was a fresh attempt to propitiate Mr. Orr for the sake of the Government elephants. He, however, was immovable. Accordingly, on Monday, the Nawabpur procession came out, shorn of its grandest attraction, *viz.*, a goodly array of elephants in rich drapery. The following day had been appointed for the Tantibazar procession. But it too could not come out owing to the unfavourable weather. It, however, issued the day after, with a good number of Government elephants. This distinction caused much heart-burning. The local newspapers grew furious and assailed Mr. Orr with bitter reproaches. He was much moved and, it is said, expressed his feelings openly.

There are men who connect this story of Mr. Orr's vexation and wrath with the two cases in which Mr. Shirres has signalled himself. The defendants in the case instituted by the Police are Dharani Nath Bysack and Preonath Bysack, belonging to the Nawabpur party. It is scarcely necessary to recapitulate the facts. Only one incident need be recorded here. These gentlemen had applied for Government elephants for the processions they paraded on the occasion of their children's weddings. The District Superintendent of Police refused their prayer. They appealed to the Magistrate, who referred the matter back to Mr. Orr, asking him to state if there were any precedent of Government animals having been given to private parties on such occasions. Indignant with the Bysacks for the attacks on him in the local press with which they had nothing to do, he hastily, without due enquiry, wrote to the Magistrate, stating that elephants were never allowed to the gentlemen of the town on such or similar occasions, with the result that the Bysacks did not get the animals.

OUR LONDON LETTER.

[The extracts from the *Times* referred to in the concluding paragraph of this letter, we are unable to reproduce for want of space. ---Ed. R. & R.] July 3.

Great Britain. Imperial Parliament. After an all-night sitting of seventeen hours on Monday, the 29th ultimo, the Report stage of the Agricultural Rating Bill was passed, and finally, on the 1st instant, it was read a third time, and now finds its way to the House of Lords. It is interesting to note that in the course of Monday night, nineteen divisions took place, consuming from 7 to 6 hours in the mere act of walking through the Division lobbies. The Speaker remained in the chair the whole time from 3 o'clock on Monday afternoon to 20 minutes past 8 on Tuesday morning, and the only good word to be said in favour of the numerous divisions is, they enabled the Speaker to leave the Chair from time to time, and keep up his strength with potent libations of beef tea! It is to be hoped the remaining weeks of the session will be devoted to good real and useful work. Now that Sir W. Harcourt, supported by Mr. Lloyd George, Dr. Tanner, and Mr. Dilke, has discovered the Speaker and the large Government majority too strong for him, he will probably endeavour to rehabilitate his character as a Parliamentary Leader.

Indian Troops at Suakin. The debate on this matter is fixed for Monday next, the 6th instant.

I am sorry to see from today's papers the Home Government will not yield to the strong protest of the Viceroy and his Council supported as the latter are by 999 out of every 1,000 of those who have served in India, Civilians, Military and Mercantile, and, strange as it may appear, against the personal opinion of Lord Salisbury expressed quarter of a century ago.

Venezuela. The sensational story of a serious conflict between

the Local Government and a British surveying party has dwindled down to a very small affair. Mr. Harrison has been liberated, and apparently the main question of the boundaries is in a fair way to be amicably settled.

Crete. A Christian Governor has been appointed by the Porte. So far good. But the Cretans have been so often put off in the past, with delusive promises, nothing will satisfy them now but a guarantee of protection from the Great Powers. These are apparently acting, so far, in perfect harmony. But the turbulent feeling of unrest is still showing itself not only in Crete, but in Macedonia and Van as well.

United States. Every one is waiting for the issue of the Democratic caucus to be held at Chicago. The final battle in the Electoral College will be on the question of currency, gold *versus* silver. The silverites will put forth all their strength, but, unfortunately for them, the party is in a dislocated state, and they have no outstanding leader to nominate for the Presidency. The future of the States is an unknown quantity, and it will be a relief, not only to them but to commercial Europe as well, when the choice of the future President is actually determined. All seem agreed Mr. McKinley will be a very weak President, should he be elected. With no strength of character of his own, he will be a mere tool in the hands of the masterful wire-pullers at Washington, and the immediate outlook, financially, is more than sufficient to damp the spirits and energies of the most astute Senator or Congressman.

France. The principal event has been the death of the Duc de Nemours, second son of King Louis Philippe. When the royal family of France had to fly from Paris in 1848, our Queen gave the life use of Claremont to the King, and Bushey Park to the late Duke. Claremont is now occupied by the Duchess of Albany, widow of Prince Leopold. The residence at Bushey Park now falls again to the gift of the Queen.

Russia. I am sorry to see the Czar is still an invalid, and the State entry into St. Petersburg is indefinitely postponed. It would appear he has not got over the severe nervous shock he sustained by the terrible catastrophe at Moscow during the Coronation fetes.

Austria-Hungary. The Liberal party is rousing itself just as Cardinal Rampolla is endeavouring to impose mediæval shackles on the Empire. A great demonstration has been made at Prague, and if the Cardinal thinks he can resuscitate the worst features of Roman Catholicism, he will find himself cruelly balked. The fine old Emperor will hold things together during his life time, but after him, what a deluge! Hungary and the Liberals throughout the dual Empire must win, and if the Cardinal wishes to avert a terrible disaster, he will yield betimes. Now it would be an act of grace and high policy, if deferred it will end in a catastrophe for the Roman Church that will rouse Mr. Gladstone's sincere sympathy, to say nothing of the wailing of his great friend Lord Acton.

The Revolt against Clerical Intolerance. There is no subject more deserving of attentive watchfulness than the uprising of the laity against the arrogance of the clergy. In Austria, Hungary, Canada and in our own House of Commons, the same battle is being fought. In Canada, a Roman Catholic (Mr. Laurier) secures a majority of 40 to 45 over the Protestants, in spite of the electorate having been ordered by the Catholic priests to support the latter. In Austria and Hungary Cardinal Rampolla is trying to carry his extreme ultramontane views, to a point, where, in Hungary at least, if he do not exercise extreme caution, the Roman Church will be worsted in the conflict. It would appear the Hungarian priests are patriots first, and will not sacrifice their national independence to a Cardinal who, without the intellectual forces, is endeavouring to play the rôle of a Richelieu or a Mazarin. The future of Austria-Hungary depends very greatly on the personal popularity of the present Emperor, who is the object of exceptional devotion to all his people. Whatever Austria may do Hungary will never yield to Rome, and the struggle, if forced upon it by the vaulting ambition of the Romish Jesuits, will eventuate in a crushing defeat to the latter. Here in England, in a milder form, we have to deal with the same enemy. The great majority of the clergy of the Church of England are sacerdotalists. They claim to be a separate part of the body politic, and in right of their "apostolical succession," to stand aloof from the laity, as a body entitled to dictate to the laity, even in matters of general politics. And this is just what the laity of England will

never tolerate. I do not speak of men like the Duke of Newcastle, Lord Halifax or Mr. Athelstane Riley. They are little better than Roman priests. But the great mass of the English laity, the aristocracy, the gentry, landed and commercial, and, above all, the intelligent working man are determined the clergy shall keep to their own sphere. The revolt in Canada, especially in the Province of Quebec, is altogether startling. "The people have broken out into open mutiny against their clerical chiefs." The Church has been losing, of late, something of her old power over the laity. The Roman Catholic laity of the Province have contumaciously defied and beaten the episcopacy at the polls." I take these sentences from a leading article in the "Times". It is unfortunate for the Church of England that, just at this moment of unrest, Dr. Temple, the Bishop of London, should be guilty of perpetrating a very gross job. Some years ago the Diocese of London was greatly reduced in territorial extent. Bishop Blomfield, the predecessor of Bishop Tait, had enjoyed an enormous income nearer £20,000 than £10,000. Bishop Tait accepted the see on the reduced scale and that is the income now enjoyed by Bishop Temple, with a town palace in St. James' Square and another at Fulham on the banks of the Thames. When suffragan Bishops were introduced to relieve the Bishops of much of their episcopal work, it was understood the former would be provided for out of the Bishops' personal revenues. But Dr. Temple has discovered a better method. He plants his suffragans in rich livings, and so spares his own purse. The living of St. Botolph's in the city is a very rich one with £3,000 a year. When the late popular incumbent, Mr. Rogers, died, Bishop Temple, instead of conferring the living on some hard worked priest who would devote all his time to the interests of the parish, has, against the protests of the parishioners, foisted upon them one of his suffragans, the Bishop of Marlborough, who already has a wealthy living at Kensington. The job is a very scandalous one. The Bishop himself and his suffragans now absorb over £16,000 a year, so we are getting back to the state of things in Bishop Blomfield's time. It is this audacious disregard of the interests of the different parishes, with a view to enhance the wealth of his suffragans, that causes the very name of Dr. Temple to "stink in the nostrils" of the commonalty of his diocese. At the first meeting of the vestry of St. Botolph's, at which Dr. Earle (Bishop of Marlborough) presided, the following resolution was carried by 14 votes to 6, in spite of the Bishop's protest:

"Mr. Evans said that it showed how impossible it would be for the chairman to perform his parochial duties without detriment to his duties as suffragan to the Bishop of London. Until Dr. Earle's name was mentioned as rector of the parish it was common knowledge that if any poor incumbent or vicar had been brought to the parish from a distance, where he had had to work himself to death, the living would have been reduced to £700 a year; but because the nominee was a friend of the Bishop of London, the full tithe they agreed to make was to be handed over to him, in addition to the £2,000 per annum he received from the glebe---Dashwood-house. He regarded the appointment as a scandal to the Church of England, and he moved:---"That the parishioners in vestry assembled hereby express their public protest against the arbitrary action of the Bishop of London in presenting to the rectory of St. Botolph Without, Bishopsgate, the Right Rev. Dr. Earle, without consulting their needs or the requirements of the parish, and also their profound indignation at his studied omission to answer letters bearing on the subject, or to receive a deputation to discuss the situation; they also desire to place on record their opinion that the preferment of Dr. Earle is an abuse of episcopal patronage, and that the Bishop's public statement that his suffragan was the man best fitted for the position is a gross libel on the hardworking vicars and curates of his diocese."

The Bishops rarely attend the House of Lords. They turned up, however, to resist the second reading of the Bill for legalizing marriage with a deceased wife's sister, only to be ignominiously beaten. The Archbishop of Canterbury said in unctuous phrase "we speak for the poor, we go out and in among the poor." A correspondent of the "Times" very happily points out that neither the Archbishop nor the Bishop of London has done a day's parish work. They worked their way to the episcopal Bench through Rugby and Wellington schools, and know no more of the wants and wishes of the poor than do the members of the Jockey Club. A few more Temples to perpetrate gross job, and the clergy will continue to lose more and more of the respect and deference of the people. The power of the clergy both in England and Scotland---established and disestablished alike---is, I am glad to say, on the wane. Young city clerks, counter jumpers, and servant girls are entranced with the loud-sounding eloquence of a Rogers, a Clifford, a Hughes or a Berry, but educated men and the thoughtful among the working classes give them a wide berth. And this last remark applies equally to Scotland. The men of the "higher criticism" who sign the "Confession of Faith" with Jesuitical reserve, and sacerdotalists, like the excellent Dr. Macleod of Govan, are alike losing their hold on all that is best in a thinking and intelligent laity.

DEAFNESS COMPLETELY CURED! Any person suffering from Deafness, Noises in the Head, &c., may learn of a new, simple treatment, which is proving very successful in completely curing cases of all kinds. Full particulars, including many unsolicited testimonials and newspaper press notices, will be sent post free on application. The system is, without doubt, the most successful ever brought before the public. Address, Aural Specialist, Albany Buildings, 39, Victoria Street, Westminster, London, S. W.

The Opening of the Indian Institute at Oxford. I enclose a full report of the speech of the Secretary of State for India, at the formal opening of the Indian Institute, as also a most interesting and instructive leading article, both from the "Times." These should prove of great interest to your readers, and I am sure you Sir, representing the vanguard of intellectual Bengal will very cordially join in congratulating Sir Monier Williams on the completion of his great work. India has no truer friend than Sir M. Williams, and, although he cannot hope to see much fruit in the remaining years allotted to him, future generations of civilians, both British-born and native, will "arise to call him blessed" for the eminent services he has rendered to the advancement of the best interests of India—moral and intellectual.

THE LATE DR. SAMBHU C. MOOKERJEE.*

In his Dedication to Sir William Hunter, Mr. Skrine takes occasion to defend the Bengalis from their detractors. "It is a remarkable fact," he writes, "that one seldom finds this attitude of contempt in Englishmen who are intimately acquainted with the Bengali language and character. . . . The Bengalis have their faults, and serious ones. Most of their failings, however, are due to defective education, an absence of healthy home-life, and of the thorough training for thews and sinews which English lads enjoy." It is in this spirit that Mr. Skrine tells the life story of his distinguished Bengali friend.

Sambhu Chunder Mookerjee came of the purest Brahman stock. His remote ancestor, dating back five centuries, was a man of letters, and the reputed author of a celebrated Indian Epic Poem. But his father was a manufacturer and trader in the Calcutta Bazaar, and his mother the daughter of a Brahman who sold fire-wood and oil seeds at Chitpore. Sambhu Chunder was born in 1839, at his father's house in Barnagore. He was an only son, and a very wayward one. By a mere accident he was led to join the local missionary school, but his father's orthodox fears becoming excited, he was removed to the Oriental Seminary in Calcutta, where he took a studious turn. In 1853, the Hindu Metropolitan College was opened. Its first Principal was Captain D. L. Richardson, one of the most cultured Englishmen who had made India their home, whose influence over the youths of that period was a power for good. Here Sambhu Chunder's chosen associates were Kristodas Pal—destined like him to be a pillar of Indian journalism—and Romesh Chunder and Soresh Chunder, of the Wellington Square Dutt family. While at this college Sambhu Chunder made his first plunge into the troubled sea of journalism. In association with Kristodas Pal, he started a periodical called the *Calcutta Monthly Magazine*, which had but a short life. In 1857 he was married. "This event," writes Mr. Skrine, "was far from having the sinister influence on his mental development, which is assigned to early marriages by self-styled friends in India. . . . Marriages in early life," he adds, "are good in themselves, and a cause of good to Society; and would-be reformers should ponder well the lessons afforded by countless ruined careers the outcome of an undue postponement of the nuptial rites." It is not "undue postponement" that reformers advocate, but undue haste that they deprecate, especially on the female side.

Hereafter, Mookerjee's career was a varied one. "He continued to pursue an even tenor of study, while seeking for honourable and independent employment." He joined the staff of the *Hindoo Patriot*, "and became one of a little knot of brilliant youths who held the banner of Indian journalism higher than any of their successors have done"—a rather broad assertion, when we note the journalism of the present day, not merely in the hands of brilliant youths, but often of highly-educated and tried men.

Mookerjee was not an ascetic; his was essentially a convivial temperament. At a wedding party, "a surfeit of oranges and green cocoanuts, followed by a severe chill, brought on an attack of asthma, which undoubtedly curtailed his life." He took opium as a palliative, and joined the mighty army of consumers of the seductive drug; but he never became its slave. He next took to the study of Homœopathy, and in recognition of his researches received the degree of M. D. from an American University. After two years' work on the *Hindoo Patriot*, he joined a lawyer's office as articled clerk; but finding the profession unsuited to his genius, he returned to the newspaper, and was formally appointed sub-editor. After three years in that position, he took an appointment in Lucknow as secretary of the Taluqdars' Association, where he edited a weekly journal in English, called *Samachar Hindustani*. His next appointment was that of Dewan to the Nawab Nazim of Bengal, where he found himself in a vortex of intrigue, from which he was summoned to perform his father's funeral rites, and returned no more to the scene of his first essay in administration.

He was next offered the head-mastership of the Calcutta Training Academy, but his career as a dominie was a brief one; and, by the advice of his friend Nawab Abdool Luteef, he accepted the post of secretary to the Raja Sheoraj Singh of Kashipur. His next post was that of personal assistant to the Nawab of Rampore, which, owing to the jealousy of the leading courtiers, he was obliged to leave. He was then appointed Minister of Hill Tipperah, "a congeries of low hills, clad with trackless jungle, then on the easternmost confines of British territory"—a most unenviable position for a man of culture and honesty. He did not hold his position long, but returned to Calcutta, and, in 1882, "founded the well-known weekly paper, *Reis and Rayyet*, which has always been conspicuous for literary finish, and generally for breadth of view."

It will be evident that Sambhu Chunder Mookerjee's was a very complex nature. "The ground-work was, of course, his Hindu origin. . . . His inherited prejudices were continually at war with those liberal impulses which were the growth of a life-long devotion to letters." But "his entire life was a protest against that foolish and, indeed, suicidal doctrine that there is no excellence of life or thought beyond the Hindu pale." His correspondence with all sorts and conditions of men, even with those holding the highest offices in the State, shows the high esteem in which he was held and the respect paid to his opinions.

The hand of death fell upon him in February 1894. Mr. Skrine's kindly tribute to his memory will be acceptable to all who knew him and his work.

J. B. KNIGHT.

—The Indian Magazine and Review, July 1896.

WHAT IS THAT ONE THING?

IT seems like an absurdity, yet it is true all the same. I mean that you might have a cellar full of wood and coal and still shiver with cold; and you *would* if it were not for one thing. "Oh, that is so obvious," you may say. "It was hardly worth while to hint at it. Anybody can see it with his eyes shut. All the better for me then: I shan't have to explain. And by the same sharpness you will be able to pick out the important point in two short letters I am about to copy for you."

The first runs thus: "In December 1890, my daughter (Mrs. M. J. Muther,) got into a low, weak, nervous condition. Do what she would she could not get up her strength. Gradually she wasted away until everyone thought she was in a decline, and had not long to live. In fact, she was so low and dejected *she did not care whether she lived or not*. She was under a doctor for six months, but his medicines did her no good. My husband then said, 'My daughter, I will now see what I can do for you.' What he meant was that he would have her take a medicine called 'Mother Seigel's Curative Syrup.' He had used it himself when he was ill, and thought it might prove as beneficial to her as it had to him."

"Mrs. Muther said she was willing to try the Syrup, although she had little or no faith in its helping one as bad as she was. For if she really had consumption we know there is no cure for that. My husband, however, got a bottle from Mr. Hulme, the chemist, in Rochdale Road, and my daughter began taking it. After the first bottle we saw a great improvement. She could eat, and the food caused her no pain. She continued with this remedy, and gradually gained strength, but it took some time to bring her round, she was so very low and weak. After a time she was able to get about, and never looked behind her. Since then she has been strong and well. We have told many persons how Mother Seigel's Syrup restored her to sound health, and are willing you should publish this statement of the facts. (Signed) (Mrs.) Margaret Watson, 11, Ruby Street, Bury, Oct. 8th, 1895."

"In March, 1893," says the second letter, "I began to fail in health. I could not say exactly what ailed me. I felt low, weak, and tired, and had no strength for anything. My appetite fell away, and what little food I ate gave me great pain at the chest and side. My hands and feet were cold, and nearly all the colour left me. I was often in so great pain I could hardly do any work. I was frequently sick, and could keep no kind of food down."

"I got weaker and weaker, in spite of all that was done, and had to be off my work for seventeen weeks. In this way I went on until November of the same year—1893. Then I happened to read about Mother Seigel's Syrup and what it had done for others suffering like me. I got a bottle of this medicine from Mr. W. Heywood, grocer, in Oldham Road, and after taking only the half of it I felt much better. I could eat without pain, and was stronger and brighter every day. When I had finished the bottle I was quite cured, and have had no return of the complaint since. I have told many others about what the Syrup did for me, and out of thankfulness I am willing my letter should be made public. (Signed) Miss Lydia E. Motton, 1, Greaves Street, Middleton Junction, near Manchester, October 10th, 1895."

Both these ladies say that they were very weak, and that their food—of which they could take but little—did them no good. In the midst of plenty they were actually starving. So much wasted was one of them that it was believed she had consumption. The event showed that they both suffered from dyspepsia, and nothing else. But that was quite enough; and besides it often runs into consumption and other fatal maladies. By setting the stomach right Mother Seigel's Syrup fully cured them both.

Coals and wood are useless without means to light a fire; and bread and meat are as nothing unless we can digest them and make them part of our flesh and bone. That is easy to see and important to remember. And it is its power to help nature work this transformation that makes Mother Seigel's Syrup so wonderful a remedy.

* An Indian Journalist: Being the Life, Letters, and Correspondence of Dr. Sambhu C. Mookerjee, late Editor of *Reis and Rayyet*, Calcutta. By F. H. Skrine, I.C.S. Thacker & Co.

CORPORATION OF CALCUTTA.**LOAN NOTIFICATION.**

THE Commissioners of Calcutta are prepared, with the sanction of the Governor-General-in-Council given under Section 404 of Act II. (B. C.) of 1888, to open a Debenture Loan for Rs. 20,00,000 (twenty lakhs) on the security of the rates, taxes and dues imposed and levied under the Calcutta Municipal Consolidation Act, 1888.

2. The debentures will have a currency of fifteen years from the 1st December, 1896, and will bear interest at the rate of $3\frac{1}{2}$ per cent. per annum, payable on the 1st June and 1st December of each year.

3. The form of the Debentures will be that given in the twelfth schedule of Act II. (B. C.) of 1888.

4. No Debentures will be issued for any sum less than Rs. 500, and above that amount Debentures will be issued only for complete sums of Rs. 100.

5. Tenders for the whole or any part of the above Loan of Rs. 20,00,000 will be received by the Secretary to the Corporation up to 2 o'clock P. M. of Friday, the 7th August, 1896.

6. Each tender must be made out in the form annexed to this Notification, and enclosed in a sealed cover addressed to the Secretary to the Corporation, and superscribed "Tender for Municipal Loan of 1896-97."

7. Each tender must be accompanied by Government Promissory Notes, Calcutta Municipal Debentures, currency-notes or cheques for not less than 3 per cent. of the amount tendered.

8. When a tender is accepted, the deposit, when made in currency-notes or cheques, will be held as a payment in part of the amount tendered, and will bear interest at the rate of $3\frac{1}{2}$ per cent. per annum from the date of acceptance of the tender, provided that the whole amount tendered is paid up in the manner hereinafter prescribed; but no debenture will issue for the sum so deposited so long as the entire amount of the tender is not paid.

9. The deposits on tenders, which may not be accepted, will be returned on application, and no interest will be payable on such deposits. If an allotment after being made is not taken up, and the full amount allotted is not paid as hereinafter prescribed, the deposit will be forfeited.

10. The rate at which a tender is made must be specified in rupees, or rupees and annas: a tender in which the rate is not so specified will be rejected as null and void.

11. The rates stated in a tender must not contain any fraction of an anna. If a rate containing a fraction of an anna is inserted in any tender, such fraction will be struck out, and the tender treated as if the rate did not contain such fraction of an anna.

12. The amount of the accepted tenders must be paid into the Bank of Bengal in the following instalments:—

One-third by the 21st August.
Do, by the 21st September.
Do, by the 26th October.

Parties, whose tenders are accepted, will have the option of paying all or any of the instalments before the dates specified above, and will receive interest from the date of such payment.

13. Anticipation interest will be paid on all instalments from the respective dates on which such instalments are paid into the Bank of Bengal to the 30th November, 1896.

14. In the case of two or more tenders at the same rate a *pro rata* allotment will be made (if the tenders are accepted), but no allotment will be issued if the amount distributable on any tender is less than Rs. 500.

15. A minimum having been previously fixed, tenders will be opened by the Loan Committee of the Commissioners at 2-30 P. M., on Friday, the 7th August, 1896, at the Municipal Office.

W. R. MACDONALD,
Secretary to the Corporation.

MUNICIPAL OFFICE:
Calcutta, 29th June, 1896.

FORM OF APPLICATION FOR DEBENTURES.

I hereby tender for Rs. _____ of the Municipal three and half ($3\frac{1}{2}$) per cent.

POSTSCRIPT.

After paying the expenses of the publication, the surplus will be placed wholly at the disposal of the family of the deceased man of letters.

Orders to be made to the Business Manager, "An Indian Journalist," at the Bee Press, 1, Uckoor Dutt's Lane, Wellington Street, Calcutta.

OPINION ON THE BOOK.

It is a most interesting record of the life of a remarkable man.—Mr. H. B. Huntington Smith, Private Secretary to the Viceroy, 5th October 1895.

Dr. Mookerjee was a famous letter-writer, and there is a breezy freshness and originality about his correspondence which make it very interesting reading.—Sir Alfred W. Corft, K.C.L.E., Director of Public Instruction, Bengal, 26th September, 1895.

It is not that amid the pressure of harassing official duties an English Civilian can find either time or opportunity to pay so graceful a tribute to the memory of a native personality as F. H. Skrine has done in his biography of the late Dr. Sambhu Chunder Mookerjee, the well-known Bengal journalist (Calcutta: Thacker, Spink and Co.); nor are there many who are more worthy of being thus honoured than the late Editor of *Reis and Rayyet*.

We may at any rate cordially agree with Mr. Skrine that the story of Mookerjee's life, with all its lights and shadows, is pregnant with lessons for those who desire to know the real India.

No weekly paper, Mr. Skrine tells us, not even the *Hindoo Patriot*, in its palmiest days under Kristodas Pal, enjoyed a degree of influence in any way approaching that which was soon attained by *Reis and Rayyet*.

A man of large heart and great qualities, his death from pneumonia in the early spring in the last year was a distinct and heavy loss to Indian journalism, and it was an admirable idea on Mr. Skrine's part to put his Life and Letters upon record.—*The Times of India*, (Bombay) September 30, 1895.

It is rarely that the life of an Indian journalist becomes worthy of publication; it is more rarely still that such a life comes to be written by an Anglo-Indian and a member of the Indian Civil Service. But, it has come to pass that in the land of the Bengali Babus, the life of at least one man among Indian journalists has been considered worthy of being written by an Englishman.—*The Madras Standard*, (Madras) September 30, 1895.

The late Editor of *Reis and Rayyet* was a profound student and an accomplished writer, who has left his mark on Indian journalism. In that he has found a Civilian like Mr. Skrine to record the story of his life he is more fortunate than the great Kristodas Pal himself.—*The Tribune*, (Lahore) October 2, 1895.

The career of "An Indian Journalist" as described by F. H. Skrine of the Indian Civil Service is exceedingly interesting.

Mookerjee's letters are marvels of pure diction which is heightened by his nervous style.

The life has been told by Mr. Skrine in a very pleasant manner and which should make it popular not only with Bengalis but with all those who are able to appreciate merit unmarred by ostentation and earnestness unspoiled by harshness.—*The Muhammadan*, (Madras) Oct. 5 1895.

The work leaves nothing to be desired either in the way of completeness, impartiality, or lifelike portrayal of character.

Mr. Skrine deals with his interesting subject with the unflinching instinct of the biographer. Every side of Dr. Mookerjee's complex character is treated with sympathy tempered by discrimination.

Mr. Skrine's narrative certainly impresses one with the individuality of a remarkable man.

Mookerjee's own letters show that he had not only acquired a command of clear and flexible English but that he had also assimilated that sturdy independence of thought and character which is supposed to be a peculiar possession of natives of Great Britain. His reading and the stores of his general information appear to have been, considering his opportunities, little less than marvellous.

One of the first to express his condolence with the family of the deceased writer was the present Viceroy, Lord Elgin. Mookerjee appears to have won the affection not only of the dignitaries with whom he came in contact, but also of those in low estate.

The impression left upon the mind upon laying down the book is that of a good and able man whose career has been graphically portrayed.—*The Englishman*, (Calcutta) October 15, 1895.

"IMPROVED UNDAUNTED"

WATCH. Rs. 7.

Guaranteed three Years.

Strong, accurate, pretty, small, open-faced, nickel silver, keyless, short winding, patent, "NEW STYLE IMPROVED UNDAUNTED" watch, with hand setting mechanism, secondhand, for Doctors, ornamental bold dial, for Rs. 7 V. P. P. with an extra glass, spring, pretty box and full three years' guarantee. Warranted to stand the roughest use. Runs more than 28 hours with one winding. Will last a life time. Easily repairable. Others sell at double our rates. One watch free for the purchase of 8 at a time. Mr. Jno. Dickson of Hapatal Railway, from Ceylon says:—It keeps splendid time and never stopped although it sustained hard knocks and jerks. x Dr. H. Moore of Royal Artillery from Poona writes says:—I sold it for Rs. 16. x Pte. W. Hopkins of Sussex Regt. from Dumbun says:—I have sold it for Rs. 20. x Mr. T. B. Scott of Puna Opium Department says:—The watch you sent me some seven years ago is still keeping very good time.

Jewelled Ring Rs. 1-8-0. Real

Blaknana, Calcutta.

KAVIRAJ NAGENDRA NATH SEN, Physician, Surgeon, Accoucheur, practises the Ayurvedic system of medicine, after having obtained a diploma at the final examination of one of the Government medical Institutions of the country.

SPECIFICS

for all ordinary diseases, like Fever, Cough, Asthma, Phthisis, Diabetes, &c., including diseases brought on by irregularities of kinds. Catalogues, containing full accounts of diseases and remedies, are transmitted on application. Prescriptions, with or without medicines, sent to every part of India and Ceylon, Cape Colony, and the British Isles, on receipt (by post) of full accounts of diseases.

Thousands of unsolicited Testimonials from every quarter.

CATARRH,

Hay Fever, Catarrhal Deafness.

A NEW HOME TREATMENT.

Sufferers are not generally aware that these diseases are contagious, or that they are due to the presence of living parasites in the lining membrane of the nose and eustachian tubes. Microscopic research, however, has proved this to be a fact, and the result is that a simple remedy has been formulated whereby these distressing diseases are rapidly and permanently cured by a few simple applications made at home by the patient once in two weeks. A pamphlet explaining this new treatment is sent on receipt of 2½d stamp by A HUTTON DIXON, 43 & 45 East Bloor St. TORONTO, Canada.
Scientific American.

VOL. XV.

CALCUTTA, SATURDAY, AUGUST 1, 1896.

WHOLE NO. 736.

POETS.

BY JAMES GREGOR GRANT.

Poets are a joyous race!
O'er the laughing earth they go,
Shedding charms o'er many a place
Nature never favoured so;
Still to each divinest spot
Led by some auspicious star,
Scattering flowers where flowers are not
Making lovelier those that are.

Poets are a mournful race!
O'er the weary earth they go,
Darkening many a sunny place
Nature never darkened so;
Still to each sepulchral spot
Called by spectral lips afar,
Fancying tombs where tombs are not,
Making gloomier those which are.

Poets are a gifted race!
If their gifts aright they knew;
Fallen splendour, perished grace,
Their enchantments can renew:
They have power o'er day and night;
Life, with all its joy and cares—
Earth, with all its bloom and blight—
Tears and transport—all are theirs!

Poets are a wayward race!
Loneliest still when least alone,
They can find in every place
Joys and sorrows of their own;
Grieved or glad by fitful starts,
Pangs they feel that no one shares,
And a joy can fill their hearts
That can fill no hearts but theirs.

Poets are a mighty race!
They can reach to times unborn;
They can brand the vile and base
With undying hate and scorn;
They can ward detraction's blow;
'They oblivion's tide can stem;
And the good and brave must owe
Immortality to them!

DEAFNESS COMPLETELY CURED! Any person suffering from Deafness, Noises in the Head, &c., may learn of a new, simple treatment, which is proving very successful in completely curing cases of all kinds. Full particulars, including many unsolicited testimonials and newspaper press notices, will be sent post free on application. The system is, without doubt, the most successful ever brought before the public. Address, Aural Specialist, Albany Buildings, 39, Victoria Street, Westminster, London, S. W.

WEEKLYANA.

THE official estimate of the loss of life and property caused by the tidal wave visiting the North-East Coast of Japan on June 15 is:—

In the Prefecture of Awomori, 346 lives lost, 840 houses washed away, and 213 persons injured.

In the Prefecture of Iwate, 23,300 lives lost, 5,920 houses washed away, and 23,840 persons injured.

In the Prefecture of Miyagi 3,344 lives, 715 houses, and 1,184 persons.

NORMA—a light grey mare, of English race, imported from Hanover, the favourite of her master when he was heir-apparent,—carried the Czar when he rode to Moscow to be crowned. On that day, Norma was shod with silver shoes and has since earned her pension. She will not be saddled again and will be cared for at the expense of the Empire.

That is true Imperialism as still understood in the East, as will be apparent from the following occurrence in a Bengal Province within living memory. The chief executive of a Maharaja, finding one of his master's horses aged and unserviceable, to save him the charge of its keep, sold it to the highest bidder, unknown to the master. While driving in the streets one evening, the Maharaja found the horse yoked to the carriage of a stranger. He immediately came to the gate of the Dewan's house and put himself up to auction. The Dewan being informed hastened to the Maharaja who told him that he, the Raja, being old was a burden on the Raj and should be disposed of to the best advantage possible. The Dewan understood the reproof and got back the horse he had sold.

...

IN the Ramsgate Police Court, Mrs. Ruby Spalding, wife of Lieutenant-Colonel Henry Spalding, of Kelvin House, was prosecuted, by the National Society for the Prevention of Cruelty to Children, for having caused unnecessary suffering to her child Walter, aged eleven. The evidence of six domestic servants formerly in the service of the defendant was to the effect that she frequently imprisoned the lad in a dark cellar, sometimes kept him without food, had struck him with a dog-whip, threatened him with a poker, had thrown a flower-vase at his head, and had said she would be hanged for him. It was also deposed that she was frequently under the influence of drink and that her language was most violent and obscene. The husband, a witness for the defence, generally denied the allegations of cruelty and declared the wife was exceedingly fond of the boy. He admitted the occurrence of frequent storms in the house, but denied that the defendant's conduct was attributable to drink. Dr. Hicks gave evidence that she suffered from blood-poisoning and hysteria and was a weak woman. She was not an habitual drunkard, but took some quantity of drink sometimes. The boy Walter said that he had not been ill-treated and was happy at home. But the language of his mother towards him was sometimes dreadful and that she had threatened to kill him, saying she would be hanged for him yet. The case was heard two days. On the first, during Counsel's opening remarks, the defendant called him a liar and urged him to "pile on the agony and produce the victim."

Subscribers in the country are requested to remit by postal money orders, if possible, as the safest and most convenient medium, particularly as it ensures acknowledgment through the Department. No other receipt will be given, any other being unnecessary and likely to cause confusion.

She also repeatedly interrupted and abused the witnesses and called upon the magistrates to order the lawyer to cease lying. When, after two hours, the patience of the court was exhausted, she was ordered to stand up in the dock, for she was allowed a chair, she refused, resisted the efforts of the police, abused the presiding magistrate as an old devil and used other violent language. When forced into the dock, she stood with her back towards the Court. At this stage she was ordered to the cells, when there was another struggle with the Police and the chief constable was struck in the face. Ultimately, she was dragged screaming from the Court. Next day she was calm and deferential to the Police, only casting reproachful glances at the prosecuting counsel. The Justices, while sympathising with the husband, sentenced the wife to a fine of 25*l.*, including costs, with the alternative of one month's imprisonment, and advised Colonel Spalding to place the boy in the hands of some friends.

SPEAKING in support of the East London Church Fund, Lord Salisbury is reported to have "remarked on the fact that mundane attractions had to be supplied in the shape of bazaars, dinners, balls and garden parties, before many people would contribute to charities; and he agreed that this showed something wrong in the state of Christian feeling among the laity. In the action of religion he saw the only hope of solving the numerous social questions that beset politicians, and of dealing effectively with the increasing amount of moral and spiritual destitution in London."

THE Royal Commission on Indian Expenditure has agreed to examine Dr. K. N. Bahadurji on the question of the separation of the civil branch of the Indian Medical Service from the military.

ACCORDING to a parliamentary paper, the total debt of India, bearing and not bearing interest, outstanding on March 31, 1896, was 103,788,928 *rx.*, the corresponding total on Oct. 1, 1895 being 104,093,127 *rx.* Of the outstanding debt, the amount not bearing interest was 867,880 *rx.*, and the total debt bearing interest was 102,921,048 *rx.* The amount of debt discharged during the half-year ended March 31, 1896, was 304,199 *rx.*

THE N.-W. Provinces Legislature has passed a Bill for Honorary Muniffs. The Courts are overworked and the finances of the country are unequal to the demand for additional paid judges. So the Government has gone in for *bagar*. Except Pandit Bishambhur Nath, all the honourable members of the Council, including the Governor-President, were for the measure suggested by the hon'ble Mr. Mahmood, late a Judge of the High Court of the United Provinces, now practising as an advocate in the Oudh Courts.

THE Maharaja's College, Jeypore, has been affiliated to the Calcutta University in Arts up to the B. A. standard.

"MARMADUKE" has raised the question in *Truth* whether it is not time that the custom of burying murderers in unconsecrated ground should cease? He says "when the criminal has paid the extreme penalty of the law, it is ludicrous for the State to pretend that it can in any way affect him in the next world; whilst, even if it were in its power, it would be abominable to do so."

WE have shewn up the policy of the Government in this country of outraging the dead bodies of fanatical Mahomedans condemned to death for assassination of British functionaries, high and low, by burning them in pigskins. We are glad to find "R. B." writing soberly in the *Pioneer* on "the Ghazi and how to deal with him":—

"The honourable term 'Ghazi,' which means 'a slayer of infidels,' seems of late to be applied rather indiscriminately. In our frontier expeditions every man who shows fight against us is described by the war correspondent as a Ghazi. Every attack on single British Officers moving about the country with insufficient escort during the progress of the expedition is described as a Ghazi outrage, and even an attack on a guard or escort composed entirely of Mahomedan soldiers is considered worthy of the same name. Ghazis crowd on the hills, sangars are full of them, they pick off sentries from a secure position, they cut up stray followers, they hamstring mules and camels; in fact the actors in any and every military operation of the enemy when the expedition is against Mahomedan tribes are termed Ghazis. But the Ghazi must have his kafir or infidel, and the British officer is generally cast for this part. Now though Christians are not kafirs to orthodox Mahomedans, it is perhaps from the manners and customs of those of the latter who live in India that the

idea has arisen that they are. My experience has led me to believe that if an Englishman asks a Mahomedan of the Punjab or of the N.-W. Provinces for a drink of water, it will be brought to him in an earthen vessel, which will be broken and thrown away after it has been used, but the Pathan, that is of the Afridi or Enzafai tribes, will share his food and drink with the sahib like a Christian, always presuming that the said sahib has not been openly having a rasher of bacon for breakfast. The Red Cross Society has no branches across the Indus, and the Pathan disposes of the many delivered into his hands summarily, as he would expect to be treated himself were the position reversed; but he makes no difference between a Christian and a man of another Pathan tribe with which his own might happen to have a temporary misunderstanding. Now the so-called Ghazi of peace time, who only seems to reach perfect development in the southern Pathan tribes under the Baluchistan Agency, and of whom the Sheranis produce particularly fine specimens, will murder any one under Government, no matter what his creed be, provided always there is a reasonable chance of escape afterwards and no danger to be apprehended from the victim. I do not mean to affirm that there are no murders committed from purely religious motives. The one that lately took place at Peshawar seems to fall under that category in the absence of any other discoverable motive—but I think I am right in stating that generally they are committed by men who have a real or fancied grievance either personal or tribal against the Government. It is a question whether our rather hysterical method of dealing with these criminals, no matter what the motive for the crime may be, does not tend to raise them in the estimation of their fellow tribesmen, and thus indirectly encourages the crimes. The hanging of Mahomedans in pigskins with the avowed idea of destroying their hopes of Paradise, has, I think, been given up of late years. It was a practice indefensible from a Christian point of view, for the punishment of the criminal after death might surely be left to a Higher Power, and equally so as a matter of good policy, for the greater the indignity heaped upon the martyr the greater his reward hereafter. Of course to a man of refined tastes the smell of a pigskin would be unpleasant, but only in a slight degree more so the hand-shake which I understand is the last personal attention of the executioner at home. Then again the celerity with which, as a rule, the execution follows the sentence gives the Ghazi a distinct advantage over his more humble fellow criminal. I have had many condemned prisoners in my charge and never knew one who, when all hope of a commutation of his sentence was gone, did not wish the end to come quickly. The crime the man has committed falls under Section 300, I. P. C., and the extreme punishment for that crime is death, and to add any trimmings to that punishment for a particular class of murder seems to me to detract from the majesty of the Law. I do not know if it be true, but I heard that on a recent occasion the troops were paraded to witness the execution of a Ghazi, and that he said that if he had only been taken round the town on view he would have had no fault to find with the arrangements. Now supposing this to be true, would it not have come home, not only to him, but to many of the lawless among the spectators, that it was an infinitely finer deed to kill a sahib, and end, if caught, in a way that would be an honour to the family, than to murder a poor little child for its ornaments and be turned off at the usual jail delivery on a Monday with only an audience of a few policemen with jaded appetites for that kind of show. I have heard that when Lord Mayo was assassinated in the Andaman Islands the present Field-Marshal Sir Donald Stewart was the chief commissioner. Although he had power to try and execute the extreme sentence summarily, he directed the ordinary procedure to be followed. Sher Ali was therefore brought before a Magistrate and committed for trial at the Sessions. When tried and convicted the sentence was sent for confirmation to the High Court at Calcutta. Sher Ali was bitterly disappointed at the little stir he thought he had made, and used to ask if he was not to have some special punishment. When he was told that if the High Court approved of the sentence he would be hanged, he said:—"Yes I should have been hanged if I had only killed a coolie, but I have killed the Mulki Lord Shah." I am told that owing to no difference having been made between this man and any other murderer, the spot where the murder took place is now not known to the convicts, and, in the opinion of the officials, had not the plain and simple routine been followed Sher Ali's crime would have been succeeded by others of a like nature. If distinction follows the declaration that an attempt, say to kill a policeman, was prompted by 'Ghaza,' what wonder is it that so many crimes are apparently committed by Ghazis. This being a purely personal motive, no other need be looked for, which simplifies the inquiry. A short time ago you published an article on this subject in which the writer advised the search for the mullah. Now, I think, it would be good policy to make, whenever possible, not only the mullah but the whole village responsible. The mullah does not confine himself to his religious duties, he is also an authority in the village council. No doubt, when the community feels that something must really be done, to direct the attention of the Sarkar to some unredressed grievance or to mark the public disapproval of some decision the mullah will find and prepare the instrument and will see that the intellect of the man selected is not too sharp, but he is only acting in the interests of the community at large. I would, therefore, suggest that on information being received that a man had gone a-Ghazising a fine of Rs. 1,000 should be at once levied on his village. If the candidate for the martyr's crown should be caught by his fellow villagers and handed over to justice before any attempt at murder were committed, the fine should be returned; but it should be forfeited if the man were apprehended by the police, or if murder or attempt at murder were committed, and in the latter case paid to the victim or his family. Of course in the case of men from beyond our frontier the above suggestion could not be acted on often, but the glaring evil is the number of crimes committed by men of tribes in our territory, and I feel confident that when the whole village suffers from the desire of one member for notoriety, his zeal would be turned into a less costly channel."

A wholesale punishment by fine not saving the innocent is inconsistent with strict justice. But it is in keeping with the law of the Indian Penal Code which punishes all the proprietors of a property where certain offences are committed. Still it is a barbarous law and ought not to be enforced except in times of commotion or where disturbances are a normal condition. Prevention of crimes is as much a part of good rule as their punishment. But general condemnation, irrespective of the guilty and the innocent, while evidencing strong rule betrays incapacity to detect crime. Such a law is a confession of weakness and is not justified at all times. There may be places and occasions where and when such a preventive measure is a necessity, but, surely, it ought not to have a place in the permanent Penal Code.

ON the 17th April, at Elsenhal, Austria, at 7-35 A.M., three trees were sawn down; at 9-34 A.M., the wood was stripped of its bark, cut up, made into pulp, and converted into paper. At 10 A.M. the paper had passed from the factory to the press and issued out of it printed and folded. So in two hours and a quarter the tree was made into a printed sheet. The lazy Indian can only look on and wonder at the rapidity of work, without being stirred into activity.

..

PROFESSOR Heramba Chandra Maitra, of the City College, has obtained, from the Chief Magistrate, a summons against the Editor Kali Prasanna Kavyabisharad, of the *Hitabadi*, a Bengali weekly journal, on a charge of defamation, based on satirical poems published in that paper reflecting on the character of Mrs. Maitra—Sreemati Kusum Kumari. The application was made by Mr. S. P. Sinha, instructed by Babu Bhupendra Nath Bose. If this case is not settled out of court or compromised, we may expect another against another Bengali journal.

NOTES & LEADERETTES,

OUR OWN NEWS

&

THE WEEK'S TELEGRAMS IN BRIEF, WITH OCCASIONAL COMMENTS.

THE Jameson trial concluded on July 28. Sir Edward Clarke submitted that Pitsani was not within the British dominions, and that no force had been fitted out at Mafeking, nor had Dr. Jameson any idea of hostile intent against a foreign State. The appeal of the Johannesburg Reform Committee for aid, he said, justified Dr. Jameson's action. Sir Richard Webster, in reply, said that both Mafeking and Pitsani were under British law, and he ridiculed the idea of the raid being a peaceful one, as the evidence showed it was premeditated.

Lord Chief Justice Russell, in summing up, was strongly against the arguments of Counsel for the defence. The Jury returned a verdict of guilty, and the following sentences were passed:—

Dr. Jameson, fifteen months' imprisonment without hard labour.

Sir John Willoughby, ten months' imprisonment.

Major White, seven months' imprisonment.

Captain Coventry, Mr. Grey and Colonel White each five months' imprisonment.

The sentences on the military prisoners involve loss of commissions.

All the prisoners were conveyed to Holloway Prison, to be treated as first class misdemeanants. They have since been removed to Wormwood Scrubs Prison as second class misdemeanants.

One of the most important State trials of recent years has ended, let us hope, gloriously to all parties concerned. President Kruger has no reason to be dissatisfied with the result. British law has been vindicated. Dr. Jameson and his compatriots are heroes still. Though they lose liberty as citizens for a time, they do not suffer in honour. British Civilization would have suffered if the contention of the heroic raiders had succeeded. The trial is remarkable in many ways.

The House of Commons has since appointed a Select Committee to enquire into the administration of the Chartered Company, including the responsibility of its officials. The solicitor of the Company has written a letter to the solicitor of the Treasury to say that Mr. Cecil Rhodes is ready to come to London and stand his trial if his prosecution is desired.

THE operations against the Matabele in the Matoppos Hills are regarded as indecisive. It is stated that Sir F. Carrington will not re-enter them, but build forts all round them. Captain Nicholson made two unsuccessful attempts on Friday and Sunday to carry one of the Matabele positions in a narrow gorge at the northern end of the Hills. The British lost several in killed.

Mr. Chamberlain, replying to a question in the House of Commons, said that, acting on the advice of Sir Frederick Carrington, Government did not propose sending out further troops to the Cape. A force from General Carrington's camp, on July 28, relieved Fort Mile to the north of the Matoppos Hills.

THE Uganda Railway Bill has passed its second reading in the House of Commons by a majority of 150.

A DESPATCH from the Porte to Greece complains of the latter sending arms and munitions to Crete, and of the entry of Greek bands into Macedonia. The despatch adds that the concessions granted to the Cretans represent the maximum. The Powers are sending a collective note to Athens stating that unless Greece follows the previous advice given to her they will allow the Sultan to restore order. They demand that Greece takes steps to prevent the despatch of volunteers and munitions to Crete.

THE finding of the court of enquiry into the loss of the Drummond Castle shows that it was caused through excessive speed and inadequate allowance for current, and that the catastrophe might have been averted had the Captain used the lead sufficiently.

THE German gunboat Seltis has been lost in a typhoon off Shantung Promontory. The number of drowned amounts to sixty-eight.

THE International Socialist Labour Congress opened on July 26, in Hyde Park, where a monster meeting took place. Resolutions were passed favouring International peace. Deputies from France and Germany were present, but it all ended in a fizzle owing to a deluge of rain.

THE House of Commons has passed the Irish Land Bill.

LORD Wolseley, in his evidence before the Royal Commission on the Indian Civil and Military Expenditure, said that he did not think the organisation of the Indian Army was far beyond what experience had shown was necessary. The present system of recruiting for India, was, he said, infinitely superior to the old system of recruiting for the India Army, and indirectly strengthened the home force, but the British Army really was a great reserve for the Army in India. He also thought that India ought to pay everything connected with the maintenance of an army there, for everything worth having to India had been derived from the British rule. Mr. Curie remarked that surely the Indian Army was quite as much a reserve for British emergencies as the British Army. Lord Wolseley in reply said that he should not like to put Indian troops in front of European soldiers, and should not like to fight France or Germany or any other army with Indian troops. He scouted the idea that Eurasian regiments could take the place of the British. Mr. Dadabhai Naoroji, alluding to Lord Wolseley's statement that England had made India, said that India had made England the richest and greatest country in the world. He added that England had done the greatest possible material injury to India.

Lord Wolseley's remarks are considered at Simla as extremely ill-judged and have been received with a universal chorus of indignation by the military element. It is apprehended they will give rise to discontent in the Native Army. The general feeling is that Lord Wolseley's opinion is worthless, as he has practically no experience of Indian troops.

THE morning papers publish the following telegram:

"Bearing in mind the offer from Australia, volunteering men as well as money to Her Majesty's Government and as an earnest proof of his deprecation of any agitation against the decision arrived at by the Government concerning all offensive and defensive measures of the united Empires of England and India, His Highness the Maharaja of Vizianagram has offered a lakh of rupees toward the expenses of the Suakin expedition."

The cost has been estimated by the Government of India at 24 lakhs. Following the lead of Vizianagram, other chiefs and princes of India may make up the amount. But the question is, Will Government accept the offer?

THE *Somaprakasa* is responsible for the following:—

"We are being undone by our own servility. In course of his tour through Behar the Lieutenant-Governor went to Gya and wished to have a sight of the celebrated foot-print of Vishnu. Sir Alexander Mackenzie, before entering the temple, hesitated as to whether he should do so with his shoes on. Seeing this, two priests (*Gayalis*) insisted upon Sir Alexander's entering the *sanctum sanctorum* with shod feet. Sir Alexander's hesitation disappeared and he obliged the priests by acting according to their wishes. After this any English or Mussalman Magistrate or high official, with the precedent of Sir Alexander Mackenzie before him, will freely enter the temple of any deity, with shoes on. Our countrymen, however, in view of such an act of desecration, will not fail to take up the cry of 'Religion outraged' and make themselves ridiculous in the eyes of sensible Englishmen."

Why find fault with the *Gyalis* of Behar when the more orthodox Madrasis threw open their temples to Lord Dufferin? The Sikh guardians of the Golden Temple in the Punjab had, with greater wisdom, provided silk shoes for Lord Elgin and his party.

Knowing Europeans shew more regard for Indian religious feelings than Natives. Satranjay, Siddhachal, is the principal place of pilgrimage in Palitana with over 2,000 Jain temples with an income of a lakh of rupees. 200 persons are employed for worship and 1,000 persons are fed twice a day. The late Keshub Chunder Sen visited the place in great state but had to be stopped and taken through the several gates without his shoes and the paraphernalia in his train.

SIR Alexander Mackenzie's sojourn to Gya has not been entirely fruitless. The Municipality and the District Board presented him a joint address in which, after the usual formalities, the Lieutenant-Governor was asked to sanction the imposition of a tax on all Railway tickets issued from and to Gya for relieving the severe strain felt by the Commissioners in keeping up the sanitary arrangements of the town. The precedent of the Benares Municipality was cited. Sir Alexander Mackenzie's reply was plain and straightforward. He pointed out the difference between the laws of the North-West Provinces and Bengal. Benares is able to levy the pilgrim tax because of a special provision in the Upper India Municipal Act. There is not the least chance of such an enactment finding favour with the Bengal Council. In the Bengal law provisions exist for a water-rate which Sir Alexander Mackenzie advised the Gya Municipality to make the most of. The address contained a reference also to the question of the separation of Behar from Bengal. It is an impractical cry taken up without any forethought. The *Pioneer* is mainly responsible for the hollow agitation on this question. In the address it was said that "certain events have led thoughtful men in the Province to advocate the separation of Behar from Bengal for administrative purposes. This is no doubt a very wide question which, we feel certain, will receive the attention of Government at the proper time, but so long as the separation of the two Provinces is not deemed practicable, we venture to express the earnest hope that the reasonable claim of Beharis, that their interest, as a separate people, is liable to separate treatment in several matters of legislation and administration, be not lost sight of." However reasonable the Beharis may think their claim to be, we fear it has not been expressed very reasonably in the language before us. The fault is, no doubt, the scribe's, but the gentlemen who presented the address ought to have employed some one better able to dress that claim in words. Sir Alexander Mackenzie's reply deserves to be quoted in full:—

"In your next point you refer to the fact that thoughtful men in the Province are advocating the separation of Behar from Bengal for administrative purposes. Now, 'thoughtful' is not precisely the term I should apply to the gentlemen who are working this agitation, which is a mere balloon without any substance whatever in it. It is undoubtedly purely a newspaper agitation of the kind at present in vogue. It appears to me very much like the newspaper agitations at home in what is called 'the silly season'—when Parliament is not sitting, and newspapers have to exercise their ingenuity to furnish something sensational for their readers, and they start some such discussion as 'Is Marriage a Failure?' or describe the proportions of some portentous gooseberry. I have observed that the propositions about the separation of Behar started while the Bengal Council was not sitting. It must have been a silly season for the Behar and other papers to take up the question. They had apparently nothing more

useful to discuss. It is the last thing in the world likely to happen within our time or which the Government of India or the Secretary of State is likely to propose, *vis.*, the creation of another local Government in Upper India."

We hope the thoughtful men will, after this, direct their thoughts to something more worthy of themselves. If Behar is to have a separate administration, Orissa also should have one. The reasons urged are of the flimsiest.

IN his reply to the municipal address at Faridpur, the Lieutenant-Governor gave a hope for the extension of the system of trial by jury. He said:—

"The last point to which you refer is the extension of the jury system to this district. As to that I need only say that I am at present considering, in communication with the High Court, the possibility of extending the jury system to some of the more important districts, but I cannot say from my recollection whether Faridpur is in the list of districts to which we propose to extend it, in the first instance, but I hope to receive the High Court's views and opinions on the general question of extension very shortly, and the intelligence and advanced education which prevail in Faridpur will necessarily entitle it to consideration when the question comes up. Without making any specific promise, I can only say that I am generally in favour of extending the jury system to those districts which are suited for it."

SIR Alexander Mackenzie, in his tour, has been indulgent, merciful and harsh. At Bankipore, he snubbed a forward busybody. At Rampore Beaulia he remitted the punishment inflicted by the Director of Public Instruction on the Rajshahi College students by curtailment of their holidays for their rowdiness. He was put out of temper at Dacca. He had a sharp reproof for the Municipal Commissioners who could not unite to give him a welcome. He threatened them with extinction unless they shewed a better appreciation of duty to themselves, to Government and to the public they represent; unless they improved the sanitation of the town; put their finances on a satisfactory footing and learnt self-sacrifice.

To make up the omission of the Municipal Commissioners, the Brahman Zemindar of Dacca, Raja Rajendra Narayan Rny, has, as a memorial of the visit of the Lieutenant-Governor, made donations amounting to Rs. 40,000 for works of public utility and usefulness.

MAJOR-GENERAL Sir Carrington directing the Matabele war has found it necessary to issue the following order:—

"The General Officer Commanding desires it to be distinctly understood by all ranks under command of him that during the continuance of hostile operations against the rebels, clemency is to be shewn to the wounded. Women and children are not to be injured, and prisoners are to be taken whenever possible. Officers Commanding Corps will be held responsible that this order is strictly carried out."

The British soldier has been equally brutal in the Kaffir war. Read the following:—

"I had a long conversation with Captain H—about the Cape, where he has been recently quartered and engaged with the Kaffirs, whom he represents as nearer to animal existence than anything he ever saw. They seem as lithe as serpents, and capable of concealing themselves from observation on almost bare ground as a hare. * * *

"I have this moment returned from dining with Captain H— and hearing a long account of Kaffirland and incidents of Cape warfare. On the whole they are very horrible, and make war more a matter of shambles than it appears in books. The Kaffirs torture all their prisoners. Our officers were tied up to the trees, and the young Kaffirs practised at them with the assegai, the mothers looking on and clapping their hands at a good shot. Some were flayed alive, others burnt with hot sticks; then there is a bullock-goad, a specimen of which he showed me, a favourite instrument of torture. Horrible as all this is, H—said that they are not so ferocious as our English soldiers. A Kaffir one day pointed to one of the men in a state of intoxication, and then significantly to himself, saying, 'You would make us like that.' They treat our women, too, with delicate respect, which our men never imitate. H—has seen a soldier deliberately place his musket to a woman's breast, that he might kill both herself and the child at her back with the same shot; the English officer, a subaltern, took no notice of this barbarity, and H—was obliged to put him under arrest. Indeed, it seems that officers and men become brutalised there. He mentioned one colonel, at whom a Kaffir fired, and singed his face. The colonel knocked the Kaffir down, strode over him, and coolly took out his knife and jagged it across his throat, instead of stabbing or shooting him. From his account, I confess, I felt strongly on the side of the Kaffirs. They feel that they will become as degraded as Hottentots by being subject to the English. At present they do not drink, and have a much finer sense of honour than the brutal soldier."

For a long time it was a mystery where the Kaffirs got their arms and ammunition. At last, when the war was ended, the secret came out. Every captured musket had the Tower of London stamp upon it—that is, the condemned muskets, which are bought up by mer-

chants, had been shipped off to the Cape and sold to the savages. Nor did they ever want powder; steamers were fitted out by dealers at the Cape, and sent up the shore with ammunition. Can you conceive selfishness and treason of a darker turpitude than this? And the Kaffirs afterwards said, in Soylock's vein, 'These be your Christian merchants!'

He showed me a number of coloured drawings, vividly representing Kaffir life—one a very hideous but strangely fascinating one, in which an English officer, stripped to his shirt, is kneeling in the hands of the torturer, whose exultation and refinements in cruelty are diabolical.

This is man! and these things are going on, while we sit by our fireside and complain of ennui, or weariness, or religious persecution or scandal, or some other trifling gut-bite. There was a bundle of assagais, which H—showed me, of various kinds. It is about six feet long, taper, about as thick as your finger at the thickest part where the iron blade joins it, and feathering off like a reed at the other end. This they use on all occasions to cut their food, shape their pipes, gash their prisoners, and as a javelin, capable of being thrown a hundred yards with wonderful precision.

They are a fine manly race of men, the women beautiful in figure, but all plain or ugly. I should except a few—in officer told me that one was the most beautiful woman he ever saw."—*Life and Letters of the Revd. Frederick W. Robertson*, incumbent of Trinity Chapel, Brighton, edited by Stopford A. Brooke, Honorary Chaplain in Ordinary to the Queen.

THE *Tribune* writes:—

"There is an individual in Lahore who is the victim of a strange fancy. He belongs to the labouring class, and before beginning his day he must go to the railway workshops, in all weathers, to hear the 'siren' buzz and to have a look at the Superintendent of the shop. He feels miserable, he says, if he is not in time to see the Saheb drive in or hear, from a spot as near to it as possible, the big whistle 'sing'. The best means of bringing a smile on his face is to tell him that the pay of his idol has been increased or that he has come in for something good in any other shape. He is quite sound in mind and body excepting this one crank and does not himself know what the mysterious force is that draws him to his accustomed haunt every morning before sunrise."

In our city, a young man of respectable family in the country, given to rain-gambling, has just lost his balance of mind. He sees nothing but clouds presaging rain that will bring him rupees. One evening he paid down rupees one thousand and came back home in a high state of excitement. Since then he is being treated as a lunatic. Another fact to be noted in this connection is that of the Rs. 1,000 paid down at an unusual hour, Rs. 900 has been returned.

Rain-gambling, like all gambling, is against law. Still it flourishes. The Police is concerned with only petty and street gambling. Betting on horses and like exciting amusements in clubs and big houses where heavy sums pass hands are not to be taken into account. Oh for an hour of Sir George Campbell!

We have before us a curious prospectus of a new school with a boarding establishment in this city. It is in English, but opens with two Bengali words meaning "G.O.L.S." The connection between this pious statement and what follows in English is not obvious. No explanation, again, is offered of the name given to the school "the Atmoddhar Institution," another jumble of languages. The meaning of the Sanskrit word is "self-rescuing." Are the teachers or the pupils, or both, to rescue themselves by their own exertions, without any outside help? Or, is the school a memorial of the Supreme Swan, named Atmoddhar, another compound, it is said, of races and religions, who, passing through various stages, usual and unusual, of existence, has turned up in the metropolis for the benefit of all and sundry that visit him and wait upon him with reverence? A Supreme Swan is expected to do wonders, and this black Indian Swan has already performed some. To begin with, though looking not oldish, and full of vigour and activity his age is given variously at 100; 300; 1,000 and 2,000 years. It has not transpired whether he has regenerated other continents than India or is familiar with other worlds than our own. For the present he has gone to Benares to negotiate for a house. Older than Methuselah, he may be a man of God—in incarnation of Brahma with Brahma's years. This walking Age, speaking Bengali but knowing English and undoubtedly other languages, since he has chosen to come to India, ought to be in demand with our Government for their various purposes. Under his advice, a person in the last stage of phthisis has recovered by disregard of all restrictions about food, drink, and other indulgences—the favourite recipe of the great Divine. Another regained the sight he had lost. One of his principal disciples has been cured of galloping diabetes. He has no end of following, his flock is larger than Professor Richard's who

had a high price for every treatment he undertook, who laid no claim to divinity, and had no salvation to offer. The Swan is all catholicity, Sanctity himself, and more Islamic than Hindu, he has no prejudices of any kind; everybody, man or woman or child, is welcome to him; no food or drink, however or by whomsoever prepared, is distasteful, and he shares it with all that surround him. He detests gold and burnt a bundle of currency notes that had been offered him by one of his admiring followers. A manifestation of divinity, it is his prerogative to live on others. He moves freely with his numerous following, visiting the great when asked to give them salvation and fulfil their wishes by partaking of their hospitality. But the charm has begun to break. The education of our schools and colleges being godless, students, under-graduates and graduates, run to such idols of veneration. The High Court has just reduced, by half, a sentence of 10 days' imprisonment passed, by a Deputy Magistrate of Hwrah, on a student named Goukrishna Goswami, for having trespassed into the house of one Annoda Prasad Chowdry and assaulted him, because he had doubted that the object of the student's adoration was not a Hindu but a Mahomedan. Many of his disciples suspected that he was not what he seemed, and they have ferreted out and circulated some ugly antecedents. Those who still stuck to him have not yet regenerated him by a biography explaining the incidents of his previous birth or earlier life, as so many manifestations of power or open acts to ward off the vulgar gaze from the inner saintliness. Lord Runkrishna too had become a Supreme Swan. Two such Swans at one time would have been too much of a good thing. Hence the appearance of one after the other in the firmament. But why the outcry against him for Mahomedan predilections, or the peep at the past? His age sanctifies him and he has proved his divine mission by miracles. Older than Adam and come to the world before Mahomed was born, how can you doubt that he is not a Hindu but a Mahomedan? A saint, again, is a saint, whether Hindu or Mahomedan. Swanship is the thing, never mind how obtained, though there is a belief that none but a Hindu can possibly attain to that holy eminence.

THANKS to the Chief Magistrate, Religion has triumphed. In the prosecution of E. A. Culloden charged with abetment of assault on the Pastor of the Union Chapel and of highway robbery, the victory is the Revd. F. Moyle-Stewart's. After a lengthy trial, in a lengthy judgment, Mr. T. A. Pearson has found that Mr. Stewart, as a man of religion and a gentleman of education, was worthy of all belief and that he was not guilty of falsehood in his evidence, which Mr. Cranenburg, pleader for the prisoner, worked so hard to establish; that the identification by only his clothes of Culloden was complete by the evidence of Mr. Stewart; that Mr. Stewart's inconsistent statements were explained away by him or were explainable and were of little help to the defence; that the Police had been very much opposed to Mr. Stewart and that a denial by him of a statement made by the Police was to be accepted; that Mrs. Culloden, Mrs. Piper and William Culloden had lied in saying that the prisoner Culloden, who was indeed suffering, was ill in bed on the day of commission of the offence and that the attempt to establish an *alibi*, which thus failed, established the offence if it did not aggravate it; that not a word of the evidence of the coachman and syce was to be believed, as they uttered or were made to utter an abominable charge against the reverend gentleman; that the witnesses for the prosecution who supported the defence were not to be trusted, because one was a dismissed servant of Mr. Stewart and another, though still in his service, had been coaxed from that service and had come into court and told deliberate lies with consistent cut and dried stories; that, though too poor to hire budmashes, they could be had by the prisoner for his purpose; and that "the robbery of Mr. Stewart on the highway was a probable consequence of the aid intentionally given to the budmashes by the accused." Mr. Pearson would, therefore, to mark his indignation against highway robbery in the heart of Calcutta and of a parson, punish the prisoner heavily. But, as Culloden was in delicate health, the Magistrate ordered for him 9 months' labour.

The Magistrate also decided a linguistic difference in Mr. Stewart's two statements in his favour. He has held that the second statement "I am morally sure he is the man," is a legally complete identification and carried greater certainty than the previous statement "I am sure

he is the man." To us, it seems, a simple statement of a man of truth and religion is as strong as that statement coupled with any number of emphatic words, or as a proof of holy writ.

THE four Bengali legislators of the Province, three of them also practising law, taking to heart certain remarks made in the *Indian Daily News*, called upon the editor to apologize for the remarks which they said were absolutely without foundation and distinctly libellous. The editor has replied in his paper. It is perhaps too early to speak on the matter till we know how the reply has been received. In the meantime we publish the call and the response :—

"3, Hastings Street,
Calcutta, 29th July, 1896.

To the Editor, *Indian Daily News*.

Sir,—The attention of my clients the Hon'ble Rai Eshan Chunder Mitter, Bahadur, the Hon'ble Baboo Gura Prosad Sen, the Hon'ble Mr. A. M. Bose and the Hon'ble Baboo Surendranath Banerjee who are the elected Bengalee members of the Council of His Honor the Lieutenant-Governor of Bengal for the purpose of making Laws and Regulations has been drawn to two editorial paragraphs—one commencing 'It is, perhaps, natural' and ending 'should have a substantial value,' and the other 'Talking of substantial values' and ending 'to say the least of it, to further advance,' in the issue of the *Indian Daily News* of the 16th instant. The second of these paragraphs insinuates, that questions in Council are put by my clients for the sake of what is called 'honoraria' in the paragraph. I do not know on what information the accusation against my clients is based, but I am instructed to tell you that it is absolutely without any foundation whatever, and my clients are advised that the 2nd paragraph to which I have referred is distinctly libellous. I am therefore instructed by them to call upon you which I hereby do, to retract and withdraw the accusation made by you against my clients and to apologize to them openly and publicly in your newspaper for the false insinuation made by you, and unless you do so within a reasonable time from date, my clients will institute a suit against you in the High Court for the vindication of their character without further reference.

Yours faithfully,
(Sd.) Bhupendranath Basu,
Attorney-at-Law."

The *Indian Daily News* replied on the 31st :—

"We have received a communication emanating from the four elected Bengali members of the Provincial Council, informing us that an 'accusation' alleged to have been made against them in these columns to the effect that they put questions in Council 'for the sake of what is called honoraria' is 'absolutely without any foundation whatever.' Now these gentlemen should read the papers more carefully before they proceed to defend themselves from attacks which they conjure up therein. Such an accusation would be as indiscreet as unkind, but as we never made it, we are logically unable to withdraw it, a feat which they call upon us to perform. We are glad to accept from these four gentlemen, however, the assurance that such a charge would have no foundation whatever, and have much pleasure in giving publicity to the fact. We regret to have been the cause of wounded feelings in the matter, but must again take occasion to observe that so long as the Bengali members insist on occupying themselves with affairs having a distinctly personal bias and an obvious irrelevance to public interests, so long will rumour be busy with assignable motives. The paragraph complained of in this journal was a warning not a reproach, and the rumour mentioned in it, with all reserve, was one which the present regrettable license in Council makes less surprising than would otherwise be the case."

THE Oriental University Institute, Woking, advertises a photo-zincograph of the manuscript of the Koran of Hufiz Osman, written in 1094 A. H. and famous for its accuracy and beautiful caligraphy. This process of reproduction has been adopted to make the work more generally known while not running counter to the wish of the good Mahomedans to preserve in its strict entirety, as far as possible, "the word of God."

THE next Oriental Congress meets in September 1897, at Paris, where it was founded in 1873.

A PRIVATE letter dated Cooch Behar, the 28th July, says :

"We have had no rain for 9 or 10 days and the weather is hot and close."

THERE have been disastrous storms in Bombay, flooding Poona and causing serious damages on the G. I. P. railway line in the neighbourhood of Bombay.

DEAFNESS. An essay describing a really genuine Cure for Deafness, Singing in Ears, &c., no matter how severe or long-standing, will be sent post free.—Artificial Ear-drums and similar appliances entirely superseded. Address: THOMAS KEMPE, VICTORIA CHAMBERS, 19, SOUTHAMPTON BUILDINGS, HOLBORN, LONDON.

REIS & RAYYET.

Saturday, August 1, 1896.

TIPPERAH.

THE STATE AND THE SUCCESSION.

TIPPERAH is an old principality, the kings claiming descent from Yayati of the Lunar Race, sovereigns of Hastinapur, the capital of the ancient kingdom of Magadha. Once its limits extended from the river Hughli on the west to Burma on the east, and from Burma on the south to Kamrup on the north. At present its area is no more than 4,086 square miles with a population of 1,37,442, chiefly Hindus including about one-fourth Mahomedans. There is still a Christian village called Mariamnagar. In all sanads or official documents from Delhi, the Tipperah Rajas were addressed at "Rajdhani Hastinapur, Sirkar Oodeypur." Tipperah has an era of its own, the present year being 1306. It was commenced, in commemoration of his conquests in the country watered by the Ganges by Raja Bir Raj, 92nd in ascent from the present Raja. This gives an average of about 15 years to each reign. Like the *Rajmala* of Kashmir, Tipperah has a chronicle of its kings called *Rajratnakar*. It has also a sacred spot. The temple of Tripureswari is as holy as the temple of Kalighat in this city and a place of pilgrimage. The Tipperahs have Mongolian features. There is remarkable affinity and even identity between the Tipperah and Manipuri languages. The races inhabiting the State in the order of civilization from lower to higher, are : Kuki, Halam, Rieng, Newatya, Jamatya, Tipperah. Another race, the Chakma, has recently crossed over from the Chittagong Hill Tracts. The Kukis are divided into eight lots—Dalong or Dalong ; Darhula ; Hawoa ; Sainial ; Chingthang ; Bong ; Beto ; and Doting. They all speak the same language, with difference of accent and intonation, but not enough to prevent mutual understanding, except perhaps the Dalongs, who, if speaking radically the same language yet speak it in a rather incomprehensible way. The accent and intonation of the Northern Kukis approximate to the Sylhet Bengali accent and intonation, while in the Udeypur division the speech assimilates with the Chittagong Bengali. These divisions of the Tipperah State Kukis are, therefore, clans rather than tribes. Some of the names seem to be those of Chiefs, such as Darhula, Chingthang, etc. The different divisions occasionally intermarry.

Except the Dalong, all the Kuki tribes can speak Bengali ; it is believed that even the Dalongs know Bengali and can speak it, though generally they do not, out of spite or wickedness, or from a point of honour. When they find it necessary, however, they are ready to speak that language. All the Kukis, except the Dalongs, pay a tax to the Maharaja, a kind of house tax, called *gharcherki*. Some

(Session 1896-97.)

Lecture by Dr. D. N. Chatterjee, B.A., M.B., C.M., Thursday, the 6th Inst., at 5-30 P.M. Subject : The Protoson. Coelenterata.

Lecture by Dr. Mahendra Lal Sircar, Friday, the 7th Inst., at 7 P.M. Subject : Thermometers concluded.

Lecture by Babu Girish Chandra Bose, M.A., F.C.S., M.R.A.S., &c. Saturday, the 8th Inst., at 5-30 P.M., Subject : Morphology of Plants—Stems.

Lecture by Dr. Nilratan Sarkar, M.A., M.D., Saturday, the 8th Inst., at 6-30 P.M., Subject : Histology—Blood.

MAHENDRA LAL SIRCAR, M.D.

Honorary Secretary.

Aug. 1, 1896.

are taxed by the clan or tribe.

The Kukis are popularly divided into Kancha and Paka, the Kancha being the wilder ones who live or are supposed to live on raw flesh, the true Kukis in fact, and the Pakas, the more civilized, who cook their meat. The genuine Kukis, that is the wild tribes popularly called in Tipperah kancha (raw) and in Bengal Proper nangta or naked, are not now within the Tipperah State.

The High Priest of the Tipperahs, the Archbishop of the Temple of the Fourteen Gods, the presiding deities of the hill men of Tipperah, is called the Chantai, who on ceremonial occasions wears a gold poita (sacred thread of the twice-born.) The inferior priests are called Galims who are also sacrificing *kamars* or *karmakars*, slaying the animals offered for sacrifice. The Chantai is selected by the Maharaja from among the Galims. The Maharaja is everything, the head of both State and Church. His position is higher than that of the Sultan of Turkey, for though the Sultan appoints the Sheikh-ul-Islam, he is bound by the law of Islam. There is no law—no scriptures to control the Raja of Tipperah.

The principal sources of income of the State are the tax on forest produce, tax on cotton and oilseeds, family tax in the hills and the zemindaries commonly known as Chakla Raushnabad, in the British districts of Noakhally, Tipperah, and Sylhet. The Tipperah Province was settled in the Bengali years 1189-93, the last corresponding with 1786-87, of the Christian era.

The permanent settlement of Chakla Raushnabad was made by the East India Company with Rajdhar Manikya, and Ramganga Manikya gave an agreement. Mr. Bignell, Agent of the Raja, indeed a kind of Minister for Tipperah, resident at Calcutta, who was the medium of communication with the British Government, states that after the Mogul "conquest, the Mogul sovereigns received no revenue, they left the ancient rulers in possession of the country and an annual tribute of 30 elephants was all that was required by the Emperors of Delhi, to which a small sum of money (Rs. 1,001) was subsequently added." The old capital was Udeypur and the new is Agartala, old and new. The rule of succession is that the reigning Maharaja appoints the heir-apparent who is known as Jubaraj and the next heir with the title of Burra Thakur. On the death of the Maharaja, the Jubaraj succeeds him and the Burra Thakur, without further appointment, becomes Jubaraj. The new Maharaja then nominates the Burra Thakur. But the Raja being a zemindar in British territory the succession is sometimes dependent upon the decision of British courts, when rival claimants to the throne of Tipperah cannot agree among themselves and when one of them applies to the Comilla courts for a declaration of his right to the zemindary.

The present Maharaja Bir Chandra Manikya is a son of Maharaja Kristokishore Manikya, and brother of the last Maharaja Ishan Chandra. On Maharaja Kristokishore's death by lightning (deaths by lightning are common in Hill Tipperah, at least that is the popular notion,—or the death of one of their Maharajas from that cause may have intensified the dread of lightning), Jubaraj Ishan Chandra became Maharaja. He ruled about a dozen years, during the greater part of which Prabhu Bepin Vihari Goswami was Minister or Mooktear, as the chief functionary was called. Maharaja Ishan was extremely religious and had little or no time to devote

to the business of the State which went from bad to worse. He had inherited a large debt from the previous reign. Maharaja Kristokishore had simple but active habits, would wear coarse linen and had no turn for business, being inordinately fond of sports, particularly shooting kora, a game bird, in the swamps. He was an early riser and daily took his walk at dawn or earlier, and was frequently met by people in all sorts of out-of-the-way places. Many are the adventures told of him, such as being stopped by a sentry who did not know his person. When a sentry found out their man, he got alarmed, but the Raja reassured him and he walked on. He was a Persian scholar and liked the company of Moulvis. Haquim Imamuddin was the chief courtier at Court as well as the chief adviser in the State. He was a judge likewise. No wonder, under such influence, the Maharaja, with all his simplicity of habits, smoked out of a great snake pipe. During his reign the State ran into debt. There was a progressive decay of resources. Ishan Chandra came into a heavily encumbered inheritance. He wept at his condition—was deeply alarmed at the prospect. Raushnabad was put up for sale. The Raja himself proceeded to Comilla to try if he could save it. He could not raise enough money, but he called on the British Officers and laid before them his condition, urged his newness to the Raj, and they relented. The sale was arrested. The Raja was granted time.

But the revenue difficulty was regularly periodical. Twice in the year the estate was coming to the hammer of the Collector. The Up-country creditors of the State increased, the rate of interest was exorbitant. The situation grew desperate. The climax was reached when one day the daily two rupees with which the Raja worshipped the feet of his guru, spiritual guide, the Prabhu, was not forthcoming. Of course, it had daily become a difficulty to procure the sum. That day there was a deadlock. Two rupees were not to be had for the Raja.

That evening the Prabhu assumed the Mooktearship. Although the Prabhu was supreme, he was wholly illiterate and rude and unacquainted with State affairs. So in matters of important business he consulted Brajamohan Thakur. The Prabhu made wholesale retrenchments in every department and, by a little sharp practice, brought down the Up-country creditors to his feet. Thus he paid the whole debt of twelve lakhs and accumulated some three lakhs of rupees.

The Prabhu reminds one of the Cardinal Fleury, Premier to Louis XV. Like him he was a virtuous ecclesiastic of high character who reduced expenses and paid off debts and brought money by various expedients to the Treasury.

Latterly the Raja was attacked with paralysis from which he suffered for some years.

When, in 1862, Maharaja Ishan Chandra died, there appeared many claimants to the throne. Maharaja Kristokishore had, besides the last Maharaja and his brother, other sons by a different wife and the eldest of them was Nilkristo Bahadoor, and Maharaja Ishan Chandra had two sons, the youngest being Nivadwip Chandra Bahadoor. During the sovereignty of Maharaja Ishan Chandra, probably finding Agartala too hot for him, Nilkristo had transferred himself from the Maharaja's to the British jurisdiction at Comilla. Contending that Maharaja Ishan Chandra at his death had left no nominated heirs to succeed him, he filed a suit in the Court of the Sub-Judge of Comilla

for the Zamindary in British territory. He gained the suit in that Court, but both the High Court at Calcutta and the Privy Council decided against him and decreed the suit in favour of the present Maharaja Bir Chandra. The late Justice Dwarkanath Mitter, then practising, was the Pleader for the Maharaja. During the continuance of the suit, and for seven years, Maharaja Bir Chandra reigned as Jubaraj under the ministry of Brajunohan Thakur. And it was not till after the order of Her Majesty, on the report of the Privy Council, that he ascended the throne. There were great rejoicings on the occasion and the cost of coronation is stated to be 5 lakhs of rupees. Lord Ulick Browne represented the British Government and went round the throne the prescribed number of times.

While the suit was still pending, Maharaja Ishan Chunder's eldest son died, and it was expected that, at the coronation of Maharaja Bir Chandra, Navadwip Chandra Bahadar would be allowed to hold the umbrella, the badge and the privilege of the Jubaraj, but he was given no part then, nor made Jubaraj afterwards. One year after, Navadwip Chandra Bahadar, having lost all hope, came over to Comilla to prepare for a fight with the Maharaja through the British Courts.

Nilkristo Bahadoor is dead. After he lost his case and while he lived, Maharaja Bir Chandra paid him a monthly allowance of Rs. 600.

Navadwip Chandra Bahadur now filed a suit claiming both the Raj and the Zamindary, which failing, he put in a claim for Jubarajship. In this suit the Sub-Judge decreed a monthly allowance of Rs. 600 against the Maharaja. On appeal by both the parties, the High Court held that Hill Tipperah being an independent Sovereign State, the suit could not lie in British Courts. But the Maharaja himself fixed the same monthly allowance on Navadwip Chandra Bahadur that he had paid to Nilkristo Bahadoor, besides paying him a lump sum of Rs. 20,000.

The full name and title of the Maharaja is—Bisam Samarvijay Mahamahodayi Pancha Sri Srijut Maharaja Bir Chandra Deb Barman Manikya Bahadoor. The present Jubaraj is Radhakishore Deb Barman Bahadoor and the Burra Thakur Samarendra Chandra Deb Barman Bahadoor. The Jubaraj is Head of the Military Department and Chief Judge of the Khas Appellate Court at Agartala.

The court language is Bengali and British Indian currency the currency of the Raj. There was a separate Political Agent at Agartala, the last being the present Chief Secretary of the Bengal Government, Mr. C. W. Bolton. Since 1879, the Collector of Tipperah is the *ex-officio* Political Agent and a Deputy Magistrate is in charge of the Agency office at Agartala.

OUR LONDON LETTER.

July 10.

Imperial Parliament. On reading the debate in the House of Commons on the employment of Indian Troops at Suakin, one is involuntarily reminded of the hackneyed quotation:

"It is excellent to have a giant's strength;
But it is tyrannous to use it like a giant."

Mr. Balfour's *sic volo sic jubeo* has carried the day and a majority of 85 rejected Mr. Morley's amendment to the resolution of the Secretary of State. 85 is of itself a grand majority, but seeing the Government may calculate their forces at the nominal figure of 147 over the Radical and Irish members combined, you see at once how many of their followers must have refused to "pass through Coventry." The severest cut at Mr. Balfour appears

in the "Times." It is worth quoting: "Mr. Balfour, with characteristic courage, put the whole matter in a nutshell, when he said that the root of the opposition to Lord George Hamilton's resolution lies in a general feeling that the policy of the Government is mean. That is a perfectly accurate diagnosis, and we would only amplify it slightly by stating that the policy is thought mean first because it is unjust, and second because it is on so paltry a scale that it cannot command even the respect yielded to vigorous and masculine error." That is sufficiently strong.

Mr. Chamberlain and Municipal Institutions. The Colonial Secretary delivered an interesting speech on municipal life, at Birmingham, on the evening of the 8th instant. The occasion was a congratulatory dinner to the Mayor who by favour of Her Majesty has now blossomed into the full dignity of Lord Mayor and henceforward is "My Lord" in place of "Your Worship." Mr. Chamberlain presided. You are aware it was as Mayor of Birmingham, he first "won his spurs" in public life. And the three years' training he then had in the conduct of the municipal affairs of a great city, has been the very best education for him in fulfilling the duties of a member of the House of Commons and becoming, as he now is, one of the foremost statesmen in England. When one looks back on his House of Commons' career you cannot but be struck that this representative Englishman owes no debt to either of the Universities of Oxford or Cambridge, but has qualified himself for his present high position by assiduous self-training and by the insight he obtained into the working of our municipal life as a member of the Birmingham Town Council and eventually its Mayor for three eventful years. Among his old colleagues of the Gladstonian regime, there is no one so cordially hated. In Mr. Gladstone's Ministry—1892-94—there were only two members of the Cabinet that had not had the benefit of a University training, while in Lord Rosebery's short-lived Cabinet, there was only one—Sir Henry Fowler. To these Oxford *Double firsts* and Cambridge *Wranglers*, it is too awful to find a Birmingham screw-manufacturer outdistancing them all, as he most assuredly does, both as a Parliamentary debater and a first class administrator. Your fellow townsmen have now a municipality, and it is well you should hear the practical advice Mr. Chamberlain has to give. According to him, there are three indispensable conditions of successful local administration. The elected representatives of the citizens must be capable and honest. There must be no room for questioning either the integrity or the ability of the permanent servants of the municipality whose independence must be guaranteed by an assured position and by salaries that will command the services of the best men. But, most important of all, the electors in general must take an active and intelligent interest in the public affairs of the local community."

These three propositions will command the assent, I think, of your leading public men. I am aware you are handicapped by the tutelage of the Government, and by the fact that the Chairman of your municipality is, of necessity, the nominee of the Government of Bengal. But there might at times, it seems to me, be less friction, and more useful solid work accomplished for the general good of Calcutta, were your leading citizens to take part in the government of the city, especially those leisured members of native society, who, from ancestral wealth are relieved of the necessity of following a profession. The second condition, as to the satisfactory remuneration of the permanent officials is one eminently fitted to be dealt with by the class of native gentlemen I have referred to, and they could do it much more efficiently than any member of the I. C. S. unless you secured one of the latter as your Chairman.

Your new Chief Justice of the High Court is to be Mr. Francis William Maclean, Q. C. He sat in the House of Commons from 1886-1891, as a Liberal Unionist. He was then appointed a Master in Lunacy, on a salary of £2,000 a year, and many will think that in these days of a depreciated rupee he would have been better at home with a life appointment worth £2,000 a year. It is no secret the Secretary of State has had great difficulty in finding a member of the Bar to fill the high office, once adorned by Sir Barnes Peacock. At the present rate of exchange its money value cannot be more than about £4,000 *per annum* unless the new Chief Justice has arranged to have his income paid in sterling. Now no member of the Bar with a home career before him would, for a moment, think of being tempted to such a climate as Calcutta for £4,000 a year. I do not say Mr. Maclean may not turn out a second Sir Barnes Peacock, but the chances are all against him, as he has been out of practice for over five years. It is much to be regretted in the public interests that such a high and responsible office has to go a-begging among second rate men at the Bar. I am glad to see Sir Thoby Prinsep is emulating Macaulay, Maine, Hobhouse and Fitzstephen, by presiding over a law commission at Simla. I think he shows forty years' service, and it speaks well for the climate of Calcutta, that he is so hale and hearty.

The United States. The Democratic Convention has been sitting

this week at Chicago, and the silverites have dished the monometallists. But, although the silverites may at Chicago name the candidate for the Presidency, it does not follow they will be any near the goal of their ambition, to secure the election of President Cleveland's successor. When the Electoral College meets in November for the final act, it seems to be the universal opinion Mr. McKinley will have a large majority. We shall know better next week the exact outcome of the Democratic Convention. If it could control the Electoral College there would indeed be evil days in store for the United States in the immediate future. The plank adopted by the large majority includes neither less nor more than the repudiation of national obligations. That is to say, future indebtedness to Great Britain and other European States is to be discharged in silver and not in gold. When the wire-pullers go in for socialism pure and simple, it is a profoundly distressing outlook for the Democratic party. All the best men in it, President Cleveland, Senator Hill and such like, are on the side of sound finance, but outvoted by the turbulent and reckless advocates of silver, the worst elements of the party come to the front.

THE INDIAN INSTITUTE AT OXFORD.

[The Secretary of State for India, Lord George Hamilton, formally opened the completed buildings in the presence of a large and distinguished company including the Thakur Sahib of Gondal, who has contributed two donations amounting to £4,500, and the Maharani of Gondal. The Keeper and originator of the Institute, Sir M. Monier-Williams, first addressed the gathering and made over the completed building to the Vice-Chancellor, who, on behalf of the University, gratefully accepted it, and asked the Secretary of State for India to open the Institute.]

Lord George Hamilton, who was heartily received, said he willingly responded to the Vice-Chancellor's request to declare the building open, but before he did so perhaps they would allow him to preface that ceremony with a very few observations. In the first place, let him heartily re-echo the congratulations which the Vice-Chancellor had already expressed to Sir M. Monier-Williams upon the successful completion, after 21 years' work, of his self-imposed task. (Cheers.) He had worked at this object with unflagging assiduity during that period; he had drawn upon his time, his energy, and his own financial resources without stint, and he thought he now might be proud of the result of his exertions. (Cheers.) It was, he thought, 13 years ago since the foundation stone of the institute was laid by the Prince of Wales, and he had been looking at the list of the distinguished men and scholars who were then present. He was sorry that that 13 years had deprived them of so many well-known names. Jowett, Northcote, Green, Toynbee, Stanley, and many others were no longer among them. But this sorrowful reflection he thought at least was tempered by the proof, if any proof were necessary, that if once a beneficent and far-reaching enterprise was started and its utility was proved, that work would go on and prosper, even although the original workers might be changed and have disappeared. But Sir Monier's energy and enterprise would of themselves have been insufficient to accomplish this great task unless he had been able to appeal to the liberality of Indian princes, noblemen, and the British public. And well had they responded. Such had been the successful result of the operations of Sir M. Monier-Williams, but he thought there was one observation which fell from him in his address which was noteworthy. He thought, he said, that this was the only institute in the United Kingdom which was solely devoted to Indian objects and studies. They were proud of their performances as a nation in different parts of the globe, but he thought none of their feats were comparable to that which they had accomplished in India. In other parts of the world they had done equal deeds of heroism, and perhaps equal administrative ability might have been shown, but the remarkable result of their performances in India was that the exploits of the few had benefited the existence of many, and that the Government, a progressive and enlightened Government as it was, had had its foundation securely laid upon the shoulders and labours of a few individuals. There were many distinguished persons present there, and the Indian Civil Service was well represented. He was no hero worshipper, and he did not say it out of any wish to flatter them, but if there was any body of men to whom he would willingly take up his hat as benefactors of humanity, it was the Indian Civil Service. (Cheers.) It was very difficult for any of them who had never been in India to conceive, or even to realize, what the nature and magnitude of their work was. Just let them try and conceive it by reversing the picture. Let them assume for a moment that Europe was India and that a small portion of that India was England. There were diversities of race, of religion, of customs, and institutions on the continent of Europe, but these varieties were not one whit greater than those which abounded in the continent of India. Let them conceive the whole Government and administration of Europe, with all these diversities, to be carried on by a few natives from India, who were annually recruited by a draft of young men from that country. The task,

they would say, was an impossible task and beyond the capacity of human administration; and yet the Indian Civil Service had undertaken that task, and they had performed it so equitably, so thoroughly, and so incorruptibly that within a few generations the Indian Government had developed into one of the most perfect executive machines the world had ever seen. (Cheers.) Well, then, anything that could affect the education or training of men who were intrusted with duties of such supreme importance was a matter, he would not say of national, but of Imperial interest, and the Vice-Chancellor, in thanking Sir M. Monier-Williams for transferring this building to the University, spoke of the inestimable value which the institute might be to those who had to discharge duties of administration in India. Let them for a moment look at what the institute might do from an educational point of view. High as was his appreciation of the work done in India, incalculable as were the benefits which our Government conferred upon the people, still, sometimes a qualm passed through his mind that those who were so admirably performing this work were not increasing in popularity on the scene of their labours, and that the *hiatus* between the governed and the governing was not being as sensibly diminished as they could wish. The Indian civilian now had to work under widely different conditions from those which surrounded his predecessor. Facilities of communication and of locomotion had brought with them great benefits. But, in his judgment, they had not been a wholly unmixed benefit so far as the administration of India was concerned. (Her hear.) England now was so accessible from India that India was not so great a home of the Indian civilian as in the past. The facilities of communication placed upon Indian administrators an enormous additional amount of work. Year by year the mechanical, he would say the automatic, part of their duties was taking more and more of their time, and they had less spare time for intercourse with the outside or unofficial natives; and it was, as they knew, a rudimentary maxim in government that no man or body of men could hope to thoroughly succeed in governing any people unless they could understand the people whom they governed. If they would allow him a minute or two he would ask their attention to this particular point, for it was of supreme importance, so far as the future was concerned. Many years ago, when he first had the honour of being Under-Secretary of State for India, there was on the Council a most remarkable man, whose name was well known to all his Indian colleagues who were present—Sir George Clark. Perhaps he was the last of those great patriarchal pro-Consuls, if he might so call them, who governed large portions of India through the magnetic influence of a strong moral character based on a thorough knowledge of those with whom he came in contact. He retired, being then upwards of 80 years of age, from the India Council, and on his retirement he was good enough to come and see him, and he spoke very frankly his mind on this particular subject. He said, "You are a young man, and what I want you to do is to devote your energy to destroying the Suez Canal and cutting every telegraph wire that connects England with India, and all the telegraph wires inside India, and when you have done that you must reduce your European army in India to 20,000 men, and then you will be able to test the young Englishman how far he has gone." He asked Sir George Clark to explain these rather bold and vandalistic theories, and he in a very few words put before him his experience and contrasted it with that of those who came after him. He said that when he was a young man he was sent to India with a knowledge only of the vernacular, and after a short time was sent up to a district where there was not a European within many miles of him. He had to keep that district quiet and to govern it by his own resources. And the only way he accomplished that task was by making friends of the notables of the district, governing to a large extent through them and by their opinions. And then Sir George went on to say—"In our days you send out young men far superior to myself in mental equipment, and they go out to a district with a Code under one arm and a telegraph wire under the other. They have to enforce their Code, and if they cannot all they have to do is to telegraph for somebody to help them to do so. That is not the way to make good administrators." There was a good deal of force in those observations. They could not put the clock back; they must take the increased facilities of locomotion with its advantages and disadvantages. They could not alter the conditions which surrounded the Indian civilian, and, if they could not, might they not do something to meet the difficulties which Sir George Clark predicted during their training in this country? It was, he thought, this Institute and its associations which might be of the utmost educational service. (Cheers.) He thought Oxford might be proud of the fact that, since the probationers for the Indian Civil Service were permitted to take up residence in the University, Oxford had, he thought, absorbed something like two-thirds of the total number of those probationers. (Cheers.) Therefore, upon the University of Oxford was imposed the task, which he was sure they would readily accept, of, to a certain extent, moulding the minds and dispositions of those who went to administer and to govern India. They got them at a plastic period of life, and might this Institute not

have a very beneficial effect upon them? Early in life he thought they had a rather exaggerated idea of what they could do. If any young English probationer had an opinion of his inherent power of governing, because he was descended from a conquering and self-governing race, many there would be able to show him that by certain accepted linguistic affinities India could claim a race of men of whom they might be proud. If he was proud of the intellectual past of his countrymen and their literature inside the walls of that institute, he would be shown that at the time when his ancestors were unclothed savages there was a literature in India well worthy of being preserved. And if he was proud of the utilitarian tendencies of his countrymen, of their architectural works, and of the great works of public utility which had been carried out in this country, inside that institute he would know that, notwithstanding all the mechanical appliances they had now, they had not been able to surpass the enterprise and architecture which they found in existence when they went to India. The evidence therefore of the old civilization, and the great feats which, under that civilization, the various Indian nationalities achieved, could not fail to bring home to the mind of any young man a respect and regard for such nationalities, and out of that respect and that regard must naturally grow sympathy and esteem. And sympathy and sentiment, as facilities of communication increased, were becoming more and more important factors in consolidating communities and races. Of the many great men whom England had recently sent to India, there was none perhaps who devoted more time to this problem which he had just sketched out than that distinguished jurist and thinker, Sir Henry Maine. They could not stop, because there would be no reform; they must not go too fast, or there would be no security; they must move, but they must take full cognizance of counteractive force behind. It was because these difficulties existed, and might increase, that he looked with pleasure upon any movement or any enterprise which would tend in any way to solve them. He did not wish to exaggerate the possibilities of any movement with which he might be associated as he was now, but he could not help thinking that, if this institute were fully utilized and properly directed, it might tend to gauge and possibly surmount some of the difficulties he had enumerated, and that it might succeed in producing even closer and more sympathetic relations than those which now existed between the English and Indian peoples. He thought they might be sure that the principles which would always regulate and underlie the Government of India would be those of justice and beneficence and progress, but it was upon the disposition and the demeanour of those who had the administration of those principles that the popularity of the Government must largely depend. He hoped and believed that year by year the roots of their administration in India would strike deeper among the sentiments and affections of the Indian people, and he hoped that the University of Oxford through the medium of that institute might play no small part in bringing about this most desirable result. (Cheers.) He had to thank the Vice-Chancellor for having, in the name of the University, invited him and other members of the India Council to be present. He highly prized that invitation, and for his own part he should always look back with pleasure upon having in his official capacity been associated for a brief period with them in a great work, the consummation of which he now celebrated by declaring the institute to be open. (Cheers.)

Sir M. E. Grant Duff proposed a vote of thanks to Lord George Hamilton for attending and for his address.

Sir William Hunter said it gave him very great pleasure to second the vote of thanks, because he saw before him many men who had taken part in the administration of that great world of colonies and dependencies which made up Great Britain; and as one of the humblest of them he should like to say how very deeply they were touched by the kind words which fell from Lord George Hamilton's lips. He had truly said that the difficulties of administering India had increased. There was a time when a panacea was proposed by Sir George Clark of abolishing the Suez Canal and cutting the Indo-European telegraph. Well, the Suez Canal was useful for short leave, and the telegraph to India was very useful for the announcing of domestic occurrences; but if Sir George Clark had really had the courage to propose so drastic a remedy, he thought he would have proposed to abolish the Secretary of State. (Laughter.) The Secretary of State was really more than the Suez Canal and the telegraph put together, because just as the telegraph and the Suez Canal represented the Imperial connexion between England and India, so the Secretary of State represented that much more than Imperial connexion—that great spiritual force by which Great Britain governed India. There came every now and again an opportunity when the Secretary of State or Parliament might make Indians feel that the connexion between India and England was not merely one of governing but also of sympathy; and the Thakur Saheb of Gondal would be able to convey to the tributary Princes, and Mr. Bhownaggee, who was there that day and who represented in a very special manner the people of India, would be able to convey to those who were

really his constituents and were really his clients, their grateful sense of what Lord George had said to them that day.

The proposition having been heartily adopted,

Lord George Hamilton, in acknowledgment, said that the great charm of being associated with the India Office was that rarely, if ever, were questions connected with Indian government discussed from a purely partisan point of view. Sir Mount Stuart Grant-Duff was always a kind friend and generous opponent. Indian questions were discussed upon their merits, and they did not sit up all night fighting over trivial things. He could assure them it was a genuine relief to visit Oxford and discuss something of utility. He hoped that the anticipations of the various speakers of what the institute might do might hereafter be realized.

Some Indian melodies composed by the Raja Sir Sourindro Mohan Tagore were then sung in Sanskrit by Mr. Ferguson, of Magdalen College, and a reception by Sir Monier and Lady Monier-Williams was subsequently held at the institute.

By a fortunate coincidence, Balliol College held in the evening the annual dinner given by the Master and Fellows to past and present members. The guests included Viscount Peel, Sir William Hunter, Sir M. Grant-Duff, and Sir M. Monier-Williams.—The Times.

THEY WONDERED TO SEE HIM.

"I could not move a yard without help. I can now walk for miles."

There is certainly a very sharp contrast between these two statements. When we see a person who, because of illness, is unable to move a yard without help, we do not expect to meet him on the road and on foot miles from home, soon thereafter; if indeed, we meet him at all. At least we should regard these extremes, considered as within the experience of the *same man*, and enclosed within a comparatively brief period of time, as something to wonder at and ask questions about. And people *did* wonder at and inquire about it. Many said the circumstances recalled the age of miracles, supposed to have passed forever away. The facts (briefly set forth in a letter from the man himself) are as follows. We may add that Mr. Henry Jackson is a farmer, well known and respected in his district, and his case is familiar to neighbours and friends of his throughout the vicinity.

"In the early part of 1892," says Mr. Jackson, "I began to feel weak and ailing. I was low in spirits, and my bodily strength seemed to be leaving me. There was a bad and nauseous taste in my mouth; my appetite, which had always been good, failed until I had no real desire for food whatever, and after eating I had much pain at the chest and a fullness around the sides. My stomach always felt *burning hot*, and I had a gnawing pain at the pit of it.

"I remained in this general condition until August of the same year, when I was taken worse. My legs began to swell, and rheumatism set in all over me, more particularly in the hips and back. No local treatment had any effect upon it. It grew worse and worse, until I was no longer able to rise from my chair without assistance. In truth, I had no power over myself, and *could not move a yard without help*.

"I suffered so with *mere pain* that I could not lie in bed, and for over *two months* I never had my clothes off.

"During this time I was attended day and night, being literally unable to do anything of importance for myself. All the sleep I got was taken in naps and snatches while I was bolstered up in my usual place in an easy chair. Under the terrible strain of the pain and loss of proper rest my nerves broke down so that any uncommon event in the house or noise was more than I could bear. My heart was very bad, and thumped until I could scarcely stay in the chair and endure it.

"The doctor who had charge of my case said my condition was critical. He said that my lungs and liver were badly affected, and that I had Bright's disease of the kidneys. Still his medicines did me no good, and after attending me ten months he said he could do no more for me.

"I then got a doctor from Bolton to see me, and he held out but slender hopes of my ever getting any better. I thought the same, and so did all who saw me.

"In October, 1893, my daughter, Mrs. Dickinson, of Bolton, told me how she had been benefited by taking Mother Seigel's Curative Syrup, and thought it might possibly help me. I had small faith, but there could be no harm in trying. So we sent at once to Mr. Pare, the chemist, in Fold Road, Bolton, for enough to decide whether it would do me good or not. After taking it a short time I was better. I could sleep better, and had some appetite for food, and what I ate agreed with me. This was hopeful and cheering indeed.

"I kept on with the Syrup and it acted wonderfully with me. The worst symptoms abated, and I gained strength. Soon all the water in my legs passed off, and the rheumatism troubled me but little. Still using the Syrup, my condition continued to improve in every respect, until I once more stood on my feet, and felt like a man of this world. *I can now walk for miles* and have no pain. All my friends think as I do—that under the circumstances my recovery was nothing short of marvellous. You are at liberty to publish this statement, and refer any interested persons to me. (Signed) Henry Jackson, Powett Hill Farm, Culcheth, near Warrington, October 9th 1895."

No words of ours can add to the convincing force of Mr. Jackson's plain statement. His disease was originally and radically of the digestion. The attack was sharp and profound, and developed into the resulting conditions he so well describes. He may not have had Bright's disease, but that he was directly progressing towards that fatal malady there is no doubt. The effect of Mother Seigel's Syrup in his case only serves to show afresh its rare and remarkable power. Scarcely is so great a victory to be looked for from any medicine. Yet the facts are undeniable. We congratulate Mr. Jackson on his escape from a danger which was much more serious than even he probably imagined.

CORPORATION OF CALCUTTA.

LOAN NOTIFICATION.

THE Commissioners of Calcutta are prepared, with the sanction of the Governor-General-in-Council given under Section 404 of Act II. (B. C.) of 1888, to open a Debenture Loan for Rs. 20,00,000 (twenty lakhs) on the security of the rates, taxes and dues imposed and levied under the Calcutta Municipal Consolidation Act, 1888.

2. The debentures will have a currency of fifteen years from the 1st December, 1896, and will bear interest at the rate of $3\frac{1}{2}$ per cent. per annum, payable on the 1st June and 1st December of each year.

3. The form of the Debentures will be that given in the twelfth schedule of Act II. (B. C.) of 1888.

4. No Debentures will be issued for any sum less than Rs. 500, and above that amount Debentures will be issued only for complete sums of Rs. 100.

5. Tenders for the whole or any part of the above Loan of Rs. 20,00,000 will be received by the Secretary to the Corporation up to 2 o'clock P. M. of Friday, the 7th August, 1896.

6. Each tender must be made out in the form annexed to this Notification, and enclosed in a sealed cover addressed to the Secretary to the Corporation, and superscribed "Tender for Municipal Loan of 1896-97."

7. Each tender must be accompanied by Government Promissory Notes, Calcutta Municipal Debentures, currency-notes or cheques for not less than 3 per cent. of the amount tendered.

8. When a tender is accepted, the deposit, when made in currency-notes or cheques, will be held as a payment in part of the amount tendered, and will bear interest at the rate of $3\frac{1}{2}$ per cent. per annum from the date of acceptance of the tender, provided that the whole amount tendered is paid up in the manner hereinafter prescribed; but no debenture will issue for the sum so deposited so long as the entire amount of the tender is not paid.

9. The deposits on tenders, which may not be accepted, will be returned on application, and no interest will be payable on such deposits. If an allotment after being made is not taken up, and the full amount allotted is not paid as hereinafter prescribed, the deposit will be forfeited.

10. The rate at which a tender is made must be specified in rupees, or rupees and annas: a tender in which the rate is not so specified will be rejected as null and void.

11. The rates stated in a tender must not contain any fraction of an anna. If a rate containing a fraction of an anna is inserted in any tender, such fraction will be struck out, and the tender treated as if the rate did not contain such fraction of an anna.

12. The amount of the accepted tenders must be paid into the Bank of Bengal in the following instalments:—

One-third by the 21st August.

Do. by the 21st September.

Do. by the 26th October.

Parties, whose tenders are accepted, will have the option of paying all or any of the instalments before the dates specified above, and will receive interest from the date of such payment.

13. Anticipation interest will be paid on all instalments from the respective dates on which such instalments are paid into the Bank of Bengal to the 30th November, 1896.

14. In the case of two or more tenders at the same rate a *pro rata* allotment will be made (if the tenders are accepted), but no allotment will be issued if the amount distributable on any tender is less than Rs. 500.

15. A minimum having been previously fixed, tenders will be opened by the Loan Committee of the Commissioners at 2-30 P. M., on Friday, the 7th August, 1896, at the Municipal Office.

W. R. MACDONALD,

Secretary to the Corporation.

MUNICIPAL OFFICE:

Calcutta, 29th June, 1896.

FORM OF APPLICATION FOR DEBENTURES.

I hereby tender for Rs. _____ of the Municipal three and half ($3\frac{1}{2}$) per cent.

Debenture Loan for 1896-97, and agree to pay for the same subject to the conditions notified at the rate of Rs. _____ annas

for every Hundred Rupees allotted to me. I enclose Government Promissory Notes, Calcutta Municipal Debentures, currency notes, or a cheque for Rs. _____

POSTSCRIPT.

After paying the expenses of the publication, the surplus will be placed wholly at the disposal of the family of the deceased man of letters.

Orders to be made to the Business Manager, "An Indian Journalist," at the Bee Press, 1, Uckoor Dutt's Lane, Wellington Street, Calcutta.

OPINION ON THE BOOK.

It is a most interesting record of the life of a remarkable man.—Mr. H. Babington Smith, Private Secretary to the Viceroy, 5th October 1895.

Dr. Mookerjee was a famous letter-writer, and there is a breezy freshness and originality about his correspondence which make it very interesting reading.—Sir Alfred W. Corft, K.C.L.E., Director of Public Instruction, Bengal, 26th September, 1895.

It is not that amid the pressure of harassing official duties an English Civilian can find either time or opportunity to pay so graceful a tribute to the memory of a native personality as F. H. Skrine has done in his biography of the late Dr. Soubhu Chunder Mookerjee, the well-known Bengal journalist (Calcutta: Thacker, Spink and Co.); nor are there many who are more worthy of being thus honoured than the late Editor of *Reis and Rayyet*.

We may at any rate cordially agree with Mr. Skrine that the story of Mookerjee's life, with all its lights and shadows, is pregnant with lessons for those who desire to know the real India.

No weekly paper, Mr. Skrine tells us, not even the *Hindoo Patriot*, in its palmiest days under Kristodas Pal, enjoyed a degree of influence in any way approaching that which was soon attained by *Reis and Rayyet*.

A man of large heart and great qualities, his death from pneumonia in the early spring in the last year was a distinct and heavy loss to Indian journalism, and it was an admirable idea on Mr. Skrine's part to put his Life and Letters upon record.—*The Times of India*, (Bombay) September 30, 1895.

It is rarely that the life of an Indian journalist becomes worthy of publication; it is more rarely still that such a life comes to be written by an Anglo-Indian and a member of the Indian Civil Service. But, it has come to pass that in the land of the Bengali Babus, the life of at least one man among Indian journalists has been considered worthy of being written by an Englishman.—*The Madras Standard*, (Madras) September 30, 1895.

The late Editor of *Reis and Rayyet* was a profound student and an accomplished writer, who has left his mark on Indian journalism. In that he has found a Civilian like Mr. Skrine to record the story of his life he is more fortunate than the great Kristodas Pal himself.—*The Tribune*, (Lahore) October 2, 1895.

The career of "An Indian Journalist" as described by F. H. Skrine of the Indian Civil Service is exceedingly interesting.

Mookerjee's letters are marvels of pure diction which is heightened by his nervous style.

The life has been told by Mr. Skrine in a very pleasant manner and which should make it popular not only with Bengalis but with all those who are able to appreciate merit unmarred by ostentation and earnestness unspoiled by harshness.—*The Muhammadan*, (Madras) Oct. 5 1895.

The work leaves nothing to be desired either in the way of completeness, impartiality, or lifelike portrayal of character.

Mr. Skrine deals with his interesting subject with the unflinching instinct of the biographer. Every side of Dr. Mookerjee's complex character is treated with sympathy tempered by discrimination.

Mr. Skrine's narrative certainly impresses one with the individuality of a remarkable man.

Mookerjee's own letters show that he had not only acquired a command of clear and flexible English but that he had also assimilated that sturdy independence of thought and character which is supposed to be a peculiar possession of natives of Great Britain. His reading and the stores of his general information appear to have been, considering his opportunities, little less than marvellous.

One of the first to express his condolence with the family of the deceased writer was the present Viceroy, Lord Elgin. Mookerjee appears to have won the affection not only of the dignitaries with whom he came in contact, but also of those in low estate.

The impression left upon the mind upon laying down the book is that of a good and able man whose career has been graphically portrayed.—*The Englishman*, (Calcutta) October 15, 1895.

"IMPROVED UNDAUNTED" WATCH. Rs. 7.

Guaranteed three Years.

Strong, accurate, pretty, small, open-faced, nickel silver, keyless, short winding, patent, "NEW STYLE IMPROVED UNDAUNTED" watch, with hand setting mechanism, secondhand, for Doctors, ornamental bold dial, for Rs. 7 V. P. P. with an extra glass, spring, pretty box and full three years' guarantee. Warranted to stand the roughest use. Runs more than 28 hours with one winding. Will last a life time. Easily repairable. Others sell at double our rates. One watch free for the purchase of 8 at a time. Mr. Jno. Dickson of Haputal Railway, from Ceylon says:—It keeps splendid time and never stopped although it sustained hard knocks and jerks. x Dr. H. Moore of Royal Artillery from Poonaudlee says:—I sold it for Rs. 16. x Pte. W. Hopkins of Sussex Regt. from Dumdim says:—I have sold it for Rs. 20. x Mr. T. B. Scott of Patna Opium Department says:—The watch you sent me some seven years ago is still keeping very good time.

Bilaknana, Calcutta.

KAVIRAJ NAGENDRA NATH SEN, Physician, Surgeon, Accoucheur, practises the Ayurvedic system of medicine, after having obtained a diploma at the final examination of one of the Government medical Institutions of the country.

SPECIFICS

for all ordinary diseases, like Fever, Cough, Asthma, Phthisis, Diabetes, &c., including diseases brought on by irregularities of kinds. Catalogues, containing full accounts of diseases and remedies, are transmitted on application. Prescriptions, with or without medicines, sent to every part of India and Ceylon, Cape Colony, and the British Isles, on receipt (by post) of full accounts of diseases. Thousands of unsolicited Testimonials from every quarter.

CATARRH.

Hay Fever, Catarrhal Deafness.

A NEW HOME TREATMENT.

Sufferers are not generally aware that these

diseases are contagious, or that they are due to the presence of living parasites in the lining membrane of the nose and eustachian tubes. Microscopic research, however, has proved this to be a fact, and the result is that a simple remedy has been formulated whereby these distressing diseases are rapidly and permanently cured by a few simple applications made at home by the patient once in two weeks. A pamphlet explaining this new treatment is sent on receipt of 2½d stamp by A. HUTTON DIXON, 43 & 45 East Bloor St. TORONTO, Canada.

VOL. XV.

CALCUTTA, SATURDAY, AUGUST 8, 1896.

WHOLE NO. 737.

FAREWELL TO OLE BULL.

BY A. C. LYNCH.

THERE was a fountain in my heart
Whose deeps had not been stirred—
A thirst for music in my soul
My ear had never heard.

A feeling of the incomplete,
To all bright things allied—
A sense of something beautiful
Unfilled, unsatisfied.

But, waked beneath thy master hand,
Those trembling chords have given
A foretaste of that deep full life
That I shall know in heaven.

In that resistless spell, for once
The Vulture of Unrest,
That whets its beak upon my heart,
Lies, charmed, within my breast.

Pale Memory and flushed Hope forget,
Ambition sinks to sleep,
And o'er my spirit falls a bliss
So perfect that I weep.

Oh, stranger, though thy farewell notes
Now on the breeze may sigh,
Yet treasured in our thrilling hearts
Their echo shall not die.

Thou 'st brought us, from thy northern home,
Old Norway's forest tones ;
Wild melodies, from ancient lands,
Of palaces and thrones.

Take back the "prairie's solitude"—
The voice of that dry sea,
Whose billowy breast is dyed with flowers,
Made audible by thee.

Take back with thee what ne'er before
To music's voice was given—
The anthem that "Niagara" chants
Unceasingly to heaven ;

The spirit of a people, waked
By freedom's battle cry—
The "Memory of their Washington"—
Their song of victory.

Take back with thee a loftier fame,
A prouder niche in art—
Fresh laurels from our virgin soil,
And—take a nation's heart !

WEEKLYANA.

THE titles of the Czar Nicholas II., as proclaimed by an archdeacon at the coronation, are—

"The orthodox, most pious and Christ-loving, most autocratic, most mighty Sovereign, crowned by God, exalted Autocrat of all the Russias, Moscow, Kieff, Vladimir, and Novgorod, Czar of Astrochan, Czar of Poland, Czar of Siberia, Czar of Kherson-Taurido, Czar of Georgia, Lord of Peskoff, and Grand Prince Smolensk of Lithuania, of Volhynia, of Podolia, and of Finland ; Prince of Estland, of Lifland, of Courland, of Semigalia, of Samogithis, of Korelia, of Tver, of Yongoria, of Perm, of Viatka, of Bulgaria on the Volga, and other places ; Lord and Grand Prince of the Lowland of Novgorod, of Ichniengoff, of Ryazan, of Polotsk, of Rostoff, of Jaroslaffe, of Byelozersk, of Oudork, of Obdorsk, of Konudisk, of Vitelgk, of Mstislavsk, and Ruler of all countries of the North ; Lord of the territories of Iberia, Kartalinsk, and Karnardinsk, and the district of Armenia ; hereditary Lord and Sovereign of Circasian and mountain princes and others ; Lord of Turkistan, of the Tcherkesses, Duke of Dithmarsen, and of Oldenburg, Heir to the throne of Norway, Duke of Schleswig-Holstein, of Stormarn, etc., etc., etc."

The many claims preferred through titles by a weak prince may raise a laugh. In a strong and ambitious ruler they are a source of alarm. A title may justify an annexation.

ACCORDING to official returns, published this year, there are no less than 129,177,000 men, women and children living in the Russian Empire. Sub-divided into their nationality, the subjects of the Czar are : 82,000,000 Russian Slavs, 8,000,000 Poles, 5,000,000 Finns, 4,500,000 Lithuanians, 4,000,000 Hebrews, 4,000,000 Germans, 9,000,000 Tartars, 2,000,000 Caucasian mountaineers, and 7,000,000 other races and tribes.

RONTGEN'S rays, like the rays of the sun, have been found to burn the skin. An engineer, named Leppin, who used his left hand in some experiments, afterwards noticed on it a singular reddening and swelling with a blister between two fingers which, however, disappeared on the application of aqua plumbi or Goulard's lotion. Experiments by Professor Grummach and Dr. Du Bois Reymond in the Physiological Institute of the Berlin University shew that not only the bones of the human

Subscribers in the country are requested to remit by postal money orders, if possible, as the safest and most convenient medium, particularly as it ensures acknowledgment through the Department. No other receipt will be given, any other being unnecessary and likely to cause confusion.

body but also some of the softer parts, such as the *os hyoid*, the larynx and the diaphragm are pervious to the X rays. An examination by these rays of the wound caused to Li-Hung-Chang by a bullet penetrating the base of his left eye, shewed that the bullet was lodged in a safe corner. The mystery about the X rays is being unravelled. Sir G. Stokes thinks and in his address as President of the Victoria Institute at the Society of Arts, has explained his reasons for thinking that the Röntgen's rays consisted of transverse vibrations, a hundredfold more potent than in ordinary light.

THE Cobden Club celebrated, on Saturday, the 27th June, the fiftieth anniversary of the repeal of the corn laws. Mr. Leonard Courtney was in the chair. He said "it was true that France, Germany and the United States prospered, but that was in spite of protection and not because of it. The disciples of the principles of Cobden claimed that if those nations had been free-traders they would have been still more prosperous. History proved that as soon as nations adopted a protective régime progress and development were at once checked, and so it happened that people who were free traders yesterday were free traders to-day and free traders for ever."

At the dinner, Mr. J. B. Potter, an old associate of Cobden, was present. The great free trader used to say to Mr. Potter, "Never assume that the motives of the man who is opposed to you in policy or in argument, are one whit less pure and disinterested than your own."

Free trade may be very good for advanced nations, but it is not so for those whose arts and manufactures are in a backward state. To a dependent country like India the principle has worked ruin to a certain extent. International exhibitions, instead of proving beneficial, have proved disastrous to her.

AT La Platau, Maryland, America, indignant at the law's delay in the trial of a man named Joseph Cocking, charged with the murder of his wife and sister-in-law, a mob took him out of the jail and lynched him.

THE Committee of the Palestine Exploration Fund has received a telegram from Dr. Fredrickbliss, stating that permission for continuance of the excavations at Jerusalem has been granted by the Sublime Porte. Still the Turk is "unspeakable."

The Army and Navy Gazette remarks:—

"By constant effort over every sea and in every clime, by the combination of commercial enterprise and maritime skill, wise investment and individual courage, prudent calculation and military daring, our people have spread their dominions over the globe. We have not startled mankind by sudden or fitful eruption, by some descent in the form of a horde on our neighbours, like the waves of invasion conducted by conquerors like Alaric or Napoleon. Nor have we transferred by a vast and elaborate military organisation, to which the whole life of a nation has been subordinated, a million of folk across a frontier to overwhelm a foe and gain a couple of provinces. But since the days of Elizabeth our struggles have been as ceaseless, our energy as restless, as the seas which protect our shores, and over which we gained an uncontrolled command. We have had a higher mission than heroes such as Alexander, Cæsar, and Timourlane, or organisers of victory such as Carnot and Moltke. We have won greatness not by the occasional lavish destruction of agglomerated myriads, but by the unremitting bravery and skill of detachments. Britain's position in the world is not due to the commanders of many corps, but to captains of ships and to colonels of regiments.

The schoolmaster and the pedant ignore the British Empire and weary their victims with tiresome iteration about Roman legions and German *corps d'armée*. But the wisest students of humanity, whether continental or insular, turn from all other histories eagerly to inquire how it is that a nation which has only 120,000 square miles in its two islands and had only some 15,000,000 of people about a century ago, now rules over 11,399,000 square miles and 402,000,000 subjects. This is the 'greatest birth of time.' How to preserve this inheritance is vital to us as the breath of our nostrils. The fall of this mighty edifice would overwhelm our metropolis with a Babylonian desolation and our rulers with infamy. This being so, all our studies should directly tend to ascertaining how most effectively to preserve our Empire, and our very curiosity should take the shape of gathering up information to illustrate its development. Education and patriotism should go hand in hand."

Again:—

"The future of the European races depends much more upon Asia and Africa than upon manœuvres by the Vistula or the Moselle. If Britain can hold command of the sea and continue to extend her Empire by success in small wars we may smile at the organisations of a Broussart von Schellendorff."

So, hurrah for small wars! The journal of the Reserve and Auxiliary Forces is led into these reflections by Captain Callwell's "Small Wars: their Principles and Practice" published by the Intelligence Department. "Seeing that our Empire," continues the *Gazette*, "has had twenty small wars for one such campaign as the Crimean, and fights perpetually outside the European continent, it is no exaggeration to assert that this unpretentious effort by Captain Callwell is more valuable to our Army as at present constituted than any translation of any work by either French or German Staff officers. Moreover, it is a patriotic monument. Why should the prowess of our warriors amidst torrid deserts and eternal snows never be commemorated? Why should our industrial toilers at home know nothing about the labours of their kin who are opening up markets for their wares by the banks of the Swat, and the Zambesi and the Irrawaddy, and by the slopes of the Suleiman range? If the Germans had a colonial Empire like ours—an Indian Empire like ours—would not German small wars be duly chronicled and fully criticized?" Historians make heroes. If it were not for the chroniclers, heroes would not exist. It has been sung "Peace hath her victories no less renown'd than war." The next peaceful advice is—Small wars are as heroic as a long campaign.

THE *Times'* correspondent writing from the camp at Ferket, writes of the magnificent courage of the Mahdists otherwise called Dervishes:

"All the numerous British officers who have taken part in former campaigns against the Mahdists, all allow that the Dervishes have lost nothing of their old valour. They heed death as little as ever. I saw them stand undismayed in the open and fight with dogged determination in the face of our deadly volley fire; they fought on with rifle and spear and knife when charged by the cavalry; they even did what some authorities have denied that any troops, however brave, would ever do—they stood in groups firing steadily into our ranks while our Maxim guns poured their streams of bullets on them, mowing them down like grass. I doubt whether any other men in the world would have stood, as these men stood, for nearly two hours against such fearful odds as were opposed to them. If trained and disciplined (but it is very doubtful whether that savage beast of prey, the Baggara, ever could be tamed), these men would make magnificent infantry. They display now as much amazing coolness when acting on the defensive as they did wild *élan* in their furious charges of former campaigns. During one part of the fight I was with the men of the 9th Soudanese Battalion, who were clearing the hills to the east of Ferket, and I saw a handful of twenty-five of the enemy's riflemen stand firm and fire into us until we were twenty yards from them, when they in vain sought safety in flight. The majority of these riflemen were blacks of the same stock as the men of our Soudanese battalions; it is therefore possible to form some idea of how the latter will fight if caught in a 'tight corner.'"

In the Russo-Turkish war, the Turk showed equal disregard of danger.

PANDY, Abdul, or Singh do not care a pie where the money comes from as long as they are paid, but the native Press, Hindu, Mussulman, and Sikh, will assuredly join in the chorus of protest and remonstrance which has been raised here and in India against taking the rate in aid for the expenses of the Suakin garrison contribution from Indian revenues. The saving may prove to be costly in the end.—*The Army and Navy Gazette*.

THE Jodhpur Cavalry, Bikaner Cavalry Corps, and several other Imperial service troops have applied to be allowed to proceed to Suakin to assist the Indian contingent.

A MADRAS paper is "extremely pleased to learn that Mr. K. P. Krishna Menon, Barrister-at-Law and practising at Coimbatore will shortly be appointed a first or second class Munsiff." Why? Because Mr. Menon becomes a judge? We have Barrister Munsiffs in Bengal, and we distinctly remember that the first appointment was a surprise and the barrister was not congratulated for the judgeship. It was a sinkage of the kind when a Commissioner of a Division or a Member of the Board of Revenue in British India, becomes Superintendent in a Native State, or a Governor in India accepts an office of Secretary in the India Office.

DEAFNESS COMPLETELY CURED! Any person suffering from Deafness, Noises in the Head, &c., may learn of a new, simple treatment, which is proving very successful in completely curing cases of all kinds. Full particulars, including many unsolicited testimonials and newspaper press notices, will be sent post free on application. The system is, without doubt, the most successful ever brought before the public. Address, Aural Specialist, Albany Buildings, 39, Victoria Street, Westminster, London, S. W.

At the general meeting of the sixth annual convention of the European section of the Theosophical Society, held at the Queen's Hall, Langham-place, Colonel H. S. Olcott, the president-founder, said that "It was a dangerous thing to allow to be spread about the idea that the society represented a body with dogmas and a sect. It was formed in the interest of collectivism and its first principle was that it held no retainer to represent the interest of any one body of religionists. It was organised in the interest of religious research and inquiry, and it had no more dogmas than the great societies existing in England."

**

39,477 or a daily average of 1,879 persons visited the Indian Museum during the 21 open days of July, namely, 462 male and 121 female Europeans, and 30,137 male and 8,757 female Natives of India.

NOTES & LEADERETTES,

OUR OWN NEWS

&

THE WEEK'S TELEGRAMS IN BRIEF, WITH OCCASIONAL COMMENTS.

SIR Mathew White Ridley having advised the Queen to extend her clemency to Dr. Jameson and his fellow prisoners and grant them the treatment of first class misdemeanants, they have all been returned to Holloway Jail from Wormwood Scrubs.

It appears to be settled that the Czar and Czarina will visit Paris about the middle of September, and will reside at the Ministry of Foreign Affairs.

GENERAL Carrington has abandoned the plan to carry the Matoppo hills by assault, as the new forts will prevent the natives sowing grain and herding their cattle and thus force them into submission to the British. This is more a Chinese than an English method of warfare. Perhaps, it is the new English principle and practice of small wars. Ill-armed rude rebels in the open field may be shot down like beasts. A savage enemy in fortified hills must be brought down to submission not by storming but by cutting off the supply of provisions. In the meantime, the patrol parties continue to harry the Matabele rebels, and are driving them into the hills—to their grave? Matabele impis are vulnerable and Colonel Plumer's column has routed five of them with loss on the British side of Major Kershaw and four others killed, and fifteen, mostly officers, wounded.

A TIDAL wave at Laichau on 26th July destroyed many villages and drowned four thousand persons.

THE Convention of Democratic Goldites meets at Chicago on 1st September. The Tammany executive have approved of the nomination of Mr. Bryan for the Presidency.

FRANCE, Russia, Germany, Italy and Austria are in favour of the blockade of Crete so as to prevent the landing of Greek Volunteers and arms, leaving the Turks free to restore order in the Island. Great Britain dissents from such an arrangement, though agreeing to joint mediation to induce Greece to fulfil her duties towards the Porte and bring the Cretans to accept a reasonable compromise. The German and Austrian press accuse Great Britain of selfish isolation, thus disturbing the concert of the Powers in the matter. Troubles in Crete are now extended to the southern part of the Island. The proposed blockade has apparently been abandoned, the Sultan intimating that he would regard a foreign blockade as an infringement of his Sovereign rights. The *Times* expresses indignation at the diatribes of the German press against the perfidy of Great Britain, and explains that Lord Salisbury simply declines the crude proposal of the Powers to blockade until he is properly informed of its scope and object. The Sultan has vetoed the sending of a despatch to Greece reported last week.

LORD Cromer in his evidence before the Welby Commission deprecated anything likely to transfer the power of financial control over India from England, and thought it inadvisable to weaken the power of the Secretary of State who was the natural ally of the Indian Council, and that it would be unwise to impair the power of the Viceroy. Every

Member of Council should, he thought, be empowered to write a confidential memorandum to the Secretary of State, but he deprecated managing Indian details in London. He advised a court of arbitration to settle matters of economy, such as England's proportion of the cost of Aden, and declined to give an opinion on the landing of Indian troops as being still a burning question.

The intervention of Parliament in some Indian matters, he thought, was harmful, and he instanced the cases of the Opium and the Contagious Diseases Acts.

THE Nile railway has reached Kosheh.

THE Transvaal Volksraad have passed a Bill providing for the education of the children of the Uitlanders in their own language.

THE Irish Labour Bill relates chiefly to the question of Irish labourers. The amendment to it had passed the Lords, and then the House restored the contentious clause which was abandoned by the Government. The defeat of the Government is considered unimportant, but it augurs badly for the fate of the Irish Land Bill. In the House of Lords Government was defeated on the amendment to the Irish Land Bill. Mr. Balfour immediately held a conference of some length with the Duke of Devonshire. The Government has been twice defeated in the Lords by a majority of 50, while in Committee on the Irish Land Bill. It is believed the measure will be shelved to prevent a conflict between the Lords and the Commons. The Commons have passed the Land Rating Bill.

THE reception of the Chinese Envoy in England has been of the simplest character. On August 5, he had an audience of the Queen at Osborne. Next day he had tea with the Prince and Princess of Wales, and afterwards went on board the Royal Yacht *Alberta* and inspected a splendid squadron of forty-seven men-of-war at Spithead. He has received the Grand Cross of the Royal Victorian Order. The same day that he went to Osborne the Chinese envoy had an hour's private interview with Lord Salisbury and afterwards visited the House of Lords and the House of Commons. The *Times* states that the real object of Li-Hung-Chang's visit to England is to obtain British sanction to an increase in the Chinese tariff, basis whereof through the fall in silver is now radically altered. Russia, France and Germany have already given their assent, but the real decision rests with Great Britain, whose trade with China is eighty per cent. of the whole. The *Times* remarks that England before consenting to the doubling of tariff must secure an adequate commercial *quid pro quo*. The article further states that it has been definitely decided that China is to have a new Army and Navy, but the extent of reform depends on the amount derivable from the increased tariff. Li-Hung-Chang has virtually ordered artillery from Germany and rifles from France, but has resolved to have a Navy constructed in England upon the English lines, with English officers.

TELEGRAPHIC communication with Mashonaland has been restored. The situation there has improved. Laager at Fort Salisbury has broken up, and the people have returned to their homes. Mr. Hartley has also been relieved.

IN the last two months, five barometric depressions formed at the head of the Bay of Bengal and they all deflected towards Orissa, Chota Nagpur, Midnapur, Hooghly, Bardwan, the Presidency and the Nadia Divisions. As a result, the Central, the Southern and Western Bengal and Orissa had plenty of rain. The Mahanadi, the Subarnarekha, the Katjuri, the Baitarni, the Brahmani and the Damuda overflowed their banks. In Northern and Eastern Bengal the people are complaining of scanty rainfall. Damage has been caused by the water of the Damuda, in the district of Bardwan, flowing through the Lakra breach. This is one of the cuts in the Damuda embankment on the right bank for the protection of the E. I. Railway. Several villages—Hajaba; Bantir; Berugram, the home of the Bangabasi Boses; Maral, the home of the Dewan Sahib of Cooch Behar—were under water. Lower down, Khanakul, Krishnagar, the seat of Raja Rammohun Roy, with surrounding villages was one sheet of water. The flood also overwhelmed many villages facing Amra on the opposite bank. The left bank has entirely escaped the visitation.

The outbreak of the monsoon has been severely felt in the

Konkan district in the Bombay Presidency. A series of excessive downpours of rain caused large tracts of land below the Ghats to be flooded, causing breaches in the G. I. P., B. B. and C. I. railways, interrupting traffic, and closing the three approaches to the western capital. The Tapi was in full flood presenting a magnificent sight.

There is cry for rain in the Punjab, the clouds having expended themselves in the N.-W. P. At Lahore, a report says, "on Monday morning several Brahmans went to the river Ravi and recited *mantras* standing in the water. Some of the Hindus in the city collected about Rs. 40 and gave a feast to the poor on the parade ground near the fort while a prayer was afterwards made for rain. The Mahomedans also have been giving *niyas* for the same purpose for some days."

A private letter dated Allahabad, the 5th August, reports :

"Up to this we have very scanty rain here, and the cultivation is very much retarded. There is fear of the standing crop suffering more if heavier downpour does not come sharp. This morning, however, I found the river Jumna in full swing from which I anticipate that there has been heavy rain in the upper districts of the N.-W. P., such as Agra, Muttra, &c. We will hear about it in a day or two.

There is not much news for the present, for Allahabad is yet empty, the big folk being still at Naini Tal. Our Lieutenant-Governor however was lately visiting several places in Oudh and was soothing the ear of the people with sweet words and honeyed phrases. The present important topic is about the Judicial Commissioner's Court of Oudh regarding which various opinions are expressed. Some are for amalgamating it with the Allahabad High Court, but the Oudh people want its removal to Lucknow, or a separate chief court as in the Punjab. Let us see how Government decides the matter."

THE discussion of the question of water supply for rural Bengal has diverted native liberality to its old channel. Raja Rjtendra Naryan Roy of Bhowal, as a part of the memorial of the visit of the Lieutenant-Governor to Dacca, has given Rs. 15,000 for excavation, in the pargana of Bhowal, of tanks to be styled the Mackenzie tanks; the Rajs of Bhagyakul contribute Rs. 5,000 for two tanks along the road from Srinager to Taltolla, the road for visitors to the Brahmaputra Fair. Raja Ranajit Sinha of Nashipur, in the Moorshedabad district, while subscribing Rs. 5,000 to the Countess of Dufferin Fund, Bengal branch, offered to the local municipality Rs. 1,500 for a tank at Nashipur to be called the Jamuna Mackenzie tank.

SIR John Lambert has got his third extension of service. The first was for two years, and when he applied for another couple of years, he was granted only one year which expires next November. In prospect of that expiration, he applied and has received another term of one year which will take him to November 1897.

A MORNING paper publishes the following judgment of D. Mahendra Lal Sircar as Honorary Magistrate :—

"In this case the defendant is charged under Section 417, Act 11 of 1888, B. C. with infringing the provisions of the Bye-law by erecting a building not according to the plan sanctioned by the Commissioners in so far that he erected certain bath-rooms not shown in the sanctioned plan. The prosecuting overseer admits in his deposition that this is a case of addition and alteration to an existing building. Bahu Kinye Lal Mukerjee, the pleader for the Corporation, contends that one of the bath-rooms, which has been constructed from the very foundation, is a building by itself for which the Commissioners had authority to grant or refuse sanction. I regret I cannot accept this view of the law as correct. I hold that the bath-rooms were only additions to the existing building and not a new house and the Commissioners are nowhere empowered by the Act to sanction or refuse such additions (*vide* sections 237 and 238 of the Municipal Act) and if the Commissioners took upon themselves to grant or refuse sanction in cases where the granting or refusal of sanction is not necessary, such granting or refusal of sanction is wholly inoperative in law, and is in no way binding on defendant. The defendant has fully complied with the law by making an application. I therefore dismiss the case and discharge the defendant."

The building regulations of the Municipality, adopted after much delay and discussion, have become a dead letter. Honorary Magistrates are averse from punishing breaches of the bye-law, the law itself not being very clear. The native Commissioners who rule the Municipality are, as a rule, opposed to building regulations. They made a great stir when a roofed veranda was constructed, in anticipation of sanction, in one of the Government House buildings, but they usually encourage in the native town constructions not according to the sanctioned plan, and have allowed houses to be built over public

roads and thoroughfares. Dr. Simpson may very well ask for a Building Act.

Let us see what the law is. Section 235 requires

"Before beginning to build any new house or to convert any hut or any temporary structure into a house, the person intending so to do shall obtain the sanction of the Commissioners to the site on which he proposes to build." The next section (236) says "Before beginning to build any new house on a site approved of under the last preceding section, or to rebuild or materially alter the structure of any house, the person intending so to do shall make an application to the Commissioners in a printed form...setting forth the description of the building, the purposes for which it is intended, its dimensions, such plan of the building as the form may specify, and such other details as may be deemed requisite to enable the Commissioners to pass orders on such application."

The next direction is

Sec. 237. "On receipt of such application the Commissioners shall within thirty days, by a written order, either sanction the building of the new house, or for any one or more of the reasons set forth in the next succeeding section disallow it,...

Sec. 238. Within thirty days after the receipt of the details, . . . the Commissioners shall pass orders in writing, either approving of the proposed buildings or disapproving thereof for any of the following reasons :—

- (a) that it will be unsafe; or
- (b) that it encroaches upon or over municipal land; or
- (c) that its construction contravenes some specified provision of this Act; or some specified bye-law made under this Act."

It will be observed that while Sec. 236 speaks of both "beginning to build any new house" and "to rebuild or materially alter the structure of any house," section 237 is limited to "the building of the new house." The Magistrates think that by sending in a plan a person is absolved from all further responsibility and that he is free to make, according to the plan, any addition or alteration to a house, without waiting for sanction.

Sec. 240 gives the Commissioners power,

"if any building such as is referred to in Sec. 235 be commenced without sending in the ground plan...or after such ground plan has been sent in, before the site has been approved of," "to cause such house, or so much of it as has been constructed, to be demolished." Again, Section 241, "If any building or alteration such as is referred to in Sec. 236 be commenced without the application required by that section being sent to the Commissioners, or before the expiration of the thirty days....., or otherwise than in accordance with the information furnished in the application.....or in contravention of any lawful orders issued by the Commissioners under Sec. 238, the Commissioners may cause such work as has been done to be demolished or altered in such manner as they may think fit, and the expenses thereby incurred shall be paid by the person failing to comply with the requirements of the Act." Further, Sec. 242. "The Commissioners may, in addition to, or in lieu of, exercising the powers conferred on them by Sec. 240 and the last preceding section, prosecute any person who shall build a new house without sending in the ground plan required by Sec. 235, or who shall build or re-build or materially alter the structure of any house without making the application required by Section 236, and such person shall, on conviction, be liable to a fine not exceeding Rs. 100 and to a further fine not exceeding Rs. 20 for every day during which the offence is continued after he has been convicted of such offence."

There is the same difference between sections 241 and 242 as between sections 236 and 237. In Sec. 241 the prohibition extends to any building or alteration and till the expiration of 30 days. In Sec. 242 the prohibition expires with the sending in of the plan or the application.

The Magistrates argue that there can be no conviction under Sec. 242 when the accused has submitted the plan or made the application, even though he has not awaited, as laid down in section 241, the prescribed time for orders of the Commissioners and commenced the construction simultaneously with submission of the plan. Supposing that is the true interpretation of the law, it is curious that while the Commissioners are free to act, under Sec. 241, on their own responsibility and demolish the construction, the Magistrates are precluded from convicting—a less harsh course. The Commissioners lose the power of demolishing when they choose, out of deference to constituted courts and kindness to the offending applicant, to ask a Magistrate to enquire into his act. That reference is to the advantage of the public. For a conviction is not necessarily an order for demolition, though it may lead to it. The house owner is given an opportunity of rectifying an omission or taking fresh orders. If the Magistrates throw the Commissioners overboard, the Commissioners may be tempted to be strict. The Bengal Council Acts are usually a curious jumble of prohibitions and penalties without order or consistency. They prohibit certain acts but sometimes omit to prescribe the penalty. It is not unfrequently difficult to find out what the intention of the Legislature is. There is another

DEAFNESS. An essay describing a really genuine Cure for Deafness, Singing in Ears, &c., no matter how severe or long-standing, will be sent post free.—Artificial Ear-drums and similar appliances entirely superseded. Address THOMAS KEMPE, VICTORIA CHAMBERS, 19, SOUTHAMPTON BUILDINGS, HOLBORN, LONDON.

section on the same subject, namely, 243, which along with other provisions, lays down that every building shall be provided with adequate ventilation. In addition, the Commissioners are empowered (Sec. 412) to make bye-laws with regard to, among others, the height and mode of construction of buildings; ventilation and the extent to which space must be left for the free circulation of air as required by Sec. 243. If, however, the law is defective, bye-laws under it cannot supply the deficiencies.

Another cause of obscurity and uncertainty is the promiscuous use of the words "house" and "building."

THE Calcutta Corporation 3½ per cent. 20 lakhs debenture loan with a currency of 15 years, has been very successfully floated. There were 243 tenders amounting to Rs. 1,06,59,500; Rs. 19,00,500 were offered at rates varying from Rs. 107-1 to Rs. 106-3; tenders for the balance Rs. 99,500 were accepted at Rs. 106-2, the average rate of accepted tender being Rs. 106-6. The premium thus comes up to Rs. 1,27,500, which covers the interest on the loan for about 2 years. In other words, the interest on the loan is reduced to about 3-1/16 per cent.

THE Lieutenant-Governor will be back to Calcutta on Tuesday. He arrived at Barisal on the 6th and, halting there the next day, leaves it to-day for Khulna, and thence comes to Calcutta. At Barisal, Sir Alexander Mackenzie, while replying to the addresses presented to him by the District Board, the Municipality, the Anjuman Islamia and the People, took occasion to speak on the frequency of serious crime in the district. He informed his hearers that the object of his going to Barisal was principally to discuss with local officers the appalling state of things. He would not anticipate the conference, but he was free to say that, unless the public feeling improved and zemindars and others assisted the Police, no increase of Police would check the crime. He was prepared to ask the Government of India to strengthen the law and for strong measures for Backerganj as were adopted for Upper Burma. There is a simpler and more expeditious way of clearing Backerganj of its crime. Why not ask for loan of the services of the Sessions Judge of Cawnpore? For one dead body found, Mr. J. E. Gill will not hesitate to sentence a whole village or any number of villagers to death. He has revived, after forty years, the bloody memory of the massacre at Cawnpore and a dark chapter of Indian history. For two deaths in the course of a quarrel over a field, he has passed capital sentence on 13 persons who formed an unlawful assembly.

A EUROPEAN starter, named Scott, of the Calcutta Tramway Company, charged with assaulting a native girl of 8 years, has, on a verdict of guilty by the jury, by a majority of four to one, been sentenced, by Mr. Giedt, at the Alipore Criminal Sessions, to 18 months' rigorous imprisonment. The jury consisted of 3 Europeans and 2 natives.

MR. Justice Reid of the Punjab Chief Court has sentenced F. E. Roy, for assaulting his (*dhoti*) washerman to death, to 2 years and 10 months' hard labour. He was charged with culpable homicide not amounting to murder or manslaughter. The jury unanimously found him guilty of only grievous hurt and strongly recommended him for mercy on account of his family who would be uncared for in his absence. The *post mortem* examination disclosed that the body had four bruises on the face, two bruises on the right side of the chest with very indefinite margins and other external injuries. The left eye was swollen and blackened. Seven ribs were fractured, the soft parts in the neighbourhood of the fractures were lacerated, the breast-bone (sternum) was also fractured transversely. The defence had contended that the injuries were inflicted after death, after the native fashion in the Punjab to make a stronger case for the prosecution.

THE manner in which the country Police are allowed to deal with suspicious deaths very often fills us with surprise. About three weeks ago, the dead body of a woman was found with a bamboo pole tied to it with ropes, lying in a bush beside the grounds of a gentleman of Janai, in Thana Chauditalah, Sub-division Serampore. Jackals had devoured a portion of the belly and some other parts, but identification was not at all difficult. The poor woman, named Lakshmi, was a maid servant in the family of one Sarodaprasad Banerjee. After discovery of the corpse, in the morning, the *chowkidar* of the boat was called in and despatched to the

Police station. The Sub-Inspector in charge came towards the evening, after a delay of several hours. No attempt was made to discover the direction from which the body had been borne. The rains have made the soil soft and ordinary detective sagacity would have led, from observation of foot-prints, to this discovery. Instead, the body was *challaned* to Serampore for medical examination. It is not known what the medical opinion is. But whatever it is, there can be little doubt that there has been some foul play. Where did the woman breathe her last? Who were the persons that became desirous of concealing the body, or, at any rate, of removing it from the place where death had occurred? Why did they not bear it to the village crematorium and openly dispose of it by fire? It is said that, though a widow, the woman was big with child. Either she was killed, or death followed as the result of some drug administered for bringing about a miscarriage. It is not known of what village the deceased was a native, or whether she has left behind any relatives. No enquiry has been made for tracing these particulars and, consequently, to this day her parents or brothers or sisters, if any, do not know her fate. It is said that evidence is procurable of the purchase of ropes at an unusual hour of the night previous to the morning when the corpse was discovered. May not this furnish a clue? Already much valuable time has been lost. The inhabitants are agape with wonder at the insouciance of the Sub-Inspector of the local Police.

REIS & RAYYET.

Saturday, August 8, 1896.

HINDU AND MAHOMEDAN LAW AND ENGLISH JUDGES.

LORD Stanley of Alderley has laid the people of India, specially the Mahomedan community, under a fresh obligation. He brought to the notice of the Upper House of Parliament the virtual abrogation of the Mahomedan Law relating to endowment for children, through the application, by the Privy Council, of a principle of English jurisprudence. According to juridical authorities accepted and long acted upon by the followers of Mahomed, a *wakf* or trust for the benefit of the children of the grantor is clearly valid, though it may not conform to the English law which abhors perpetuity. Whether the

(Session 1896-97.)

Lecture by Babu Ram Chandra Datta, F.C.S., Monday, the 10th Inst., at 4-15 P.M. *Subject*: Distinction between Chemical and Physical Forces. Tuesday, the 11th Inst., at 4-15 P.M. *Subject*: Chemical Affinity. Classification of the Elements. Thursday, the 13th Inst., at 4-15 P.M. *Subject*: Chemical nomenclature. Weights and Measures. Laws of Chemical combinations.

Lecture by Babu Rajendra Nath Chatterjee, M.A., Wednesday the 12th Inst., at 5-30 P.M. *Subject*: Hydrostatic Paradox—Equilibrium of Liquids.

Lecture by Dr. D. N. Chatterjee, B.A., M.B., C.M., Thursday, the 13th Inst., at 5-30 P.M. *Subjects*: The Protozoa. Coelenterata.

Lecture by Dr. Mahendra Lal Sircar, Friday, the 14th Inst., at 7 P.M. *Subject*: Expansion by Heat in detail.

Lecture by Babu Girish Chandra Bose, M.A., F.C.S., M.R.A.S., &c. Saturday, the 15th Inst., at 5-30 P.M., *Subject*: Morphology of Plants.—Leaves.

Lecture by Dr. Nilratan Sircar, M.A., M.D., Saturday, the 15th Inst., at 6-30 P.M., *Subject*: Histology—Epithelium.

Admission Fee, Rs. 4 for Physics, and Rs. 4 for Chemistry; Rs. 6 for both Physics and Chemistry; Rs. 4 for Physiology; Rs. 4 for General Biology; Rs. 6 for complete course of Physiology and Biology. The charge for a single lecture is 4 Annas.

MAHENDRA LAL SIRCAR, M.D.,

Honorary Secretary.

Aug. 8, 1896.

Mahomedan law of *wakfs* is or is not consistent with the true interests of the Islamic community, it is a part of their law, and the decision that has made such trusts illegal has naturally caused great dissatisfaction among those most affected by it, as it has upset an established order of things, broken up many ties, and threatened utter ruin to many families.

In the debate (which we publish elsewhere) started by Lord Stanley, it was said that the decision was in strict accordance with Mahomedan Law. The noble Lord had also a good share of abuse and ridicule for presuming to impeach a judgment of the Privy Council. This was as might be expected. Similar and even worse interpretations of both Hindu and Mahomedan Law have been given notwithstanding the infallibility claimed by Lord Halsbury for his brother Judges of the Privy Council. Some remedy is surely called for. We cannot blame the Lords of the Privy Council for this or any other decision in which the law of the Shasters or of the Koran has been misinterpreted. They are foreign lawyers trained in systems of jurisprudence which have little in common with those that obtain in this country. With all their learning, legal acumen, experience of judicial work, and anxiety to correctly administer the laws laid down for Hindus and Mussulmans, they cannot always avoid making mistakes. Nor are they uniformly consistent in the interpretation of their own law. What the people of India complain of is that there is not a single native of this country in the Judicial Committee of their Sovereign's Privy Council, and that English lawyers are vested with supreme jurisdiction in matters with which they are scarcely familiar. The result is that, although theoretically the British Parliament and the Indian Legislature have given us the benefit of our own laws in matters relating to inheritance, succession, marriage and religious usages, yet, in practice, we are governed, not by our ancient codes, but, to a great extent, by a medley of dogmatic rules and untenable principles originally laid down in ignorance, and afterwards adhered to for the sake of consistency.

Take, for instance, the so-called Hindu law relating to wills. As a matter of fact there is nothing in the Hindu Shasters to warrant the recognition of testamentary disposition of property. The ancient codes, as also most of the modern digests, impose heavy restrictions on the power of the father to make sales and gifts *inter vivos* in the absence of necessity. As to testamentary disposition they are almost silent, because, according to one of their fundamental principles, the ownership of a person is by his death extinguished in favour of the heir. In a polygamous country like India, the danger of giving arbitrary power of disposition of property to the parents is so great that the Shasters placed the father and the son on an equal footing with regard to ancestral property. The Dayabhaga of Jimutavahana, who is followed in some parts of Bengal, first recognised the legal validity of sales and gifts *inter vivos* of ancestral property, and explained away the sacred text forbidding its alienation as a mere moral prohibition. But the authorities of the Bengal School maintain, quite as strongly as those of any other, that ownership is extinguished by death, and that there is nothing in any of the codes, ancient or modern, to give countenance to a testamentary disposition. Yet the validity of wills executed by Hindus has been recognised in such a large number of

cases that a Hindu, in Bengal at least, has now the same capacity for testamentary disposition as any Englishman. The Lords of the Privy Council themselves observe:—

It is too late to contend that because the ancient Hindu treatises make no mention of wills, a Hindu cannot make a testamentary disposition of his property. Decided cases too numerous to be now questioned, have determined that testamentary power exists, and may be exercised at least within the limits which the law prescribes to alienation by gifts *inter vivos*.

The power of testamentary disposition given to Hindus is owing partly to the practice of making wills which grew up in the early days of British rule, through the influence of English lawyers in the Presidency towns. The natural inclination of the father being not to recognise the son's right to control his acts, and testamentary dispositions without reference to the claims of the children being well calculated to check their spirit of insubordination, it is no wonder that the practice, once introduced, found great favour. But a custom which came into existence under such circumstances ought to have been checked, instead of being encouraged and recognised. As testamentary dispositions are held valid on the ground of custom, the sale of ancestral property, by a Hindu father of the Mitakshara School, without legal necessity, may be recognised as valid also, because such sales are frequent,—perhaps much more frequent than wills.

English Judges have given us not only the right of making wills but have also vested us with almost unlimited powers in dealing with every kind of property, ancestral or self-acquired. The doctrines that have grown round the subject are traceable to an erroneous translation by Colebrooke of a passage of the Dayabhaga. The author of that treatise which is followed in Bengal propounded for the first time the doctrine that the ownership of the son in the property of the father arises not at the birth of the son, but at the death of the father. This view, which made it impossible for the son to claim any right or title in the ancestral estate in the lifetime of the father, is, as we have already said, very much opposed to many sacred texts disqualifying the father from making a sale or gift of ancestral property without the consent of the sons. The author of the Dayabhaga explains away those texts by saying that they are mere moral prohibitions that may bind the conscience of good Hindus, but do not affect the legal validity of a sale actually made.

To get rid of these texts, Jimutavahana made an observation which was erroneously translated by Colebrooke as laying down that "a fact cannot be altered by a hundred texts." This has, as erroneously been identified by English lawyers and Judges with the doctrine of *factum valet* of Roman Law. As a matter of fact, the original does not sanction the view that when a person without absolute ownership makes a sale or gift, the transfer is valid in spite of the defect in his title. The true translation of the passage in the original is "a thing cannot be altered by a hundred texts," the purport being that the essential characteristic of an entity, like a legal right, can no more be affected by a text than that of a material object. The word *vastu* in the original can mean only "thing" or "substance," and such words as "fact," "event" or "act" cannot certainly be regarded as its equivalent in English. The meaning of the observation is that the father being absolute master of every description of property in his life time, he has the power of disposing of them

in any manner he likes. The essential character of a legal right being the power of absolute disposition, it cannot be said that he has such a right and yet is not competent to deal with his property. Hindu lawyers are of the Realistic School of philosophy, and, according to them, a legal right is an entity. Its essential characteristic being the power of absolute disposition, a text of the sacred codes, however authoritative, can no more deprive it of that characteristic than withdraw from a material object its weight.

To explain what *Jumtavahana* means, one of his commentators goes on to add that the texts prohibiting the sale of ancestral property by the father without the consent of the son are of the same nature as those that forbid the killing of a Brahman. As in spite of the texts prohibiting the slaying, a Brahman may be put to death, so, in spite of the texts forbidding the sale, an ancestral property may be sold, and when sold the recovery of such property is as impossible for the sons, as the restoration to life of a Brahman who has been slain. English Judges and lawyers took this to be an illustration of the *factum valet* doctrine for which they had already found authority in the epigrammatic observation of *Jumtavahana*. As a man who has been killed cannot be restored to life, so when any property is sold by the father the sons cannot claim the restoration thereof. This is the conclusion that the English Judges drew from the passage, and this is the foundation of the *factum valet* doctrine which they originally derived from the *Dayabhaga*, but which has been subsequently applied by them to persons and things that are admittedly not governed by the law of the *Dayabhaga* as to ancestral property. The doctrine has, in fact, been applied to illegal adoptions, illegal marriages, and to many things else in provinces where even the name of the *Dayabhaga* is unknown.

Having granted the power to make wills, the Privy Council would not sanction other advances made by Hindus towards English law. They disallow gifts to the unborn, and, having thus made it impossible for themselves to recognise in its entirety the English law relating to remoteness, have not yet been able to fix the extent to which they would give effect to a gift in favour of a class including unborn persons. They declared a completely disinherited son because of his conversion to an alien faith, as heir to the disinheriting father, after a life taker, and gave an earthquake shock to Hindu feeling by upholding the claim of the unchaste widow to her husband's property.

In the debate the Lord Chancellor claimed infallibility for his brother Judges and for himself. So far as English law is concerned, the claim may be well founded. But in respect of Hindu and Mahomedan law, it is impossible to repose such blind confidence in Judges who know not a syllable of Sanskrit or Arabic. The Lord Chancellor ridiculed Lord Stanley by advising him to study and understand the judgment of the Privy Council. We have too much regard for the *Pradvivak* or *Kazi-ul-Kuzzat* of England and the keeper of our sovereign's conscience, to speak of him in a tone of levity. We, however, think that we may, in all seriousness, ask him and the other law Lords to study Hindn and Mahomedan law more carefully before dogmatizing on any question of Shastric or Koranic jurisprudence.

The Lord Chancellor remarked that the judgment of the Privy Council as that of the highest Court of Appeal is the law, and that no one was competent to impeach its correctness, though it was open to him to try to have the law itself altered. It may be answered that unless one is free to criticize the judgment, one can have no grounds to ask for an alteration of the law laid down in it. The Lords who delivered it might refuse to argue with any lay Lord or any other subject of Her Majesty, whether that judgment is right or wrong. That does not necessarily take away the right to examine the decision, which is far-reaching in its consequences, or the reasons thereof. That examination is, indeed, useless as long as the decision is not withdrawn or is allowed to stand, that is, is not altered by the legislature. The question asked by Lord Stanley was the first step towards the rectification of the judgment delivered, or a return to the original law, as he understands it, and as the Mussalmans believe it to be. Lord Stanley, after his wont, was caustic, and he took special pains to acquaint himself with the law. It cannot be said that he lightly put the question. The judgment of the Judicial Committee of the Privy Council was delivered on the 15th December 1894. The notice of question was put on the Minutes in August and September 1895. Many months, again, elapsed between the notice and the question. During this long period, while the noble Lord strengthened by enquiries his conviction that the Privy Council judgment was not according to Mahomedan Law, the Government slept over it and then made the usual answer basing it on the official principle of *dictum valet* that an order made was right and could not be altered. That is the doctrine which guides the Government of this country. An order made is unalterable. It may be utterly wrong or passed on wrong information, still it must stand. That is prestige. The autocracy of Russia is not more self-sufficient. It is a source of no end of injustice, which is borne in silence. In avoiding perpetuities, the Judicial Lords inflict a perpetual injustice on a large and important section of the Indian community, and the House of Lords calmly look on, because the highest Court has decided that *wakfs* must cease. Let that be the law, if it be thought expedient for the ends of government, but why robe it with the sanctity of religious law? Lord Stanley of Alderley in his sympathies with the weak people of this country, had the hardihood to appeal to the Queen's Proclamation. He should have remembered that the Privy Council Judges interpret the law. One of England's greatest lawyers, on a notable occasion, had declared that the Proclamation is no law, not being an Act of Parliament; and though one of the Viceroy's of India had tried to re-assure the people and princes of India that it should always be respected and obeyed by her servants in India, another Viceroy had thought that it was capable of other interpretations than those usually given to it and that it was not unalterable. Nothing puts the Government out of temper more than an allusion to that Charter of Indian rights and liberty, and Lord Stanley of Alderley touched a sore point to be voted out of order. But he did no more by his question than what he was declared competent to do. He admitted that the judgment has become law, and, while doubting its correctness, asked for a declaratory Act. All honour to Lord Stanley of Alderley for his stand on behalf of India!

OUR LONDON LETTER.

July 17.

Great Britain. Since the abandonment of the Education Bill and the passage of the Agricultural Rating Bill, things have been going on more smoothly in the House of Commons. But on Wednesday, the 15th, the pervading calm melted away, and the whole sitting was devoted, on the part of Sir W. Harcourt and his tag-rag of a following, to showing up what they are pleased to call the vagaries of the Government in relation to the Irish Land Bill. When I announced the introduction of this Bill some weeks ago, I ventured to say it deserved a large measure of success, just because it failed on the one hand to satisfy the extreme landlord party and the extreme tenant party on the other. The former is led in the House by Mr. Carson, the able Barrister and Mr. Lecky's colleague in the representation of Dublin University. The latter has for spokesman Mr. T. W. Russell, a man of fair but not commanding ability, who first brought himself into notoriety as a temperance lecturer and whose strident voice is more adapted to the clangour of an Irish platform, than to the dignity of the House of Commons. The difficulty has been to bring Mr. Carson and Mr. Russell to the terms of a compromise. But the most amusing incident in the debate of Wednesday was Tim Healey's public and scornful repudiation of poor Dillon. As everybody knows, Dillon is no statesman. His sole game is to play his own bat, and leave others to fall and flounder as they may. Immediately this Land Bill is introduced by Mr. Gerald Balfour in a speech of studied moderation, poor Dillon rushes over to Ireland, and denounces it as a "rotten sham and a bare-faced fraud." Finding he had made a colossal blunder—Healy and Redmond with their followers accepting the Bill as an "instalment," a payment to account—Dillon has ever since been endeavouring to wriggle out of his rash assertion. So on Wednesday Healy denounced him bitterly, and the split in the anti-Parnellite party is more pronounced than ever. This was really the most telling incident of Wednesday's debate. You know T. P. O'Connor of "Sun" notoriety, at least by name. An Irish adventurer of fair journalistic ability, he sits in the House of Commons as the nominee of the Irish rowdies of Manchester. He writes a daily account of what transpires in the House for his evening paper, the "Sun," which, with the equally scurrilous halfpenny print, the "Star," represents all the venom and malignancy of ultra Radicalism. In his account of Wednesday's proceedings, the wily "Tay Pay," as he is familiarly called, says not a word about the Dillon-Healy scandal, but devotes several paragraphs to what exist in his own brain, and nowhere else, to rumours of Mr. Russell having thrown up the subordinate position he occupies in the Government, as Parliamentary Secretary to the Local Government Board.

The Lords passed the resolution as to the Suakin force last night by a majority of 52.

The "Times" gives them a good setting down in its leading article, and points out how the hereditary Chamber has lost a golden opportunity, of asserting itself as against the popular Chamber.

Mr. Balfour caught a slight chill on Saturday and his place as leader of the House has been temporarily filled by Mr. Chamberlain, much to the chagrin of Tay Pay, Harcourt, Morley and others of that ilk. In debate Mr. Chamberlain is a match for them all, "jointly and severally" as the lawyers have it.

Socially, the event of the week has been the Garden Party at Buckingham Palace on Monday evening, when some 4,000 or 5,000 people were present in an atmosphere that reminded one of September evening in lower Bengal. The heat has been most oppressive, but yesterday it gave way to a total change in the direction of the wind, accompanied by heavy rain. To-day we are back again to your September weather, close and muggy.

Early on Monday morning there was what might have been a most appalling accident to the L. & N. W. Scotch Express. For some reason as yet unexplained the front one of two powerful engines left the line just after running through Preston station. It took the other engine with it, and the entire train. Fortunately the accident was attended by the loss of only one life. It is asserted the loss of life was reduced to a minimum owing to the extraordinary strength of the new carriages. The unfortunate traveller who forfeited his life was returning to his parents at Aberdeen and on his body being searched it was found he had had the good Scotch prudence to take an insurance ticket for £1,000 and two coupons of a weekly paper for another £1,000 each, so his father and mother will procure £3,000 by the untimely death of their son.

On Wednesday, by a singular coincidence, posthumous honour was being paid to two of the most illustrious of Oxford's sons. Though wholly dissimilar in their personal idiosyncrasies, and in the impress they have made on the intellectual and moral life of England and on all lands where the mother tongue is spoken, Cardi-

nal Newman and Dr. Arnold are names that will live for all time. Of the two, I cannot help thinking the greater living force belongs to Arnold.

Men like Dean Lake, Lord Lingen and Mr. Bryce pay homage to the exalted gifts and graces of the Cardinal, the two former as representing those who came under his extraordinary personal influence as a teacher at Oxford, before his secession to Rome; Mr. Bryce as one of the most distinguished living representatives of the two colleges that claim Newman,—Trinity and Oriel. But, as a living force the Cardinal must, to my judgment, yield to Arnold. You have only to contrast the names of those present at the abbey, and at the oratory, to appreciate my contention. Actual pupils of the great Headmaster included the Dean himself (Bradley) Dean Lake of Durham, Mr. Seton-Karr (wellknown in Calcutta not only as a distinguished member of the Civil Service, but the real *fon* *et origo* of all the mischief entailed on poor Mr. Long by the publication of the famous "Nil Darpan," the Bishop of Gibraltar, Admiral Blake and Sir Gardner Engleheart. There were many others present belonging to the Rugby of later generation, but all indebted to the magic influence of the great Teacher as passed on by his successors and their colleagues.

And so Arnold's influence will be reflected to the end of time. Dean Bradley's words may well be quoted: "We are paying honour to the memory of the great Christian Reformer, as we may well call him, of the whole life of our English public schools, whose influence, direct and indirect, is felt far and wide. Even now that influence was felt in schools that were ancient and famous when Rugby was as yet unfounded or little known. It is felt far and wide in schools that owe their very birth, it may be said, to the effect, direct and indirect, of the work of Arnold."

I add some words from the *Standard*: "The world is still largely governed from Eton, Harrow, Winchester and Rugby; and the man who moulds the young Englishmen of his generation, and trains them in unshrinking courage, in lofty ideals, in love of truth, and in the higher patriotism, is conferring more good on the human race than all the theologians of the Vatican, and all the controversialists of the Sorbonne. Arnold taught hundreds of English gentlemen to be more gentle, more manly, more truthful, more just, more courageous than ever; and it is simply impossible to estimate the benefit he thereby conferred on his country, on the Empire, and on the human race. To Newman all the powers of intellect, and all the graces of style; but, Arnold may claim something higher than either or both—a passionate love of active virtue in a world conditioned as we know it, and an indefatigable determination to communicate this noble rage to others. That is the highest lot and noblest function of man."

What a day it would be for India if you had a native Arnold in every province, directing and stimulating the energies of your young countrymen so as to enable them to confer on their own Fatherland the priceless heritage bequeathed by Arnold to our public schools!

France. The attempt on the life of President Faure was the act of a harmless lunatic, and is of no consequence in itself. But the example is a very bad one when there are so many wild Anarchists ready at any moment to work confusion and disaster, as for example at Barcelona.

An interesting event is the engagement of the head of the House of Bourbon—the Duc d'Orleans—to an Austro-Hungarian Archduchess. This marriage will bring the House of Orleans into relationship with the royal families of England and Belgium, Saxe-Coburg and Gotha and Braganza.

This morning's papers announce the unexpected death of M. Edmond de Goncourt, at the house of his friend M. Alphonse Daudet. The publication of his will is looked forward to with immense interest in literary and artistic circles, as it is well known the brothers had determined to place their entire fortune, on the death of the survivor, in the hands of Trustees for the foundation of a Goncourt Academy, where illustrious *litterateurs* should receive pensions of £300 a year. It was intended to be a sort of rival to the celebrated Home of the Forty, into which admission is often granted to the undeserving, while illustrious names are boycotted, merely because of political or professional jealousy.

DEBATE ON MUSSULMAN LAW IN INDIA.

House of Lords—Session 1896, Monday, 29th June 1896.

Lord Stanley of Alderley rose to ask whether the Secretary of State for India was aware of the alarm prevailing among the Mussulman subjects of Her Majesty in India, owing to a recent decision of the Judicial Committee of the Privy Council in the case of Abul Faiz Mahomed Ishak and others *versus* Russomoy Dhar Chowdry and others, the effect of which was to abrogate an important branch of the Mussulman Law—namely, that relating to family *wakfs*, or the law relating to the creation of benefactions for the endower's family, with the reversion for the

general poor; whether it was not the fact that the full enjoyment of their law and religious usages and institutions, so far as they did not conflict with any statutory enactment, has been guaranteed to the Indian Mussulmans by Her Majesty's Proclamation? The law in question related to one of their most cherished institutions, upon which depended the prosperity of their principal families, which had rendered important services to the State in times of danger; whether it was not the fact that numerous memorials had been presented to the Indian Government against this judicial decision; and whether they have not prayed for a declaratory Act declaring the validity of the law which had been held to be invalid; and what steps the Government propose to take to redress the wrongs inflicted by this decision of the Privy Council? The noble Lord said that he regretted having to differ from the opinions of the noble Lord (Lord Hobhouse), and he regretted having been told by him that he thought this question of vakfs was dead, since it was as lively as ever in the Indian press, and the noble Lord might have remembered that "the evil that men do lives after them." The Notice on the Minutes had been prepared about last July, at which time memorials against the Privy Council judgment had been sent in to the Indian Government. This Notice had been put on the Minutes in August and September last, so that there had been ample time for obtaining some of these memorials. He would, perhaps, be told that no memorials had been received at the India Office. This was most likely, if they had not been asked for; and after the notice last September, they ought to have been asked for; and the India Office ought to be ready with an answer to the question as to these memorials. The Mussulmans, however, were not the only persons aggrieved by the attitude recently taken by the Indian Administration, with regard to family settlements. The Hindus also had reason to complain of a decision in what was called the Tagore case. He had always felt the highest respect for the Judicial Committee of the Privy Council, and he voted against his inclination and against a Resolution moved in 1872 by the late Earl Stanhope, and supported by the noble Marquess now at the head of the Government, on the occasion of the appointment of the late Sir Robert Collier to a seat on that Bench; he had so voted because of the high opinion that was entertained at the time of the judicial capacity of that learned gentleman. He did not remember ever having read or heard of anything to diminish the judicial reputation of Sir Robert Collier during all the time that he sat in the Privy Council. During that Debate in 1872 the noble Marquess (the Prime Minister) had blamed the parsimony of Mr. Gladstone's Government, which had given too low a salary for the Privy Council Judgeships, and if the salaries then fixed were still insufficient, he hoped Her Majesty's Government would make them such as to secure a first-rate man for the next appointment to the Judicial Committee. It might, however, be the case that since the fall in value of land and funds, the salaries of 1872 might now be sufficient. He could not help thinking that the decision of the Privy Council, to which he was now calling attention, was likely to jeopardise the reputation of the Judicial Committee. Some decisions might err from the Judges not being sufficiently informed on the subject before them, but in this case the decision quoted several very good authorities, but only for the purpose of disregarding them. Syed Amir Aly was an authority before he became a High Court Judge at Calcutta. The judgment quoted from him frequently, and its reasons for differing with him were, to say the least, extraordinary. The judgment said:—

"The opinion of that learned Mahomedan lawyer is founded as their Lordships understand it, upon texts of an abstract character and upon precedents very imperfectly stated. For instance, he quotes a precept of the Prophet Mahomed himself, to the effect that, 'A pious offering to one's family to provide against their getting into want is more pious than giving alms to beggars.'"

Further on the judgment said:—

"These precepts may be excellent in their proper application. They may, for aught their Lordships know, have had their effect in moulding the law and practice of vakf as the learned Judge says they have."

This last sentence ought to have run as follows:—

"These precepts, as their Lordships very well knew, had moulded the law and practice of vakf."

This point as to which the Court professed ignorance was proved by language. The judgment used the word "Mahomedan" instead of "Mussulman" as to communities. He did not complain of this, since it was an ordinary English phrase; but, as a matter of fact, the adjective "Mahomedan" was never used in any Mussulman country or language except with reference to, and to describe the law founded by the Prophet, which was named "Sheriatti Muhammadiyeh," so that Mahomedan law was correct, and a Mahomedan community an incorrect expression. Besides the precepts quoted by Syed Amir Aly, other sayings of the Prophet showed that he recommended charity to

the family and dependents of a man in preference to more distant poor. A book called "Mishkat ul Musabih," translated by Captain Mathews of the Bengal Artillery, and printed at Calcutta 1809, contained this passage:—

"Abu Hurairah said a man came to his Highness (to ask about alms and charity) and said, 'I have got one dinar'; he said expend it upon yourself.' The man said, 'I have got another dinar'; the Prophet said, 'expend that upon your children.' The man said, 'I have got another dinar'; he said, expend that upon your relations, your women, father and mother.' He said, 'I have got another dinar'; the Prophet said, 'expend that upon your servants.' The man said, 'I have got another dinar'; he said, 'you know best the condition of the person most worthy of it, and whoever you know to be so give it.'"

This judgment of the Judicial Committee appeared to have gone wrong, because it failed to distinguish between gifts and vakfs. Gifts in perpetuity, it said, were forbidden by Mussulman law; that was true, but the essence of vakf was its perpetuity. The judgment quoted an opinion of Mr. Justice Farran which showed this. That Judge had described a settlement as

"a perpetuity of the worst kind, which would be invalid on that ground unless it can be supported as a vakfnameh."

The Privy Council judgment was very near arriving at a correct interpretation and decision when it declared:—

"Whether it is to be taken that the very same dispositions, which are illegal when made by ordinary words or gift, become legal if only the settlor says that they are made as vakf, in the name of God, or for the sake of the poor. To these questions no answer was given or attempted, nor can their Lordships see any."

This seemed to be a slur or a reflection upon Mr. Branson, who appeared before their Lordships in this case, and who could have answered this question if it had been put to him, and their Lordships ought to have seen the answer, since their judgment mentioned the law book "Hidaya." This book was translated and published by order of the Bengal Government in 1791, and a new edition of it was published in 1870. This authority said (p. 234):—

"An appropriation (or vakf) is not complete according to Hanifa, unless the appropriation destine its ultimate application to objects not liable to become extinct; as when for instance a man destines its application ultimately to the use of the poor (by saying, I appropriate this to such a person, and after him to the poor), because these never become extinct."

So that when the Judgment said:—

"Their Lordships agree that the poor have been put into this settlement merely to give it a colour of piety, and so to legalise arrangements meant to serve for the aggrandisement of a family,"

Their Lordships appeared to have been ignorant of what was laid down in a law-book, that was one of the best known in India, and to have imputed to the settlors as a colourable regard for the poor, what was in fact a legal technicality. Whatever fault might be found with this judgment, the merit of great candour must be conceded to it. It stated that this Board in Ahsan Ullah's case adopted the view of Mr. Justice Kemp to the effect that provision for the family out of the grantor's property might be consistent with the gift of it as vakf. It also cited the judicial opinion of Mr. Justice Amir Aly in Bikani Mia's case, a dictum of Sir Raymond West in the Bombay High Court, and a decision of Mr. Justice Farran in the same Court—all these contrary to this judgment. Mention had often been made of those who were *Plus Royalistes que le Roi*. In this case the India Office appeared to pose as a more strenuous supporter of Mussulman law than the Indian Mussulmans or the Turks of Constantinople, by denying the legality of such vakfs. The last time he was at Constantinople, which was six or seven years ago, before these cases had arisen in India, he had heard of similar vakfs, or family appropriations in Constantinople, and a few days ago he met a Turkish diplomatic agent who had confirmed the existence of many such vakfs at Constantinople. Some writers said that Mussulman law was not sufficiently elastic, and that it was only suited to primitive communities. The Indian Administration and the Privy Council Judges were in these cases endeavouring to deprive that law of the elasticity it did possess; and with regard to the latter accusation, all the malpractices of the Liverpool Produce Exchange were forbidden in "Mishkat ul Musabih," the book already mentioned. He had lately read a French historian's comment on judicial decisions during the reigns of the Stuarts, and their base subservience to the Government. He thought that a future historian reading the Privy Council judgment and the communication he had received from the India Office would inter similar pliancy on this occasion. For his own part he would be more inclined to impute obstinacy than pliancy to the noble Lord who had delivered the judgment. But whether the legal or executive officials in India were at fault in this matter, it would be easy to remedy it if the Secretary of State would order a Declaratory Act to be passed in the sense petitioned for in some of the memorials. He

thought he had shown that the judgment of the Judicial Committee was not in accordance with Mussulman law, neither was it in accordance with Christian law. When their Lordships so lightly dismissed the precepts quoted by Mr. Justice Amir Aly, they might have remembered that there was not much difference between them and the eighth verse of the fifth chapter of the 1st Epistle of Paul to Timothy---

"But if any provide not for his own, and especially for those of his own house, he hath denied the faith and is worse than an infidel."

Perhaps, as St. Paul lived 600 years earlier, the Privy Council judges who thought the precepts of the Prophet too old, would think still less of St. Paul's precept. Perhaps they would think that Gaius, who lived 100 years later than St. Paul, was also too old. A case had, however, been decided this year in one of Her Majesty's Law Courts in London, by which a will leaving some thirteen thousand pounds to the poor had been upset. It was true that this was due to a technicality, but the satisfaction with the decision had been general, because the testator had left five relations unprovided for, one of whom was in the workhouse, and two others on the verge of it. He now came to the last two paragraphs of the Notice--questions addressed to the Under Secretary for India, as to what steps the Government of India would take. A correspondence had been going on in the *Moslem Chronicle* of Calcutta, showing the interest taken in this question. A pleader, Mehmed Mustafa Khan, had written a letter, dated May 11th, from the Vakil's Library, High Court, in the *Chronicle* of May 23rd last. This letter repudiated the views urged in another letter of Mr. Iradat Ullah in the *Chronicle* of May 9th. After pointing out that for a Mussulman to propose to repeal Divine law by human legislation would be apostasy, he ended his letter in the following words, and he entreated the noble Earl to give his attention to them:--

"The vakf question, however, stands on a different footing, and its administration by our Courts has, to a great extent, certainly been unsatisfactory. Even here our Courts profess to expound the Mahomedan law; but we say 'No,' this is not our law; and we have now appealed to the Government to put our Courts right by legislation. But the difference in the two legislations proposed is that, while in the vakf question we want an Act confirming the Mahomedan law disturbed by our Courts, Mr. Iradat Ullah wants an Act disturbing Mahomedan law heretofore rightly administered."

These few words summed up the whole question. It would be preposterous if the answer were that the India Office could not interfere, after the Secretary of State had interfered with the Government of India in an unprecedented manner by a mandate to alter the Cotton Duties, in order to redeem the electioneering pledges which he had incautiously given to Lancashire, and by charging the cost of the troops sent to Suakin to the Indian Exchequer.

The Under Secretary of State for India (the Earl of Onslow): It is the fact that full enjoyment of their law and religious usages and institutions has been guaranteed to the Mussulman population of India by Her Majesty's Proclamation; but the case to which the noble Lord has called attention was decided by the Privy Council strictly in accordance with the Mussulman law. It was a case in which a remainder to the poor was inserted merely for the purpose of perpetuating a bequest to the family of a testator, and in accordance with the Mussulman law it was held by the Privy Council not to be valid. The noble Lord asks whether it is not the fact that numerous memorials have been presented against this decision. The India Office is not aware that any memorials have been presented, and it is quite certain that they were not numerous. It may be that the parties in this case, or those interested to maintain the legality of similar settlements, may have presented memorials, but no others are known of. The Government of India does not propose to take any steps to redress the wrongs which the noble Lord imagines to have been inflicted by the decision, and if any representation is made on the subject it should be to the local government, who will be able to introduce legislation.

The Lord Chancellor (Lord Halsbury): My Lords, I cannot allow this occasion to pass without entering a protest against the precedent set by the noble Lord. It is quite within his right, if he thinks proper, to ask Her Majesty's Government whether they mean to alter the law; but to argue a judgment of the Privy Council--a matter over which, I may point out, your Lordships have no jurisdiction at all--and to use such language as the noble Lord has thought it right to use--namely, that the judges have altered the law, and that wrongs have been inflicted by their decision--appears to me neither a decorous treatment of the highest legal tribunal of the land nor a very desirable precedent to set; and further, it is not calculated, I think, to add to the dignity and impressions which the judgments of the Privy Council make in those places where observations such as those of the noble Lord are likely to do more mischief than good.

["Hear hear,!"] The noble Lord must assume that this is the law, because when once a decision has been given by the highest Court of Appeal it becomes the law of the land. Therefore, the noble Lord's course should be to alter the law and not to make observations on the character of a judgment which may do no little harm in the country affected. ["Hear, hear!"] I want to say this, further, that when the noble Lord examines the judgment and comments upon it and reasons with it he is in this difficulty. I am making this protest because I was not a party to this judgment. If I had been I should have refused to have said a word, and I do not suppose that any one of the learned Judges sitting in this House who were parties to that judgment would condescend to argue with the noble Lord whether their judgment was right or wrong after they had once delivered it. ["Hear, hear!"] They would tell the noble Lord to look at the judgment and read it and--may I add?--understand it--[laughter and cheers]--before he comments upon it.

Lord Stanley of Alderley said he understood the noble and learned Lord to say that a decision of the Privy Council made the law. For that reason it was justifiable to ask that Her Majesty's Government should alter it.

THEY WONDERED TO SEE HIM.

"I could not move a yard without help. I can now walk for miles."

There is certainly a very sharp contrast between these two statements. When we see a person who, because of illness, is unable to move a yard without help, we do not expect to meet him on the road and on foot miles from home, soon thereafter; if indeed, we meet him at all. At least we should regard these extremes, considered as within the experience of the *same man*, and enclosed within a comparatively brief period of time, as something to wonder at and ask questions about. And people *did* wonder at and inquire about it. Many said the circumstances recalled the age of miracles, supposed to have passed forever away. The facts (briefly set forth in a letter from the man himself) are as follows. We may add that Mr. Henry Jackson is a farmer, well known and respected in his district, and his case is familiar to neighbours and friends of his throughout the vicinity.

"In the early part of 1892," says Mr. Jackson, "I began to feel weak and ailing. I was low in spirits, and my bodily strength seemed to be leaving me. There was a bad and nauseous taste in my mouth, my appetite, which had always been good, failed until I had no real desire for food whatever, and after eating I had much pain at the chest and a fullness around the sides. My stomach always felt *burning hot*, and I had a gnawing pain at the pit of it.

"I remained in this general condition until August of the same year, when I was taken worse. My legs began to swell, and rheumatism set in all over me, more particularly in the hips and back. No local treatment had any effect upon it. It grew worse and worse, until I was no longer able to rise from my chair without assistance. In truth, I had no power over myself, and *could not move a yard without help*.

"I suffered so with *mere pain* that I could not lie in bed, and for over *twelve months I never had my clothes off*.

"During this time I was attended day and night, being literally unable to do anything of importance for myself. All the sleep I got was taken in naps and snatches while I was bolstered up in my usual place in an easy chair. Under the terrible strain of the pain and loss of proper rest my nerves broke down so that any uncommon event in the house or noise was more than I could bear. My heart was very bad, and thumped until I could scarcely stay in the chair and endure it.

"The doctor who had charge of my case said my condition was critical. He said that my lungs and liver were badly affected, and that I had Bright's disease of the kidneys. Still his medicines did me no good, and after attending me ten months he said he could do no more for me.

"I then got a doctor from Bolton to see me, and he held out but slender hopes of my ever getting any better. I thought the same, and so did all who saw me.

"In October, 1893, my daughter, Mrs. Dickinson, of Bolton, told me how she had been benefited by taking Mother Seigel's Curative Syrup, and thought it might possibly help me. I had small faith, but there could be no harm in trying. So we sent at once to Mr. Parr, the chemist, in Ford Road, Bolton, for enough to decide whether it would do me good or not. After taking it a short time I was better. I could sleep better, and had some appetite for food, and what I ate agreed with me. This was hopeful and cheering indeed.

"I kept on with the Syrup and it acted wonderfully with me. The worst symptoms abated, and I gained strength. Soon all the water in my legs passed off, and the rheumatism troubled me but little. Still using the Syrup, my condition continued to improve in every respect, until I once more stood on my feet, and felt like a man of this world. *I can now walk for miles* and have no pain. All my friends think as I do--that under the circumstances my recovery was nothing short of marvellous. You are at liberty to publish this statement, and refer any interested persons to me. (Signed) Henry Jackson, Pewett Hill Farm, Culcheth, near Warrington, October 9th 1895."

No words of ours can add to the convincing force of Mr. Jackson's plain statement. His disease was originally and radically of the digestion. The attack was sharp and profound, and developed into the resulting conditions he so well describes. He may not have had Bright's disease, but that he was directly progressing towards that fatal malady there is no doubt. The effect of Mother Seigel's Syrup in his case only serves to show afresh its rare and remarkable power. Scarcely is so great a victory to be looked for from any medicine. Yet the facts are undeniable. We congratulate Mr. Jackson on his escape from a danger which was much more serious than even he probably imagined.

POSTSCRIPT.

After paying the expenses of the publication, the surplus will be placed wholly at the disposal of the family of the deceased man of letters.

Orders to be made to the Business Manager, "An Indian Journalist," at the Bee Press, 1, Uckoor Dutt's Lane, Willington Street, Calcutta.

OPINION ON THE BOOK.

It is a most interesting record of the life of a remarkable man.—Mr. H. Babington Smith, Private Secretary to the Viceroy, 5th October 1895.

Dr. Mookerjee was a famous letter-writer, and there is a breezy freshness and originality about his correspondence which make it very interesting reading.—Sir Alfred W. Corft, K.C.I.E., Director of Public Instruction, Bengal, 26th September, 1895.

It is not that amid the pressure of harassing official duties an English Civilian can find either time or opportunity to pay so graceful a tribute to the memory of a native personality as F. H. Skrine has done in his biography of the late Dr. Sambhu Chunder Mookerjee, the well-known Bengal journalist (Calcutta: Thacker, Spink and Co.); nor are there many who are more worthy of being thus honoured than the late Editor of *Reis and Rayyet*.

We may at any rate cordially agree with Mr. Skrine that the story of Mookerjee's life, with all its lights and shadows, is pregnant with lessons for those who desire to know the real India.

No weekly paper, Mr. Skrine tells us, not even the *Hindu Patriot*, in its palmyest days under Kristodas Pal, enjoyed a degree of influence in any way approaching that which was soon attained by *Reis and Rayyet*.

A man of large heart and great qualities, his death from pneumonia in the early spring in the last year was a distinct and heavy loss to Indian journalism, and it was an admirable idea on Mr. Skrine's part to put his Life and Letters upon record.—*The Times of India*, (Bombay) September 30, 1895.

It is rarely that the life of an Indian journalist becomes worthy of publication; it is more rarely still that such a life comes to be written by an Anglo-Indian and a member of the Indian Civil Service. But, it has come to pass that in the land of the Bengali Babus, the life of at least one man among Indian journalists has been considered worthy of being written by an Englishman.—*The Madras Standard*, (Madras) September 30, 1895.

The late Editor of *Reis and Rayyet* was a profound student and an accomplished writer, who has left his mark on Indian journalism. In that he has found a Civilian like Mr. Skrine to record the story of his life he is more fortunate than the great Kristodas Pal himself.—*The Tribune*, (Lahore) October 2, 1895.

For much of the biographical matter that issues so freely from the press an apology is needed. Had no biography of Dr. Mookerjee, the Editor of *Reis and Rayyet*, appeared, an explanation would have been looked for. A man of his remarkable personality, who was easily first among native Indian journalists, and in many respects occupied a higher plane than they did, and looked at public affairs from a different point of view from theirs, could not equisuffered to sink into oblivion without some

attempt to perpetuate his memory by the usual expedient of a "life." The difficulties common to all biographers have in this case been increased by special circumstances, not the least of which is that the author belongs to a different race from the subject. It is true that among Englishmen there were many admirers of the learned Doctor, and that he on his side understood the English character as few foreigners understand it. But in spite of this and his remarkable assimilation of English modes of thought and expression, Dr. Mookerjee remained to the last a Brahman of the Brahmins—a conservation of the best of his inheritance that wins nothing out respect and approval. In consequence of this, his ideal biographer would have been one of his own disciples, with the same inherited sympathies, and trained like him in Western learning. If Bengal had produced such another man as Dr. Mookerjee, it was he who should have written his life.

The biography is warmly appreciative without being needlessly laudatory; it gives on the whole a complete picture of the man; and in the book there is not a dull page.

A few of the letters addressed to Dr. Mookerjee are of such minor importance that they might have been omitted with advantage, but not a word of his own letters could have been spared. To say that he writes idiomatically English is to say that is short of the truth. His diction is easy and correct, clear and straightforward, without Oriental luxuriance or striving after effect. Perhaps he is never so charming as when he is laying down the laws of literary form to young aspirants to fame. The letter on page 285, for instance, is a delightful piece of criticism: it is delicate plain-speaking, and he accomplishes the difficult feat of telling a would-be poet that his productions are not in the smallest degree poetry, without one may conclude, either offending the youth or repressing his ardour.

For much more that is well worth reading we must refer readers to the volume itself. Intrinsically it is a book worth having and reading. —*The Pioneer*, (Allahabad) Oct. 5, 1895.

The career of "An Indian Journalist" as described by F. H. Skrine of the Indian Civil Service is exceedingly interesting.

Mookerjee's letters are marvels of pure diction which is heightened by his nervous style.

The life has been told by Mr. Skrine in a very pleasant manner and which should make it popular not only with Bengalis but with all those who are able to appreciate merit unmarred by ostentation and earnestness unspoiled by harshness. —*The Muhammadan*, (Madras) Oct. 5, 1895.

The work leaves nothing to be desired either in the way of completeness, impartiality, or lifelike portrayal of character.

Mr. Skrine deals with his interesting subject with the unfailing instinct of the biographer. Every side of Dr. Mookerjee's complex character is treated with sympathy tempered by discrimination.

Mr. Skrine's narrative certainly impresses one with the individuality of a remarkable man.

Mookerjee's own letters show that he had not only acquired a command of clear and flexible English but that he had also assimilated that sturdy independence of thought and character which is supposed to be a peculiar possession of natives of Great Britain. His reading and the stores of his general information appear to have been, considering his opportunities, little less than marvellous.

One of the first to express his condolence with the family of the deceased writer was the present Viceroy, Lord Elgin. Mookerjee appears to have won the affection not only of the dignitaries with whom he came in contact, but also of those in low estate.

The impression left upon the mind upon laying down the book is that of a good and able man whose career has been graphically portrayed. —*The Englishman*, (Calcutta) October 15, 1895.

The career of an eminent Bengali editor, who died in 1894, throws a curious light upon the race elements and hereditary influences which affect the criticisms of Indian journalists on British rule.

The "Life and Letters of Dr. S. C. Mookerjee," a book just edited by a distinguished civilian in Calcutta, takes us behind the scenes of Indian journalism.

It is a narrative, written with insight and a

complete mastery of the facts, of how a clever youth gradually grew into one of the ablest leader-writers in Bengal, and still more gradually matured into one of the fairest-minded editors that western education in India has yet produced. If the training and experience which develop the journalist in England are sometimes varied, they seem in India to have an even wider range.

But the object of this notice is to show how a great Bengali journalist is made; space forbids us to enter upon his actual performances. They will be found set forth at sufficient length, and with much felicity of expression, in Mr. Skrine's admirable biography. It is characteristic of the noble service to which Mr. Skrine belongs, that such a book should have issued from its ranks. Dr. Mookerjee was no optimist. One of his brilliant speeches contained the following sentence:—"India has neither the soil nor the elasticity enjoyed by young and vigorous communities, but present the arid rocks and deserts of an effete civilization, hardly stirred to a semblance of life by a foreign occupation dozing over its easily-gained advantages." This was true of the pre-Mutiny India of 1851. If it is no longer true of the Queen's India of 1895, we owe it in no small measure to Indian journalists like Dr. Mookerjee who have laboured, and some misrepresentation, to quicken the "semblance of life" into a living reality. —*The Times*, (London) October 14, 1895.

"IMPROVED UNDAUNTED"

WATCH. Rs. 7.

Guaranteed three Years.

Strong, accurate, pretty, small, open-faced, nickel silver, keyless, short winding, patent, "NEW STYLE IMPROVED UNDAUNTED" watch, with hand setting mechanism, secondhand, for Doctors, ornamental bold dial, for Rs. 7 V. P. P. with an extra glass, spring, pretty box and full three years' guarantee. Warranted to stand the roughest use. Runs more than 28 hours with one winding. Will last a life time. Easily repairable. Others sell at double our rates. One watch free for the purchase of 8 at a time. Mr. Jno. Dickson of Hospital Railway, from Ceylon says:—It keeps splendid time and never stopped although it sustained hard knocks and jerks. x. Dr. H. Moore of Royal Artillery from Poona says:—I sold it for Rs. 16. x Pte. W. Hopkins of Sussex Regt. from Dumfries says:—I have sold it for Rs. 20. x Mr. T. B. Scott of Patna Opium Department says:—The watch you sent me some seven years ago is still keeping very good time.

Jewelled Ring Rs. 1-8-0. Real

Silver Watch Rs. 13. Real

Solid Gold Watch Rs. 24.

Pretty electro cased gold chain Rs. 1-8-0. Fashionable electro cased Gold Ring set with scientific diamonds, Rubies, Emeralds, at Rs. 1-8-0. Mr. G. Smith, Silt Inspector from Sanikatia, says:—"A German valued the diamond ring at Rs. 50 and ruby at Rs. 30." Key winding, Government stamped, solid silver hunting case, Royal watch with extras and full three years' guarantee, for Rs. 13. Pte. G. Hawkes of 2nd York Light Infantry from Purandhar says:—"For the first one I got Rs. 25; the second one I sold to a Sergeant for Rs. 28. x Pte. H. C. Bishop of L. F. L. Regt. from Kamptee says:—"A Corporal offered Rs. 30 for the very same watch. Gentleman's open faced, keyless real solid gold watch Rs. 30; ladies' Rs. 24; both with extras and guaranteed for 3 years. Mind they are guaranteed to be of real solid gold. No agents kept, all goods sent only by us from Bombay per V. P. P.

SPECIFICS

for all ordinary diseases, like Fever, Cough, Asthma, Pthisis, Diabetes, &c., including diseases brought on by irregularities of kinds. Catalogues, containing full accounts of diseases and remedies, are transmitted on application. Prescriptions, with or without medicines, sent to every part of India and Ceylon, Cape Colony, and the British Isles, on receipt (by post) of full accounts of diseases.

Thousands of unsolicited Testimonials from every quarter.

CATARRH,

Hay Fever, Catarrhal Deafness.

A NEW HOME TREATMENT.

Sufferers are not generally aware that these diseases are contagious, or that they are due to the presence of living parasites in the lining membrane of the nose and eustachian tubes. Microscopic research, however, has proved this to be a fact, and the result is that a simple remedy has been formulated whereby these distressing diseases are rapidly and permanently cured by a few simple applications made at home by the patient once in two weeks. A pamphlet explaining this new treatment is sent on receipt of 2½d stamp by A. HUTTON DIXON, 43 & 45 East Bloor St. TORONTO, Canada.
Scientific American.

VOL. XV.

CALCUTTA, SATURDAY, AUGUST 15, 1896.

WHOLE NO. 738.

THE MOSLEM.

By EDWARD ST. JOHN FAIRMAN.

"Mohamedans are fanatics!"

Those foolish, thoughtless, Christians say,
Who would embroil world's politics,
Hoping to profit by the fray.

In all creeds some "fanaticism"—

E'en midst the Christians 'tis extant—

For is there not the direst schism

'Twixt Catholic and Protestant?

The staunchest Protestants protest

'Gainst "errors" of the Romish creed,

Whilst Catholics devout attest

For such no absolution's need.

'Twixt Protestants and Catholics,

With one the others heretics!

The others scathing doubt affix

On statues, pictures, crucifix.

The one the other disbelieves,

Withholding any sympathy,

And each with hope his heart relieves:

"For me alone Eternity!"

In Europe 'tis but verbal war

Waged 'twixt Christians good and holy,

But in the East 'tis different far—

Often there 'tis fierce and bloody!

If you scarcely can believe it—

Although the truth I frankly speak—

Just, if but for few days, visit

Jerusalem in Exeter week.

But what you think fanaticism,

With Turks is often precept true;

Their love for neighbour catechism,

Which fear of God does them induce.

I much prefer such fanatics

(I, as born-Christian, boldly say)!

They have no Christian pomp, nor tricks,

But worship God in humble way.

Devotion, Faith, Simplicity,

Contrition, in the heart and acts,

To pray for pardon, fervently,

Is earnest Moslem creed—true facts!

They spurn aside all outward show;

They sit not down to pray at ease,

But stand, or bend the knee, or bow

The brow to earth—and pray for peace.

In fact, they seek to find God's love—

In Moslem hearts such thoughts e'er shine—

They stand, and pray to God above,

In Mosque, and not at ease recline!

And when they give their alms to poor,

They, on real charity intent,

Think not to write such acts on door,

Nor publish as advertisement.

They seek not hollow, wordly fame:

Philanthropist, or Godly-man!

Unseen, unknown, they hunger tame,

Or clothe the limbs of neighbour wan.

They wait not e'en for grateful smile,

For Moslems say, with meekness calm:

"I do not seek your thanks the while,

'Tis God who prompts me give the balm."

Their House of God contains no seats,

For which alone the rich can pay;

The pauper there his prayer repeats

As well, beside the richest Bey.

(How Christian lords would ope their eyes,

In England, in a Christian Church,

If Christian, in a pauper's guise,

Should next them sit, or their coats smirch!

But no such thing could ever be

In England, in this Christian land;

God's creature, when in poverty,

Must not near mortal Dives stand!)

But Moslems are devout and kind,

Their God is God of rich and poor,

And in their Mosque the rich you find

With beggar pray upon same floor.

They say: "All equal in God's sight!"

And "Poverty is not a sin!"

And in God's House no Turk would slight

A Moslem poor clad, old, or thin!

The Turk needs not grand pomp all round,

No warmth, no pews, no cushioned seats;

He says: "God ev'rywhere is found!"

In house or field, his prayers repeats.

He leaves off in his work to pray,

And not only waking, sleeping;

His law: to pray five times a day!

All his actions are in keeping.

His Sabbath ne'er is business day

To take his wage, or bills to pay,

To soothe his mind he does not say:

"O, I'll go to Church next Sunday."

Same prayers he says in Mosque, or out,

His Sabbath day is no parade,

All ostentation he would scout;

"'Tis God," he says, "who has me made!"

DEAFNESS. An essay describing a really genuine Cure for Deafness, Singing in Ears, &c., no matter how severe or long-standing, will be sent post free.—Artificial Ear-drums and similar appliances entirely superseded. Address THOMAS KEMPE, VICTORIA CHAMBERS, 19, SOUTHAMPTON BUILDINGS, HOLBORN, LONDON.

Subscribers in the country are requested to remit by postal money orders, if possible, as the safest and most convenient medium, particularly as it ensures acknowledgment through the Department. No other receipt will be given, any other being unnecessary and likely to cause confusion.

"I pary to God, and God alone,
I do not seek to have man's praise ;
I to my God for sins atone ;
Can man do aught to heaven to raise ?"
He ever prays for God's good will,
And never thinks of business first,
To make his gain, and pockets fill,
And leave his prayer to God—the last.
As God is good to let him live,
To breathe His air, to work, or play,
'Tis not too much for him to give
His God one prayer five times a day,
He answers first his God's command,
He e'er obeys high Duty's call,
Then works, or follows pleasure's band,
But bows to Will of God in all !

He always finds the time and place
His sacred duties to fulfil ;
He lets no false excuse efface
His homage due to his God's will.
Whate'er the Christians fondly say
About their's as best religion,
The Turks can teach them how to pray
In pure meekness and contrition.
They spurn no beggar in the street,
They practise charity demure ;
They give to man their bread and meat
And throw it not to pigs impure.
They never "pitch" to poor their pence ;
They never pass unhelp'd the blind ;
They ne'er to grey hairs give offence,
But practise charity in mind.

They always have a gentle word
To give to poor, infirm, or old ;
No Income Tax does right accord
To turn their poor into the cold.
All affliction has their pity.
"Misfortune," they most rightly say,
"May befall in ev'ry city,
And strike us all, though rich to-day.
If such my lot, then how should I
Consider unkind word or deed ?
I should feel the same acutely,"
The fervent Moslem says, indeed.
The Moslem can true lesson give
Of Mercy and of charity,
And all can vouch, who midst them live,
For Eastern Hospitality.

Jerusalem is Christian home,
But guarded by the Turkish troops,
And oft when Christian pilgrims come
Their rage against each other swoops.
At which the Turkish soldiers smile,
But strive such anger to appease ;
And though the Christian Turks revile,
They need those Turks to keep the peace.
E'en in the Holy Sepulchre
Oft Christian frantic feuds arise,
There the Christian love of lucre
Does oft the fervent Turk surprise.
For Christians often squabble there
O'er Romish candle, or incense,
Or drop of holy water, where
All should pray with deference.

Although at Mecca ev'ry year
Do Moslems; thousands e'en, appear,
No feuds 'twixt them we ever hear ;
They go to pray—not fight and swear.

Turk with affection e'er behaves
(Such is sacred law of Koran),
He treats those servants you call slaves
With same kindness as his children.
If Moslems have so many wives,
Allowed to them by creed and law,
In Europe there are many hives
Whence often wasps the honey draw.
The Moslem will not cast foul eye
On other Moslem's child, or spouse ;
To spoil their joy he would not try,
Nor faintest jealousy arouse.

As 'tis with him, so neighbour's home
Is sacred to each Moslem good ;
"A neighbour" is a neighbour whom
He'll tend, or e'en supply with food.
When adverse fortune visits him
He'll share with any other one,
And leave him not in want, e'er grim,
With family to starve alone !

Then why throw your scoff prolific ?
O, Christian reader ! pause and muse !
Such is the "Moslem fanatic,"
But Moslems smile at your abuse !

London, 7th May, 1896—24th Dulkanada, 1313.
—*The Islamic World*, June, 1896.

WEEKLYANA.

A 46½ carat Burma ruby, the largest ever cut, was bought in at a London jeweller's sale recently for £10,000. A 1 carat blue diamond fetched £750, and a 140 grain black pearl, once belonging to Queen Isabella II. of Spain, went up to £1,437-10.

La France Militaire speaks of a new balloon, the invention of Lieutenant-General Von Zeppelin, for military campaigns. The inventor has discovered a material impermeable to the gas. The balloon has the shape of a cigar, and can be propelled at the rate of 41 feet per second, by screw propellers driven by a Daimler motor. It will be possible now to make an aerial voyage of several days' duration with a weight of 37½ cwt.

SIBERIA is proving a Canada to Russia. It is rich in gold, silver, coal, graphite and other minerals. Coal can be picked up on the very road near Nerchinsk. The same district is also full of silver. Iron is plentiful near Nikolaefsk. There is extensive breeding and rearing of fishes in the Amu. The Russian kerosine oil threatens to drive out all others, Indian or American, from the Indian market. Baku, the centre of the trade, on the west of the Caspian Sea, is assuming an importance, unrivalled by any of the kerosine trade centres. The bed of the Caspian abounds in petroleum. In comparison to it the supply from Burma or Assam is insignificant.

THE following is an official report of the foreign and Indian mineral oils :—

Imports of kerosine and other mineral oils.			
1888-89	gallons	39,851,885	Rs. 18,612,803
1889-90	"	53,390,158	" 24,788,265
1890-91	"	54,235,275	" 23,622,192
1891-92	"	58,109,283	" 23,681,405
1892-93	"	67,085,968	" 26,902,640

In Burma there are large and productive oil works at Yenangyaung and at Akyab, the output in 1892 having been over 8,00,000 gallons. * * Petroleum is said to have been worked in Burma for upwards of 2,000 years, and there appears to exist an unfailing supply in many parts of that province. Much of the oil is of very high quality and can be burned in lamps even in its crude state. The only wells that are at present worked on European methods are those of Messrs. Finlay, Fleming & Co., at Kodung, but operations have not as yet been extensively established. There is, however, a wide field for capital and enterprise in the working of the petroleum of Burma, and the highest expectations may be entertained of the future of this industry.

NIKOLA TESLA has found that exposure of the head to a powerful X radiation produces a general soothing effect, with a sensation of warmth in the cerebral lobes and a tendency to sleep.

THE following account of M. De Goncourt's will is given by the Paris correspondent of a London paper :—

"The will of the late M. Edmond de Goncourt, whose remains are to be buried to-morrow in the Montmartre Cemetery, was opened, yesterday, at the house of M. Alphonse Daudet, at Champrosay. It appoints M. Alphonse Daudet and M. Léon Hennique as executors. By his will M. Edmond de Goncourt bequeaths his relatives to respect his last wishes. If he leaves them nothing, he says, it is because he knows they are in no danger of finding themselves in want. It is for that reason he appoints M.M. Alphonse Daudet and Léon Hennique his universal legatees and executors, and that he charges M.M. Roger Marx and Delzant with the work of drawing up the catalogue of his collections, and to direct, with the aid of M.M. Dantou and Feral, the experts, the liquidation of his estate. The will provides that his goods and chattels shall be disposed of by auction at six separate sales—first, a sale of books; second, Japanese curiosities; third, pictures, drawings, and engravings; fourth, furniture; fifth artistic objects; sixth, a sale of his house on the Boulevard de Montmorency at Auteuil.

A certain number of legacies are first to be paid out of the product of these sales. Among them is one of five thousand francs to Mlle. Edmée Daudet, his god-daughter, to complete the pearl necklace, of which he presented to her the first pearl on the 1st January last. There is also a legacy of fifteen hundred francs to Mlle. Jeanne Charpentier, also his god-daughter, for the purchase of lace on her marriage. Certain curiosities are bequeathed to various persons. The 'Venus,' by Falconet, is left to Princess Mathilde, and a bronze Stork to Madame Alphonse Daudet. His old servant, Pelagie, is provided for with a life annuity of forty-eight pounds. The will then deals with the De Goncourt Académie, which, faithful to the promise he made to his brother, he creates with the bulk of his property.

The Académie is destined to aid young men of talent. Politicians, the nobility, poets, and functionaries are to be excluded from this Académie, which is to be composed of ten life members, to be renewed by the vote of the majority of the surviving members. In the case of any member of the De Goncourt Académie ever becoming a member of the Académie Française his name is to be struck off the list of the members of the former institution. Eight of the ten members are designated in M. Edmond de Goncourt's will. They are M.M. Alphonse Daudet, Huysmans, Mirbeau, Rosny senior, Rosny junior, Hennique P. Margueritte, and G. Giffroy. Each of the ten members of the De Goncourt Académie is to receive a life annuity of six thousand francs per annum out of the interest produced by the capital to be realised by the liquidation of his estate.

The will also provides five thousand francs for an annual prize to be awarded by his Academicians to the author who they may consider has during the twelvemonth produced the best novel or work on history, æsthetics, erudition, or the best book of tales. M. Edmond de Goncourt expresses the hope that his Academicians will call the annual prize the *Prix de Goncourt*. Lastly, M. Edmond de Goncourt entrusts to his old servant Pelagie the duty of carrying the complete manuscript of the *Journal de Goncourt* to his solicitor, Maître Duplan. That gentleman is to deposit it in the National Library, where it is to be kept for twenty years before being published as a whole. In the case of the National Library refusing the deposit, M. Edmond de Goncourt says in his will he relies on his friend, Alphonse Daudet, to place the manuscript in honourable and safe keeping."

THE *Glasgow Herald* of 11th July writes :—

"There has just died at Rugby a lady who knew Warren Hastings. She was Mrs. Powlett, grand-daughter of Sir Charles Wheeler, Bart., of Leamington Hastings, Warwickshire, and was born in 1799. Her great uncle was a member of the Supreme Council in India late in the last century, and his widow's house in Park Lane was a place to which many Anglo-Indians used to resort. It was there that, when quite a girl, she saw Warren Hastings. Mrs. Powlett was the mother of Admiral Powlett, who was some months ago run over by a vehicle at the top of New-street, and who subsequently brought a successful action in the Birmingham County Court against the driver."

ORANGE coloured flannel shirts have been recommended for the English troops in Egypt, as yellow is a protection against the sun.

THE plan for spanning the Tigris at Bagdad with an iron bridge 600ft. in length, has been approved of by the Turkish Ministry of Public Works.

THE French Commission has reported against a ship canal from the Atlantic to the Mediterranean on account of the enormous expense of 2,000 to 3,500 million francs.

LAST week we gave the building regulations of the Calcutta Municipality, and pointed out how they have been found nugatory. If it be any help in the interpretation of the Calcutta Municipal Consolidation Act, 1888, we may mention that the Burma Municipal Bill, introduced by the Hon'ble J. Woodburn, in the Viceroy's Legislative Council, on the 30th July, at Simla, clears up the sanitary provisions in regard to buildings. We reproduce two sections of the Bill :—

"90. (1) Every person intending to erect or re-erect any building shall, if so required by a bye-law made by the committee in this behalf,—
(a) give notice in writing of his intention to the committee, and
(b) submit with such notice—

(i) a site-plan of the land ;

(iii) a plan showing the levels at which it is proposed to lay the foundation and lowest floor or plinth, and specifications of the work to be constructed and the materials to be used.

(2) The committee may at any time within six weeks thereafter, by notice in writing, either prohibit the erection or re-erection of such building if deemed likely to be injurious to the inhabitants of the neighbourhood, or give any directions consistent with this Act in respect of all or any of the following matters, namely :—

(b) the free passage or way in front of the building ;
(c) the space to be left about the building to secure free circulation of air and facilitate scavenging and for the prevention of fire ;
(d) the ventilation and drainage ;
(e) the level and width of foundation, the level of the lowest floor or of the plinth and the stability of the structure ;
(f) the line of frontage with neighbouring buildings, if the building abuts on a street ; and
(g) the number and situation of the water-closets, latrines, urinals, privies, sewers, ventilating-pipes, cesspools, traps, sinks, sulliage-trays and wells ;

(3) If any building is begun or erected or re-erected in contravention of any such bye-law, prohibition or direction as aforesaid, the committee may, by notice in writing, require the building to be altered or demolished, as it may deem necessary.

(4) If any person, after delivering plans and specifications regarding any building under sub-section (1), departs, except under the orders or with the permission of the committee, from such plans and specifications, the committee may, by notice in writing, require such building to be altered or demolished, as it may deem necessary.

(5) A notice issued under sub-section (1) shall hold good only for such time as the committee may by bye-law direct for each class of buildings.

(6) The expression 'erect, or re-erect any building' includes—

(a) any material alteration or enlargement of any building ;
(b) the conversion into a place for human habitation of any building not originally constructed for human habitation ;
(c) the conversion into more than one place for human habitation of a building originally constructed as one such place ;
(d) the conversion of two or more places of human habitation into a greater number of such places ;
(e) such alteration of the internal arrangements of a building as affects an alteration in its drainage or sanitary arrangements, or affects its security ; and
(f) the addition of any rooms, buildings, out-houses or other structures to a building.

91. (1) The committee may by bye-law regulate, in respect of the erection or re-erection of any building within the municipality,—

(a) the materials to be used and method of construction to be adopted as regards external and party walls, roofs, floors, fire-places and chimneys ;

(b) the position of fire-places, chimneys, sewers, privies and cess-pools ;

(c) the space to be left about the building to secure the free circulation of air and facilitate scavenging and for the prevention of fire ;

(d) the ventilation and drainage ;

(e) the height and slope of the roof above the uppermost floor upon which human beings are to live or cooking operations are to be carried on ;

(f) the number and height above the ground, or above the next lower storey, of the storeys of which the building may consist ;

(g) the level and width of the foundation, the level of the lowest floor or plinth and the stability of the structure ; and

(h) the means to be provided for egress from the building in case of fire ;

(2) If in and during the erection or re-erection of any building any bye-law made under this section is contravened, the committee may, by notice in writing to be delivered within a reasonable time, require the building to be within the space of thirty days demolished or so altered as it may deem necessary :

The Burma Municipal Bill, 1896, like the Bengal Municipalities Bill, 1872, is a model measure, and takes a wide survey of taxes and improvements for the present and the future. We do not know how it will be received in Burma. The Bengal Bill had evoked much opposition, and, though passed by the Bengal Legislative Council, been vetoed by Lord Northbrook. When Mr. Woodburn moved for leave to introduce his Bill, Lord Egin, probably unnerved by the comprehensiveness of the measure, was not for passing it at Simla, and remarked "I understand that the intention of the Hon'ble Member is that the Bill should now only be introduced and published, and should not be taken into consideration till the Council meets in Calcutta."

THE Chapter of Taxes of the Burma Bill is inexhaustible :—

(A.) with the previous sanction of the Local Government,—

"(a) a tax on buildings and land not exceeding ten per centum of the annual value of such buildings and lands ;

(b) a tax on lands covered by buildings at a rate not exceeding three pias per square foot per annum ; or, if the lands are covered by buildings of two or more storeys, at a rate not exceeding four pias per square foot per annum ;

(c) a tax on lands not covered by buildings at a rate not exceeding ten ruppees per acre per annum ;

(d) a tax on buildings according to the length of street frontage

occupied by such buildings at rates not exceeding the (progressive rates specified in a schedule ;)

(e) a tax on households or families at a rate not exceeding thirty per centum per annum on the amount of the thatamedata-tax assessed upon each household or family ;

(f) a tax, not exceeding five rupees per quarter, on every vehicle, boat, animal used for driving, riding, draught or burden, or dog, kept within the municipality or any part thereof ;

(g) a tax on private markets at a rate not exceeding five per centum of the net annual profits derived by the owners therefrom ;

(h) a toll, not exceeding eight annas, on every vehicle and animal, used as aforesaid, entering the municipality and not liable to taxation under clause (f) :

Provided that any person may compound for exemption from all tolls leviable in respect of any vehicle or animal under this clause by paying the tax which would have been leviable in respect thereof under clause (f) if the same had been kept within the municipality ;

(B.) with the previous sanction of the Local Government and the Governor General in Council, any other tax.

(2) Only one of the taxes mentioned in clauses (a), (b), (c) and (d) of sub-section (1) shall be imposed in respect of the same property.

(3) In this section 'annual value' means the gross annual rent for which buildings and lands liable to taxation may reasonably be expected to let, and, in the case of houses, may be expected to let unfurnished."

Over and above these,

A Water-tax, a Lighting-tax, a Scavenging-tax and a Latrine-tax.

No limit is fixed for these taxes. There is only a general direction that no more is to be recovered than is necessary for the purposes of the taxes.

NOTES & LEADERETTES,

OUR OWN NEWS

&

THE WEEK'S TELEGRAMS IN BRIEF, WITH OCCASIONAL COMMENTS.

SIR Matthew White Ridley has been commanded by the Queen to intimate her desire that no celebration shall take place until she has actually reigned sixty years. The 60th year began on June 20. The Jubilee of her reign was held after completion of the 50th year.

THE Tsar and Tsarina have settled on a visit to Vienna at the end of August, and thence to Breslau, where they will meet the Emperor William. They will afterwards visit Darmstadt, Balmoral and Paris, where they will stay a week. The Parisians are delighted at the idea of the visit.

GENERAL Carrington reports that, owing to recent reverses, the Matabele are inclined to make peace. Fuller accounts of Colonel Plumer's action state that it lasted seven hours, and that Captain Beresford and the Mounted Infantry and Maxim, which he commanded, were at one time completely surrounded by the enemy. Colonel Plumer then sent reinforcements, which routed the Matabele, who lost 300 men. Colonel Alderson reports that on the 8th instant his column carried Mkonis Kraal at the point of the bayonet after an hour and a half's fighting. The enemy lost two hundred killed, and many wounded. Captain Haynes, of the Engineers, and two privates were killed, and four wounded on the British side. This opens the road between Salisbury and Umtali. Colonel Plumer's and other isolated actions have completely cowed the Matabele, and the Impis in the Matoppo Hills are dispersing, whilst many are disposed to surrender.

NEGOTIATIONS between the Powers in regard to Crete have so far been without result, as they are unable to agree to any practical course. Greece, in reply to the renewed urging against the despatch of arms and volunteers to Crete, states that she is doing her utmost, but that the people are inflamed with the news of the recent massacres. During a debate in the House of Commons, Mr. Curzon said that Crete was a perfect powder magazine. He recognised the importance of preventing the importation of arms and men there, but said that Great Britain was unable to give the Sultan the assistance of British fleet without the guarantees of a better government in the island. He still hoped, however, that the contending parties would be reconciled, and that peace would be restored. The Russian press

condemns the attacks of the German press on Lord Salisbury for declining to take part in the blockade of the island, which, it says, would be futile, unless applied equally against the Turks and Christians.

The report current at Athens of the butchery of twenty-five Christians and the burning alive of a priest in Crete has been confirmed. How? The ghastly tragedy is said to have taken place at the monastery of Anapolis.

The insurgent leaders in Crete have dissolved the Reform Committee formed by the revolutionary Government to promote union with Greece.

THE eclipse of the sun was obscured by clouds at the European and Japanese stations.

AN Italian cruiser has seized a Dutch steamer, the *Doelwyk*, off the coast of the Erythraea, with a cargo of rifles and ammunition on board, ostensibly bound to Karachi.

INTENSE heat prevails at New York. One hundred and twenty deaths have taken place from sunstroke and heat apoplexy in five days.

THE Irish Land Bill passed through Committee in the House of Lords. It is understood that the opposition was broken owing to Lord Salisbury privately threatening to reconsider his position if again defeated on an important amendment. The House of Commons has accepted the minor amendments and disagreed on others.

THE Commons have appointed a Committee of Enquiry into the rules of the Chartered Company, and the Jameson Raid. The Committee will consist of fifteen members, including Mr. Labouchere.

ADVICES from Madagascar state that complete anarchy exists outside the French lines. The country is devastated by marauders.

THE Mission organized by the Blackburn Chamber of Commerce to develop the cotton trade with China, sails on the 22nd instant *via* Vancouver, and will occupy three years.

LORD Wolseley, who was interviewed by Reuter's representative, said he entertained the highest opinion of the fighting qualities and efficiency of the Indian Army, and that, moreover, when he published his views some years ago, he praised it in the highest terms, stating that English and Indian Cavalry combined could easily ride over hordes of Cossacks. This opinion, he said, he still held, and he believed that for the purposes for which it existed the Indian Army was perfect as it could be. The extracts from his evidence before the Welby commission, which had been published in the press, were, he said, misleading.

Lord Wolseley, in presenting the prizes at Shoeburyness, said he thought it would be an advantage if the magnificent Army of India could be represented on such an occasion.

LORD George Hamilton, in the House of Commons, replying to a question by Mr. Barnes regarding the proposed amending of the Bengal Tenancy Act, and asking for a return of the correspondence on the subject, promised an immediate reference to the Government of India and assured the House that the objections of the landlords and tenants to the proposed amendments Act, will receive the careful consideration of the Government of India. Replying to Sir William Wedderburn, he said that he could not assent to the suggestion to appoint a select committee annually to report to the House upon Indian accounts, as such a committee would seriously interfere with the administrative work of the Government of India, and would moreover be expensive.

MR. Balfour, replying to several questions in the House of Commons, said that the gravity of the situation concerning contagious diseases in India was undoubted, and that as there was a dispute whether and how far it was due to the recent legislation, Government would consider the propriety of an enquiry to decide the controversy.

IN the House of Commons, on Aug. 13, the Secretary of State for India presented the Indian Budget. In doing so he eulogised the frugality and excellent financial control exercised by the Indian Government. He claimed that the adjustment of the cotton duties had placed the industries concerned on a footing of perfect equality. He endorsed Sir Henry Brackenbury's testimony in regard to the efficiency of the Indian Army, and said that the India Council would not have agreed to the increasing of its reserve without the knowledge that the Native Army of India was fit to go anywhere and to meet any troops in the world (cheers).

Any remission of taxation was, he said, impossible owing to the fluctuations of exchange, and the reserve depending upon indirect taxation. The closing of the Indian Mints was an artificial makeshift, but it had achieved the aims which the promoters had in view. He trusted that the delimitation of the frontiers would avert further expenses on frontier expeditions. He declared that Indian railway policy was of a too piecemeal character. The proposed annual conference of the Indian railway officials would do much to remedy matters. His lordship urged the necessity of developing railways in Burma. In dwelling upon the increasing acerbity of attacks of the Native press against the British rule in India the Secretary of State pointed out the remarkable improvement effected in Burma under the British rule. The debate on the Indian Budget ended in a desultory discussion on various matters including the combining of Executive and Judicial offices, the cotton duties and railways. Lord G. Hamilton, replying to a question said that a change in the Executive and Judicial offices was a question which would involve great expense, but the Indian Government were gradually working in that direction. It was intended, he said, that all the money voted for railways should be spent this year, and the same rate of outlay would be maintained for the next few years. Sir W. Wedderburn moved for the appointment of a select committee annually for the purpose of examining Indian accounts. Sir Henry Fowler and Mr. Baunagri opposed the motion, which was ultimately rejected by 110 against 30.

THE Lords have adopted the amendments of the Commons to the Irish Land Bill and have passed the Uganda Railway Bill. Parliament was prorogued on Aug. 14.

DR. Nansen has returned to Norway, having, it is said, reached four degrees nearer the North Pole than any previous explorer.

THE death is announced of Sir John Millais.

THE Irish prisoners Daly, Devaney, Gallagher, and Whitehead have been released owing to ill-health.

LIEUTENANT-GENERAL Sir W. K. Elles, K.C.B., Commanding the Forces, Bengal, died at Naini-Tal, of cholera. It was an early morning attack, usually fatal. Doctors were called in at 9 and at 4 in the afternoon the patient was dead. Her Majesty, through her Equerry, has expressed to the Commander-in-Chief in India and her Army an India deep regret at the death. A command order by the Major General commanding the Forces in Bengal says that mourning will be worn by all the troops in the command, and flags halflined, for a period of 15 days that is until the 25th August inclusive.

THE heat this year in the Khyber has been excessive. Rain has not fallen for 3 months. The tanks are dry. In 25 days there have been 11 deaths from sunstroke, or one in every alternate day. In Cooh-Bihar, the drought continues. The Patna and neighbouring districts are suffering much from the same cause. The weather is unusual for August. Since last two weeks, there has been no rain; the heat is scorching, and there is apprehension of famine. Rain has fallen in the Punjab. The Madras, like the Bombay, Presidency has had excess of rain. The Coleroon, a branch of the Cauvery, overflowed its banks. The Krishna has washed away a tract of land. There was a lamentable boat accident on the river in which as many as 200 persons lost their lives. While it was still in high flood, a new boat with 200 men was launched at Valve in the Sattara district. In mid stream it was caught by the current and carried down the stream about

100 yards and was then upset, the river proving the grave of the 200 excepting 2 boatmen who safely reached the shore. On the whole, this year the monsoon visitation has been a little too severe in the peninsular area. Burma has shared a portion of the rainfall. Portions of the Burdwan and Hooghly districts in the Bengal Presidency are suffering from want of rain. The conversion of the Banka in the first into the Eden Canal has proved a boon in the present scarcity of water. The last two years, the villages on its banks suffered from drought and scanty harvest. This year, though the rainfall has not been sufficient, the villagers are enabled to irrigate their fields by the canal water. They resist the claim to sell the water and they have gained their point against Government in the first court. In most of the places where rain has not been plentiful, cholera has shewed itself.

There was another formation of a cyclonic curve, this week, at the head of the Bay. The wind travelled through Orissa and Chota Nagpur and the Central Provinces. The monsoon in the Bay area has caused rain in most parts of Bengal, in portions of Burma and Assam. There were scattered showers in the N.-W. P. and the Punjab. The breeze along the west coast of the Peninsula was of moderate force. The east and the central Peninsula and Rajpootana had some rainfall.

THE Viceroy starts on his autumn tour on the 2nd of November, and, after visiting Delhi, Ulwar, Ajmere, Oodjypore, Jeypore, Bikanir, Jodhpore, Baroda, Indore and Benares, will be in Calcutta at 9 P.M., on Thursday, the 10th of December.

THE Government of India have declined with thanks the offers of the service of their Imperial Service Corps by some of the Native States for the Snakin small war. What about the Vizianagram offer of a lakh of rupees towards the cost of the Indian Contingent?

THE telegram about the offer, by the Maharaja of Vizianagram, of a lakh of rupees towards the cost of the Indian contingent for the Snakin Expedition, is followed by the announcement that a suit has been filed, in the Madras High Court, for recovery of Rs. 23,000 from the Maharaja, for repairs done to his "Admiralty House" at Atyar. This is a mischievous piece of news, intended evidently to discredit the Raja that he is not so liberal as he seems, or liberal at the expense of others or to the neglect of other more immediate claims on his charity and purse.

THE Lieutenant-Governor returned to Calcutta on Tuesday morning and left for Darjeeling the same afternoon. Sir Alexander Mackenzie leaves the Legislative Council to the members to deal with the amendment of the Bengal Municipal Act as they like. Either he has sufficient confidence in them, or he will exercise his full right of consenting or not consenting to the Bill when passed by the Council. He, however, presided at a meeting of the Countess of Dufferin Fund, Bengal Branch, held at Belvedere, to consider a proposal to dispose of the Victoria Hospital and to purchase a site for a new one. The negotiations not being complete, no definite conclusion was arrived at. At that meeting an announcement was made of a donation of Rs. 25,000 by the Humble Nawab Syed Ameer Hossein on behalf of Raja Pudmanand Singh.

THE *Behar Herald* and the *Indian Chronicle* published at Bankipore says: "The action of the District Board and Municipality of Patna in contributing Rs. 15,000 each towards the expenditure incurred on the occasion of His Excellency the Viceroy's visit to this town has been pronounced by the Local Government to have been irregular." Does the action of the Local Government end with this expression of disapproval? If the money has been irregularly or illegally spent, it should be refunded. The Presidency Commissioner had objected to municipal expenditure on addresses to the Viceroy at the Queen's Jubilee. And now the Lieutenant-Governor has entered his protest against any expenditure in honour of the Viceroy. But are Bengal Municipalities precluded, by law, from honouring the Queen, the Viceroy or other distinguished personages? The Calcutta Act allows "contribution to the cost incurred on the occasion of any public ceremony or entertainment in Calcutta" with "the previous sanction of the Local Government." Supposing the sanction of the Local Government were asked by the Patna District and Municipal Boards for the expenditure, would it have been refused?

THE Chairman of the Calcutta Corporation has applied for six months' leave from the 1st day of September next. During his absence, the Vice-Chairman will also act as Chairman.

THE High Court—Justices Messrs. O'Kinealy and Binerjee—have, on appeal, commuted to transportation for life the sentence of death passed by the Sessions Judge of Maimensing, on one Gonesh Sheik, for killing his wife and one of his children, by smashing their heads with a thick piece of bamboo. He had also aimed the murderous weapon at his younger child, when the brother of the murderer intervened. Gonesh had confessed to the Police that having discovered that his wife had an intrigue he had gone mad and was driven to desperation. The Judicial Committee of the Privy Council may have discovered that a wife's unchastity in India is no bar to her succeeding to her husband's property. The feeling, however, against such unfaithfulness is too strong in the country, and the High Court Judges, in the present case, recognize the feeling. Their order is :

"This is an appeal against the order of the Judge of Maimensing, who convicted the appellant of murder and sentenced him to death. There can be no doubt about the propriety of the conviction. What happened at the time, and the statement of the accused before the Magistrate, would tend to show that he knew the consequences of what he was doing. Then arises a question, on which we have had some difficulty, as to whether the extreme penalty of the law should be inflicted on this man, or whether the ends of justice would be met by the other punishment allowed, *viz.*, transportation for life. It appears to us quite clear that at the time the murder was committed, the accused was acting under a strong delusion in regard to the unfaithfulness of his wife. The evidence of his brother, the statement to the chowkidar, and even the subsequent statement to the Magistrate, show that clearly there is no doubt that under a feeling of jealousy he committed the murder. Under these circumstances we think it is not necessary to sentence the accused to the extreme penalty of the law. We set aside the sentence of death, and direct that the accused be transported for life, under section 367, I. P. C."

IN the Police Court, a Criminal Bench sentenced to 6 months' rigorous imprisonment a Mahomedan, for removing, without permission, from an eating house in Wellesley Street, a frying pan with a dozen chops, eating the chops and restoring the pan. He was arrested in the last act. The Magistrates made no allowance for the hunger that had prompted the theft, as it does not appear that the thief was an old offender. Six months' hard labour for a dozen chops or a fortnight's for each chop is too severe a sentence, unless the Magistrates sent him to jail for free board and lodging. Begging too for alms or bread is an offence and the Chief Magistrate sentenced an old Mahomedan for begging in the New Market to four days' simple imprisonment. There is a workhouse for European vagrants, but for other beggars—the jail is their home.

THE *Hitabadi* defamation case was taken up by the Chief Magistrate on Tuesday to be adjourned to Thursday, the 20th. Mr. T. Palit with Mr. H. D. Bose, instructed by Babu Bhupendra Nath Bose, appeared for the prosecutor Babu Heramba Chandra Maitra, and Mr. B. Chakravarti for the defence. The *Amrita Bazar Patrika* explains that "the article alleged to be defamatory is a piece of poetry which was published in the issue of the *Hitabadi* of the 24th July last. The poem in question consists of eleven stanzas; and the case for the prosecution is that under the pretext of addressing Kusum (flower) which is the name of the wife of the complainant, it refers to complainant's wife and makes innuendoes against her character. One stanza, as translated by a High Court translator, runs thus : 'Is the bee the only lover of the Kusum? To-day on Ganapati's neck; to-morrow at Vishnu's feet; on another day on another god is her stay. What manners and morals are these—what conduct!' The next stanza runs as follows : 'At every step do I see the misconduct of the flower. To-day the object of Upendra's enjoyment; to-morrow fit for Heramba. Seeing (this) whose ideas are not tainted? I know flowers are utterly worthless.'" The defence relies upon the various meanings of the several Bengali words in the original, and therefore asked the Magistrate to have with him on the Bench one or two Bengali Magistrates to assist him at the enquiry. There was opposition from the other side, but Mr. Palit had no objection to the proposal if he knew the names of the joint Bengali Magistrates. Mr. Pearson, at the outset, had informed the parties that this was a *fit* case for the jury, and that he would send it up, a *prima facie* case being made out. Mr. Pearson accepting the suggestion of the defence, there was a private consultation between the Magistrate and the two counsel. When the Court sat again, the

case was adjourned and it was known that Baboo Nobin Chand Boral, an attorney of the High Court and of the directorate of the journal when it was started before it passed to the present proprietors, would be the assisting or interpreting Magistrate. The prosecution is believed to be an outcome of the Krishnagar or the last Bengal Provincial Conference, an under National Congress, and as our Congressists have kept many matters out of court, it is a wonder why the present still hangs fire.

THE Rangoon Chamber of Commerce have memorialised the Viceroy for a reform in the law touching settlement of disputes by arbitration otherwise than in the course of a suit. The existing statute law on the subject is contained in Section 28, Exceptions I and II, of the Indian Contract Act, Section 21 of the Specific Relief Act, and Sections 523, 524 and 525 of the Civil Procedure Code. There are two classes of agreements to submit to arbitration. The first, dealt with in Section 28, Exception I, of the Contract Act, is about future disputes, and the second, about disputes that have already arisen. Section 21 of the Specific Relief Act enacts that "no contract to refer a controversy to arbitration can be specifically enforced, but if any person who has made such a contract, and has refused to perform it, sues in respect of any subject which he has contracted to refer, the existence of such contract shall bar the suit." This negative provision, the Chamber observe, is practically the only penalty for the breach of such a contract. Then, again, the only agreements which can be filed under Section 523 of the Civil Procedure Code are those which relate to disputes that have already arisen and not to disputes that may arise in future. Most of the contracts relating to purchase and sale of goods contain a clause to the effect that if disputes arise about the quality of the goods, or their quantity or measure, or other matters of a similar kind, they shall be referred to the arbitration of persons named in the contract of sale or to be nominated by the Local Chamber of Commerce. A dishonest trader, buying under such a contract, may, under the present law, make the clause about arbitration a dead-letter. He has only to raise an objection, however groundless, to the goods. The seller is not able to exact adherence to the agreement. He may institute a suit, but the Civil Courts, under the Specific Relief Act, are incompetent to order specific performance of the agreement to arbitration. It is the interest of the dishonest buyer to gain time and otherwise hamper the seller. He is abundantly able to do this by remaining quiet. The seller has to fight out the matter in a regular suit governed by the ordinary procedure which is very costly and which involves a lot of trouble. The Rangoon Chamber accordingly pray for an amendment of the existing law upon the same terms as those of Statute 52 and 53, Vict. cap. 49. The other Chambers of Commerce have been consulted by Government as to the desirability of such amendment. It goes without saying that the Rangoon Chamber have spotted a real defect in the law. The Chamber's prayer, however, does not go far enough. Section 526 of the Civil Procedure Code enacts that "if no ground, such as is mentioned or referred to in Section 520 or 521, be shown against the award, the Court shall order it to be filed, and such award shall then take effect as an award made under the provisions of this chapter." The meaning of this is that if objections be taken against the award, the party desiring to file it shall have to institute a regular suit involving expenditure of both money and time. There should be a provision to the effect that if objection

The Indian Association for the Cultivation of Science.

Lectures by Babu Ram Chandra Datta, F.C.S., Monday, the 17th Inst., at 4-15 P.M. *Subject*: Occurrence, Sources, and Preparation of Hydrogen. Tuesday, the 18th Inst., at 4-15 P.M. *Subject*: Physical and Chemical properties of Hydrogen. Thursday, the 20th Inst., at 4-15 P.M. *Subject*: Occurrence, Sources, Preparation and properties of Oxygen.

Lecture by Babu Rajendra Nath Chatterjee, M.A., Wednesday, the 19th Inst., at 5-30 P.M. *Subject*: The Principle of Archimedes—Specific gravity, how to determine it.

Lecture by Dr. D. N. Chatterjee, B.A., M.B., C.M., Thursday, the 20th Inst., at 5-30 P.M. *Subjects*: The Protozoa, Coelenterata.

Lecture by Dr. Mahendra Lal Sircar, Friday, the 21st Inst., at 7 P.M. *Subject*: Expansion by Heat in detail. Co-efficients of Expansion of Liquids and Gases.

Lecture by Babu Girish Chandra Bose, M.A., F.C.S., M.R.A.S., &c. Saturday, the 22nd Inst., at 5-30 P.M., *Subject*: Morphology—Inflorescence.

Lecture by Dr. Niranjan Sarkar, M.A., M.D., Saturday, the 22nd Inst., at 6-30 P.M., *Subject*: Histology—Epithelium, Endothelium.

MAHENDRA LAL SIRCAR, M.D.,
Honorary Secretary.

Aug. 15, 1896.

be taken, the Court shall have power to deal with it. As a matter of fact, the absence of such a direction has made the provisions about private arbitration entirely nugatory in the case of contested awards. The repeal only of Section 21 of the Specific Relief Act will not afford adequate relief.

REIS & RAYYET.

Saturday, August 15, 1896.

THE RETIRING CHIEF JUSTICE.

SIR Comer Petheram is about to retire from the Chief Justiceship of the Bengal High Court. He leaves India with the best wishes of all who know anything about him. The bar give him a dinner and the public in general hold a meeting in his honour. In that he is more fortunate than his predecessors in office. Though not as brilliant, as hard-working, and as jealous of the encroachments of Government on the powers of his Court as Sir Barnes Peacock, Sir Comer Petheram, like Sir Richard Couch, looked with an equal eye on all. Without enhancing the prestige of the Court, he gave proofs of a fearless independence in the discharge of his duties. In a country where it cannot be said that all is not race, where its people are continually struggling for superior political existence and are easily led into the belief, with unequal laws, of unequal administration of justice, it is no small praise to say that he takes no note of racial distinctions. A British Judge is always expected to be a visible impersonation of the blind goddess that holds the scales evenly, regardless of consequences. Sir Comer Petheram fully came up to this almost universal notion of judicial integrity and impartiality. He brought himself to prominent notice, while he was Chief Justice of the Allahabad High Court, in what is known as the Laidman-Hearsey case. His severe but just denunciation of Mr. Laidman's conduct gave offence to the Government of the N.-W. Provinces. With the character of a civilian of Mr. Laidman's standing judicially damaged, British power, it was gravely argued, would come to an abrupt end in the N.-W. Provinces, if not all India. Sir Comer Petheram, although he applied nothing but the Indian Penal Code and the Indian Criminal Procedure Code and the principles embodied in the Indian Evidence Act, earned yet the reputation of a judicial firebrand whose love for the technicalities of Westminster Hall was dangerous to the time-honoured ways of British bureaucracy in India. It never struck those sapient administrators and journalists that a vindication of the majesty of the Law as against offenders in power would strengthen British rule in India more effectively than British bayonets. Sir Comer Petheram came to Bengal with a reputation. His appointment in the Bengal High Court was hailed with delight by all who had heard of him. Within a few days after taking his seat he endeavoured to introduce a wholesome reform in the delivery of judgments. Judges in India seldom pronounce judgment on the conclusion of a trial, when all the points of fact and law involved and the arguments of Counsel are fresh in their mind. Instead, they allow a considerable time to elapse and then a written judgment is delivered. This is opposed to the practice of Judges in England. It very often happens that Indian Judges do not deliver judgments till they forget everything about the case. In this, it is said, there is considerable merit. Counsel seek to mystify

and mislead. Accordingly, our Judges require time before they can regain equanimity of mind. The impressions made by the eloquence of Counsel should be allowed to wear off before there can be thorough judicial impartiality. During the preliminary proceedings relating to the impeachment of Warren Hastings, after the magnificent oration of Sheridan on the Begums of Oudh, the friends of Hastings moved that as the House was under the spell of the orator, the division on the motion should be postponed to the next sitting. This was allowed by Burke and others without any opposition. Sir Comer Petheram, however, with that common sense which has always distinguished him, did not allow much weight to this argument. Forensic eloquence in India has become a thing of the past. The most successful Counsel in the Indian High Courts confine themselves to plain statements of fact and expositions of law without any attempt at eloquence. Fluency is all that they aim at and their highest effort is the quoting of precedents. As a matter of fact, Indian Judges, however soft-hearted, are not exposed to the risk of being carried away by the eloquence of the bar. The reason, therefore, of their not delivering judgments immediately is inability or want of practice. All Judges do not come up to the standard of Sir Barnes Peacock, Sir John Budd Phear, and Sir Charles Pontifex. Sir Comer Petheram's endeavour did not prove successful, like Lord Dufferin's to induce the august members of the Supreme Legislative Council of India to speak their speeches instead of reading them.

Among important cases that Sir Comer Petheram has disposed of in the Bengal High Court, the people are not likely to forget three. The first is the defamation case against the *Pioneer* brought by the late lamented Captain A. W. Hearsey. Persuaded that he would not have justice in any of the courts of the N.-W. Provinces, the Captain came to Calcutta, intent to take advantage of the very unsatisfactory state of the law relating to publication. Here, too, he experienced no small difficulty. In the Police Court, he had generously set free the printer and publisher and agreed to proceed against the editor only. When the matter, after some preliminary difficulties, went up finally to the High Court, the Judge who presided at the Sessions raised the plea that there was no proof of publication against the editor and directed the jury to return a verdict of not guilty.

Captain Hearsey, failing in Calcutta, but nothing daunted, tried Howrah. The Magistrate proved to him no better than the Judge of the High Court. The redoubtable hero made a third attempt. This time it was the metropolitan Police Court again. The offending paragraph was brought home to Mr. Allen, the managing proprietor of the Allahabad journal. The case was committed to the Sessions, and Sir Comer Petheram, who must have been moved to see how a subject of her Majesty was being baffled in his quest of justice, resolved to preside himself. It had become a scandal, for which the head of the judicial administration in Bengal could not but be responsible. The prisoner pleaded guilty and the Chief Justice ordered a heavy fine of Rs. 3,000, possibly to atone for the delay in the final order and the harassment the complainant had gone through.

The second case is the State prosecution of the *Bangabashi* newspaper. This Bengali hebdomadal had lost its head over the Age of Consent Bill,

and acted in a very unbecoming way by publishing, week after week, virulent attacks on not only the Government of the country but also respectable private individuals who felt bound to support that legislative proposal. Some of the effusions were characterised by considerable silliness. Sir Charles Elliott, moved by the desire of reading a lesson to the vernacular press, was instrumental in bringing about a criminal prosecution of the journal. The charge was nothing less than exciting disaffection against the Government of the country. The case was heard by the Chief Justice with the aid of a Special Jury. Mr. Jackson, who was Counsel for the defence, displayed great ability and citing passage after passage from Anglo-Indian journals published during a period of great excitement, showed that the Bengali paper had not indulged in greater license. The Chief Justice's charge to the jury, while laying down the law in a manner highly favourable to the cause of authority, was, in other respects, a very fair one and almost a model of what a judicial charge should be on such grave occasions. He refrained from enlightening the jurors as to what his own opinion was regarding the articles complained of. It is true the jurors are not bound to accept the Judge's opinion; still there can be no doubt that they are considerably swayed by it in returning their verdict. Few jurors have the courage to assert themselves against the presiding Judge. The jury in the "Bangabashi" trial were not unanimous. The Chief Justice did not enquire what the verdict was that had been arrived at by the majority, and declining to act upon a verdict that was not unanimous, dismissed the jury and ordered the case to be brought up as a *remanet* at the next Sessions. The accused got time for deliberation. The Government which had worked itself up to fever-heat, cooled down. Peace-makers appeared on the scene. The prosecuted journal apologised, admitting its peccancy. The apology was accepted. The accused escaped further trouble. It is said that there was no law under which the Chief Justice could refuse to accept the verdict or act upon it. Outside the Presidency towns the law empowers the Judge to reject a verdict if he does not agree with it. He should, in that case, make a reference to the High Court which is to deal with it as an appeal. The procedure governing the trial of criminal cases before the High Court Sessions is different. The presiding Judge may, if he disagrees with the jury, take up the case again, with a new jury. Before, however, this is done, the verdict must be ascertained, for how can a Judge differ from a verdict unless he knows what it is? In the High Court Sessions, the number of jurors, instead of being twelve, need only be nine. Then, again, unanimity is not at all necessary. The verdict of the majority is to be looked upon as the verdict of the jury. Sir Comer Petheram, by refusing to ascertain what the verdict of the majority was, and by ordering a fresh trial, simply because of the absence of unanimity among the jurors, became instrumental in saving the accused, although his action was not, perhaps, in strict accordance with the established procedure. In serious cases, Judges, in many civilised countries, decline to act upon verdicts that are not unanimous. Sir Comer probably acted in conformity with the traditions of Westminster Hall without enquiring too curiously into the Indian law.

We come now to the third, *viz.*, the Assensole outrage case, as it has come to be known. A Euro-

pean rough committed a diabolical assault upon a poor native woman. The case came up before a Division Bench of the High Court. The two Judges that composed it differed in opinion, the native Judge maintaining that the evidence was sufficient to justify a conviction. Sir Comer Petheram, after a careful review of the evidence, felt bound to support his native colleague. Thereupon the miscreant received his dues.

Few persons possess a kinder heart than Sir Comer Petheram. In this respect, he reminds us of the late Sir Henry Harrison. Like Sir Henry, Sir Comer believes that bread is the highest necessity of life, and that no one should be deprived of bread on light grounds. Among several instances that we know, we shall mention one that is typical of the kindness that frequently tempered Sir Comer's justice. A poor clerk in the Accounts Branch of the Original Side, guilty of a grave offence against office discipline, was reported for dismissal. The Chief Justice, carefully considering the matter, and taking note of the fact that it was the man's first offence, ordered degradation with mulct of pay for six months, after which a report was to be submitted of his conduct. To this day, though the order is dated four years back, no such report has been made, with the result that the poor fellow is still suffering the mulct,—a telling commentary on the difference of spirit between the Chief Justice and the highly pampered native officer whose duty it was to obey the order.

OUR LONDON LETTER.

July 24.

Imperial Parliament. On Friday evening, the 17th instant, Lord Salisbury, as Foreign Secretary, took an important departure in the House of Lords. Hitherto, papers dealing with current controversial questions between one or more of the great Powers, have been placed on the tables of both Houses of Parliament in so dilatory a fashion, that, when published, they have lost much of their real value. But, on Friday, Lord Salisbury, with the consent of the Washington Government, laid on the table a most important correspondence that has been carried on for some months between Mr. Secretary Olney, and our own Foreign Office. Lord Salisbury has throughout kept two points quite distant—

- (a.) Our boundary misunderstanding with Venezuela and
- (b.) The general question of automatic arbitration on all political differences that may arise between the United States and ourselves.

On the former point Lord Salisbury seems apparently to be willing to allow the President of the United States to act as arbitrator between Great Britain and Venezuela, always excepting the territory that has been so long a part of Great Britain's western possessions, as to have led settlers there to acquire land and claim *de facto* all the privileges of British citizens. In this contention Lord Salisbury is assured of the hearty support of his fellow countrymen, whose views are not circumscribed by the narrow limits of "Little Englandism."

In regard to the second point, Lord Salisbury wishes to have some Court of Appeal nominated in equal numbers by the two Governments, so as to ensure a quiet, deliberate, judicial decision, and not one dictated by political passion, prejudice or panic. For example, what justice could we have expected from the Government of the United States during the whirlwind of passion produced by President Cleveland's attitude in December last—an attitude, be it remembered, that owed its inception, not from any desire to hold an even balance between Great Britain and Venezuela, but dictated solely by the exigencies of party conflict in the United States? Whatever may be the final issue of this correspondence, every one may rejoice that it has paved the way for a better and more friendly and courteous understanding between President Cleveland and Lord Salisbury.

DEAFNESS COMPLETELY CURED! Any person suffering from Deafness, Noises in the Head, &c., may learn of a new, simple treatment, which is proving very successful in completely curing cases of all kinds. Full particulars, including many unsolicited testimonials and newspaper press notices, will be sent post free on application. The system is, without doubt, the most successful ever brought before the public. Address, Aural Specialist, Albany Buildings, 39, Victoria Street, Westminster, London, S. W.

The Irish Land Bill, after many perils, appears at last to have reached the shore, and will ere long be sent up to the House of Lords. On the day of the royal wedding, the Government was defeated, on one of the clauses, by 16 votes in a House of 170 members. It was a snatch division due to the absence of so many members on account of the wedding. Later in the afternoon, in a House of over 300 members, Government had a majority of over 250. So if Mr. Balfour cares to replace the defeated clause he can easily do so, at the "report" stage, but possibly he may not deem it of sufficient importance.

The Royal Wedding passed off with great *eclat* on Wednesday. Tuesday had been the hottest day of this very hot summer. The sun beat down on our pavements after the manner of an Indian May. Fortunately, the wind changed during the night, and Wednesday was delightfully cool and cloudy without any rain. All passed off well, and the demonstrations of loyalty to our gracious Sovereign and the father and mother of the bride were enthusiastic beyond all precedent, if we except the jubilee day.

Jamson's Trial is proceeding apace before the Lord Chief Justice of England with Baron Pollock and Mr. Justice Hawkins as colleagues. Sir Edward Clarke's preliminary appeal to have the "indictment quashed," on some very narrow, technical grounds, was overruled by the unanimous decision of the Judges and the story of the raid is being told over again *ad nauseam* just as it was before Sir John Bridge, the Chief Magistrate of London.

The Maharaja of Jhullawar. The case of this unfortunate Raja was brought before the House of Commons, not so much out of sympathy for him, as for the opportunity it afforded two "reptile" Radicals of wasting precious time that would otherwise have been devoted to the Irish Land Bill. One of the greatest mercies vouchsafed by the last general election was the relegation to private life of the notorious Temperance agitator, W. S. Caine. A pretentious plutocrat with nothing to recommend him but his money-bags, he sought to make himself an authority on India by spending the winter in luxurious travel and abusing the missionaries as only quasi-devout plutocrats can. But unfortunately though the electors of Bradford spurned him, he has a son-in-law in the House, by name Herbert Roberts. To him Caine committed the welcome task of wasting valuable time at this late period of the session, and holding up the Government of India to contempt, because of its assumed indifference to the claims of justice and mercy. Mr. Roberts was seconded by Sir W. Wedderburn, who ought to have known better, and they secured the invaluable support of Dr. Clark. It turned out that not one of the three had studied the Blue Book containing the papers in the case. As Lord George Hamilton in his reply well said, "Here are three gentlemen who propose to upset the decision of the Government of India, and they do not know the elementary facts of the case." Could political malice and malignity go further?

I am aware there is a difference of opinion about this case on your side, but, assuming the accuracy of the Secretary of State's facts, two points seem clear: the young man should never have been allowed to ascend the *musnud*, and he ought long ago to have been sent to the right about. But so long as poor human nature is what it is, you will always find men of the stamp of Roberts and Wedderburn keen to waste Government time in the House of Commons, so long as their political leaders are in opposition.

The new Indian loan has been a marked success, although it would appear the financial experts had anticipated even greater results.

The Burma Railway is a gigantic undertaking in the hands of the leviathans of finance, the Messrs. Rothschild. The Board is a strong one, but I imagine investors would have been pleased to have everything left in the hands of the Rothschilds, only they for their own protection will be glad to have men of Indian experience to fall back upon for advice and guidance.

Cuba and Crete divide the interest of the East and West. Nothing but international jealousies prevent Great Britain interfering with a strong hand. But were Lord Salisbury to put his foot down, France and Russia would immediately accept it as a *casus belli*. Meanwhile blood flows. Christians struggle to strangle the Mahomedan soldiery, and the latter retaliate as only Turkish mercenaries can.

In Crete, there is still desultory fighting without any permanent gain to either side.

INDIAN TROOPS IN THE SOUDAN.

To the Editor of "The Liberty Review."

SIR,—I had to shorten my observations yesterday owing to the approaching hour for the division, and I am glad that I did so, as it allowed more time for Lord Welby's very useful speech. Will you allow me to complete what I wished to say?

Only two arguments have been advanced in favour of a payment by India. First, precedents; but the precedents are bad, because they originated before the Act of 1858, and at a time when the Government of the day thought it right to get as much as possible from the Court of Directors, and before the existence of the feel-

ing that the people of India are our fellow subjects. This state of opinion was shown when, in 1857, the late Lord Elgin turned aside on his way to China to assist Lord Canning with the troops he was taking with him, and received much praise for so doing. Now he would have received no praise, but much blame, if he had shown any hesitation in assisting the Viceroy. Since 1883 circumstances had altered very much; there had been a great change in public feeling with regard to increasing the burdens on India, and several Secretaries of State had pronounced against action such as that now proposed; the Duke of Argyll had spoken with perhaps more force than the others, and Lord Northbrook's speech against the increase of Home Charges in 1893 ought to have prevented him from twitting Lord Kimberley with inconsistency. Since 1883-84 the financial position of India had become much worse: at that date the gross revenue of India was 71 millions of Rs.; in 1893-94 it had increased to 95 millions Rs. In no European country has there been during that period so large an augmentation of public burdens as in India. It is stated that the increase in the United Kingdom has been 14 per cent., in France 13 per cent., and in India 35 per cent. These figures are taken by the Poona Association from the Statesman's Year Book.

During the past twelve years the Famine Insurance grants have been suspended five times and twice curtailed; the consumption of salt has diminished; the revenue from opium has decreased; administrative reforms have been postponed; and useful expenditure, such as for education, curtailed; yet in 1893-94 the Government granted compensation for loss by exchange to the European services, whose salaries are still on the old footing previous to the overland route, and more frequent furloughs. These figures justify the resistance of the Indian Government and the unanimous opposition of the English press, and the desire expressed by working men that England should not be guilty of this meanness.

With regard to the precedents quoted, if most were furnished by the Liberal party, that would be because the Liberals have been longer in power than the Conservatives. The precedent of Abyssinia was the worst, because India was not concerned whether King Menelik kept his missionary prisoners or not; and Sir Stafford Northcote, candidly or cynically, excused it on the ground of keeping the Bombay army in wind. Lord George Hamilton said of this precedent that there had been a risk in sending these troops away from India, because it was only ten years after the Mutiny. There is a fallacy in that supposition, since, ten years after the Mutiny, its failure and suppression were still fresh in men's minds in India, while every year that elapses since 1857 would dim those recollections, and make it more possible for those who were discontented to think of another attempt. The precedent of 1885 was not a precedent, because the Indian Government was not consulted in time.

The second argument used by the supporters of the Resolution is that India has an interest in the Sudan expedition. This has not been proved, and the arguments for it are, as the *Times* says to-day, narrow and far-fetched. Before discussing the interest of India in the Sudan expedition, it would be necessary to establish that any one has an interest in that expedition, and that would be difficult. The Suez Canal and Egypt run no real danger from the people of the Sudan; the people of the Sudan bear no enmity to the Egyptians; their enmity is against the British occupation. It has been said that the principal motive for the expedition was to furnish an excuse for prolonging the occupation. Other reasons have been alleged, but they appear to be too futile to be worth repeating. If Egypt were restored to its own Government, Egyptian influence would gradually be re-established over the Sudan by peaceable means, and without bloodshed.

What the country would most wish to know is, who it is that has prevented the Government from giving up its intention in deference to the very generally-expressed wish of this country, and to avoid discontent, or, as some speakers have said, disaffection, in India. Nobody believes that Lord George Hamilton cares to maintain this policy; his boast on Wednesday of what he had done respecting the troops at Mombassa disproves it; and, if possible, it is very desirable to exonerate the Secretary of State for India. The same may be said of the Prime Minister.

The *Times* has hinted not obscurely that this must be due to some permanent clerk or clerks. Wreckers of ships have existed very recently; is it certain that the Government are not being misled in order to wreck their reputation, and discredit them at the next elections? However that may be, future discredit is certain.

There may be some persons who would deny that this extortion would produce discontent in India. I have met one such, a distinguished Indian civilian, who said they would not be discontented unless stirred up by Europeans. When Indian civilians speak of Europeans they usually mean indigo planters and interlopers who give trouble to the officials. In this case the Europeans are the Viceroy and his Council, and the majority of the rank-and-file of the officials. That they have not failed in their duty to India will allay rather than fan the discontent.—Your obedient servant,

STANLEY OF ALDERLEY.

July 17th, 1896.

Letters to the Editor.

DR. FITZEDWARD HALL'S PUBLICATIONS.

SIR,—I shall feel highly obliged if you or any of the learned readers of your paper kindly inform me through its medium where in India the following works of Dr. Fitzedward Hall are available for sale :—

- (1) (Dr. James R. Ballantyne's) Lectures on the Nyaya Philosophy, (Sanskrit and English. Revised edition, with a bibliographical preface.)
- (2) A Contribution towards an Index to the Bibliography of the Indian Philosophical Systems.
- (3) A Rational Refutation of the Hindu Philosophical Systems, (translated from the Hindi and Sanskrit.)
- (4) Benares, Ancient and Medieval. A Monograph.

M. SIVARAMAYYA.

Vizianagram, August 5, 1896.

* * We can give only the place and year of publication : (1) Benares, 1852 ; (2) Calcutta, 1859 ; (3) Calcutta, 1862 ; (4) Hertford, 1868.—Ed. R. & R.

APOLLO'S VENAL SON.

SIR,—My attention having been directed by the kindness of friends to a paragraph that appeared in a contemporary of yours, charging me with ignorance of the meaning of the expression "Apollo's venal son" as applied by Byron to Sir Walter Scott, permit me to reproduce, for the delectation of your readers, that gem of criticism and to reply to it.

"We read in a letter that appears in the columns of a contemporary : 'The great Sir Walter Scott himself was open to the charge of offering work after work to the public without careful revision. Apollo's venal son was the sobriquet he earned from Byron in his celebrated satire.' We are afraid the writer has missed the meaning of the phrase he quotes. 'Venal' never means 'careless,' 'hasty,' or 'slipshod,' and Byron did not mean that Scott omitted to subject his works to careful revision. 'Apollo's venal son' only means 'hireling bard,'—another phrase used in the same context. We do not, therefore, see the purpose of the quotation, especially as the writer goes on to say, 'Of all calumnies, this seemed to stick to him.' A calumny is an undesired reproach. If Byron penned a calumny, what can be its value as an instruction and a guidance?"

Johnson said to a guardian complaining of the little progress his boy had made in the school the former kept for a while,—“Sir, I can give your boy lessons. But I cannot give him a head.” To my critic also I must reply in a similar strain,—“Sir, I can only write, taking the utmost care to be perspicuous. I cannot give you brains to understand what I write.” Speaking of the slipshod method of work for which Mr. R. C. Dutt is distinguishing himself, I referred to Sir Walter Scott. I wanted to convey, as delicately as possible, the fact that Mr. Dutt's carelessness and haste would, in all likelihood, give a handle for the charge that he wrote for money. Look at my sentences, “The great Sir Walter Scott himself was open to the charge of giving work after work to the public without careful revision. ‘Apollo's venal son’ was the sobriquet he earned from Byron in his celebrated satire.” The two sentences are independent of each other. The statement embodied in the first is *not* referred to as the direct cause of that embodied in the second. There is a delicate insinuation which no reader of sense would possibly miss. As my critic, however, happens to be a logician who can never write a paragraph or short article without his ‘firstlies’ and ‘secondlies’ and ‘thirdlies’ and ‘fourthlies,’ &c., the sentences present an insurmountable difficulty to him. I know this class of men are at sea when confronted with what is called suggestive writing. Nor do they understand what is meant by delicacy of sentiment or statement. The omission to refer, in the case of Sir Walter Scott, to the love of lucre as his motive, prompted as it was by delicacy, for I was speaking of Mr. R. C. Dutt whom I love and honour, is to men of this description a grave fault of style. We have more Holoferneses and Fadladeens among us than we know of.

My critic's observations on my remark that “of all calumnies this seemed to stick to him,” show that beneath the lowest depth of obtuseness there is even a lower deep. “A calumny is an *undeserved* reproach. If Byron penned a calumny, what can be its value as an instruction and a guidance?” However undeserved, a calumny, repeated from mouth to mouth, makes the existence of the calumniated a misery. As my critic is believed to be making himself familiar with the Hindu Scriptures in his new zeal for orthodoxy (witness his vexation with Mr. M. M. Ghose for the latter's remark that Chaitanya had the qualities of a great statesman), may I cite the instance of the poor Solar prince Rama? None knew more certainly than Rama himself that the aspersions on the chastity of Sita for having accepted her, were calumnious. Yet he made himself and his noble wife miserable by banishing her into the woods. The Yadava hero, Krishna, was

above stealing the precious gem that had been worn by his uncle-in-law. Yet when the calumny was uttered by every mouth that he had murdered the wearer and appropriated the jewel, he was obliged to leave Dvarka, enter the deep woods, go down into the nether regions, and fight Jamvavat for recovering the lost treasure. Descending to secular history, did not calumny drive Byron himself, who affected an utter indifference to public opinion, from his native land and keep himself aloof from it for the remainder of his life? But I deem it an idle task to multiply examples. The fact is, the utmost confidence in one's own rectitude of purpose is no bar to the pain that well-directed shafts of calumny can and do inflict. In the case of Sir Walter Scott, the calumny uttered by Byron stuck to him. I was for warning my distinguished countryman that a similar fate might overtake him if he persisted in giving careless works to the public. An inordinate love of lucre would be imputed to him and that calumny would stick to him and pain him and his friends. So a calumny may have an educational value upon the conduct of even the best among us. I think I can now write Q. E. D., without which my critic would not allow anybody to make his bow to the public and retire.

S. C. SANYAL, M.A.

THEY WONDERED TO SEE HIM.

"I could not move a yard without help. I can now walk for miles."

There is certainly a very sharp contrast between these two statements. When we see a person who, because of illness, is unable to move a yard without help, we do not expect to meet him on the road and on foot miles from home, soon thereafter ; if indeed, we meet him at all. At least we should regard these extremes, considered as within the experience of the *samskara*, and enclosed within a comparatively brief period of time, as something to wonder at and ask questions about. And people *did* wonder at and inquire about it. Many said the circumstances recalled the age of miracles, supposed to have passed forever away. The facts (briefly set forth in a letter from the man himself) are as follows. We may add that Mr. Henry Jackson is a farmer, well known and respected in his district, and his case is familiar to neighbours and friends of his throughout the vicinity.

"In the early part of 1892," says Mr. Jackson, "I began to feel weak and ailing. I was low in spirits, and my bodily strength seemed to be leaving me. There was a bad and nauseous taste in my mouth, my appetite, which had always been good, failed until I had no real desire for food whatever, and after eating I had much pain at the chest and a fullness around the sides. My stomach always felt *burning hot*, and I had a gnawing pain at the pit of it.

"I remained in this general condition until August of the same year, when I was taken worse. My legs began to swell, and rheumatism set in all over me, more particularly in the hips and back. No local treatment had any effect upon it. It grew worse and worse, until I was no longer able to rise from my chair without assistance. In truth, I had no power over myself, and *could not move a yard without help*.

"I suffered so with *mere pain* that I could not lie in bed, and for *over twelve months I never had my clothes off*.

"During this time I was attended day and night, being literally unable to do anything of importance for myself. All the sleep I got was taken in naps and snatches while I was bolstered up in my usual place in an easy chair. Under the terrible strain of the pain and loss of proper rest my nerves broke down so that any uncommon event in the house or noise was more than I could bear. My heart was very bad, and thumped until I could scarcely stay in the chair and endure it.

"The doctor who had charge of my case said my condition was critical. He said that my lungs and liver were badly affected, and that I had Bright's disease of the kidneys. Still his medicines did me no good, and after attending me ten months he said he could do no more for me.

"I then got a doctor from Bolton to see me, and he held out but slender hopes of my ever getting any better. I thought the same, and so did all who saw me.

"In October, 1893, my daughter, Mrs. Dickinson, of Bolton, told me how she had been benefited by taking Mother Selgel's Curative Syrup, and thought it might possibly help me. I had small faith, but there could be no harm in trying. So we sent at once to Mr. Pare, the chemist, in Fold Road, Bolton, for enough to decide whether it would do me good or not. After taking it a short time I was better. I could sleep better, and had some appetite for food, and what I ate agreed with me. This was hopeful and cheering indeed.

"I kept on with the Syrup and it acted wonderfully with me. The worst symptoms abated, and I gained strength. Soon all the water in my legs passed off, and the rheumatism troubled me but little. Still using the Syrup, my condition continued to improve in every respect, until I once more stood on my feet, and felt like a man of this world. *I can now walk for miles and have no pain*. All my friends think as I do—that under the circumstances my recovery was nothing short of marvellous. You are at liberty to publish this statement, and refer any interested persons to me. (Signed) Henry Jackson, Pewett Hill Farm, Culcheth, near Warrington, October 9th 1895."

No words of ours can add to the convincing force of Mr. Jackson's plain statement. His disease was originally and radically of the digestion. The attack was sharp and profound, and developed into the resulting conditions he so well describes. He may not have had Bright's disease, but that he was directly progressing towards that fatal malady there is no doubt. The effect of Mother Selgel's Syrup in his case only serves to show afresh its rare and remarkable power. Scarcely is so great a victory to be looked for from any medicine. Yet the facts are undeniable. We congratulate Mr. Jackson on his escape from a danger which was much more serious than even he probably imagined.

POSTSCRIPT.

After paying the expenses of the publication, the surplus will be placed wholly at the disposal of the family of the deceased in form of letters.

Orders to be made to the Business Manager, "An Indian Journalist," at the Bee Press, 1, Uckoor Dutt's Lane, Wellington Street, Calcutta.

OPINION ON THE BOOK.

It is a most interesting record of the life of a remarkable man.—Mr. H. Babington Smith, Private Secretary to the Viceroy, 5th October 1895.

Dr. Mookerjee was a famous letter-writer, and there is a breezy freshness and originality about his correspondence which make it very interesting reading.—Sir Alfred W. Corti, K.C.I.E., Director of Public Instruction, Bengal, 26th September, 1895.

It is not that amid the pressure of harassing official duties an English Civilian can find either time or opportunity to pay so graceful a tribute to the memory of a native personality as F. H. Skrine has done in his biography of the late Dr. Sambhu Chunder Mookerjee, the well-known Bengal journalist (Calcutta: Thacker, Spink and Co.); nor are there many who are more worthy of being thus honoured than the late Editor of *Reis and Rayyet*.

We may at any rate cordially agree with Mr. Skrine that the story of Mookerjee's life, with all its lights and shadows, is pregnant with lessons for those who desire to know the real India.

No weekly paper, Mr. Skrine tells us, not even the *Hindoo Patriot*, in its primeval days under Kristodas Pil, enjoyed a degree of influence in any way approaching that which was soon attained by *Reis and Rayyet*.

A man of large heart and great qualities, his death from pneumonia in the early spring in the last year was a distinct and heavy loss to Indian journalism, and it was an admirable idea on Mr. Skrine's part to put his Life and Letters upon record.—*The Times of India*, (Bombay) September 30, 1895.

It is rarely that the life of an Indian journalist becomes worthy of publication; it is more rarely still that such a life comes to be written by an Anglo-Indian and a member of the Indian Civil Service. But, it has come to pass that in the land of the Bengali Babus, the life of at least one man among Indian journalists has been considered worthy of being written by an Englishman.—*The Madras Standard*, (Madras) September 30, 1895.

The late Editor of *Reis and Rayyet* was a profound student and an accomplished writer, who has left his mark on Indian journalism. In that he has found a Civilian like Mr. Skrine to record the story of his life he is more fortunate than the great Kristodas Pil himself.—*The Tribune*, (Lahore) October 2, 1895.

For much of the biographical matter that issues so freely from the press an apology is needed. Had no biography of Dr. Mookerjee, the Editor of *Reis and Rayyet*, appeared, an explanation would have been looked for. A man of his remarkable personality, who was easily first among native Indian journalists, and in many respects occupied a higher plane than they did, and looked at public affairs from a different point of view from theirs, could not be suffered to sink into oblivion without some

attempt to perpetuate his memory by the usual expedient of a "life." The difficulties common to all biographers have in this case been increased by special circumstances, not the least of which is that the author belongs to a different race from the subject. It is true that among Englishmen there were many admirers of the learned Doctor, and that he on his side understood the English character as few foreigners understand it. But in spite of this and his remarkable assimilation of English modes of thought and expression, Dr. Mookerjee remained to the last a Brahman of the Brahmins—a conservation of the best of his inheritance that was nothing but respect and approval. In consequence of this, his ideal biographer would have been one of his own disciples, with the same inherited sympathies, and trained like him in Western learning. If Bengal had produced such another man as Dr. Mookerjee, it was he who should have written his life.

The biography is warmly appreciative without being needlessly laudatory; it gives on the whole a complete picture of the man; and in the book there is not a dull page.

A few of the letters addressed to Dr. Mookerjee are of such minor importance that they might have been omitted with advantage, but not a word of his own letters could have been spared. To say that he writes idiomatic English is to say what is short of the truth. His diction is easy and correct, clear and straightforward, without Oriental luxuriance or striving after effect. Perhaps he is never so charming as when he is laying down the laws of literary form to young aspirants to fame. The letter on page 285, for instance, is a delightful piece of criticism; it is delicate plain-speaking, and he accomplishes the difficult feat of telling a would-be poet that his productions are not in the smallest degree poetry, without one may conclude, either offending the youth or repressing his ardour.

For much more that is well worth reading we must refer readers to the volume itself. Intrinsically it is a book worth buying and reading. —*The Pioneer*, (Allahabad) Oct. 5, 1895.

The career of "An Indian Journalist" as described by F. H. Skrine of the Indian Civil Service is exceedingly interesting.

Mookerjee's letters are marvels of pure diction which is heightened by his nervous style.

The life has been told by Mr. Skrine in a very pleasant manner and which should make it popular not only with Bengalis but with all those who are able to appreciate merit unmarred by ostentation and earnestness unspoiled by harshness. —*The Muhammadan*, (Madras) Oct. 5, 1895.

The work leaves nothing to be desired either in the way of completeness, impartiality, or lifelike portrayal of character.

Mr. Skrine deals with his interesting subject with the unfailing instinct of the biographer. Every side of Dr. Mookerjee's complex character is treated with sympathy tempered by discrimination.

Mr. Skrine's narrative certainly impresses one with the individuality of a remarkable man.

Mookerjee's own letters show that he had not only acquired a command of clear and flexible English but that he had also assimilated that sturdy independence of thought and character which is supposed to be a peculiar possession of natives of Great Britain. His reading and the stores of his general information appear to have been, considering his opportunities, little less than marvellous.

One of the first to express his condolence with the family of the deceased writer was the present Viceroy, Lord Elgin. Mookerjee appears to have won the affection not only of the dignitaries with whom he came in contact, but also of those in low estate.

The impression left upon the mind upon laying down the book is that of a good and able man whose career has been graphically portrayed. —*The Englishman*, (Calcutta) October 15, 1895.

The career of an eminent Bengali editor, who died in 1894, throws a curious light upon the race elements and hereditary influences which affect the criticisms of Indian journalists on British rule.

The "Life and Letters of Dr. S. C. Mookerjee," a book just edited by a distinguished civilian in Calcutta, takes us behind the scenes of Indian journalism.

It is a narrative, written with insight and a

complete mastery of the facts, of how a clever youth gradually grew into one of the ablest leader-writers in Bengal, and still more gradually matured into one of the fairest-minded editors that western education in India has yet produced. If the training and experience which develop the journalist in England are sometimes varied, they seem in India to have an even wider range.

But the object of this notice is to show how a great Bengali journalist is made; space forbids us to enter upon his actual performances. They will be found set forth at sufficient length, and with much felicity of expression, in Mr. Skrine's admirable monograph. It is characteristic of the noble service to which Mr. Skrine belongs, that such a book should have issued from its ranks. Dr. Mookerjee was no optimist. One of his brilliant speeches contained the following sentence:—"India has neither the soil nor the elasticity enjoyed by young and vigorous communities, but present the arid rocks and deserts of an effete civilization, hardly stirred to a semblance of life by a foreign occupation dozing over its easily-gained advantages." This was true of the pre-Mutiny India of 1851. If it is no longer true of the Queen's India of 1895, we owe it in no small measure to Indian journalists like Dr. Mookerjee who have laboured, amid some misrepresentation, to quicken the "semblance of life" into a living reality. —*The Times*, (London) October 14, 1895.

"IMPROVED UNDAUNTED"

WATCH. Rs. 7.

Guaranteed three Years.

Strong, accurate, pretty, small, open-faced, nickel silver, keyless, short winding, potent, "NEW STYLE IMPROVED UNDAUNTED" watch, with hand setting mechanism, secondhand, for Doctors, ornamental bold dial, for Rs. 7 V. P. P. with an extra glass, spring, pretty box and full three years' guarantee. Warranted to stand the roughest use. Runs more than 28 hours with one winding. Will last a life time. Easily repairable. Others sell at double our rates. One watch free for the purchase of 8 at a time. Mr. Jno. Dickson of Haputal Railway, from Ceylon says:—"It keeps splendid time and never stopped although it sustained hard knocks and jerks." × Dr. H. Moore of Royal Artillery from Poona and Lee says:—"I sold it for Rs. 16. × Pte. W. Hopkins of Sussex Regt. from Darnley says:—"I have sold it for Rs. 20. × Mr. T. B. Scott of Patna Opium Department says:—"The watch you sent me some seven years ago is still keeping very good time."

Jewelled Ring Rs. 1-8-0. Real

Silver Watch Rs. 13. Real

Solid Gold Watch Rs. 24.

Pretty electro cased gold chain Rs. 1-8-0. Fashionable electro cased Gold Ring set with scientific diamonds, Rubies, Emeralds, at Re. 1-8-0. Mr. G. Smith, Salt Inspector from Sanikutta, says:—"A German valued the diamond ring at Rs. 50 and ruby at Rs. 30." Key winding, Government stamped, solid silver hunting case, Royal watch with extras and full three years' guarantee, for Rs. 13. Pte. G. Hawkes of 2nd York Light Infantry from Purandhar says:—"For the first one I got Rs. 25; the second one I sold to a Sergeant for Rs. 28. × Pte. H. C. Bishop of L. F. L. Regt. from Kumptee says:—"A Corporal offered Rs. 30 for the very same watch, Gentlemen's open faced, keyless *real solid gold watch* Rs. 30; ladies' Rs. 24; both with extras and guaranteed for 3 years. Mind they are guaranteed to be of real solid gold. No agents kept, all goods sent only by us from Bombay per V. P. P."

SPECIFICS

for all ordinary diseases, like Fever, Cough, Asthma, Phthisis, Diabetes, &c., including diseases brought on by irregularities of kinds, Catalogues, containing full accounts of diseases and remedies, are transmitted on application. Prescriptions, with or without medicines, sent to every part of India and Ceylon, Cape Colony, and the British Isles, on receipt (by post) of full accounts of diseases.

Thousands of unsolicited Testimonials from every quarter.

CATARRH,

Hay Fever, Catarrhal Deafness.

A NEW HOME TREATMENT.

Sufferers are not generally aware that these diseases are contagious, or that they are due to the presence of living parasites in the lining membrane of the nose and eustachian tubes. Microscopic research, however, has proved this to be a fact, and the result is that a simple remedy has been formulated whereby these distressing diseases are rapidly and permanently cured by a few simple applications made at home by the patient once in two weeks. A pamphlet explaining this new treatment is sent on receipt of 2½d stamp by A. HUTTON DIXON, 43 & 45 East Bloor St. TORONTO, Canada.

REVIEW OF POLITICS LITERATURE AND SOCIETY

VOL. XV.

CALCUTTA, SATURDAY, AUGUST 22, 1896.

WHOLE NO. 739.

IN MY GARDEN.

(From the German of Leyden.)

My flowers are gently whispering,
Down in this shady nook,
And, while they murmur, angrily
Up unto me oft look—

"Why gaze ye on me, flow'rets fair,
With widely open'd eyes?
What secret tell each other, that
Ye thus express surprise?

"The little, drooping rose-bud, here
Ye on my bosom see,
Cull'd I not wantonly—this morn
My love gave it to me!"

BARONESS SWIFT.

ON A LOST KITTEN.

Alas! my tiny darling,
Though fondly you were cherished,
Yet now your fate we know not,
It may be you have perished.

Or you may still be ling'ring
Unsheltered and unfed,
Hunted by dogs and children,
Wand'ring in want and dread.

When first your home forsaking
Your loss you little knew,
Ah! still my heart is aching
My tiny pet, for you!

Daily I long to aid you
And shield from further pain,
I pray that He who made you
May guide you home again.

MARION BERNSTEIN.

—The Glasgow Herald.

WEEKLYANA.

THE trial of the unsuccessful raider Dr. Jameson and his associates is one more mighty proof of the glorious British Constitution and British Law. The proceedings so far as they have reached this country enhance our respect for the English and the English Judges. Dr. Jameson is idolized as a hero and yet he is as much subjected to the law as any ordinary subject of the sovereign without distinction of any kind. We do not therefore hesitate to make the following extracts. They are not long considering the importance of the subject:—

"Sir Edward Clarke's submissions, on the reassembling of the Court, (on July 28) resolved themselves into one only, and that had all along been expected. It was that there was no case to go to the jury, for the

reason that the acts charged against the defendants were committed on territory—Mafeking and Pitsani Pitlogo—where the Foreign Enlistment Act had not been proclaimed. And the way in which he sought to establish his point was this: The Foreign Enlistment Act, by its own machinery, requires that there shall be a proclamation in each British possession before it can become operative. The contention which Sir Richard Webster put forward in his opening for the Crown was that the Act had by proclamation become part of the law of Cape Colony in 1870, and when, in 1885, the Cape Legislature included British Bechuanaland in the Colony all its laws became applicable to the extended boundary. Sir Edward sought to get behind this proposition by a reference to the Imperial Act of 28 and 29, Vict., chap. 63, which is an 'Act to remove doubts as to the Validity of the Colonial Law.' Broadly, this statute enacts that any Act of the Legislature of a British Colony shall be null and void if it be repugnant to any Imperial Act. The Foreign Enlistment Act, Sir Edward put it, was undoubtedly imperial, and it was equally certain that it contained the provision that it should only operate in a British possession after proclamation by the Governor. The Act of the Colonial Legislature of 1885, by applying the Foreign Enlistment Act to British Bechuanaland without the proclamation required by that statute itself, did that which was repugnant to the imperial law, and, therefore, it was inoperative.

The Attorney-General (Sir Richard Webster) briefly disposed of the point as contrary to the letter, spirit, and express intention of the Foreign Enlistment Act, and he stamped as a monstrous absurdity the theory that the laws of a colony could not apply to future additions of territory that it might acquire. The acceptance of such a doctrine would be against common sense. These phrases were objected to by Sir Edward Clarke, who observed 'that common sense is that to which everybody appeals on matters which they do not understand;' and Lord Russell ironically added, 'Common sense has nothing to do with legal points.' The argument was not a long one, and the Court, apparently, found little difficulty in coming to a conclusion; for, after a very brief consultation, the Lord Chief Justice, with the concurrence of his learned brothers, decided against Sir Edward in a concise and simple judgment, which upheld the doctrine previously propounded by the Solicitor-General, that Englishmen who settle in new territory carry with them the laws of the mother country, and those laws, in so far as they are applicable to the conditions in which settlers find themselves, are the law of the land. The entire point was aptly illustrated by Lord Russell when he said that it would be as reasonable to say that the bye-laws and regulations of a borough shall not apply to the area comprised by an extension of boundary, as to say that the laws of a colony shall not be operative in territory which it may subsequently acquire and incorporate."

At Calcutta, about this time, in 1870, in what is known as the great Wahabee case, in the matters of Ameer Khan and Hashmadad Khan, the late Mr. Anstey, their counsel, had familiarized us with the safeguards provided by the British Law in favour of personal liberty and the fact that Englishmen carried with them their good laws wherever they went. They were not therefore free to act as they liked in any British colony or dependency.

The Jameson trial was resumed on July 27, with the case for the defence.

"In little more than three hours Sir Edward Clarke succeeded in placing before the jury the broad lines of his case for the defendants. Four main propositions formed the basis of his speech. The first was that the transference of the Bechuanaland Border Police to the control of the Chartered Company was carried out with the knowledge of the imperial Government under imperial officers, with no relation whatever to the raid. The second was that the body of men collected at Pitsani Pitlogo, under Dr. Jameson, Sir John Willoughby, and the two Whites, were for policing the Bechuanaland Protectorate acquired by the company. Dr. Jameson's intention was to form an encampment or headquarters there, and his operations at Pitsani Pitlogo, in pursuance of that object, had no reference whatever to an expedition into the Transvaal. The third proposition was that Mafeking was not under the dominion of the

Subscribers in the country are requested to remit by postal money orders, if possible, as the safest and most convenient medium, particularly as it ensures acknowledgment through the Department. No other receipt will be given, any other being unnecessary and likely to cause confusion.

Queen in November 1895, and that Pitsani Pitlogo was not then, and is not now, British territory, for the reason that it was ceded to the company by Montsioa for the purposes of forming a headquarters for the police. The fourth proposition was that, right or wrong in what he did, Dr. Jameson had no guilty motive. The court was well filled but not crowded when Sir Edward Clarke began his address. His exordium was brief. He was there, he said, to represent 'four gentlemen of honour and repute, of unquestioned loyalty, and of high character, now charged with a criminal offence.' Neither in these, his opening observations, nor in those with which he closed, did Sir Edward make any appeal on behalf of the defendants for sympathy, for that, he declared, would be 'unworthy of him and of them.' Some emotion was shown when, turning to Dr. Jameson, sitting immediately below him, he referred to the fact that his client had expressed his readiness to accept entire responsibility for the events that had led to the present proceedings. That attitude had been resented, apparently by the other defendants, or, at all events, it had hurt their feelings, for they desired to share equally with Dr. Jameson the responsibility for their acts. But Sir Edward, while appreciating their generous motives, was compelled to draw a distinction between the case affecting Colonel Grey and Major Coventry and that concerning Dr. Jameson and the other three officers.

Had a guilty intention been proved? To find that in the affirmative, the jury would have to say that the expedition was directed against the government of a friendly State. But the evidence contradicted that conclusion. From beginning to end, Dr. Jameson had no other motive, and had acted in a way to show that he had no other motive, than to succour the people of Johannesburg, and to protect the women and children there. Treating as irrelevant to the issue all that occurred on the march, except such incidents as went to show that Dr. Jameson did not molest the Boers, and had no intention of molesting them, Sir Edward directed his observations to the evidence of motive. And here the letter to Dr. Jameson, signed by members of the Reform Committee, was again brought under notice. The Boer Police had been withdrawn from Johannesburg, and the witness Tossel had told them that there were some first-class desperadoes in the town. Women and children were being sent away, and the alarm was great and real. Dr. Jameson, when he started on his march, honestly thought that women and children were in peril. The evidence was clear that he believed a massacre was feared; and they could not forget his expressions of surprise to the cyclist Rowland, who met the column with despatches from the Reform Committee, that there had been no fighting at Johannesburg. It was impossible that all these things could be a sham. On the legal point he claimed that the expedition, hostile or otherwise, was not fitted out at places where the Foreign Enlistment Act had been proclaimed; and, on the facts, his case was that the column started, even if in mistake, with the honourable, humane, and noble object of relieving fellow men, women and children, believed to be in imminent peril. What if Dr. Jameson and his brother officers had not crossed the frontier? What if there had occurred the massacre that was feared? What if, when help was needed, none had been forthcoming, though it was known that there was, within 150 miles, a force of experienced British troops that could have averted the catastrophe? Dr. Jameson had started on an errand than which there could not be one of greater humanity, and it was that, and no other motive, as shown by all the evidence, which had prompted his starting on a Sunday night to the help of the people of Johannesburg. Had he and his friends stood passively by during a massacre—and what assurance had the defendants, with the information then in their possession, that one would not occur?—then the consequences to them before the world would have been infinitely worse than anything which could now befall them."

Next day, July 28, Lord Russell, the Lord Chief Justice, began his summing-up. He began

"with great impressiveness, and early let it be understood that the responsibility thrown upon the judges was, from the peculiarity of this case and the important points of law to be decided, as great, if not greater, than that which fell upon the jury. It was a criminal case involving a serious charge, and if the law had been violated the law must be vindicated. The consequences of most crimes were immediate and limited, but the results of such acts as those charged against Dr. Jameson and the other defendants none could foresee. Still, whatever the nature of the offence, if the jury had a doubt of its being properly proved, the accused were entitled to the benefit of it; but it must be a real doubt, not one conjured up. This observation Lord Russell applied to a consideration of the facts only, and the jury were informed that, on the law, it was their duty, and not a matter within their discretion or grace, to give effect to the Court's direction. For the judges' law, for the jury facts; this was the broad distinction laid down. The judge did not, at the outset, refer to the evidence more than was necessary to a complete explanation of the legal aspect of the case; but he did incidentally comment upon the remarkable circumstance that the facts had not been contested, and that no attempt had been made to gainsay the statements of the witnesses.

Having cleared the ground so far, Lord Russell first described the persons indicted, and next the nature of the charge brought against them. The defendants were servants of the Crown, in positions of trust, and acquainted with the law. The charge against them was that they were parties to the preparation, in the Queen's dominions, of a military expedition to proceed against a friendly State—the South African Republic. That was an offence within the meaning of the Foreign Enlistment Act, which applies both to a state of war and of peace. In peace it is a primary duty of the State to respect the independent sovereignty of other States. If the inviolability of one State be attacked under the authority of another, that is an act of war. Raising his voice, and with great solemnity of manner, Lord Russell here delivered, with the concurrence of his brother judges, the specific direction of law, that Dr. Jameson's expedition was not the less an expedition against the dominions of a friendly State, in that

it was not aimed at overturning the Government of the South African Republic, or was promoted for philanthropic or humane motives, or, again, was intended only to secure a reform of the Boer law. If the expedition was designed to enter the Transvaal with the intention, either by show of force, or by actual force, to interfere with the constituted authority of the Republic, with a view to procuring a reform of the law, it would be an expedition against a friendly State. If these things were done by authority of the Queen, or of any other Sovereign, it would be an act of war. If they were done by an unauthorised subject of the Queen—here the judge, by way of emphasising his words, struck the desk before him—then they would constitute an illegal and filibustering raid, within the meaning of the Act. A pause occurred after this declaration, addressed as much to the general public as to the jury. It was right, Lord Russell said, that he should state distinctly and emphatically the law on this matter. 'If,' he added, 'it makes our responsibility greater, it makes the jury's less.' Passing from the legal rules bearing upon the case, the judge proceeded to consider the legal points. Into these it is unnecessary to follow him, save to record the results of his examination of the official documents. The Conventions of 1881 and 1884 were taken as establishing the South African Republic a friendly State; Mafeking was held to be within the Queen's dominions; and in the territory where Pitsani is situate the evidence was accepted as showing that we had exercised repeated acts of sovereignty there. But with regard to Pitsani, where Dr. Jameson encamped his men, the judge left to the jury the two questions, whether the place was within the dominions of the Queen, and whether the Foreign Enlistment Act was in operation there by proclamation in November and December 1895. It is a primary condition of an offence under the Act that the preparation and fitting out of an expedition against a friendly State must take place 'within the Queen's dominions', without her licence. If that be not proved, the case fails. But if a subject of the Queen, from Paris or Berlin, or some place outside her Majesty's dominions, gives his aid and counsel in the preparation and fitting out of an expedition within her dominions, he is just as guilty of an offence under the Act as though he had committed it in his own country. What would occur to an alien who assisted the fitting out of an expedition in our dominions was not discussed, as none of the defendants are foreigners. From Lord Russell's authoritative construction of the Act, it was clear that, whether Pitsani be or be not within the Queen's dominions, Dr. Jameson and his friends could not escape on the legal contention of their counsel, and that their cause must lie with the jury.

The afternoon was devoted to a consideration of the evidence, to see how far it supported the Crown's description of the expedition—that it was military, and that it was directed against the Government of the South African Republic. Though the Lord Chief Justice dealt with only the salient portions of the mass of testimony, yet the winnowing process was long and tedious. Special attention was directed to the fact that the witnesses on behalf of the Republic had given their evidence without restraint and in a straightforward manner; and with this observation may be associated another of an inferential nature made by the judge earlier in the day—that the defendants, among others, were, after the raid, made prisoners. In many countries they would have been dealt with very speedily, but they were here, to be tried by the laws of their country. 'On another branch of the evidence, relating to the demands for reform by the people of the Johannesburg, the question was put to the jury—Why, if they were legitimate, were those demands addressed to the Administrator of the Chartered Company, instead of to the High Commissioner, Sir Jacobus de Wet, the Governor of Cape Colony, or even to her Majesty's Government? The facts of the case pointed obviously to two things—that Dr. Jameson and those with him were misinformed as to the attitude, tone, and temper of the people in Johannesburg, and that they expected a rising of 2,000 men—the adults coming on.' Dr. Jameson started on his march, and, though he held the Queen's Commission, and was Administrator under the Chartered Company, yet he persevered with his expedition, despite the messages he received from the Queen's representatives."

At twenty minutes past four o'clock the jury received from the judge a series of questions which had application both to Mafeking and to Pitsani Pitlogo:—

"Were the accused, or any of them, engaged in the preparation of a military expedition? Did the defendants, or any of them, 'assist, aid, abet, counsel, or procure,' in its preparation? Were they, or any of them, employed in any capacity in the expedition? Had her Majesty's representatives exercised dominion and sovereignty in the Pitsani Pitlogo District? The foreman having received the paper on which these questions were written, inquired whether, if they did not answer them, the alternative would be a verdict of Guilty or Not Guilty. Lord Russell informed them that such would undoubtedly be the alternative, but their failure to give replies would attach to them a certain amount of responsibility, and there was no adequate reason why they should not return answers. With that intimation the jury retired, and were away about an hour. On their return, they answered all the questions in the affirmative, amid a stillness which denoted the strain of great and suppressed excitement, though not the slightest feeling was manifested when at length it was known that the answers given amounted, according to Lord Russell, to a verdict of guilty against all the defendants. But a curious turn was given to events when the foreman stated that the jury, though they had answered the questions categorically, were not absolutely agreed upon a verdict of Guilty or Not Guilty. The judge described that as an unhappy state of things, and, as the answers of the jury were capable of no other construction, he directed them to find a verdict against the defendants. There was a further brief period of suspense, during which the jurymen again consulted, but eventually all doubt was set at rest by their returning a verdict of Guilty.

Thereupon, Sir Edward Clarke moved for an arrest of judgment, but after considerable discussion, the defendants themselves, through their counsel, intervened with a request that sentence should be passed upon

them without delay. The Lord Chief Justice, speaking amid the same remarkable quietude that had all along prevailed, then passed sentence. In brief words he adverted to the position of the defendants, and declared that they had been convicted on evidence which could not be doubted by any man who honestly applied his mind to the facts. The actual sentences were heard in perfect silence, and without the slightest sign of comment as they were delivered:—Dr. Jameson, fifteen months' imprisonment; Sir John Willoughby, ten months; Major White, seven months; and Colonel Grey, Colonel White, and Major Coventry, five months, all without hard labour."

The hesitation of the jury was in keeping with the popularity of the prisoners. The authoritative stern but impartial rebuke of the Chief Justice prevented a perverse verdict. The prisoners being convinced that they had committed a wrong though in what they believed a good cause, and their conduct being approved by their country, they offered themselves to accept the sentence of the Court without further enquiry. The submission has been rewarded. They are being treated as first class misdemeanants.

THE Lord Chief Justice of England was besieged with applications from ladies anxious to be present at the trial of Dr. Jameson. Lord Russell determined not to countenance the practice of his predecessor, Lord Coleridge, who on such memorable occasions would accommodate ladies with seats on the bench. It is interesting to note that this is the first trial at Bar in a criminal case since the trial of the Tichborne claimant, in 1873-74.

ONE of the dangers in mining industry, especially in coal mines, is the collapse of the upper strata. On the night of the 19th of July 1895, there was such an accident in the city of Brux, Bohemia, Austria. The ceiling of the mine cavity below gave way, and just above it there was a large layer of quicksand which found crevices for going down. The ground began to settle carrying the houses along with it till the following morning. The subsidence began at the east of the city and proceeded towards the west. It was an awful night with storm and rain, and darkness (due to the collapse of gas pipes) the lightning rendering the hideous scenes visible. Families running half-naked from their houses and people frightened by the panic flying from peril, without knowing where to find safety, were, unconscious of the distorted streets, hurried into muddy crevices.

IN Algiers, the French possession in north Africa, they have discovered important Roman ruins, viz., at Thamagadi (Timgad), Mascula (Khen Schela), and Lambaesis (Lambessa). These ruins can be reached by railway from Constantine to Batna. Thamagadi is 23 miles farther inland and wagons are available from Batna to those places close to each other on the border of the Sahara desert. The ruins have Roman characteristics like Pompei with this difference that the African cities have covered walks in almost all the principal streets for protection from the tropical sun. Recently they have destroyed some of the buildings in Thamagadi for the erection of a penitentiary. In Lambessa a pretorium still exists.

THE mad man's unsuccessful attempt on the life of President Faure has revived the memories of such attacks on royalty. Our own good Queen and Empress was aimed at 5 times, namely, on March 2, 1882; May 19, 1849; July 3, 1842; May 30, 1842; and June 10, 1840. William I of Germany and Napoleon III of France had each three escapes; Napoleon I one; Louis Philippe six; Isabella II of Spain three; Humbert I of Italy one; George IV when regent one; George III two; Francis Joseph of Austria one; Amadeus of Spain one; Alfonso XII of Spain two; Alexander III of Russia many.

IN the Queen's Bench, *Singh vs. Attenborough* has been decided against the defendant. This was an action by the executors of the late Maharaja Duleep Singh, including Prince Victor, one of his sons, to recover from Messrs. Attenborough, pawn brokers, certain jewels of the value of £3,000. It was alleged for the plaintiff that Mr. Llewellyn Wynne, Solicitor, of Lincoln's Inn, had pledged the jewels without authority, while the defence contended that there was a holding out to Wynne by Prince Victor as his agent. Mr. Justice Day held that there was no authority, expressed or implied, to pledge the jewels, and accordingly gave judgment for return to the plaintiffs of the valuables with cost.

IMPROVING upon the present pattern, the Austrians have produced the lightest rifle retaining with its lightness sufficient resisting power to fire the same ammunition. It is a Mannlicher repeater of about 7 lbs. 4 oz. in weight, and of considerably increased accuracy.

INSTEAD of military manoeuvres on a large scale in England this year, it is proposed to send out a number of officers to Egypt to join the Sirdar's expedition for a month or two to gain experience.

THE *Army and Navy Gazette*, of July 18, raises and answers the question "What is a small war?" thus:—

"What is a small war? Hitherto the term, though commonly used, has not been clearly defined. The question is now answered in what must be accepted as official language. The definition is: 'A war carried on between a civilised, a properly organised, and an uncivilised army.' Of such campaigns we have had our fair share. Captain Callwell, the author of the work, upon the appearance of which we commented last week, goes, however, farther, for he classes the late campaign against China and Japan as a 'small war.' The consequences, it is true, were most serious to one of the belligerents, but it was a war, as it is laid down, 'conducted on land, at least, between a highly trained, armed, organised, and disciplined army on one side, and by forces on the other side which, though numerically formidable, could not possibly be described as regular troops in the proper sense of the word.' When terms are used in general conversation it is as well to know what they really mean. There can now be no doubt on a point which has been often discussed but never hitherto satisfactorily explained. As Captain Callwell's verdict is given with the authority of the Department of Military Intelligence we are bound to accept it, and in future those who have taken part in military operations against an indifferently organised enemy will have no cause to feel slighted if the war in which perhaps they may have earned distinction is said to have been a small military enterprise. It is called small because the two sides have not been equal from the standpoint of military science, training, and equipment. Thus we owe to the Intelligence Department a debt of gratitude for having defined on a reasonable basis the distinction to be drawn between a 'small' and a 'large' war. Numbers do not count; issues, however important, must be put out of the reckoning also. It is a matter of the equal fitness of both sides to carry out operations according to the scientific principles which obtain in the armies of civilised states. The 'little Japs' certainly have no reason to cavil at the judgment of the British War Office, though others may reasonably be expected to enter a protest. But in a purely British sense the Director of Military Intelligence cannot very well be blamed for making it known to our Army what in the opinion of his able staff is warfare of the first rank. The language of the author, writing of course with the full sanction of his military superiors—for the volume bears the word 'official' on its title page—is clear and distinct. 'Whenever,' it is said, 'a regular army finds itself engaged upon hostilities against irregular forces, or forces which in their armament, their organisation, and their discipline are palpably inferior to it, the conditions of the campaign become distinct from the conditions of modern regular warfare.' And so it is argued that the campaign in India in 1857-59, that in Afghanistan in 1878-80, and that in Egypt in 1882 were small wars, because, great as the difficulties were, the sides were unequally matched."

SPEAKING of the Cretans, the same journal says:—

"The Apostle Paul, quoting an unknown Cretan prophet, gives a bad character of the Cretans to Titus: 'The Cretans are always liars, evil beasts, slow bellies.' That was 1,836 years ago. If the impartial and unprejudiced traveller who records his impressions of the inhabitants of the island to-day is to be credited, the Cretans of the present time excel the ancients, especially when they sign petitions. The Turks at all events regard them as 'evil beasts,' who tell lies and commit murders with the utmost relish. Correspondents at Athens spread the fictions they hear there over the globe. If a Turkish man-of-war opens fire on a Christian (Heaven save the mark!) village whence a gang of assassins issued to murder a boat's crew of Turks who had landed to lay hold of scoundrels who had fired on and killed one of them, all Europe is horrified by stories of wholesale massacres of innocent people and bombardments of open towns and harmless hamlets! If the apostles of the grand idea did not come among them, and if political agitators from Greece would leave the Cretan Christians to themselves, these sanguinary excesses which are supposed to be outbursts of patriotic fury, would not be heard of, for they are not spontaneous, and the Turks would have no pretence or justification for savage repression and revengeful excesses."

In Christian Europe, the Turk has been always more sinned against than sinning.

A SUIT has been filed for partition of the Vallur Zemindary, in the Kistna district, Madras Presidency. The Zemindar opposes the claim of his brother for half of the property on two grounds; first, that the Zemindary is impartible and that even if the plaintiff were entitled to a share, he is precluded from claiming it, because physically incapable of begetting heirs to the property.

DEAFNESS. An essay describing a really genuine Cure for Deafness, Singing in Ears, &c., no matter how severe or long-standing, will be sent post free.—Artificial Ear-drums and similar appliances entirely superseded. Address THOMAS KEMPE, VICTORIA CHAMBERS, 19, SOUTHAMPTON BUILDINGS, HOLBORN, LONDON.

NOTES & LEADERETTES,
OUR OWN NEWS

&

THE WEEK'S TELEGRAMS IN BRIEF, WITH
OCCASIONAL COMMENTS.

PARLIAMENT was prorogued on Aug. 14.

The Queen in her Speech says :—"My relations with foreign Powers continue to be friendly. The hostile movements of Dervishes on the Nile and against the Italian positions in Abyssinia convinced me that it was necessary that the Egyptian Government should arrest their advance, and by my advice and sanction an expedition was undertaken to restore to Egypt her lost territory as far as Dongola. A considerable portion has already been recovered by the short but brilliant action fought at Firket. The condition of some portions of Turkey, and especially Crete, continues to cause me much anxiety, and, while observing a strict neutrality, I have endeavoured, conjointly with the Powers, to effect a reconciliation by proposing to establish a system of government acceptable alike to Christians and Musalmans." The Queen then trusts that the Matabeles will accept her clemency and refers to the delimitation agreements with the Amir and the Shah, and adds that friendly relations are maintained with the tribes on the road to Chitral. The Speech closes with reciting the different Bills passed during the Session.

DR. Nansen, the explorer, and one companion were conveyed to Norway in the steamer *Windward*, belonging to the Harmsworth expedition, which found them in Franzjosef ind. They had left the *Fram* embedded in ice in latitude 86 degrees. The crew were all well. Dr. Nansen expects the *Fram* to drift to Spitzbergen in safety. The steamer has returned to Skjervo. She had reached as far as latitude 85°.

AT the banquet which followed the installation of Lord Salisbury as Warden of the Cinque Ports, he made a speech in which he said that there existed in the eastern extremity a source of danger which threatened the security of the whole of Europe; but although he had warned Turkey of her eventual punishment, it in no wise pledged Great Britain to go to war to execute that punishment. He said he earnestly hoped that the Powers would be enabled to abate the danger while there was yet time.

THE report that President Kruger had concluded a treaty with a European Power is officially denied at Pretoria.

ZILMI Pasha, in receiving the Cretan deputies, stated that some of their demands would infringe the rights of the Sultan, and he desired them to amend them. A body of Greek Volunteers with artillery having landed near Canadia, the Porte has informed the foreign Ambassadors that, unless that landing is stopped, its relations with Greece will be severely strained.

THE betrothal of the Prince of Naples to the Princess Helen of Montenegro is announced.

THE Emperor William's yacht *Meteor*, while racing off Southsea, collided with the yacht *Isolde*, smashing her mainmast and killing her owner, Baron Zedwitz.

MR. Cecil Rhodes is at the Matoppos Hills parleying with the rebels, of whom some are peaceably inclined while the others are defiant.

THE Russian press unanimously accuse Great Britain of fomenting trouble in Crete to divert the attention of Europe.

THE present fall in silver is ascribed to American dealers unloading heavy stocks, because they have abandoned all hope of Mr. Bryan's succeeding in the contest for the Presidency.

THERE has been serious insubordination in the detachment of the 7th Hussars stationed at Mafeking. The men became refractory and refused to turn out on parade for saddlery inspection. Five have been

sentenced to three years' imprisonment, and thirty others have been sent to Maritzburg to be punished for minor offences.

Two Native papers in Egypt have been suppressed owing to shameless attacks made on the Queen of England.

THE Persian Consul General at Bombay has received a telegram from the Persian Prime Minister, stating that the murderer of the late Shah has been executed, and that mourning has ceased.

CALCUTTA is preparing for the Congress to be held during Christmas week in this city. At a meeting held at the British Indian Association rooms, presided over by Mr. W. C. Bonnerjee, the Reception Committee was formed and the office-bearers chosen. Sir Romesh Chunder Mitter has been elected Chairman of the Committee, and Messrs. J. Ghosal, K. S. Bonnerjee, Bhupendranath Bose (Calcutta), the Hon'ble Mr. Guruprasad Sen (Dacca and Behar), Babu Bikant Nath Sen (Berhampore), Babu Ambica Churn Mazumdar (Faridpur), Joint Secretaries, and Raja Benny Krishna, treasurer. The meeting also decided to ask the Hon'ble Mr. R. M. Syani, advocate, Bombay High Court, to preside at the National Assembly. A meeting of the Reception Committee was announced for last evening to appoint an Executive Committee.

THE Trustees have notified that the Gilchrist scholarships will be withdrawn after the present year, after six years.

THE Society for the Higher Training of Young Men has changed its name into the Calcutta University Institute. Has there been any change in its constitution or the Government patronage?

THE fourth Criminal Sessions of the Calcutta High Court for the current year will commence on Wednesday, the 26th day of August, Mr. Justice Rampini presiding. Mr. Justice Ameer Ali has been allowed to hold Original Courts, but he has not yet been selected for the Sessions. He is, we believe, under a pledge not to claim all the rights of a Barrister Judge. The Sessions are once more open to Civilian Judges. Native Judges in Calcutta have yet to earn the distinction of presiding at the Sessions.

THE Report of the Protector of Immigrants of the Colony of Natal for the half year ending December 31, 1895, is a collection of births, diseases and deaths. The protector is Mr. L. H. Mason. During the period three vessels arrived with 982 souls, of whom 598 were men, 238 women, 70 boys including a college student, and 76 girls, from Madras. 978 persons embarked. During the voyage, there were four births—2 boys and 2 girls, but no deaths. This is satisfactory, so far as the transit was concerned. 349 persons returned to India, 149 to Madras and 200 to Calcutta. For Madras there were 88 men, 32 women, 13 boys and 16 girls. For Calcutta, 110 men, 37 women, 24 boys and 29 girls. Before leaving the colony they declared their savings to be :—

Cash	£ 4,828	Madras people	£ 3,484
Jewellery	£ 1,294	Calcutta	£ 2,638
	£ 6,122		£ 6,122

Thus the Madrasis, though numbering less, were more industrious than the Calcutta people.

Natal is divided into Durban, Alexandra, Pietermaritzburg, Victoria, Umvoti, Weenen and Klip River counties. The largest number of deaths occurred in the Durban county, namely, of 54 men, 32 women, 49 boys and 33 girls; in the Victorian county 56 men, 27 women, 45 boys, and 32 girls laid their bones. In the other counties the deaths were comparatively small. The largest number of deaths in all the counties was due to lung affections.

The total Indian population in the Natal were as follows :—

	Men	Women	Children	Total
Free Indians	13,096	6,394	12,298	31,788
Indentured Indians	8,828	3,671	2,512	15,011
	21,924	10,065	14,810	46,799

The birth-rate was nearly double to that of the death-rate during the last two years. Marriages were also on the increase.

RAI Bhagwan Dass Bogla Bahadur, the prince of Hindu timber merchants and jewellers, died about a year ago, bequeathing by his will large sums of money in private and public charities. We read in the *Statesman* that, among other bequests, a sum of four lakhs of Rupees has been directed to be spent on a hospital for the benefit exclusively of Hindus, one lakh being for the building and the site, and three lakhs for the maintenance of the institution. Considering how the poor but respectable classes in this country refuse to avail themselves of the benefits of a public hospital, the project of an infirmary with special arrangements in view of the requirements of caste, should not be regarded as evidencing an absence of catholicity in the donor. The widow, and the son, Lachminarayan, a promising young man of about 19 years of age, have recently come from Bikaner to Calcutta for seeing the directions in the will duly complied with. Amongst the executors is Rai Sewbux Bogla Bahadur, brother of the deceased, whose charities also have already been on a large scale, the Dharamsala at Howrah, with its roomy building and excellent arrangements, being one of them. *Hope* mentions the case of a poor but respectable Brahman, a near kinsman of the late Hurrish Chunder Mookerjee, having been made houseless in execution of a decree obtained against him for a small sum of money by the late Bhagwan Dass. The deceased had desired to excuse the debt, but as his agents had received no express instructions, they were obliged to enforce the decree in a manner that betokened considerable harshness. We, like our contemporary, shall be glad if the executors could see their way to re-establish the poor Brahman, for the sake of his great kinsman, in his old and only home.

To his many honours and distinctions, Rai Bahadur Kunye Lal Day has added, from the *Empress*, another certificate to crown them all to the surprise of his friends and those who know him. It runs thus:—

"The Doctor has read widely of the literature of the day: he loves knowledge for its own sake, and he has written, during the years that have passed under review until the present time (1831 when he was born and August 1, 1896, when he figures in the journal), numerous papers which have appeared in the medical journals on the subject of indigenous drugs and on toxicological and therapeutical topics, while he has contributed some enlightened writings towards the reform of Hindu sociology. He is deeply religious and, though a staunch adherent of the Brahminical faith, is not conservative: he has a fine conception of true religion in its highest and most practical ideals. His dignified bearing, courteous and gentlemanly demeanour, begotten of his long-continued intimate intercourse with men of eminence in official and professional circles, his perfect command of the English language, allied to the subtle perception innate to the Bengali, and his sterling integrity of character, are distinguishing personal characteristics which have won for him the respect and esteem of his many friends—European and Indian."

We are reminded of the words of the late Babu Mahendranath Bhattacharya of the subordinate executive service, President of the College of Pandits, Nadia, author of several Bengali books. While noticing the Rai Bahadur's Bengali book on Chemistry, *Rasdyana*, the late Pandit remarked to this effect: the book professes to be written in the Bengali language, and the greater part of it is certainly printed in Bengali characters. The language is, however, neither Bengali nor English. It is a compound of two atoms of English and one atom of Bengali. As H_2O represents the chemical combination of water, so the formula E_2B may be taken to represent the language in which Babu Kunye Lal's chemistry is written. The Pandit evidently meant more than he expressed and would probably have symbolised the writer by CO_2 if not H_2S . If the Rai Bahadur made himself meaningless or unintelligible, or were fume and gas in which he largely deals, the rage of the hour, sanctioned by a self-constituted directing authority, of constructing Bengali words for chemical elements and compounds, is the height of absurdity.

THE *Calcutta Gazette*, of August 19, publishes a Resolution reviewing the works of public utility constructed during the year 1895 from private contributions. It is intended to be substituted for one published in the *Gazette* of the 22nd July. In the substituting Resolution a lakh of rupees disappears under the head of roads during the year 1895, and the sum for works costing Rs. 500 each and upwards during the year 1894 is increased from Rs. 2,35,677-3 to Rs. 2,67,177-3. A partial explanation is to be found in the alteration in the closing order. The old ran thus:

"The total amount contributed for works of public utility during the

year 1895, shows a marked increase over the figures of the two previous years. This increased display of public spirit and liberality on the part of those who have helped to contribute towards these works is viewed by the Lieutenant-Governor with much satisfaction, and in conveying his acknowledgments His Honour desires to bring to notice the liberal contributions of Rs. 1,00,000 and Rs. 23,658 given, respectively, by Babu Jogendra Chandra Basu and the late Dr. Bhola-nath Bose."

The new order is:—

"The total amount contributed for works of public utility during the year 1895 shows but little increase over the figures for the previous year, and is still below the amount contributed in 1893. The Lieutenant-Governor desires that the thanks of the Government may be conveyed to those who have displayed their liberality and public spirit."

We are tempted to enquire whether formal letters of acknowledgment, as ordered in the Resolutions, were forwarded from the Bengal Secretariat "to those, or their representatives, who have constructed works costing Rs. 500 each and upwards," and, if so, whether they have been withdrawn from the so-called donors of Rs. 1,00,000 and Rs. 23,658? The lakh of rupees, it was said, was contributed for a *pucker* metalled road from Khulsini to Bhola in Singoor, about 12 miles, in the district of Hooghly. Has the road been constructed or does the lakh of rupees remain unpaid? Or, is the whole affair a fleeting shadow? We understand from the *Indian Mirror*, of August 21, that a representation went up to Government, there being no donation of the lakh of rupees. How came then Mr. Glass's department to "pass" the lakh of rupees, compromising the head of the Local Government? Perhaps, to the D. P. W., which sinks lakhs in every year, a lakh, once at a time, is a trifle. The only consolation to Sir Alexander Mackenzie is, if that be any, that the sham donation has not carried away a Rajaship. There are instances of donations of Rs. 500 swelled by inferior newspapers to Rs. 5,000 when made by a Raja aspiring to be a Maharaja, and of an intention to contribute converted into a reality. The lakh incident is the first of its kind, so far as we can remember, in which the Government has been positively befooled.

THE meeting at the Dalhousie Institute, on Wednesday, in honour of the retiring Chief Justice, Sir W. Comer Petheram, was presided over by Maharaja Narendra Krishna, President of the British Indian Association. Maharaja Jotendra Mohun Tagore moved the first resolution recording the meeting's high appreciation of the manner in which the Chief Justice has discharged his duties and regret at his departure. The resolution was seconded by Mr. P. Playfair, President of the Bengal Chamber of Commerce, and supported by Babu Surendra Nath Banerjee. The second resolution, proposed by Maharaja Durga Charan Law, seconded by Dr. Rashbehary Ghosh and supported by Mr. Lal Mohun Ghose, decided upon an Evening Party and an Address. The next speakers were Khan Bahadur Abdul Jubbar, Baboo Ganes Chunder Chunder and Mr. W. H. Ryland. Mr. T. W. Spink, Babu Joygobind Law and Saligram Sing, Prince Bukhtyar Shah and Mr. H. M. Rustomjee also took part. Thus almost all sections and professions were represented. Notwithstanding the early adhesion of Babu Surendra Nath Banerjee to the movement, the meeting was limited to friends and admirers. It was agreed upon at the preliminary conference to call a public meeting through the sheriff. The omissions, however, will be made up largely by private entertainments. Khan Bahadur Mahomed Yusoff gives an Evening Party on Friday next, the 28th of August, to meet Sir Comer Petheram. The Calcutta Bar treats him to a dinner, at the Dalhousie Institute, on the 29th. There will also be an Afternoon Party at Maharaja Jotendra Mohun Tagore's next month.

BABOO Monmath Nath Bose writes under date Cuttack, the 17th August:—

"The extraordinary heavy rain of this year has nearly washed away the whole of the Orissa Division from Balasore to Pooree. The rising of the rivers Subarnarekha, Butarani, Bhramani and Mahanadi, one after another, with their tributaries Saindee, Katjary and Bolongna, has caused a general panic throughout the Division. All the paddy lands except the higher ones have been submerged and there is very little hope of getting any crops this year. The steamer communication between Bhadrak and Cuttack, a distance of 65 miles, was stopped for a period of 9 days. The oldest men of the locality do not remember such a flood, but the Engineering Department asserts that the present flood is less than 3 inches in height than the greatest flood on record. That flood lasted only 3 days whereas the present is continuing for a period of 17 days. The

velocity of the river Mahanady is such that wild elephants, bulls, cows and buffaloes have been carried away from their jungle homes and in Cuttack they have caught an elephant, 120 cows and some buffaloes. Cuttack has been saved by cutting the embankment of the river Katjury.

Homesteads of the poor together with their cattle have been washed away and they are now wandering from one place to another (like the ancient Jews) to find a shelter. The Zamindars are doing their best to save the rayyets and advancing them rice from their *Golas*; but that is not sufficient to keep them up in this time of distress.

Ancoora, a Pargana in the District of Balasore, is on both sides of the river Gomai, a tributary of the Baitarani. Its drainage has been obstructed by the coast canal, hence the accumulation of water on both sides of the canal from 10 to 12 feet in height submerging an area of 2,500 acres of land. The manager of the Mullicks' estate represented the matter to the Sub-Divisional Officer of Bhadrak, Babu Sriram Chauder Bose, who sent the report to the higher authority for prompt measures by cutting a portion of the *Nona Bund* so as to make a passage for the water. But I am sorry to say that up to this time no steps have been taken.

A couple of days before the flood was subsiding, from yesterday the rivers are rising again."

At the Egmore Police Court, Madras, one Mylaikandasamy Chetty, was, for sending in a false return to the Income Tax Collector, sentenced, by Mr. W. E. Clarke, to a fine of Rs. 80. In passing his order, the Magistrate is reported to have remarked that although the accused might not have kept accounts, as was contended on his behalf in mitigation of punishment, yet he must have known what his income was. The accused had given just one half of his real income and it appeared to the court that his action was wilful and done with intent to defraud the Government. To the literate, not to say of such who do not, because cannot keep accounts, the Income-Tax Act is not so clear as the words of the Egmore Magistrate would make it. It has been complicated by the various rulings and orders of Government passed from time to time since the tax was first introduced by Mr. Wilson after the mutinies. None are all those orders always available to the public. Mr. Grimley's Manual was published in 1886, the year of the present Income Tax Act, II of 1886. It does not embody the orders made since the passing of the Act and those orders are not gazetted. The Act requires a petition of objection or for revision of assessment to specify the taxable income to a pie. This petition as also the return of income is to be accompanied by a declaration saying that what is stated therein "is true to the best of my information and belief." When you do not know what deductions are allowed, you cannot possibly make a correct return or state what your income is for the purposes of the Act. A false declaration, again, is punishable as an offence under section 177 of the Indian Penal Code.

Here is a difficulty for the scrupulous. He is not sure how the income is to be calculated and he hesitates to subscribe to the declaration. But whether he believes the return or the amount of the income stated by him to be true or not, he must make the declaration to be in accordance with the law, or to receive a hearing. In ignorance he may be led to make an over estimate, which, equally with an under estimate, is false and therefore punishable. It may not be to the interest of Government to prosecute him when there is an offer of excess payment. For an unlawful gain it may overlook a conscientious falsehood. But he is as much guilty of a false declaration as if he had given a false estimate to defraud Government. Government itself is an abettor of the offence, when knowing that the return is not correct, as giving more than it what it ought, it accepts the document as correct for a little gain. It is as much bound, we should think, to make the necessary deductions and allow their benefit to him, as to refuse a return when made to escape full payment.

We will here once more point out that the Calcutta Income-Tax Office knowingly recovers from residential house owners more than they ought to pay under the Act. That law says that "where a building is occupied by its owner, it shall be deemed a source of income within the meaning of this Act, and, if liable to be assessed under this Act, shall be assessed at five-sixths of the gross annual rent at which it may reasonably be expected to let, and, in the case of a dwelling-house, may be expected to let unfurnished." The Income-Tax Office itself makes no assessment but accepts that of the Municipal Office and charges the tax on that valuation. The principle of the Municipal Act is very different. It does not proceed on the letting value but on the valuation of the land and the present cost of construction of the building, which both swell the assessment to much more than the letting value. The Income-Tax Office has not only no organiza-

tion of its own for valuation of houses, but finds it profitable to accept the Municipal assessment of dwelling houses. This is clearly beyond the law and is there no remedy for the exaction?

RECENTLY (R. & R. Aug. 8) we alluded to the capital sentence passed by Mr. Gill, the Sessions Judge of Cawnpore, on 13 persons forming an unlawful assembly for a riot in which two men were killed. Here are the facts:

Twenty-five years back, one Palip Singh had, on a usufructuary mortgage of a field and bagh, received from one Gokul Singh Rs. 20. But there was no possession of the lands and Palip redeemed the mortgage by payment of Rs. 30, and got back the deed. When in June last, he applied for mutation of names, Gokul threw obstacles in the way; he was so obstructive that a warrant had to be issued for his appearance. The day fixed was the 25th June. On the 18th June, Palip and his son Har Pershad were killed and grandson, Jabar Singh, grievously wounded. Believing that the land was his and waiting long in vain for registration of his name in the Government books, Palip had gone to plough the field. Gokul, an old man, aware of the fact, went there also, it is said, for dissuading Palip from ploughing. According to the evidence, Gokul told Palip not to plough the field until he had redeemed the mortgage. On Palip replying that he had paid back the mortgage debt, there was a fight of words between the two. From words they came to blows. The Judge says it may be true that Gokul struck the first blow. Palip hit Gokul with his *lathi* and knocked him down. Gokul was accompanied by his two sons Pershad and Har Pershad and Pershad's son Jabar. With Palip Singh were all the other 12 accused and a man named Pitam Ahir who had not been sent up. The Judge finds that when Palip knocked Gokul down the accused had surrounded him in his relations, and furiously attacked them with lathis, that Gokul, Har Pershad and Jabar were speedily stretched on the ground, and Pershad only escaped by flight. The thirteen accused then made off. When they had left the field Pershad went back and found Gokul, Har Pershad and Jabar Singh senseless. The bodies were brought into the village. After an hour or two Gokul and Har Pershad expired. At the trial, the accused were represented by two muktears.

The assessors unanimously considered it proved that all the accused were present and that they had assembled there in order that if Gokul came to interfere with the ploughing they might resist him by force and they disbelieved the *alibi* set up by two of the accused. Concurring with the assessors, the Judge found all the accused guilty of rioting, of rioting when armed with deadly weapons, of being members of an unlawful assembly in prosecution of the common object, to which unlawful assembly Gokul and Har Pershad were murdered, and, therefore, guilty of culpable homicide amounting to murder. Mr. Gill remarks: "The matter at issue between Gokul and Palip was of a very trifling nature and the dispute could have been easily settled in a court of law or by the friendly intervention of the leaders in the village." Palip taking the law into his own hands must suffer the extreme punishment of the law. The other accused, according to the Judge, were more guilty than Palip, for "most of them had absolutely no concern in the dispute and not the faintest excuse for their lawless violence."

He would not, merciful Judge, sentence them to any higher punishment than death by hanging. The accused must be fortunate indeed that for so many crimes they suffer only one punishment. And when they are hanged by the neck they will bless the Judge with their lips for his impartiality in making no distinction between them, and die with a prayer for Gill Justice and the Law of the Indian Penal Code.

It is to be noted that one of the 13 had lost the use of his left arm and leg and another could not wield a *lathi* with his right hand. But one of them was Palip's brother and both were old men, which fact, according to the thinking of the Judge, aggravated their offence, and they were murderers, for they did not prevent the younger men from taking part in the quarrel which resulted in two deaths. It was remarked by the late Hurrish Chunder Mookerjee, whom the late Dr. Sambhu C. Mookerjee and the late Rai Bahadur Kristodas Pal succeeded in the conduct of the weekly *Hindoo Patriot*, that in every day of our life we commit most of the offences of the Penal Code. We are sure, if the framers could dream that Judges like Gill would rise to administer the Code, it would have taken a different shape. Here, at any rate, is a warning to the Legislative Councils, not to make their laws too comprehensive.

FROM the first day of September next, the College Department of the Metropolitan Institution passes from Babu Surendranath Banerjee to the Trustees of the Vidyasagara Institute. They will now have the charge of the entire Institution.

THE *Hatabadi* defamation case was resumed by Mr. Pearson, assisted by Mr. Nabin Chand Bural, on Thursday, and again adjourned to Friday next, the 28th August. As on the first day, Mr. Palit appeared for the prosecution. This time the defence was represented not by Mr. B. Chakravarti but by Mr. P. M. Mitra. On previous notice, to avoid any future objection, Mr. Palit applied for permission to allow the husband Babu Heramba Chandra Maitra to be also a complainant. This was not granted. The counsel then opened the case for the wife and had not concluded when the Court rose.

A CAMP of exercise for the Patiala, Jhind and Nabha Imperial Service troops will be held at Chuarpur in January, and will last about three weeks. Two regiments of the Gwalior Cavalry will take part in the forthcoming Jhansi camp.

THE Ruby Mines Company in Burma have obtained a fresh lease for 14 years. The annual rent reserved is Rs. 3,15,000 plus 20 per cent. of net profits over that sum. Six lakhs out of the ten now owing are remitted. If the Company pay a dividend of over five per cent., the Government will get half the excess.

REIS & RAYYET.

Saturday, August 22, 1896.

HINDU CASTES AND SECTS.

DR. BHATTACHARYA AND HIS MADRAS CRITIC.

DR. Jogendra Nath Bhattacharya's recent work on Hindu Castes and Sects is attracting attention that it deserves. Among other journals, the *Madras Times* has come out with a critical notice. That notice betrays some power of writing, though, in the main, it is unequal and disappointing. The writer begins by speaking of the book as a most interesting one. But he has almost throughout discovered an incapacity to appreciate its true spirit. The most important parts of the doctor's book are the dissertations on the philosophy of religion forming the introduction to his descriptive account of the different Hindu sects. It is only by the light of these disquisitions that an idea can be formed of the nature, as explained by Dr. Bhattacharya, of religion generally, or of any particular cult in its bearings towards the others. There are, certainly, as our contemporary mentions, other works about our religion and religious sects. But we doubt the existence of any book, ancient or modern, which has attempted a scientific classification of the known religious

systems in the world, or to expound the nature of religion in such a comprehensive manner as to render it possible to bring within the same category the Vedic worship of the ancient Hindus, the fire worship of the Zoroastrians, the Christian doctrine of the Trinity, the symbolic worship of the Sivites and Saktas, and the monotheism of the Mussalmans and the Brahmos. Dr. Bhattacharya has solved, for the first time, as it would seem, some of the most knotty points in the philosophy of religion, and, if his views appear to be well grounded, it is the duty of every journalist in the country to give the utmost publicity to them. Long enough has poor humanity been imposed upon by Incarnations and Swans of sorts. Long enough have our countrymen been dragged through the mire of emblematic worship. Dr. Bhattacharya has demonstrated, according to the approved methods of science, the absurdity of any esoteric meaning lurking in the lustful cults chiefly practised by Hindus of modern times. Every person having the good of humanity at heart should hail the attempt made by Dr. Bhattacharya to show up the wolves in sheep's skin that have, from the beginning of the world, lived and fattened on their fellowmen. The writer under notice is evidently an Englishman of culture and a Christian. He can have no motive to befriend our charlatans, yet in speaking of the book, he says that the author would have produced a more readable work if he had left out his own speculations and confined himself to facts.

The doctor's philosophy may be wrong. If it were bad, the best course for his critic would have been to expose his errors in a proper way. To tell him that he should have confined himself to facts, eschewing philosophy altogether, is like calling upon an astronomer to record only the apparent movements of the sun, the moon, the planets and comets, without an attempt to explain them by either the Ptolemaic or the Aryavattyan theory. One having the slightest knowledge of the physical sciences can easily conceive what their progress or value would have been, if the students of those sciences had confined themselves to facts without philosophising in the least. What, for instance, would the science of thermotics have been without the theory that heat is only a mode of motion? What, again, would the science of chemistry have been without the atomic theory, which not only forms the basis of its nomenclature and symbols, but has led to some of the most important discoveries? Man's nature is to speculate or philosophise. The goal of philosophy is the unification of diversity. It is impossible to treat, scientifically, of religion and religious sects, without some attempt to discover their bearings towards one another and detect, if possible, a unity in variety. Knowledge itself would be a crude mass, almost unserviceable for many of our purposes, if presented in details, without comparison and differentiation for the end of classification.

Our contemporary has adopted the style of some Indian judges who, when they have a junior counsel before them, call upon him to confine himself to facts. To any one who has the least forensic experience it must be obvious that, to enable the jury to arrive at a correct decision, it is necessary for both the advocate and the judge to marshal the facts in such a manner as to lead to some particular inference. This justifies the practice of our law courts that when all the facts are laid before the jury, counsel sum up and the judge explains the

The Indian Association for the Cultivation of Science.

210, Bow-Bazar Street, Calcutta.
(Session 1896-97.)

Lecture by Babu Rajendra Nath Chatterjee, M.A., Wednesday, the 26th Inst., at 5 P.M. *Subject*: Specific gravities of solids and liquids (concluded)—Pneumatics.

Lecture by Dr. D. N. Chatterjee, B.A., M.B., C.M., Thursday, the 27th Inst., at 5-30 P.M. *Subjects*: The Protozoa. Coelenterata.

Lecture by Dr. Mahendra Lal Sircar, Friday, the 28th Inst., at 7 P.M. *Subject*: Expansion by Heat (concluded.)

Lecture by Babu Girish Chandra Bose, M.A., F.C.S., M.R.A.S., &c. Saturday, the 29th Inst., at 5-30 P.M. *Subject*: Morphology—Flowers.

Lecture by Dr. Nilratan Sircar, M.A., M.D., Saturday, the 29th Inst., at 6-30 P.M. *Subject*: Histology—Endothelium.

Admission Fee, Rs. 4 for Physics, and Rs. 4 for Chemistry; Rs. 6 for both Physics and Chemistry; Rs. 4 for Physiology; Rs. 4 for General Biology; Rs. 6 for complete course of Physiology and Biology. The charge for a single lecture is 4 Annas.

MAHENDRA LAL SIRCAR, M.D.,
Honorary Secretary.

Aug. 22, 1896.

charge to them, each enforcing the views that those facts would support. In asking the public to pronounce their verdict on the priests, Dr. Bhattacharya has tried to explain the facts connected with them more after the manner of a judge than that of an advocate. If the view taken by him is based on erroneous premises, let them be exposed by all means. But one should not expect that one's *ipsi dixit* is sufficient to set aside the balanced judgment of a careful thinker who is always on his guard against prejudice and foregone conclusions of every kind.

The author gives the main facts relating to several cults current among Hindus of the present day, and, in order to explain their nature, raises at the outset the question whether our religions are the gift of God Almighty, or whether they are not the inventions of men actuated partly by philanthropy but chiefly by selfish motives. After having shown that the theory of the divine origin of religion is quite untenable, the doctor goes on to show that the only hypothesis which accords with the actual facts is that religion is the outcome of human policy. This view alone furnishes a clue to the progressive development of religions from nature-worship to man-worship, and from man-worship to the abomination-worship to which every religion has, more or less, a tendency to culminate. If the writer in the Madras journal could put forward facts at variance with the hypothesis favoured by Dr. Bhattacharya, no one, we are sure, would be more glad than the doctor himself to give it up.

The writer of the notice observes that "no country has existed without a religion, and a purely destructive work like the one before us can scarcely do much good to any one." The unphilosophical character of this remark cannot be made obvious without a little of that irreverence which many might consider unpardonable, but which, for the sake of truth, is sometimes necessary. We, therefore, need not feel much hesitation in saying that, as there is no country in the world in which there are not a good many knights of industry, one might as well say that it is useless to expose the ways of the shop-lifter, the cattle-lifter, the house-breaker and the pickpocket. The fact is, the world has not advanced much in candour. Religion is a ticklish subject, round which centre all the prejudices which the mind is capable of harbouring. Most people forget that religion, like colour, dress and diet, are determined for us by a host of circumstances over which we have no control, instead of being at all determined by us. One born in a Christian country and family becomes as easily a Christian as one born in a Mussulman country and family becomes a follower of Mahomet. Every faith pretends to be the true one, all the rest being founded upon error. A dispassionate examination of the origin of a faith is never tolerated by those that regard it as true.

The admiration which the reviewer professes for Buddha deserves a passing notice. The followers and admirers of Buddha are never tired of referring to his having left home and wife and new-born child for the sake of working out his purpose. But was the great opponent of the Brahmins the only person in the world that left home under similar circumstances? Is not a mania for mendicancy common among young men in every part of the world? Have not thousands and thousands of men in every age adopted, for the sake of adventure or novelty, a similar or even a more miserable course

of life? As observed by Dr. Bhattacharya, mendicancy deserves no more credit than suicide.

We do not mean to say that Dr. Bhattacharya's work is faultless. Like every product of the human mind, it has its imperfections. There are even errors here and there. But before one takes up the rôle of a critic, one should read it thoroughly from beginning to end. A superficial perusal can lead only to flippancy and injustice.

OUR LONDON LETTER.

July 31.

Imperial Parliament. After another all-night sitting, the Irish Land Bill has left the Commons, and the second reading will be taken tonight in the House of Lords. Next week it will go into Committee, and the Irish landlord party, stronger in the Lords than in the Commons, threatens to do its best or worst to mutilate the Bill. But Lord Salisbury's majority in the Lords should prevent any mischief. At the last sitting in the Commons, Colonel Saunderson and Mr. Smith Barry, made a savage attack on Mr. Balfour, which he paid back to them in their own coin, asserting either "he or they were mad." As I wrote when Mr. Gerald Balfour introduced the measure, inasmuch as it was displeasing both to the landlords and the anti-Parnellite section of the Home rulers led by Mr. Dillon, it was fair to conclude it held a fair *via media*, and that is the general opinion. The Government received invaluable help from Mr. T. M. Healy and Mr. Redmond. The former again made good his position as unquestionably the ablest debater among the Irish members, and, with the exception of Mr. Chamberlain, may be said to be second to none in the House.

His Irish friends gave him and his brother---Maurice---a complimentary banquet in acknowledgment of the splendid service he had rendered to Ireland in his conduct towards this measure. In his speech at the dinner, Mr. Healy, without naming him, held up Dillon to the scorn of his countrymen, as a leader wholly wanting in the gifts of leadership, and earnestly urging Mr. Sexton to come out of his retirement, and assume the leadership of a united anti-Parnellite party. The quarrel between him and Dillon is notoriously incapable of adjustment, and a man of Healy's strong intellectual character will not brook playing second fiddle to so incompetent a man as Dillon.

Last night Mr. Chamberlain in a short speech introduced his resolution as to a Parliamentary enquiry into the whole Rhodesian question, but the Committee cannot sit until the reassembling of Parliament in the beginning of February. It now remains to nominate the members of the Committee. There is a difficulty about the chairmanship, Mr. Chamberlain being reluctant to assume the position. The only other member of the Government named for it is the Chancellor of the Exchequer, who acted as Colonial Secretary some twelve years ago. But he too does not covet the post, and this morning's papers appear to think Mr. Chamberlain must take it. There will be a struggle over Mr. Labouchere. He wishes to be a member, and Government is quite agreeable to accepting him as the unscrupulous opponent of Mr. Rhodes and the Chartered Company. But just on this account a strong feeling exists, that he should not serve as he cannot give an unbiased judgment.

Dr. Jameson's Trial. This terminated on the evening of the 28th instant, and you would know the result and the sentence on the Wednesday morning. Yesterday it was everywhere believed, much to the gratification of all classes of society, that the prisoners would be treated as "first class misdemeanants," which would have consisted merely in the deprivation of their personal liberty. They would have been able to wear their own clothes---to have their own food supplied to them from outside---to receive their friends---to carry on their correspondence---and in short live their ordinary lives, but in confinement. This of itself to such men would have been severe penalty. But to the amazement of every one, the Home Secretary stated in the House last night, he had no power to interfere. The court that passed the sentences alone had the power to grant the privilege, and it had refused to interfere. It is now hoped Government will invoke the royal prerogative, to which even the Lord Chief Justice and his colleagues must bow. The popular feeling throughout the country is rising, and possibly the severity of the Judges may lead ultimately to a considerable reduction of the sentences. Already the House of Commons is moving, and all parties including the Irish Nationalists (though they no doubt have ulterior ends of their own in view) have signed a "round robin" to the Home Secretary, praying for the exercise of the royal clemency. Even Mr. Labouchere has signed the petition.

Two Books on India. The "Times" reviews favourably Syed Muhammad Latif's work on the *History of the Punjab* and Mr. R. P. Karkarra's "Forty years of progress in India."

The same journal's article of the 27th instant on Indian Affairs, is more than ordinarily full of interesting matter and must be very gratifying to your Lieutenant-Governor. Sir A. Mackenzie's attitude on the question of roads for the Western Duars has been thoroughly statesmanlike, and if allowed free scope will do more than "could be effected by any philanthropic efforts to promote the movement of the population from the overcrowded or arid districts to the under-peopled areas of Bengal." The other matter relates to Sir A. Mackenzie's endeavours to grapple with the ever present dread of "water famine" in one or more divisions of Lower Bengal. In this the Supreme Government do not appear to have given him a free hand.

Li-Hung Chung is expected here on Monday. Government has taken Lord Lonsdale's two houses in Carlton House Terrace, where the Chinese functionary will be entertained as a state guest. His visit is to extend to quite four weeks. No doubt, Liverpool, Manchester, Sheffield, and Glasgow will excite his amazement. But, what beyond everything will be calculated to impress him, will be the magnificent display of the British Navy in the Solent, on Tuesday. Another thing that would excite his wonderment, would be a drive or drives through the suburbs of London, North, South, East, and West. But to appreciate such a drive an impossible condition would be necessary, to wit, that it should be accomplished without the public being aware of it. To Li-Hung-Chung, to be mobbed by a gathering of London roughs would be intolerable. No doubt on his visit to the city he will see enough of London crowds. No doubt, he and his entourage are early risers. Four morning drives between 6 and 8 with good weather thrown in, would accomplish everything.

The International Peace Congress. The proceedings of this vaunted congress have excited no end of amusement to Londoners. Last Sunday there was to be a great gathering in Hyde Park, but a drenching rain soon cooled their ardour and many of them, as the "Times" cruelly remarked, probably "experienced a cold douche bath for the first time in their lives." There are several component bodies in this wonderful gathering.

The S. D. F. (Social Democratic Federation) and the I. L. P. (Independent Labour Party) with such leaders as Hyndman, Mann, Keir Hardie, and others of that ilk, hoped to have the whole proceedings well in hand, as a protest of the working classes against the capitalists. Not that Hardie, Mann, Tillet, Wilson belong to the working classes. They are supported by them and lead a glorious life, hurrying through the country, while the real workers—poor, duped creatures—maintain them, in what to them is luxury and plenty—out of the savings that should go to their wives and children.

But the best joke has yet to be told. The foreign Anarchists have got a footing, and every day there is at the Queen's Hall, where they meet, the most monstrous rowdyism, so that nothing is accomplished.

It is truly a melancholy spectacle for all thinking men. But this Labour question is one all far-seeing statesmen will have to face. Already it is being acknowledged that in the Presidential contest in the United States, while the platform today is one of Silver v. Gold, the real battle will yet have to be fought between Capital and Labour. And when the critical moment does arrive, it will be found that in no country in the world will the issue be so far-reaching and so volcanic as in the United States of America. Crete is still an uncertain factor in the *haute politique* of Europe, and together with the state of unrest in Macedonia bodes no good to the Turk. I am sorry to see by this morning's papers Madagascar is in a deplorable state. The state of things at the Hova capital at the end of June reminds one of the state of Calcutta in the same month of 1857.

HOUSE OF COMMONS.

Monday, July 20.

THE MAHARAJA OF JHALLAWAR.

Mr. H. Roberts asked the Secretary for India whether he would grant a public inquiry into the case of the Maharaja of Jhallawar in such a form that the Maharaja might have a full opportunity of making his defence, and whether this inquiry would include an examination of the charges made by him against the political resident.

Lord G. Hamilton: The decision of the Indian Government, which I confirmed in a despatch of May 1, is final, and I have no intention of reopening this case.

Subsequently Mr. H. Roberts asked for leave to move the adjournment of the House for the purpose of discussing a definite matter of urgent public importance, namely, "the treatment of the Maharaja of Jhallawar and the unsatisfactory character of the inquiry into his case."

Mr. Clancy inquired, as a point of order, whether, as this matter was a year old and the decision which the hon. member desired to challenge was three months old, the hon. member could now raise the question on a motion for adjournment.

The Speaker did not think the hon. gentleman stated quite

accurately the dates of the case, but he thought it was a case in which he could not take upon himself the responsibility of saying that it was not a matter of urgent public importance.

More than forty members having risen in their places, and leave having thus been obtained,

Mr. H. Roberts moved the adjournment of the House. He spoke amid considerable interruption and loud cries of "Divide," and said the matter was an important one, as the issue involved the principle upon which the whole Constitutional question of the position of native princes turned. In the year 1883, in consequence of the changes made by the British Political Agent, the Maharaja of Jhallawar was deprived of his ruling power; in 1892 he was reinstated with conditions, and in December 1894 he was reinstated with full powers with one condition only—namely, that he should keep the Political Agent fully informed of all the matters with which he ought to be acquainted. This year, however, he had been deposed again, as the consequence of charges brought against him by the present Political Agent. Some of these charges were very trivial, while others were serious, the most serious being the withdrawal of four and a-half lakhs of rupees from the Treasury. The Prince steadily maintained that he was right in what he had done. But he (the hon. member) was not dealing with the question of whether the charges were right or wrong; all he desired was that in cases such as this a native prince should have an opportunity of stating his views before an impartial tribunal, and this had not been given in this instance. He hoped that the result of his intervention would enable the noble lord to offer some hope that the Maharaja might be able to state his case before an impartial tribunal. This matter did not affect one native State alone, but was an important imperial question, viewed from an Indian standpoint.

Sir W. Wedderburn seconded the motion. He said he wished to refer chiefly to two points, namely, the importance of this matter and the necessity of giving the Raja an impartial trial. It had been said by the political officers that these proceedings were being very closely watched all over Rajputana. But he went further and said that the proceedings were being watched by every ruling Chief throughout India, not only with interest, but with anxiety and alarm. How could that fail to be the case when they saw one of their number deprived of his throne and exiled from his dominions, not for any maladministration proved in public enquiry, but upon the secret reports of the political agent who was on bad terms with the Prince himself. Our position in India depended very much on the goodwill of the native Chiefs. At the time of the Mutiny they were our sheet-anchor, and those who took an interest in our Imperial fortunes should be specially careful to remove all causes of unrest and alarm among the native Chiefs of India. He did not say there were not cases in which the Government of India ought to interfere—cases in which maladministration and tyranny were proved. In such cases it was not only the right but the duty of the Indian Government to interfere. He agreed entirely with the view that it was to the paramount Power alone that the inhabitants of native States should look for protection against misgovernment and tyranny; but what he contended for was that in this case no tyranny and no oppression had been proved against the Chief in question. He maintained that this was a personal quarrel, and that the charges of maladministration were somewhat of an afterthought. It was the misfortune of our political system in India that in every native State there were two kings, the Raja on the one hand, who gathered around him the supporters of the "ins"; and the Political Agent, on the other hand, who gathered around him every faction who might be termed the "outs." The only story the Government of India heard was the story told by the Political Agent, whose only source of information was the faction whose very object it was to discredit the Raja. His proposition was that this Prince had not had an impartial trial, because all the information on which the Government of India had acted was one-sided information, obtained from a tainted source. Such being the case, he was entitled to a fair and impartial hearing before the very serious step of deposing him was taken. The correspondence showed that there was no real popular discontent. All the signs of popular discontent were wanting. What were the charges of misgovernment? The only thing he saw charged in the nature of maladministration had reference to the revenue settlement, and the remarkable part of that accusation was, not that the Raja had taken too much from his subjects, but the statement of the agent absolutely was that he did not take enough. He only wished that the people of British India could make that charge against their Government. Another complaint was that the Raja cut down

DEAFNESS COMPLETELY CURED! Any person suffering from Deafness, Noises in the Head, &c., may learn of a new, simple treatment, which is proving very successful in completely curing cases of all kinds. Full particulars, including many unsolicited testimonials and newspaper press notices, will be sent post free on application. The system is, without doubt, the most successful ever brought before the public. Address, Aural Specialist, Albany Buildings, 39, Victoria Street, Westminster, London, S. W.

expenses. Again, he could only wish that the Government of India would do the same thing, and so get rid of a great deal of objectionable taxation. The reports of the political officer did not lay any great stress on acts of maladministration. The Government of India practically gave away the whole case by saying that the question before them had been not so much specific acts of maladministration by the Raja himself as his attitude towards the British Government. The whole case had arisen out of a quarrel between the political agency and the Raja, and what was asked was that there should be an impartial enquiry. He had no special knowledge of this particular chief but it was in the interests of all the chiefs, and because he believed there was no more important thing for our rule in India than to cultivate and retain the goodwill and friendship of the native chiefs that he seconded this motion.

Lord G. Hamilton said he would not question the right of the hon. member to make exceptional use of the forms of the House to call attention to this question; but he had chosen a singularly inopportune time. (Hear, hear.) These papers had been in the hands of the House for some time past, and the matter might have been raised last week, or the week before, next week, or the week after, without in the least degree affecting the hon. member's case. (Hear, hear.) The hon. member had deliberately selected a day specially apportioned to the discussion of an important Bill in which many hon. gentlemen took great interest. The question that the House wished to discuss was more or less limited by time; and if a motion of this kind was made to obtain a great slice of the time of the House for one day, it was more or less an indirect attempt to kill that measure. (Hear, hear.) He could demolish the whole of the hon. gentleman's case in half-a-dozen minutes. It was a matter of great surprise that two hon. gentlemen should read the Blue Book with such blind eyes. Every little detail in favour of the Maharaja had been paraded before the House, but the main facts on which his deposition was based had altogether escaped their notice. He was an adopted son of the ruler of a small State created by the Indian Government, and on the death of his adopted father he was sent to college at Rajpootana. During the time he was a minor his State was governed by a native council, under the superintendence of the Political Agent, and the State greatly improved in prosperity, and the people became habituated to good government and administration. When he arrived at his majority, the Indian Government only allowed him to undertake the government of the State on the condition that he did not upset the principles that had been enforced during his minority, and that on all questions of material importance he should consult the Political Agent. It was said that there was a personal quarrel between him and the Political Agent. There had not been a single Government in the last fifteen years that had not come into collision with him, or a solitary Political Agent that had not had reason to report him. The first Political Agent was Sir Edward Bradford, the present Chief Commissioner of Police, and all who knew him would say that he was a model Political Agent, combining firmness with a courtesy and charm of manner that was seldom to be found. (Hear, hear.) The Maharaja had not been two years discharging the functions of his State before Sir Edward Bradford had to report him as almost hopeless. He did all he could to keep him straight, but the young man disregarded his advice, and the only alternative seemed to be to depose him. The Indian Government declined to adopt that step, but considerably reduced his powers, and addressed to him a very severe warning. That was under Lord Dufferin. The succeeding Viceroy, Lord Lansdowne, had his attention called to his conduct, and addressed a still stronger caution, pointing out that it might be necessary to remove him from the State. This apparently had some effect, and to a certain extent he became more amenable to advice, and was shortly afterwards allowed to discharge some of the functions that he had previously enjoyed. Later on, as he seemed more disposed to act on advice and to carry on his Government on proper lines, Colonel Irving, the then Political Agent, recommended that he might be given back his full original powers. The one mistake was the granting of those powers, because the moment he had them he lapsed back into his old habits. Captain Evans Gordon then appeared on the scene, and finding malpractices going on in every branch of the Administration, protested against them. The Maharaja then deliberately tried to bribe Captain Evans Gordon, and, on the attempt being exposed, refrained from offering any apology for the gross insult that he had offered the Political Agent. The Prince took as his confidential adviser a native advocate who had been struck off the rolls, and the Agent complained that thereafter every form of maladministration was practised, he himself being boycotted, and people who had obtained access to him being dismissed. Altogether, the Prince showed himself to be an impossible ruler, and in the end his deposition became absolutely necessary. He (the noble lord) admitted that it was necessary most scrupulously to guard the rights and privileges of the Indian princes. (Hear, hear.) At the present moment he was glad to say that relations between those princes and the Indian Government were most cordial. With the assistance and advice of the political agents we had to discharge a most difficult duty. The adminis-

tration of the native States was steadily improving; but just as we had a duty towards the native princes, so had the Indian Government a duty towards the people who lived in the native States. We had taken from them the means of revolution, and we were, therefore, bound to prevent misgovernment. In the present instance the Prince had refused to comply with the conditions on which alone we could accept his authority, and, as he had set the Indian Government at defiance, his deposition could not be avoided.

Mr. Clancy: I beg to move that the question be now put.

The Speaker did not accept the closure.

Dr. Clark said the only charge of maladministration against this Prince was that he had attempted bribery; but it was clear from the Blue Book that that attempt had been made, not by the Maharaja of Jhallawar, but by a Bengali Baboo, who had been dismissed by the Resident, and who had offered the new Agent 15,000 rs. to refrain from further action against him. He (Dr. Clark) protested against the Prince having been deposed without being heard in his own defence.

Mr. H. J. Wilson doubted the wisdom of investing this young Prince with power, just on leaving college, at the age of eighteen. He considered that the cause of the trouble had been not administration, but jealousy between the Prince and the Political Agent.

Mr. Balfour rose to move the closure, but Mr. H. Roberts also rising,

The Speaker said: I think the hon. member proposes to withdraw the motion.

The motion was, by leave, withdrawn.

WE MUST HAVE THE TOOLS.

ROBINSON CRUSOE, you remember, made a big boat or canoe out of the trunk of a tree. It was a laborious and tedious job. And that wasn't the worst of it. When he got the boat done he couldn't launch it. It was too heavy for one man to handle. If he had only had an arrangement like the capstan of a ship he might have managed. He *understood* how to do it, but lacked the tools. How often we find ourselves at a dead stand for that same reason. Let me give you a fresh illustration, tied up for the moment in the following letter, which must first be read before we can rightly come at the point.

"In the spring of 1884," says our correspondent, "I got into a low weak way, not being able to imagine what had happened to me. My strength kept ebbing away till I had scarcely the desire or ability to do anything. I felt as tired as if I had just arrived home from a long, hard journey, yet no tax more than usual of any kind had been laid upon me. My mind, too, was weary; so that I turned from things that obliged me to think, plan, or consider.

"Side by side, so to speak, with all this was the failure of my appetite. Of course I continued to eat, or make an effort to eat, but food no longer tempted me as it does a person in health. I picked and minced over my meals, and the little I took neither tasted good nor did me any good after I had eaten it. Instead of warming, comforting and stimulating me, as it used to do, it gave me distress at the stomach, pain at the chest, and a singular feeling of tightness around the waist, as though a belt were buckled too snug around me.

"After a time the condition of my stomach seemed to grow worse. There was that sense of gnawing, so often mentioned by others, and occasionally a feeling of faintness and sinking, almost like the ground giving way under one's feet."

[REMARK: An eminent London physician, in one of his books, describes this sinking feeling as one of the most appalling and frightful that it is possible to experience. It is not the body but the *mind* that suffers. I, the present writer, have had two attacks of it, and pray to have no more. It is like unto the overshadowing of the Death Angel's wing, *with the mind fully conscious of the situation*. The cause is uric acid poison in the blood, one of the products of prolonged indigestion.]

"When this sinking feeling came on," continues the letter, "it weighed me down like a nightmare. Finally I got to be so weak I could only walk slowly and feebly. The doctor who prescribed for me said my complaint was *dyspepsia*, but his medicine had no perceptible effect.

"I continued like this for eight years; not always the same, but now better and then worse. Yet in all that long time there was not a day when I could say I was well. No medicine or treatment seemed right for me, and I almost began to think I never should recover my former health.

"In March, 1892, Mother Seigel's Syrup was recommended to me as having done wonders in cases like mine, even when they were of long standing and everything else had failed. No harm to try it, we thought, and got a bottle from Mr. Grime, the chemist, in Bolton Road; and after taking it I felt great relief. My appetite quickly improved, and I could eat without pain. When I had taken two or three bottles more the bad symptoms had all gone, and I was as well as ever. My husband also took the medicine with the same good results. You may publish my letter and refer inquirers to me. (Signed) (Mrs.) Elizabeth Wilson, 5, Northcote Street, Bolton Road, Darwen, March 1st, 1895."

The lesson in this interesting narrative is too plain for us to miss it. Our old friend Crusoe was not able to launch his boat for the want of machinery. Similarly the doctor who attended Mrs. Wilson was not able to cure her because he did not possess the right remedy. His opinion as to her complaint was entirely correct. She was suffering from chronic dyspepsia, precisely as he told her. But alas! it is one thing to know what ought to be done and quite another to have the knowledge and means to do it.

Between these two things (over this wide gap) stands Mother Seigel's Syrup, just as between the two sides of the Thames stands London Bridge.

Sir George Chesney Memorial Committee.**CHAIRMAN :****General Sir Henry W. Norman.****MEMBERS :**

The Marquess of Lansdowne, Field Marshal Lord Roberts, Mr. George Allen, Colonel Sir J. Ardagh, Sir Stuart Bayley, Mr. William Blackwood, Sir Edward Braddon, Rev. A. G. Butler, Colonel Sir G. S. Clarke, General Sir E. Collen, Sir Auckland Colvin, Sir Julian Danvers, General C. H. Dickens, Sir Mortimer Durand, General Sir W. Stirling Hamilton, Captain Hext, R. N., Mr. A. P. Howell, Sir W. W. Hunter, Lieut.-Genl. McLeod Innes, General Sir Allen Johnson, Sir H. S. King, M. P., Mr. A. Lawrence, General Sir R. Low, Sir Alfred Lyall, General Sir O. Newmarch, Sir Andrew Scoble, Field Marshal Sir Lintorn Simmons, Field Marshal Sir Donald Stewart, General R. Strachey, General Sir A. Taylor, Mr. Meredith Townsend, Mr. W. C. Unwin, General Sir George White and General Sir E. Williams.

Memorial**TO THE LATE****SIR GEORGE CHESNEY, K.C.B., R.E., M.P.**

A Meeting was held, on the 24th April, at the Royal United Service Institution, of some of the friends of the late Sir George Chesney, to consider the question of the commemoration of his distinguished services as Soldier, Administrator, Statesman, and Author. General Sir Henry Norman presided, and was supported by Field Marshals Sir Lintorn Simmons and Sir Donald Stewart, and other friends of Sir George Chesney. To carry out the object of the Meeting, a General Committee was formed, which included the gentlemen then present, and in addition, the Marquess of Lansdowne, Field Marshal Lord Roberts, General Sir George White, Sir Andrew Scoble, Sir Alfred Lyall, Sir H. S. King, Sir W. W. Hunter, Mr. Meredith Townsend, General Richard Strachey, Mr. William Blackwood, and others.

The form the Memorial should take was left for the future consideration of the Committee, as it would depend on the amount subscribed, but the suggestions tended towards a bust of Sir George for the India Office, and a medal for valuable contributions to Military Literature. It was resolved to limit each subscription to a maximum of three guineas.

Subscriptions will be received by Lieutenant-General McLeod Innes, 9, Lexham Gardens, Cromwell Road, London, W.

COMMITTEE FOR INDIA :

His Excy. General Sir George White, V. C., G. C. I. E., K. C. B., the Hon'ble Major-General Sir E. Collen, K. C. I. E., Lieutenant-General Sir W. S. A. Lockhart, K. C. B., K. C. S. I., His Excy. Lieutenant-General Sir C. Mansfield Clarke, K. C. B., Major-General J. Duncan, Major-General G. E. L. S. Sanford, C. B., C. S. I., Major-General G. de C. Morton, C. B., Major-General A. R. Badcock, C. B., C. S. I., Brigadier-General W. G. Nicholson, C. B., Captain J. Hext, C. I. E., R. N., Colonel W. S. S. Bisset, C. I. E., R. E., Colonel T. Deane.

Honorary Secretary :

Colonel T. Deane, Simla.

Subscriptions will be received, in India, by Messrs. King, King & Co., Bombay; Messrs. King, Hamilton & Co., Calcutta; and by the Alliance Bank, Simla, and its branches at Calcutta, Cawnpore, Agra, Ajmere, Darjeeling, Lahore, Murree, Mussoorie, Rawal Pindi and Umballa. Subscriptions are limited to a maximum of Rs. 32 in India.

By order of the Committee,

T. Deane, Col.,
Hony. Secy.

Simla, 18th July, 1896.

POSTSCRIPT.

After paying the expenses of the publication, the surplus will be placed wholly at the disposal of the family of the deceased man of letters.

Orders to be made to the Business Manager, "An Indian Journalist," at the Bee Press, i. Uckoor Dutt's Lane, Wellington Street, Calcutta.

OPINION ON THE BOOK.

It is a most interesting record of the life of a remarkable man.—Mr. H. Babington Smith, Private Secretary to the Viceroy, 5th October 1895.

Dr. Mookerjee was a famous letter-writer, and there is a breezy freshness and originality about his correspondence which make it very interesting reading.—Sir Alfred W. Corft, K.C.I.E., Director of Public Instruction, Bengal, 25th September, 1895.

It is not that amid the pressure of harassing official duties an English Civilian can find either time or opportunity to pay so graceful a tribute to the memory of a native personality as F. H. Skrine has done in his biography of the late Dr. Sambhu Chunder Mookerjee, the well-known Bengal journalist (Calcutta: Thacker, Spink and Co.); nor are there many who are more worthy of being thus honoured than the late Editor of *Reis and Rayyet*.

We may at any rate cordially agree with Mr. Skrine that the story of Mookerjee's life, with all its lights and shadows, is pregnant with lessons for those who desire to know the real India.

No weekly paper, Mr. Skrine tells us, not even the *Hindu Patriot*, in its palmiest days under Kristodas Pal, enjoyed a degree of influence in any way approaching that which was soon attained by *Reis and Rayyet*.

A man of large heart and great qualities, his death from pneumonia in the early spring in the last year was a distinct and heavy loss to Indian journalism, and it was an admirable idea on Mr. Skrine's part to put his Life and Letters upon record.—*The Times of India*, (Bombay) September 30, 1895.

It is rarely that the life of an Indian journalist becomes worthy of publication; it is more rarely still that such a life comes to be written by an Anglo-Indian and a member of the Indian Civil Service. But, it has come to pass that in the land of the Bengali Babus, the life of at least one man among Indian journalists has been considered worthy of being written by an Englishman.—*The Madras Standard*, (Madras) September 30, 1895.

The late Editor of *Reis and Rayyet* was a profound student and an accomplished writer, who has left his mark on Indian journalism. In that he has found a Civilian like Mr. Skrine to record the story of his life he is more fortunate than the great Kristodas Pal himself.—*The Tribune*, (Lahore) October 2, 1895.

The career of "An Indian Journalist" as described by F. H. Skrine of the Indian Civil Service is exceedingly interesting.

Mookerjee's letters are marvels of pure diction which is heightened by his nervous style.

The life has been told by Mr. Skrine in a very pleasant manner and which should make it popular not only with Bengalis but with all those who are able to appreciate merit unmarred by ostentation and earnestness unspoiled by harshness.—*The Muhammadan*, (Madras) Oct. 5, 1895.]

The work leaves nothing to be desired either in the way of completeness, impartiality, or lifelike portrayal of character.

Mr. Skrine deals with his interesting subject with the unfailing instinct of the biographer. Every side of Dr. Mookerjee's complex character is treated with sympathy tempered by discrimination.

Mr. Skrine's narrative certainly impresses one with the individuality of a remarkable man.

Mookerjee's own letters show that he had not only acquired a command of clear and flexible English but that he had also assimilated that sturdy independence of thought and character which is supposed to be a peculiar possession of natives of Great Britain. His reading and the stores of his general information appear to have been, considering his opportunities, little less than marvellous.

One of the first to express his condolence with the family of the deceased writer was the present Viceroy, Lord Elgin. Mookerjee appears to have won the affection not only of the dignitaries with whom he came in contact, but also of those in low estate.

The impression left upon the mind upon laying down the book is that of a good and able man whose career has been graphically portrayed.—*The Englishman*, (Calcutta) October 15, 1895.

"IMPROVED UNDAUNTED"

WATCH. Rs. 7.

Guaranteed three Years.

Strong, accurate, pretty, small, open-faced, nickel silver, keyless, short winding, nautic, "NEW STYLE IMPROVED UNDAUNTED" watch, with hand setting mechanism, secondhand, for Doctors, ornamental bold dial, for Rs. 7 V. P. P. with an extra glass, spring, pretty box and full three years' guarantee. Warranted to stand the roughest use. Runs more than 28 hours with one winding. Will last a life time. Easily repairable. Others sell at double our rates. One watch free for the purchase of 8 at a time. Mr. Jno. Dickson of Hospital Railway, from Ceylon says:—It keeps splendid time and never stopped although it sustained hard knocks and jerks. x Dr. H. Moore of Royal Artillery from Poonamallee says:—I sold it for Rs. 16. x Pte. W. Hopkins of Sussex Regt. from Dundum says:—I have sold it for Rs. 20. x Mr. T. B. Scott of Patna Opium Department says:—The watch you sent me some seven years ago is still keeping very good time.

Jewelled Ring Re. 1-8-0. Real

Silver Watch Rs. 13. Real

Solid Gold Watch Rs. 24.

Pretty electro cased gold chain Re. 1-8-0. Fashionable electro cased Gold Ring set with scientific diamonds, Rubies, Emeralds, at Re. 1-8-0. Mr. G. Smith, Silt Inspector from Sanikutia, says: "A German valued the diamond ring at Rs. 50 and ruby at Rs. 30." Key winding, Government stamped, solid silver hunting case, Royal watch with extras and full three years' guarantee, for Rs. 13. Pte. G. Hawkes of 2nd York Light Infantry from Purandhar says:—For the first one I got Rs. 25; the second one I sold to a Sergeant for Rs. 28. x Pte. H. C. Bishop of L. F. L. Regt. from Kanpotee says:—A Corporal offered Rs. 30 for the very same watch. Gentlemen's open faced, keyless *real solid gold watch* Rs. 30; ladies' Rs. 24; both with extras and guaranteed for 3 years. Mind they are guaranteed to be of real solid gold. No agents kept, all goods sent only by us from Bombay per V. P. P.

Novelty in Ayurvedic Medicine. AYURVEDIC PHARMACY.

36, Lower Chitpore Road, Fouzdar
Bilaknana, Calcutta.

KAVIRAJ NAGENDRA NATH SEN, Physician, Surgeon, Accoucheur, practises the Ayurvedic system of medicine, after having obtained a diploma at the final examination of one of the Government medical Institutions of the country.

SPECIFICS

for all ordinary diseases, like Fever, Cough, Asthma, Phthisis, Diabetes, &c., including diseases brought on by irregularities of kinds Catalogues, containing full accounts of diseases and remedies, are transmitted on application. Prescriptions, with or without medicines, sent to every part of India and Ceylon, Cape Colony, and the British Isles, on receipt (by post) of full accounts of diseases.

Thousands of unsolicited Testimonials from every quarter.

CATARRH,

Hay Fever, Catarrhal Deafness.

A NEW HOME TREATMENT.

Sufferers are not generally aware that these diseases are contagious, or that they are due to the presence of living parasites in the lining membrane of the nose and eustachian tubes. Microscopic research, however, has proved this to be a fact, and the result is that a simple remedy has been formulated whereby these distressing diseases are rapidly and permanently cured by a few simple applications made at home by the patient once in two weeks. A pamphlet explaining this new treatment is sent on receipt of 2½d stamp by A HUTTON DIXON, 43 & 45 East Bloor St. TORONTO, Canada.
Scientific American.

VOL. XV.

CALCUTTA, SATURDAY, AUGUST 29, 1896.

WHOLE NO. 740.

CIRCASSIAN MELODIES.

WAR SONG.

1.

Hark, oh hark, the fife and drum !
Onward on, the Cossacks come !
Sound the war cry, sword and lance, -
Gleam in air, advance, advance !

2.

Raise, oh raise, the banner high !
Arm ! arm all, for Attégbéi !
Guard the valley, guard the dell !
Hearth and home, farewell, farewell !

3.

We will dare the battle strife,
We will gladly peril life ;
Death or liberty's the cry !
Win the day, or nobly die !

4.

Who would fly when danger calls ?
Freemen's hearts are freedom's walls.
Heav'n receives alone the brave -
Angels guard the patriot's grave !

5.

Beats there here a traitor's heart,
Duped by wily Moscow art,
Who his land for gold would give ?
Let him die, or childless live !

6.

Hark ! oh hark ! the cannons roar !
[Foe meets foe, to part no more !
Quail, ye slaves, 'neath freemen's glance !
Victory's ours !—advance ! advance !

The following lines refer to the death of a young Khansonkhi prince and his beautiful bride, who fell, fighting side by side, while defending, with his clansmen, a dangerous pass against the Russians, in the vicinity of Ghelendjik.

Hark ! hark ! the dread battle-cry booms through the air ;
Young Islam is armed, and the war-horse is nigh ;
He hears not, he marks not, the sob of despair,
But onward he rushes, to conquer or die !

The war-cry is sounding through mountain and vale,
The Moscow, like masses of locusts, come fast :
What shrieks rend the air ? —'tis the hero, who, pale
And wounded, and lifeless, is breathing his last !

DEAFNESS. An essay describing a really genuine Cure for Deafness, Singing in Ears, &c., no matter how severe or long-standing, will be sent post free.—Artificial Ear-drums and similar appliances entirely superseded. Address THOMAS KEMPE, VICTORIA CHAMBERS, 19, SOUTHAMPTON BUILDINGS, HOLBORN, LONDON.

But he lies not alone on his cold earthy bed,
For she whom he loved fell a corse by his side :
There beauty and bravery sleep with the dead,
And the dark narrow grave is the home of the bride !

The succeeding stanzas relate some of the warlike deeds of the glorious chieftain Elijah Mansour—the greatest of all Tartars next to Ghenghis Khan.

[It is remarkable how little is known in Europe of the deeds of this great chieftain, so famous in the long and desolating wars of Russia against the inhabitants of Krim-Tartary and the Caucasus, and who, when we consider the magnitude of the power he had to contend against, and the wild hordes he had to organise, deserves to be ranked among the noblest patriots that ever adorned any country.

The Russians, whose dark policy has ever been to envelope in mist everything connected with the Caucasus and Krim-Tartary, merely describe him as a sort of Mahomet, or false prophet ; whereas the historians of Persia and Turkey make honourable mention of his military talents, extraordinary bravery, and devotedness to the cause of his country, and ever represent him as the most indomitable and formidable enemy that Russia ever had to contend against in the Caucasus. If we were only to credit one half of what the traditionary songs of the bards tell us, he must have been an Alexander in valour, a Lockman in wisdom, and a Machiaveli in policy. Indeed such is the veneration of the Tartars, Circassians, and Lesghians, for his memory, that even to this day the slightest relic that belonged to him is prized as a gem of inestimable value. Every one of his haunts in the Caucasus—nay, every place where he took up a temporary abode, are held sacred by the inhabitants.—Edmund Spencer.]

Of that brave chief I sing the praise
Who victory ever crowned ;
In chieftain's mouth, and minstrel's lays,
His name shall be renowned.

Tshelel-Eddin !

He was born to tread the Moscow's pride
Down to the lowly dust ;
He fought, he conquered, near and wide,
That northern race accurst.

Tshelel-Eddin !

Speak ! Mansour speak ! why hast thou left
The warrior sons alone,
Of thy strong arm and presence 'reft,
'Neath Moscow yoke to groan ?

Tshelel-Eddin !

Thy name was hope, thy name was joy,
To Tartary's warlike bands ;
'Twas bright as gold without alloy,
'Twas fair as Adin's land.

Tshelel-Eddin !

Subscribers in the country are requested to remit by postal money orders, if possible, as the safest and most convenient medium, particularly as it ensures acknowledgment through the Department. No other receipt will be given, any other being unnecessary and likely to cause confusion.

Robbed of her young, the tigress see
How fierce she paws the ground ;
But far more fierce was Mansour, he
Hurl'd death and ruin around.

Tshelel-Eddin !

The swift deer bounds from hill to hill,
No arrow like its flight ;
But Mansour's step was swifter still
When he led on the fight.

Tshelel-Eddin !

His sable war-steed scours the plain
Which other chief ne'er bore ;
His master clanked the captive's chain ;
That war-horse lives no more.

Tshelel-Eddin !

The accursed hosts of Moscov won
Our own, our father's soil ;
Sleep, Mansour ! sleep ! the deed is done !
Thy nation is their spoil !

Tshelel-Eddin !

We kneel, we pray, Oh ! Moscov, hear !
Where hast thou him convey'd ?
The man whose presence banished fear,
The light without a shade.

Tshelel-Eddin !

Do those dark towers, foul murder's home,
Begirt with watery walls,*
Contain the chief for whom we moan,
For whom each Tartar calls ?

Tshelel-Eddin !

Alas ! when those stern gates once close,
No captive comes to tell
His tale of grief, his tale of woes,
The secrets of his cell.

Tshelel-Eddin !

Then, Allah, let thy lightnings slay
The foe we loathe and hate !
Let vultures on their life-blood prey !
For death was Mansour's fate—

Weep ! Tartars weep !

LINES TO THE MEMORY OF THE HEROIC PROPHET OF THE CAUCASUS.

Here dwelt that rare, that priceless gem,
So seldom found below,
An honest patriot. Traveller, then,
A sigh, a tear bestow.

He fought, he bled, to save a land
From slavery's galling chain ;
But dauntless heart and willing hand
Were both, alas, in vain !

Fart from the world, from war, and strife,
He here, in peace and prayer,
Passed years of his pure tranquil life,
With heaven his only care.

Then, Mansour, be thy memory blest,
Till time shall cease to be,
By Tartary's sons, and stranger guest,
By all the brave and free.

* The bard here alludes to the Schlüsselburg, the well-known state prison of Russia, in the vicinity of St. Petersburg, where it is said Elijah Mnnsour, when captured by the Russians, was confined.

† The subjugation of Krim-Tartary to the power of Russia in 1781 having plunged the gallant spirit of this great chieftain into despair, he retired from the world to this place (one of the favourite cots Elijah Mansour was accustomed to occupy in the famous defile called Jagra), where he lived as a hermit till the repeated invasions of the Caucasus by Russia again roused him to arms, in which contest, after performing prodigies of valour, he was captured by general Gudowitsch at the siege of Anapa.

WEEKLYANA.

THE *Gazette of India*, of August 22, publishes the following resolution of the Government of India, in the Finance and Commerce Department :

"In exercise of the power conferred by section 14 of the Indian Securities Act (XIII of 1886) the Governor General in Council is pleased to make the following alterations in the rules published in the Resolution above referred to (No. 95, dated the 7th January 1888) :

I.—For Rule 5 of the said rules the following shall be substituted, namely :

'5. No notice will be taken of any trust appearing in an endorsement of transfer or receipt for interest. When a note is endorsed to, or receipted by, any person, in his capacity of trustee or in any other representative capacity, such person will be treated in all respects as the true owner of the note.'

II.—For Rule 7 the following shall be substituted, namely :

'7. The holder of a note may be required to receipt the same for renewal in all or any of the following cases, that is to say :

(1) If the note has been enfaced for payment of interest at a Mofussil Treasury, and the holder thereof is desirous of altering the place of payment.

(2) If only sufficient room remains on the back of the note for one further endorsement, or when any word or words is or are written upon the note across any existing endorsement or endorsements, all cross endorsements being strictly prohibited.

(3) If the note is torn or in any way damaged or crowded with writing, or unfit, in the opinion of the officer before whom it is produced for payment of interest, for receiving endorsement.

(4) If the note bears an endorsement which transfers the note to, or is signed by, any person otherwise than in his personal capacity, except in the under-mentioned cases :

(a) where the transferee is a well-known firm, corporate body, or Bank ; or the signature attached to the endorsement is the usual name or signature of such a firm or purports to be the impression of the common seal of a corporate body with perpetual succession or is the signature of the Secretary, Deputy Secretary, Manager, or Agent, of a Bank or corporate body ;

(b) where an endorsement is made in his official capacity by the person holding for the time being one of the offices to which the Governor General in Council has, by notification in the *Gazette of India*, declared section 7, sub-section (1), of the Indian Securities Act (XIII of 1886), to apply ;

(c) where the transfer is made to or by a person in whose favour a certificate under the Succession Certificate Act (VII of 1889) or probate or letters of administration under the Indian Succession Act (X of 1865), or the Probate and Administration Act (V of 1881) has or have been granted by a Court of competent jurisdiction ;

(d) where the transfer is made to or by the executor or administrator of an estate who is described as such therein, such executor or administrator being shown to be the holder according to the tenor of the note and previous endorsements.

(5) If the endorsement is not clear and distinct, or if it is made on paper affixed to a Government Promissory Note.

(6) If, in the opinion of the officer before whom the note is presented for payment of interest, the title of the person so presenting the note is irregular or not fully proved.

(7) If the note in question, being a counterpart note issued under the provisions of rule 8, has ceased to be the property of a minor, or to belong to an estate in which administration is limited to interest.

In all or any of the preceding cases payment of any further interest on such note may be refused until the note is receipted for renewal and actually renewed.'

III.—In Rules 10 and 16 for the words 'the Act' and in Rules 15 and 22 for the words 'the said Act' the words and figures 'the Indian Securities Act (XIII of 1886)' shall be substituted."

THE greatest giant going is the American. He is no myth like the giants, religious and secular, of old, of the European Continent—the Guildhall giants, the giant of Antwerp, the giants of Douai, the giants of Brussels, the giants of Ath, the giant of Lille and the giant of Aix. He is not so high as any of these, but is composed of flesh and bones and lives and breathes. He is the tallest man of the present day, measuring eight feet in height. And, what is more, unlike the generality of the species, he is well proportioned in all his limbs and normal development. Such is the opinion of Dr. Zuckerkandl, of the Vienna Anatomical Museum, himself a great authority on the subject. At his invitation, Wilkins, of whom we are speaking, visited the Vienna Museum, full of the skeletons of giants, and was convinced of his own superiority over those whose bones he inspected. In life, he is the observed of all observers. In death, he will be the object of all preservers. There is surely to be a scramble for his bones, unless he has already disposed them of.

FROM giants to centenarians. A notable character in the person of the widow of M. Rostkowsky, Josephine, believed to be the oldest in age in France, has died at Aniche, near Douai, at the age of 112 years and 4 months. Her husband was a Captain in the 6th Polish Regiment of the Line, and she herself took part in numerous engagements as Assistant Surgeon. It is added that at the age of seventy-one she figured in the Crimean War in the ranks of the French

Army. The Modern Methuselah, Henry Jenkins, had attained the age of 169 years, living 16 years longer than old Thomas Parr who died at the age of 152 years and odd months. These two remarkable Englishmen were born in the 16th century and died in the 17th.

In 1875, an Armenian, suffering from fever, was admitted as an indoor patient at the Calcutta Medical College Hospital. He gave his age at 142. He had married three times, the third wife was more than 70 when he came to be treated. He remembered the landing, at Chandpul Ghat, of the Governor Warren Hastings and the sensation in Calcutta occasioned by his impeachment as Governor-General. He spoke of the agitation for the institution of jury in civil cases in Calcutta and had witnessed the burning of Hindu widows in the funeral pyres of their husbands. He could speak Bengali and denounced the hanging of the Brahman Nand Kumar. Of middle stature, he had a strong constitution and refused to lie in bed during the day as a sick patient. The fever was not very high and there was no complication. He was discharged from hospital in two weeks.

THE Marquis de Mores has been murdered by his Tuareg escort in North Africa. He was the only son of the Duc d'Valombrosa and had married Miss Hoffman, the beautiful and accomplished daughter of a New York banker and started with her cattle ranching at Dakota. Having founded a model city he had to come to Paris on account of a disagreement with the old settlers. Then he supported Boulanger and after that came to India with the Duc d'Orleans. Another remarkable incident in his life was the suit he instituted against *Truth* for libel for saying that his father had made his fortune in the days of the First Napoleon by selling dead soldiers in the army as potted meat. The courts held that a dead man could not be libelled. The Indian law, however, is more advanced. It makes no distinction between the living and the dead. No suit for damages may lie against a libeller of the dead but he may be prosecuted criminally by those left behind.

At the Coroner's inquest on the death of Francis James Smith, aged 39 years, a compositor, late of 21, Butlin Street, New North Road, London, another compositor deposed that he noticed blood streaming from beneath the door of the lavatory, which the deceased had entered a short time before. He called for assistance, and on an entrance being forced the deceased was found covered with blood, which was flowing freely from a terrible gash across the throat. The medical evidence showed that the man had cut his throat with a table-knife. The deceased's brother gave evidence that Francis had never threatened to take his own life but complained lately of the great heat. The jury returned a verdict of "suicide while of unsound mind, produced by the heat."

DR. Duncley, Minister of the Baptist Church, Great George Street, Salford, from 1848 to 1855, when he became editor of the *Manchester Examiner and Times* and a few years later co-proprietor, and whose connection with the paper ceased in January 1889, dying on June 29 1896, was cremated on July 2.

WE read in an English monthly that "Mr. John Wesley Harper, the oldest member of the publishing house and founder of the famous international magazine, died on the 21st July, at an advanced age."

THE same day, Lieutenant Walter Maxwell Scott, great-great-grandson of Sir Walter Scott, on his coming of age, was presented, at Abbotsford, with an illuminated address and sword.

THE day before, "Charles Dickens the younger," the eldest son of the novelist, died at the age of 59.

MISS Mamie Dickens, the eldest daughter of Charles Dickens, died on the 23rd July, the day her brother was buried.

It is reported "Mr. T. P. O'Connor's newspaper, *The Sun*, recently celebrated its third birthday. It has, says Mr. O'Connor, a large and solid circulation, and pays a large profit weekly."

ACCORDING to the *Publishers' Circular*, the output of books in Great Britain is as follows:—Sermons, one volume a day; novels, five a

day; educational books, two a day; art and science, two each every week; histories or biographies, six a week; and law, one every two weeks.

CAMBODIA, in Cochin China, contains some Buddhist ruins of interest. In Nhonto, a village seven miles south of Tourane, a tower twenty-five feet high fronts an Annamite Buddhist chapel containing three painted sandstone statues of rare workmanship. Further south, two analogous temples are found with towers 25 to 30 ft. high. The sculptures scattered over the ground point to their Hindu origin. Stones bearing inscriptions are many.

MISS F. J. Erskine, author of "Bicycling for Ladies," &c., who is enlightening the readers of the *Englishman* on the subject, says, in the 7th Chapter, Care of Machine, "It is the independence enjoyed that makes cycling so delightful and this cannot be appreciated to the full without being quite self-contained." Hear now what Ouida says of cycles and cyclists: "Bicycles are a detestable, public nuisance, progress by them is vulgar, ugly, and renders the human race more ridiculous than it was before their invention. The racing cyclist is the lowest form of deformed humanity that we can behold, and when he and his compeers tear through country roads he presents a loathsome sight, drenched with sweat, covered with dust, and clinging, crooked and almost nude, to his machine. There is only one thing worse, a light railway, which will help to complete the destruction of what little is left of Tudor England, of Stuart England, and of England of Shakespeare, and of Falkland."

A CONGRESS of Hydrology, Climatology and Geology will be held at Clermont Ferrand, France, from September 28 to October 6. The Minister of the Interior has accepted the honorary presidency.

THE Bengal Government having published draft rules for the grant of certificates to Compounders under the Municipal Acts, Dr. Hem Chandra Ray Chaudhuri, L.M.S., a practising physician of this city, has addressed the following letter to the said Government:—

"The Calcutta Municipal Act (Sec. 368) requires that 'no shop or place shall be kept for the retail sale of drugs not being also articles of ordinary domestic consumption, unless the same shall have been registered in the office of the Commissioners' and directs that 'no person shall compound, mix, prepare, dispense, or sell any drug in any such registered shop or place unless he be duly certified as a fit person to be entrusted with such duties under rules made for that purpose by the Local Government.' There is a penalty for uncertified persons compounding, mixing, preparing or selling drugs in registered shops or places, as also for owners, occupiers or keepers of such shops or places employing uncertified persons. There is a saving clause that nothing in the section 'shall be construed to apply to the sale of drugs used by practitioners of indigenous medicines when such drugs are not sold in a shop or place where medicines are dispensed upon prescription.' The word 'drug' has been defined in the Act to 'include medicine for internal or external use.'

By exclusion of indigenous drugs, probably in the absence of any recognised school or authorities for teaching the preparation of indigenous drugs, the object of the law seems to be to restrict to qualified persons the preparing and vending of medicines recognised by the British Pharmacopœia. It cannot be said that Kaviraj and Hakims do not dispense medicines upon prescription. They compound, mix and prepare medicines according to their own recipe. Though they do not make up prescriptions made by others than themselves, still they prepare medicines used by all other practitioners of their kind, and that preparation requires as much supervision as the dispensing of European medicines. The preparation of patent medicines ought equally to be brought under regulation. Equally with Kaviraj and Hakim establishments and places for sale of indigenous medicines, homœopathic dispensaries seem to be left by the law out of consideration. For in them there is hardly any dispensing of medicines in the proper sense of the phrase, though they prepare some of the original or mother tinctures.

It is very desirable that rules declaring the competency of compounders should be passed and that all dispensaries and drug shops of whatever kind placed under supervision. I perfectly see that in making rules the Government does not nor can it alter or amend the law. It is now only concerned with the qualifications of compounders. I do not take up in myself the interpretation of the law nor am I disposed to think that 'shop or place kept for the retail sale of drugs' includes all dispensaries and drug shops, and drugs of all systems of medicine. And if it is intended to exempt any class of medicines or any kind of drug shops, one set of rules will not do for all systems and places. It is however not very difficult to find out what qualifications are required for preparing or dispensing Kaviraj or Hakim medicines or prescriptions, and, as I have already said, no special qualifications are required for compounders of homœopathic medicines. It would therefore be to place unnecessary or blind restrictions in the three cases mentioned, if the rules proposed are given the sanction of law without a direction by proper authority not to enforce them in such instances.

The law exempts drugs used by practitioners of indigenous medicines. There is no knowing what are indigenous drugs. Practitioners of indigenous drugs use drugs other than indigenous. The British Pharmacopœia again not only includes indigenous drugs, but almost all the medicines recommended by it are indigenous to some part of India or other, and that the drugs used by the allopaths are procurable in this country.

From these considerations I am led to conclude this letter with a suggestion for an Indian Pharmacy Act."

NOTES & LEADERETTES,

OUR OWN NEWS

&

THE WEEK'S TELEGRAMS IN BRIEF, WITH OCCASIONAL COMMENTS.

THE Tsar and the Tsarina, attended by Prince Lobanoff, have arrived at Vienna, where they met with a hearty reception.

GENERAL Gossler has been appointed Minister of War in the place of General Bronsart Von Schellendorff, who has resigned because his proposals to modernise procedure in courts-martial have been overruled by the Emperor's private advisers. The nation strongly supports General Bronsart, and it is understood that Prince Hohenlohe likewise does so. The official *Gazette* announces that Prince Hohenlohe will in the autumn introduce certain reforms in the procedure of courts-martial. This indicates that the Emperor has yielded in the matter.

THE *Times* states that Lord Salisbury has informed Li-Hung-Chang that he favoured the principle of an increase in the Chinese tariff but would consult the Chambers of Commerce at Shanghai and elsewhere before consenting. Li-Hung-Chang urged an immediate decision in the matter, stating that Great Britain had already conceded the same thing to Japan without an equivalent. The Chinese envoy is reported to have stated privately that China will not abandon the inland duties for the mere increase in the tariff. Li-Hung-Chang is charmed with his stay in England, but leaves without having ordered anything whatever. Reuter learns that Li-Hung-Chang has made no concessions to Russia, but is in favour of a junction of the railways in Amur with those in Manchuria. No convention, however, has been signed, and no port ceded to Russia. Russia is favourably inclined to the revision of the Chinese tariff. Germany awaits Great Britain's action in the matter and France awaits the opinion of the French Minister at Peking.

GREAT concern is felt at Madrid at the news from Manila of the discovery of a Separatist conspiracy in the Philippines, in connection with which many arrests have been made. The Governor of Manila has telegraphed to the Spanish Government that he is quite able to cope with any outbreaks of insurgents without any aid from home.

A LETTER from Mr. McKinley has been published, in which he formally accepts the candidacy for the Presidency and urges strict protection coupled with reciprocity.

A NEW gunboat has been launched at Kosheh. The advance of the Nile expedition commences about the 5th proximo. It is expected that Dongola will be reached about the beginning of October. The forward movement of the Nile expedition has been resumed, and the garrison at Suardeb is advancing to occupy Abserat. The steamer Mushtari has arrived at Suakin. A case of cholera among the Indian camp-followers has occurred there. The heat is most intense and the Brigadier-General, Lloyd Pasha, the Governor and four other officers are obliged to leave and put to sea attended by a Surgeon. The contracts for supplies to the Indian troops extend to the end of December.

THE Turks have routed the principal insurgent band in Macedonia and killed their Chief. Constant sanguinary encounters are still taking place between the insurgents and the Turks. The Porte has accepted the scheme proposed by the Powers for a settlement of the Cretan question with slight changes which are now being discussed.

The scheme comprises the appointment of a Christian Governor for five years under the guarantee of the Powers, and judicial economy.

IT is reported from Constantinople that a body of forty Armenians seized, on Aug. 26, in the afternoon, the Ottoman Bank, after killing the guards on duty. They still held the building late in the evening and were firing on the Police from the roof and windows; simultaneously rioting took place in the other quarters of the city, and many have been killed and wounded on both sides. The rioters have sacked the shops, and a bomb was exploded outside the guardhouse, several soldiers being killed and wounded. Her Majesty's ship *Dryad* has left Therapia for the city, and French and Italian guardships follow. Her Majesty's ship *Cockatrice* has arrived *en route* for the Danube. The latest news is that the Porte announces that the Armenians who seized the Ottoman Bank and elsewhere in the city have poured bombs on to harmless passers-by, killing many. No unofficial advices have been received from Constantinople, but it is known that the Armenians at the Ottoman Bank have surrendered, and have been conveyed in Sir Edgar Vincent's (Governor of the Ottoman Bank) yacht to Guanare.

MAJOR Coventry has been released from Holloway Jail owing to ill health.

ADVICES from Natal state that the artisans there are agitating strongly against the importation of Indian artisans.

THE Sultan of Zanzibar is dead. Said Khalid proclaimed himself Sultan, and seized and barricaded the palace. He has a force of 2,000 men, well armed. Her Majesty's ships *Philomel*, *Thrush* and *Sparrow* landed men at the Custom House. Her Majesty's cruiser *St. George* Flagship of Rear Admiral Rawson, and the cruiser *Raconn* also arrived and landed 250 bluejackets and marines. The ships were drawn up in position, their guns commanding the palace. Admiral Rawson sent an ultimatum to Said Khalid to the effect that unless he surrendered by nine o'clock in the morning of the 27th, the palace would be bombarded. Said Khalid refusing, the bombardment began at nine that morning. The firing was very heavy, and lasted for fifty minutes. The Zanzibaris, behind barricades, maintained a hot fire throughout. The palace is now in ruins and on fire from end to end. Said Khalid fled during the bombardment and took refuge in the German Consulate, where he remains. The Sultan's ship *Glasgow* opened fire, but was sunk. British marines and bluejackets and a detachment of friendly Askaris hold the main streets of the town. No Europeans on shore were injured during the bombardment. Hamond, a cousin of the late Sultan of Zanzibar, has been placed on the throne. During the bombardment the *Thrush* was struck sixty-two times and the *Raconn* sixteen times. The only casualty on the British side was a petty officer of the *Thrush* wounded. The enemy's loss was heavy, most of their killed being Askaris, besides a few Arabs. After the first broadside from the British ships many of the enemy fled to the outskirts of the town, where there was much looting. Several Indians were killed. Captain Egerton, of the *St. George*, and Captain O'Callaghan, of the *Philomel*, led the land attack. All ranks behaved splendidly.

The British Government has no intention of changing the Government at Zanzibar for the present. This decision has given satisfaction to the Natives there. The conversion of Zanzibar into a British Colony would entail heavy expense, and raise unnecessary difficulties with the Powers.

Captain Raikes, with a party of Zanzibaris is still pursuing the looters. It will probably be some time before order is restored, and this shows the necessity of a reliable Indian force there and the abolition of Arab rule. A large number of Indians have taken shelter on board the British India steamer *Nowshera*.

GHAFAR KHAN, Deputy Collector of Lucknow, has been nominated by the Government of India as the next British Agent at Kabul. Ghafar Khan must be more than a Deputy Collector to have been chosen for his new post.

The Secretary of State has sanctioned the pension of Rs. 100 per month to the family of the late Agent, who was murdered last year.

THE Revd. John Drake, of Ellichpore, Barar, while travelling in the Madras Railway, was found at Ruchore not to have paid fully for his luggage. The Biggame Master would not allow it to be taken away until the balance had been paid. The Reverend gentleman then wrote to the Traffic Manager charging the Biggame Master, Haslem, who only did his duty, with demanding a bribe of two rupees to pass the luggage. Taking the man of religion at his word, the Traffic Manager dismissed the Biggame Master. Haslem now prosecuted Mr. Drake for defamation. The Egmore Police Court, Madras, has convicted the Reverend gentleman and fined him Rs. 25. Will Haslem get back his appointment? We hope the Traffic Manager is no cousin of any of the young Under-Secretaries in the Civil Secretariat. These gentlemen dispose of all appeals for re-instatement by the stereotyped reply—"sees no reason to interfere," or "re-open the case," however flagrantly unjust the original order of dismissal may be.

IN a letter, dated Calcutta, Aug. 24, to the *Statesman*, Vice-Consul Cowasjee D. Rustomjee for Persia (Bombay) asks, "Will you permit me to point out a slight inaccuracy in the paragraph in your issue of the 20th instant regarding the installation of Nawab-Kumar Syama Coommar Tagore as Vice-Consul for Persia in Calcutta?" He goes on to say that "The Nawab-Kumar is an adult of between eighteen and nineteen years." "I was specially deputed by his Excellency the Consul-General for Persia from Bombay to present the *firmān* to the Nawab-Kumar." "He is, I may mention, the heir-apparent of Nawab Shahzada Raja Sir Sourindra Mohun Tagore, K.C.I.E."

The Vice-Consul for Persia having "Nawab-Kumar"-ed the son, felt himself, probably, in duty bound, to "Nawab-Shahzada" the Raja father. The Persian Vice not only confers a new title but enlarges an existing one. Raja Sourindra Mohun is a simple English Knight. He is given an Indian Order. There are Mussulman Rajas. Are we to have Hindu Nawabs? Once the Bengal Government catalogued a Hindu Raja with Mussulmans. The present is a complete conversion. The Parsi Vice-Consul representing a Mussulman kingdom is not satisfied with the multitudinous honours, won from all quarters of the globe, of our eminent townsman, but must force a Mussulman dignity on him. Raja Sourindra Mohun becomes Nawab Shahzada Raja Sourindra. Babu Cowasjee D. Rustomjee—we mean no offence, Parsis had been Baboos in Calcutta and there is still a Parsi establishment in which the father and the son are known as Burra and Chhota Babus—has, besides, solved a problem in Indian titles. The sons of a Raja are Kumars. The sons of a Nawab have no such courtesy title. The question how the sons of a Nawab are to be addressed was recently put to the Bengal Government which simply avoided it. The Parsi Babu calls them Nawab-Kumars, probably to distinguish them from Maharaj- or Raj-Kumars. His notion of dignity evidently lies in an array of titles, however incompatible they may be. The Parsis are now more Mahomedan than Hindu. They resent the honour of Babu and glory in the Mahomedan titles of Khan Bahadur and Shamsul-Ulāna. We are sure, Raja Sourindra Mohun Tagore, who is descended from Bhatta Narayan and Halayudha, will be the last person to accept the titles thus conferred on him by the Parsi gentleman. The author of the "Golden Book of India" has found that "*Nawabzada* or *Mian*, is the title given to the sons of Nawabs." He, again, says: "The title of Prince is also often given by courtesy as the English rendering of the title of 'Shahzada,' conferred by Her Majesty the Empress on certain descendants of the Tipu dynasty of Mysore, of the old kings of Oudh, and of former Amirs of Afghanistan." "Shahzada" he translates as "King's Son." The Parsi Babu Sahib makes a distinction between the sons of a Raja and of a Nawab, but would confound royalty with nobility.

SURGEON-LIEUTENANT-COLONEL James Frederick Parry McConnell, M.D., F.R.C.S., the fashionable physician of Calcutta, died at his residence, in Wood Street, on Monday, of peritonitis. Finishing the first course of his education at the Doveton College, he went home and came out as M.B., joining the medical service on the 1st April, 1870. From the 4th December of the same year to 30th September 1871, he was in military employ. The next month he was appointed House Surgeon of the Medical College Hospital. In less than a year, he was Resident Physician and Professor of Pathology in the same institution, when Dr. Chevers was Principal. The chair of Pathology had just been opened, for which a recommendation had been forwarded

before his return to this country as a doctor. This appointment was the making of the man. He utilized the opportunities afforded by *post mortem* examination of several dead bodies to many useful purposes, enlarging his own knowledge and adding to the knowledge of his profession. It was during this period that he made a discovery with which his name is associated and for which he will be hereafter remembered. In one of his dissections, he came upon a living parasite in the heart of a subject. Close inspection and microscopical investigation established the fact that it was in its place when the man was living. The fluke was named after the discoverer—*Distoma McConnelli*. Soon after, in 1882, Dr. McConnell was promoted to the rank of Surgeon Major. Three years after, he was Civil Surgeon of the 24-Perganas. When Dr. R. C. Chandra retired, Dr. McConnell came back to the Medical College and officiated as Professor of *Materia Medica* and second Physician, being confirmed in the posts in 1891, which he held till his death.

Like many of the Army Surgeons, the deceased, when he came out, was little advanced in knowledge. But hard study and devotion to dissection of dead bodies paved the way to his future success. Under the discipline of Dr. Chevers, and the guidance of Dr. Chandra, he made rapid progress, and if, like his fellow-worker in the Calcutta Medical College, and good friend, Dr. Lawrie, now the Residency Surgeon at Hyderabad, he could, between his strict official duties and roaring practice, make time for research, he would have left a more enduring name.

THE famous *dansusee*, Sarna Bai, in her declining glory, is in trouble. She was put to *hajut* on a charge of ordering an assault on one Bepin Behary Dutt, which, committed by two of her durwans, proved fatal. He was no admirer of hers and would abuse her. She had ordered her men to teach him a lesson, and they belaboured him almost to death. Seven of his right ribs and six of the left were broken and he died in hospital on Wednesday. There is no dying declaration, due, it is believed, not to sufficient notice being taken by the Police of the serious nature of the wounds and informing the Magistrate of the same. The Police enquiry has been taken out of the hands of one Superintendent and placed in those of another. In preferring a Bengali to a European, the Police Commissioner shows no bias for his own colour and creed in the detection of crime. Yesterday, Mr. Garth obtained an order or release of his fair client on a bail of Rs. 5,000.

BABU Jogesh Chandra Chatterjee has written, in Bengali, a useful primer on Hygiene. The little work is neatly got up, and suited for a text-book. It has not, however, those commendations that usually entitle a book to be selected by the Text-Book Committee. It has not been printed in a particular Press. The writer is no officer of the Education Department nor a near relative of one. His book, again enters into competition with another on the subject by an officer of the Text-Book Committee. That latter work has been a text-book for more than the last twenty-five years. The President of the Committee says that there is no chance of any member receiving any favour, for the rules lay down that if any member happens to be an author, he must leave the room while his book is discussed. The simplicity of this learned gentleman is really charming. We wish others were as simple to accept this assurance of the President that in the deliberations of the Committee there is only fair field and no favour. Poor Mr. Chatterjee had appealed to the Lieutenant-Governor, but there is no escape from the Committee. The older primer contains a chapter that is a medley of anatomy and physiology, with two unexplained plates lending an air of learning. Mr. Chatterjee omits all reference to the anatomical organisation of man as having nothing to do with an elementary work of hygiene intended for little children.

DAMASCUS is one of the most living ancient cities in Asia. Baalbec and Palmyra are mere sounds. Babylon and Tyre are a heap of ruins. Damascus, according to Josephus, is standing from before the days of Abraham. During the Jewish Monarchy, the garrisons of David opposed the progress of Solomon. The chronicles of Jeroboam and Ahaz and the prophecies of Isaiah and Amos pointed to the close relations of the people with one another. Ezekiel mentioned its mercantile greatness. Alexander the Great sent Parmenio to take it while he was engaged in marching from Tarsus and Tyre. Julian the Apostate called it "the eye of the East." In the

Mahomedan conquest it was visited by Saladin and Tamarlane. Shakespeare writes of it in I King Henry VI thus :

"Winchester : Nay, stand thou back ; I will not budge a foot :
This be Dunascus, he thou cursed Cain,
To slay thy brother Abel if thou wilt."

This city is watered by the "Streams of Lebanon" sung by Solomon and the "rivers of Dunascus" which Naaman preferred to all the waters of Israel. Copious fountains from the rocks water the brushwoods at the base of Anti-Lebanon. It is situated in a wilderness of gardens of flowers and fruits. Innumerable mosques are seen on approaching the city. It contains many nationalities. Persians in gorgeous silks, Nubians in black and white, Greeks in their costumes, Jews with ringlets, Bedouins, Druses, Kurds, and Armenians mingling together, with the pilgrims on their way to Mecca, present a marvellous medley of humanity.

There are about two hundred mosques. The largest among them exhibits three distinct styles of architecture, marking three distinct epochs in the history of the place. The population is 150,000 of whom 100,000 are Muslims. Peace reigns among them all, though a disturbance took place in July 1865. As usual, "the unspeakable Turk" seemed to be at the bottom of the rumour, though no clear proof could be found. It was on his way to this city that St. Paul was converted to Christianity.

Some of the ruins of the ancient city are still visible. The Heliopolis of the Greeks and Romans, celebrated for its sunworship, was one of the wonders of the world. The temple of Baalbec, dating at least from the reign of Antoninus Pius, was created on the acropolis of the city. The great temple of Jupiter has preserved a part of its portico. In the grand portico of the principal temple of Baalbec the following inscription is found : "To the great gods of Heliopolis. For the safety of our Lord Ant. Pius Aug. and of Julia Aug., the mother of our Lord of the Castra (indistinct words) senate. A devoted of the Sovereigns, the capitals of the columns of Antoninus, whist in the air, embossed with gold at her own expense." A second temple of the Sun can also be found.

A CORRESPONDENT of "Nature" supplies the following particulars of a fight among two sea monsters, which he observed while cruising in the strait of Malacca between the Nicobars and the Malay Peninsula :—

"I had the watch from eight bells to midnight, and at about 11 P.M. was leaning over the lee rail, idly gazing seaward, where the rising moon was making a broad lane of silvery light upon the smooth, dark waters. Presently there was a commotion in the sea, right in the way of the moon, and I immediately went for the night glasses to ascertain, if possible, the nature of it. In that neighbourhood there are several active volcanoes, and at first I judged the present disturbance to be one of these sending up debris from the sea bed. A very short examination satisfied me that the trouble, whatever it may be, was not of volcanic or seismic origin. I called the captain, as in duty bound, but he was indisposed to turn out for anything short of actual danger ; so the watch and I had the sight to ourselves. We edged away a little under the light draught of wind, so as to draw nearer to the scene, and presently were able to realize its full significance. A very large sperm whale was engaged in deadly conflict with a monstrous squid, whose far-reaching tentacles enveloped the whale's whole body.

The livid whiteness of those writhing arms, which enlaced cachalot like nest of mighty serpents, stood out in bold relief against the black boulder like head of the aggressor. Presently the whale raised itself half out of water, and we plainly saw the awful-looking head of the gigantic mollusk. At our distance, something under a mile, it appeared about the size of one of our largest oil casks which held 336 gallons. Like the rest of the calmar visible, it was of a peculiar dead white, and in it gleamed two eyes of inky blackness, about a foot in diameter.

To describe the wonderful contortions of those two monsters, locked in a deadly embrace, is far beyond my powers, but it was a never-to-be-forgotten sight. The utter absence of all sound, for we were not far enough to hear the turmoil of the troubled sea, was not the least remarkable feature of this Titanic encounter. All around the combatants, too, were either smaller whales or immense sharks, who were evidently assisting in the destruction of the great squid, and getting a full share of the feast. As we looked spellbound we saw the writhings gradually cease and the encircling tentacles gradually slip off the whale's body, which seemed to float unusually high. At last all was over, and the whole commotion had completely subsided, leaving no trace behind but an intensely strong odour as of a rocky coast at low tide in the full blaze of the sun."

THE Administration Report on the Railways in India for 1895-96, Part I, by Col. T. Gracey, the Director-General, submitted to the Government of India on the 10th June and published this month, contains fifteen chapters devoted to important and interesting matters. Chapter I contains a general summary of results during the year under review.

The total length of railways opened and sanctioned on the 31st March 1896 was 23,466½ miles, being a net increase of 2,394 miles during the year. On the 5th March 1896, the Indian Railways Act of 1890 was amended into Act IX of 1896. There were 3 guaranteed railways—Great Indian Peninsula, Bombay Baroda and Central India, and Madras ; 6 State lines leased to companies—Bengal-Nagpur, Indian Midland, Bengal Central, Rohilkhand and Kumaon (Lucknow-Bareilly section), Southern Marhatta and Assam Bengal ; and 21 State railways (Commercial). During the year, the State suffered a loss of Rs. 1,783,700 against Rs. 2,348,489 in 1894-95. The paying railways were the Rohilkhand and Kumaon, Eastern Bengal, Burmah, East Indian, Bengal and North-Western (Tirhoot Section), Rajputna-Malwa, Godhra-Rutlam-Nagda, and Palampur-Deesa. Chapter III. treats of lines under survey or projected. A line from Hoogly to Mogulserai is a new scheme and is expected to be successful. The Kalka-Simla railway under survey will facilitate the migration to the hills. Chapter IV. speaks of collieries and oil wells. Chapters V. to XIII. are full of details of stores, rolling stock, capital, main results of working and revenue statistics, details of earnings and expenditure, rates and fares, fuel consumption, and persons employed. Chapter XIV. is interesting as recording flood damages. It gives a comparative view of the force of the monsoons and cyclonic storms during 1895 and 1896. "The floods in the Krishna district in September 1895 were exceptionally heavy." In August 1896 it was worse. In Koncan the rainfall was below the normal, but cyclonic storms caused damages. This year the country suffered from floods. The vigour of the monsoon was rather terrible in the peninsular area this year.

Accidents were small in number. On the East Indian Railway 6 ; North-Western 3 ; Oudh and Rohilkhand 10 ; Eastern Bengal 3 ; Great Indian Peninsula 2 ; Madras Railway 3 ; on the Nizam's 3 ; Rajputna Malwa 3 ; Southern Marhatta 2 ; South Indian 2 ; Assam-Bengal 2 ; Burma Railway 4 ; Rohilkhand and Kumaon 1 ; Bengal Dairs 1 ; Bhavnagar-Gondal 1 ; making a total of 37. This concludes the report. We would have been glad for suggestions of the Director-General, for improvements for the benefit of the travellers. The third and the intermediate classes of the East Indian Railway urgently require some. The packing of passengers for distant journeys produces harmful effects as far as sanitation is concerned. The number should not exceed six in any compartment. The number of closets should be increased.

SIR Alexander Mackenzie has followed up his threat to Backergunge. He begins by completely disarming the people. The following notification appears in this week's *Calcutta Gazette* :—

"NOTIFICATION—No 4772J.

The 22nd August 1896.—Whereas numerous murders by gunshot have been committed in the district of Backergunge, and it is deemed necessary for the suppression of such crime that the possession and use of firearms in the district should not be permitted, the Lieutenant-Governor, under the authority vested in him by sections 18 of the Indian Arms Act, XI of 1878, hereby notifies that all licences now held in the district under sections 5, 13 and 14 of the said Act, that is to say, for the manufacture, conversion or sale of firearms and the sale of ammunition, for going armed with firearms and for having in possession or under control firearms and ammunition, are cancelled with effect from the 1st September 1896. The Magistrate of the district will allow to the holders of licences such time as may be necessary for the deposit of their arms with the officer in charge of the nearest police-station.

Arrangements will be made whereby the collecting members of chaukidari panchayets will be supplied with guns for use where they may be needed for protection against wild animals.

C. W. BOLTON,
Offg. Chief Secy. to the Govt. of Bengal "

THE London *Spectator* has the following notice of Mr. Skrine's "An Indian Journalist" :—

"An Indian Journalist. By F. H. Skrine. (Thacker, Spink and Co., Calcutta.)—Dr. Sambhu C. Mookerjee's Life and Letters, as they are set forth in this volume, are worth reading. They give us an interesting glimpse into the life of an educated Bengali who stands between the old order and the new. He was liberal enough to welcome countrymen who had broken caste rules by crossing the sea ; yet there was so much of the old leaven in him that he would order everything touched by such a visitor to be destroyed. As regards his occupations he was something of a rolling-stone. His versatility, indeed, in turning from one thing to another seems strange when compared to our settled ways. He was Grand Vizier to an Indian Prince, an M. D., a journalist. This last occupation was his final choice. He had many distinguished correspondents, and the letters that he wrote and received introduce us to and enlighten us about many grave questions in Indian politics and social life."

A PRIVATE letter of the 27th instant from Narail deploras the absence of rain, the withering of the rice crop, and impossibility of extracting jute from the plants, and apprehends distress in the coming year from both food and water famine.

YESTERDAY was the third day of the hearing, in the Chief Magistrate's Court, of the prosecution of the *Hitabadi* for defamation on the complaint of Babu Heramba Chandra Mitra on behalf of his wife. Mr. Palit concluded the opening of the case for the prosecution and intimated that he would have proceeded against the journal for contempt, if the Police Court were the High Court, for publishing correspondence on the subject of the investigation which purported to say that "if your contention is correct, see how many people come forward to be defamed." After alluding to the *Dinik*, also being prosecuted on the same charge by the same complainant and another, he examined two witnesses—Babu Chunder Nath Bose, Bengalee translator to the Government of Bengal, and Babu Lalit Mohun Roy, an assistant in the India Club. The case will be taken up again on Tuesday, the 1st September.

THE *Dinik* has been summoned to answer a charge of libelling Babus Heramba Chandra Mitra and Dwarkanath Gungooly and their wives in an acrostic, the sentence formed by every fourth word of the lines being the subject of complaint. The application was made in the first instance to Mr. Pearson who referred the applicants to the Northern Division Magistrate who has issued the summonses.

REIS & RAYYET.

Saturday, August 29, 1896.

THE LATE NAWAB SIR ABDUL GHANI, K.C.S.I.

DEATH has again removed one of the foremost men of Bengal and a jewel of the Mahomedan community. Nawab Sir Abdul Ghani's demise has cast a gloom over the whole of East Bengal and will be mourned by many more. He was an extraordinary man. His noble life is an interesting study and ought to be a lesson and guide to Indian noblemen.

In the reign of the emperor Mahomed Shah, the ancestor of the family, Moulvi Abdulla, came from Cashmere and established himself as a trader in Sylhet, with head office at Dacca. At the time of Ghaziuddin Mahomed, the last of the Nawabs of Dacca, who was known as the *pugla* Nawab owing to his eccentricities, the family of the present Nawabs had begun to establish themselves at Dacca. It was the time when the old Nawabate was about to terminate. The then head of the rising family was Maulvi Hafizulla Saheb. The business had expanded and they had purchased Zemindaries. Moulvi Hafizul-

la was succeeded by Khaja Alimulla popularly known as Ali Mean, father of Nawab Abdul Ghani. Khaja Alimulla was closely related to Hafizulla, and was an important member of the family. He was a thorough man of business, with strong common sense and uncommon foresight. He saw that old Mahomedan houses in and about Dacca were at their ebb. This was an opportunity to raise his own family on their ruins. He turned his attention to purchase of landed estates, which so much occupied him that he had hardly any time to attend to the business with which his family had commenced, and which, therefore, nearly came to a close. He was fortunate in acquiring Zemindaries cheaply. Fortune smiled on him in other ways. More a Zemindar than a trader, he was now the possessor of the historical diamond "Dariya-i-Noor," worth many lakhs of rupees which Messrs. Hamilton bought for him for only Rs. 60,000. Ali Mean very early in life had courted European society at Dacca and made many friends among officials and non-officials. He did not know English. There was hardly any Mahomedan of his day that knew it, but he had the keenness to see the value of English connection and of the favour of the English. Ali Mean had several sons and daughters. His favourite son was Ghani Mean (then Khaja Abdul Ghani) in whom he detected the traits of character required to complete the work he had commenced. That son was, therefore, selected as the next head of the family and trained accordingly. He was introduced, when a boy, to the Europeans at Dacca, and was given lessons in English just enough for practical purposes. Ali Mean improved the estates so much that he was considered the first Mahomedan Zemindar in Eastern Bengal. His influence at Dacca was great, and people of all classes came to him for help and advice. He lived to equip the boy for the next brilliant chapter of the family history.

Ali Mean, although of the old school and a conservative, had no bigotry about him. His mode of living was, in most respects, European, for he never objected to such European ways as are good and not objectionable on religious grounds. His name was a household word among the European gentlemen and ladies of Dacca. He died about 44 years ago at the advanced age of 70, when Ghani Mean was in the full bloom of youth and well prepared to take his father's place.

He took up the management of his *reayat* with no light heart. Following the example set by his father and the principles laid down by him for conduct of business, he largely improved the estate and raised himself in the estimation of Government and his countrymen generally. He was much liked and loved by his own relations.

As a young man of most pleasing and graceful manners, much attached to his friends, fond of sports and all sorts of manly games, he was a good shot and loved pig-sticking. His education was that of a Mahomedan gentleman of his time, but, with his little knowledge of English, he was a prodigy among his co-religionists. He never showed any inclination for literary pursuits but he liked poetry and music and was liberal to their professors. He combined in himself all that is good and amiable in European and Mahomedan ways and manners. With his active habits, he dressed more like a European than a native. He was, besides, blessed with good health, the result of his active life.

The Indian Association for the Cultivation of Science.

210, Bow-Bazar Street, Calcutta.

(Session 1896-97.)

Lecture by Babu Rijendra Nath Chatterjee, M.A., Wednesday, the 2nd Sep., at 5-30 P.M. Subject: Pneumatics (concluded).

Lecture by Dr. D. N. Chatterjee, B.A., M.B., C.M., Thursday, the 3rd Sep., at 5-30 P.M. Subjects: The Protozoa. Coelenterata.

Lecture by Dr. Mahendra Lal Sircar, Friday, the 4th Sept., at 7 P.M. Subject: Expansion by Heat concluded. Change of State by Heat.

Lecture by Babu Girish Chandra Bose, M.A., F.C.S., M.R.A.S., &c. Saturday, the 5th Sept., at 5-30 P.M. Subject: Morphology—Flowers.

Lecture by Dr. Nilratan Sircar, M.A., M.D., Saturday, the 5th Sept., at 6-30 P.M. Subject: Histology—Endothelium connective tissue.

Admission Fee, Rs. 4 for Physics, and Rs. 4 for Chemistry; Rs. 6 for both Physics and Chemistry; Rs. 4 for Physiology; Rs. 4 for General Biology; Rs. 6 for complete course of Physiology and Biology. The charge for a single lecture is 4 Annas.

MAHENDRA LAL SIRCAR, M.D.,

Honorary Secretary.

Aug. 29, 1896.

By judicious and liberal management, Ghani Mean greatly improved the estates and within a short time acquired the reputation of a liberal-minded Zemindar. He was always assisted in the conduct of his affairs by experienced and trustworthy servants, chiefly Hindus. Although he had European and Eurasian managers in his distant and outlying Zemindaris, he rarely availed himself of their assistance in the general control of his affairs. Before he had associated with himself his son, Nawab Ahsanulla, in the work of management, he had nearly doubled the income left by his father. He was uniformly respected, loved, and trusted by all his servants who always found a pleasure in working with and under him.

He would rise very early, ride out, or go a hunting or shooting, or supervise the laying out of gardens, or take long walks. In this he resembled the late Maharaja Mahtabchand Bahadur of Burdwan. On return he would come to his *chaikhana*, a house where he would take tea. Between 7 and 8 A.M. he was always at his tea table, surrounded by a number of respectable gentlemen including some of his relations. Many old, poor, invalid Mahomedans, in reduced circumstances, attended this tea party. Every one was welcome, whether in rags or attired gorgeously, whether Mahomedan or Hindu. Under the pretence of tea, light breakfast would be served to those who had seen better days but who were unable to support themselves. This was a pleasant gathering when the Nawab would be asked to decide family quarrels, reconcile opposing brothers and combating litigants, and do other patriarchal acts. At 9, the Nawab retired to his private apartments, where he took his principal meals, prepared under the supervision of his worthy Begum, with all the important members of his family. At 11 A.M., after the first meal, he retired for rest. Between 11 and 2, he remained in the zenana with his wife and children, attending to their needs and discussing purely private family matters. At 2 P.M., one would find him seated in his room in Ahsan Manzil, smoking *hukka*, of which he was very fond. Important business affairs now claimed his attention. From 2 to 5 important visitors and private arbitration. In this last troublesome and unpleasant business he shewed remarkable tact and patience. Even long after retiring from actual business, he personally managed some estates of his friends in order to save them from trouble and ruin. In the evening also he would go out for a drive or ride, and at 8 again he would sit with some of his best friends and relations and hear music for an hour. At 10 P.M. to bed.

In this way he lived and worked for nearly 40 years, during which time he was never heard to be sick or sorry. Even after giving up the charge he enjoyed excellent health till a few years before his death. He always stuck to his old habits and was very fond of the company of his friends. His public charities are widely known and Dacca is specially indebted to him. He felt most keenly for respectable people reduced to poverty. The greater part of his charity was given in secret. No one had access to his private accounts which he regularly kept himself. He created a confidential fund for the support of the respectable poor of Dacca of whom there is a large number among the Mahomedans. It was managed privately by some members of his family. It has saved the scions of ruined families, and many widows and orphans of his town from penury

and begging, which is the lot of many in most of the old towns in India. They know not who supports them and how God provides them with the means of livelihood. The stipends vary from Rs. 100 to Rs. 2 a month. This fund has been much enlarged by the present head of the family.

He spent large sums on sacred shrines in and about Dacca, supporting spiritual heads and learned men. Although a staunch Sunni, he did not hesitate to maintain, at heavy expense, from his private purse, the greatest and the largest public *Imambara* at Dacca which is entirely a Shia concern.

Following the example of English noblemen, he laid out at a great cost a park, the well known *shekargah* of Baigunbari in the suburbs of Dacca. The Nawab's hospitality was proverbial. People in Calcutta still remember his party when he came here in 1867 as a Member of the Supreme Council.

We do not know any person of his position who stooped so much to show kindness and courtesy to all with whom he came into contact. It was really a treat to meet that charming old man whose gracefulness of manners and buoyancy of spirits had a bewildering effect. The deceased Nawab gave his son a better and more liberal education than what he had received. Nawab Ahsanulla's English education was supervised and conducted by Europeans. Those who know him thoroughly say that he is one of the best educated and enlightened noblemen of India.

It is 20 years since that the deceased Nawab first commenced to train up his son, the present Nawab, in the management of his estates. Gradually he increased his powers, ultimately reserving himself only as an appellate authority in important matters.

The father and son were much attached to each other. Nawab Abdul Ghani was equally fortunate in his wife, Nawab Ahsanulla's mother, a model lady with accomplishments suited to her status in life and time, with goodness of heart, excellence of character and open-handed charity. She was a true help meet to him in a family of nearly 200 members, exercising a wholesome influence not only on her husband but on the whole family as well, and in forming the character of her son.

The Nawab leaves a worthy son to succeed him. Nawab Ahsanulla's second son, Nawab Alikulla, who is now being brought up as the next successor, is a charming and lovable boy.

OUR LONDON LETTER.

August 7.

Imperial Parliament. Interest was centred last night in the House of Lords when the Irish Land Bill went into Committee. The evening proved a disastrous one to the Government. It was defeated by its own supporters in three divisions, the first placing them in a minority of 50, the second in a minority of 47, reduced in the third and last to 19. The position of the Government is a humiliating one, Lord Salisbury being defeated by his own supporters in spite of Lord Rosebery and the few Separatist peers present giving him the benefit of their support in the division lobbies. The Committee meets again this afternoon, when Lord Salisbury may possibly say what the intentions of the Government are. Last night, he maintained an ominous silence. The proceedings were of the dullest and most depressing character. The Irish peers who took part in the debate, nearly all read their speeches. Of course, this remark does not apply to seasoned debaters like Lords Ashbourne and Macnaghten. I was present during a part of the evening, but the brother Barristers Messrs. Monamohun and Lalmohun Ghose could give most of them a start of five miles in the race of eloquence, and beat them with ease. You will notice how the majorities fell off. Before the dinner hour, 58. During and afterwards, 47.

Then, as the evening advanced, the bucolic peers evidently preferred their beds to the gilded benches of the House of Lords, and the 58 came down to 19. Then at 12-15, Lord Salisbury thought they had enough for one night, and proposed an adjournment to this afternoon. If you are to believe a Gladstonian paper, some of the Irish peers, whipped up for this special occasion, had never been in the Houses of Parliament before, and had to be directed by the police in attendance to their proper Chamber. But this, I fancy, must be a joke. It is unfortunate the landlord party should have placed itself in such violent antagonism to that of the tenants. It is in a policy of "give and take" that the future peace of Ireland must be found, and the Bill that has roused into such bitter temper peers like the Duke of Abercorn, Lord Londonderry and their followers, cannot be such a harmful one to the landlords when it is pronounced, on behalf of the tenants, by Mr. Dillon, to be a "sham and a fraud."

The House of Commons has been three days over the Scotch Rating Bill, which has at last gone to the Upper House. It was too good an opportunity for the two Scotch bores in *excelsis*, Messrs. Dalziel and Caldwell, to distinguish themselves. How often the latter spoke in Committee no one can possibly tell, and I do not suppose the honourable member himself knows. The former tried some of his impertinence on the Speaker, but was promptly and peremptorily silenced. Mr. Gully will stand no nonsense. Last night, Dr. Tanner, being in his usual state after ten o'clock, attempted to insult the Speaker. He, however, caved in, craven as he is, the moment Mr. Gully threatened to report him to the House.

Cricket has suddenly become an Indian question over Prince Ranjit Singh. It is a great triumph for him that he has pushed himself to the front in this great national English game. Many competent judges pronounce him to be the very first all-round batter in England. The question now being fiercely debated is, shall the Prince play in the final match between the Australians and an all-England eleven? Having qualified himself as a member of the Sussex County Club, and, if I mistake not, of the M. C. C., I do not well see how exception can be taken to him. This morning's "Daily Mail" has telegrams from Melbourne, Sydney, Adelaide and Brisbane, from representative papers, all agreeing he should be included in the eleven. He is a most popular player, and no one, not even the great chief himself, Dr. Grace, is more heartily cheered by the crowds that attend the leading matches throughout the country. He has apparently also domiciled himself in England, and so I hope he will hereafter be included in all international matches. Indeed, our friends in the antipodes hope he will be included in the English eleven that are to go to Australia next season.

Natives of a very different stamp must be Messrs. Buldeo Prasad and Balgobind Bajpai, so called "Bankers" of Allahabad. Their business circular has fallen into the hands of the editor of "Truth." Their special function apparently is to "meet the requirements of families of limited means." "Truth" remarks the facilities to people of limited means "offered by those two worthies throw into the shade anything given by the money-lending fraternity at home." The circular, after quoting the terms on which small advances are made, goes on to remark: "The object of the firm by framing these easy terms is to meet the requirements of persons of limited means." Mr. Labouchere's remark on these words is to the following trenchant effect: "So far as I can make them (the terms) out, a family man of middle means, who did business with this firm would speedily come to the end of his resources and find his family in the work-house."

Water Famine. Your editorial of the 11th ultimo on this subject as affecting Bengal, appeals to us in London here, as, owing to the long continued drought, our water-supply is threatened. Already, in the East End, supplies are limited to three hours in the morning and three in the evening. The vast population in that neighbourhood consists principally of the struggling poor and their sufferings are already acute; while zymotic diseases are threatening to decimate the inhabitants, unless some relief can be found.

Crete. There is a report to-day of a change of Russian policy in regard to its treatment of the Cretan question, and of its attitude towards the Porte. Events seem to betoken some immediate action on the part of the great Powers, but it will be some days before the world is made acquainted with the precise steps to be taken.

The United States. A late issue of the Edinburgh "Scotsman" contains a very interesting letter on the forthcoming Presidential election, by a well informed correspondent, from Chicago.

DEAFNESS COMPLETELY CURED! Any person suffering from Deafness, Noises in the Head, &c., may learn of a new, simple treatment, which is proving very successful in completely curing cases of all kinds. Full particulars, including many unsolicited testimonials and newspaper press notices, will be sent post free on application. The system is, without doubt, the most successful ever brought before the public. Address, Aural Specialist, Albany Buildings, 39, Victoria Street, Westminster, London, S. W.

After tracing the history of the country since the close of the civil war, he goes on to discuss the present outlook. He points out that while "slavery was the excuse" the real cause of the war was for supremacy. Reference is then made to the terrible financial troubles of 1873 and 1893, and to the gigantic strike of 1894. He gives Mr. Cleveland all credit for the masterful way in which he met the crisis. But the feeling of unrest instigated by the labour trouble of 1894 has now been "shifted partly from the shoulders of the city and urban labourers to those of the farmer and miner." A great wave in favour of silver has swept over the West and South like a cyclone, and "during twenty-two years' experience of the conditions of this country, we have seen nothing like it." The writer proceeds to point out what a force for good has been the institution of the Supreme Court, which, so far, has been able to keep both Republicans and Democrats "in restraint." He then gives utterance to the following portentous sentence: "Politically this country is rotten to the core, and honeycombed with fraud." But he admits this is due more to the system than to the people, and he winds up with the warning that deeper than gold or silver, Free Trade or Protection, lies in the future the "great labour question." "While we may disguise the facts, the network of competition is drawing round us, and unless we face the difficulties of the situation we may be strangled before we can escape."

Meanwhile Mr. Mackinley and Mr. Bryan seem to be taking a rest after the excitement of the St. Louis and Chicago conventions. They will soon be on the war path again, and Mr. Bryan announces his intention of inflicting a great speech on the politicians of New York. Mr. Smalley, the American correspondent of the "Times," has evidently no liking for Mr. Bryan. He describes him in Carlyle's often quoted phrase as going off into "wind and tongue." Senator Palmer, of Illinois, a Democrat of standing, says of him: "Mr. Bryan is the best possible representative of the Populists and semi-Populists who nominated him. He is all mouth." Mr. Smalley asks himself the question, "Has Mr. Bryan in him the stuff of a revolutionary leader, for it is a revolution he is trying to lead." He is the mouth-piece of the "discredited, the discontented, the disloyal, for they are disloyal to the Republic as it is and to society as it is. They want a new heaven and a new earth. Is Mr. Bryan the man to give it them, to work miracles? He believes the masses to be downtrodden and oppressed, but he has only smooth words for the oppressor. If he has any great intellectual superiority, any overmastering power of will, any gift of difficult leadership, any commanding authority over his heterogeneous legions, he has yet to show it. If he be only an acrobat, a mere politician, clever in speech and clever in electioneering, he will soon be found out. He is an unknown quantity, probably unknown also to himself."

The Daily Mail. This new first class morning daily paper beats the record in English journalism. It is published at a half penny, and contains not only all the ordinary intelligence supplied by such old penny journals as the "Standard," the "Telegraph," "Daily News" and "Chronicle," but has its own correspondents in all the principal cities of the world. It is also to be put almost immediately in telephonic communication with Paris. Another strong feature in its management is the sending of special correspondents, highly qualified, to keep its readers abreast of the many exciting topics of general political movements. One of the most important of these correspondents is about to start for America to keep us in full touch with all the developments of the exciting Presidential election in the United States. The "Daily Mail" began with an average circulation, in May, of 171,121 copies. The sale in last month reached the enormous total of 5,496,622, or a daily average of 203,578 copies. This is a story of marvellous success, and reflects the very highest credit on Mr. Harmston, to whose genius for organization and splendid energy we are indebted for this latest and most important addition to the number of our morning newspapers. The editor is not indifferent to India. In the issue of the 5th instant, an Anglo-Indian correspondent discusses the frontier question. There is also in the same issue the report of an interview with Mr. J. M. Maclean (formerly of Bombay) on the injudicious, haphazard remarks of our Commander-in-Chief, on the Native Army, before the Royal Commission sitting on the financial relations of Great Britain and India.

Lord Wolseley, as Mr. Maclean justly observes, knows nothing of the present native army. His experience of the Indian soldier is antediluvian, and not worth a brass farthing. The Gladstonian penny-a-liners are very fond of giving Mr. Chamberlain the sobriquet of "pushing Joe." The term "pushing" might more appropriately be given to Lord Wolseley. He has pushed himself to the first place in the front ranks of the army. If you wish to see how poor and contemptible a man he really is, you have only to read his treatment of the late Sir Bartle Frere, when the latter was High Commissioner at Cape Town and was superseded in Natal by Wolseley. His conduct at that time stands out in dastardly contrast to that of the noble Indian Army Bayard, the late Lord Napier of Magdala. What a colossal fortune I could make if I could only buy Lord Wolseley, at my valuation, and sell him at his own! The Transvaal millionaires would not be in it.

Letter to the Editor.

THE FOOT-BALL IN CALCUTTA.

The Foot-ball demon has possessed Calcutta. Good or bad, it can not be denied that foot-ball excites more interest here at the present time than anything else. A casual observer can not but be struck with the lively appearance presented by the *maidan* of a clear afternoon. Every available spot, as far as the eye can reach, is converted into a foot-ball ground, and it would be a rude intrusion to tread its sacred precincts. Each ground is the property of a club or clubs, for the use of which the Police charges a nominal annual rent. The more respectable clubs have tents pitched at convenient places close to the grounds and the latter are kept in good order at considerable expense. It needs but little discernment to distinguish a foot-ball ground from the surrounding fields, the former is so well kept. Truly it has been said that a plot of green grass is the most refreshing sight on the face of the earth. The foot-ball season commences about the middle of June and lasts till the middle of October. During this period the grounds in the *maidan* are busy every day of the week with lusty young men kicking a leather ball; and it really does one's heart good to see the enthusiasm evinced by the players as well as the on-lookers, in this noble game. We will speak only of the part taken by Bengalee youths in the foot-ball rage. Young Bengal take a very keen interest indeed in foot-ball—more perhaps than they ever did in the Hon. Mr. Banerjee's political agitations. The interest is real, for they know what they are about. It is active, for they are impelled by something within and not set by the ears by a strong band from behind. The interest is also very widespread. This is amply proved by the large number of Bengal's sons—students teachers, clerks, pleaders, attorneys, brokers, shop-keepers, in fact members of almost every walk of life—who on a "match" day pour in from a variety of quarters towards the scene of action. According to the *Englishman's* computation, no less than 35,000 people assembled to witness the final competition for the Indian Association challenge shield, and the Bengalees without doubt formed the major part of the gathering. We know of people coming down from Hughli and such neighbouring places to witness an exciting "match" in the *maidan*. The wave of enthusiasm has reached the remote villages of Bengal. Reports are now and then published of inter-subdivisional or inter-district matches. Narail, a small village in the district of Jessore, contains no less than three foot-ball clubs and each has a respectable number of members. Speaking of Calcutta, the number of foot-ball clubs is very large indeed and is yearly increasing. Some of these are very curiously named, e. g., "The Stalwarts", "Students' Amethyst Gymnastics," &c. The playing members of most of the clubs are students, and if a statistics can be prepared it will be seen that a large percentage of the student community of Calcutta takes to this exercise. The Baboo Junior, taking a fancy to this particular form of exercise does not date back more than five or six years. Within this short period the leather ball has assumed such gigantic proportions that it has completely filled his imagination. Clubs have sprung up like mushrooms with ever-lengthening lists of members and one of their representatives has been even given a place in the Council of the Indian Foot-ball Association.

It is evident from what has been written above that the Bengalee student has rather suddenly been roused from his native lethargy. He is no longer content with only stocking his brain with scraps of information on every possible and impossible subjects. He must do something to improve his body. A great impetus was given by our late Lieutenant-Governor, Sir Charles Elliott, in this direction, and we must not forget to mention in this connection the beloved and honoured name of the late lamented Mr. Harry Lee, the Chairman of the Calcutta Corporation, who, of all others, did the most in introducing a spirit for athletics among the younger generation. A need for some sort of bodily exercise had been felt, and its introduction was looked with favour and even furthered by high officials. Foot-ball naturally attracted the attention of the young men as being at once the cheapest and most exciting form of exercise and best calculated to suit their convenience as regards time, ground, &c. All that was needed was complete; and like the mysterious force which suddenly converts a liquid in a state of high tension into a crystalline mass when a slight motion is imparted to, or a nucleus introduced into it, the impetus given, Young Bengal all of a sudden broke forth into a fit of enthusiasm for foot-ball. The first effervescence has not yet subsided, and at the sight of this unwonted activity cautious men—unfortunately for our country we have too many of them—are denouncing the movement as tending to distract the attention of the students from their studies. Instances are quoted with the object of proving the danger of the innovation. A certain boy was one day told by his father to stay at home one afternoon. He came from school as usual, ate his tiffin and did not go out. But as the time was drawing near for the

members of his club assembling in the play-ground, he began to show signs of restlessness, till at last he could bear the strain no longer—he actually fell into a swoon. Whatever might be the objections of "old women," it can not be denied that we have need of the robust student in the place of his stooping, dyspeptic predecessor. Without pausing one moment to argue such feeble objections, we may without hesitation say that the Bengalee student with a stronger physique has a brighter future before him. Reviewing the life of the late Kristodas Pal, Mr. N. N. Ghose remarked that when Mr. Gladstone first entered the House of commons, Kristodas was not yet born and when Kristodas died, Mr. Gladstone had not yet introduced his *magnum opus*—the Home Rule Bill—into the House. This pregnant expression speaks perhaps more than can be said in a single article in favour of the Bengalee boys taking to a manly game, such as the foot ball is one. Mr. F. J. Rowe, of the Presidency College, is said to have humourously remarked the other day that, among the Indians, there are now only three great men living—Dr. J. C. Bose, Dr. P. C. Roy and Kumar Sri Ranjit Singji. Whatever that might be worth, it must be admitted that it will be a blessed day for Bengal when the best foot-ball player will be hailed with as much enthusiasm, if not more, as the Prem Chand Roy Chand scholar of the year.

A Member of the Mohanbagan Athletic Club.

Aug. 27, 1896.

WE MUST HAVE THE TOOLS.

ROBINSON CRUSOE, you remember, made a big boat or canoe out of the trunk of a tree. It was a laborious and tedious job. And that wasn't the worst of it. When he got the boat done he couldn't launch it. It was too heavy for one man to handle. If he had only had an arrangement like the capstan of a ship he might have managed. He *understood* how to do it, but lacked the tools. How often we find ourselves at a dead stand for that same reason. Let me give you a fresh illustration, tied up for the moment in the following letter, which must first be read before we can rightly come at the point.

"In the spring of 1884," says our correspondent, "I got into a low weak way, not being able to imagine what had happened to me. My strength kept ebbing away till I had scarcely the desire or ability to do anything. I felt as tired as if I had just arrived home from a long, hard journey, yet no tax more than usual of any kind had been laid upon me. My mind, too, was weary; so that I turned from things that obliged me to think, plan, or consider.

"Side by side, so to speak, with all this was the failure of my appetite. Of course I continued to eat, or make an effort to eat, but food no longer tempted me as it does a person in health. I picked and minced over my meals, and the little I took neither tasted good nor did me any good after I had eaten it. Instead of warming, comforting and stimulating me, as it used to do, it gave me distress at the stomach, pain at the chest, and a singular feeling of tightness around the waist, as though a belt were buckled too snug around me.

"After a time the condition of my stomach seemed to grow worse. There was that sense of gnawing, so often mentioned by others, and occasionally a feeling of faintness and sinking, almost like the ground giving way under one's feet."

[REMARK: An eminent London physician, in one of his books, describes this sinking feeling as one of the most appalling and frightful that it is possible to experience. It is not the body but the *mind* that suffers. I, the present writer, have had two attacks of it, and pray to have no more. It is like unto the overshadowing of the Death Angel's wing, with the *mind fully conscious of the situation*. The cause is uric acid poison in the blood, one of the products of prolonged indigestion.]

"When this sinking feeling came on," continues the letter, "it weighed me down like a nightmare. Finally I got to be so weak I could only walk slowly and feebly. The doctor who prescribed for me said my complaint was *dyspepsia*, but his medicine had no perceptible effect.

"I continued like this for eight years; not always the same, but now better and then worse. Yet in all that long time ~~there~~ was not a day when I could say I was well. No medicine or treatment seemed right for me, and I almost began to think I never should recover my former health.

"In March, 1892, Mother Seigel's Syrup was recommended to me as having done wonders in cases like mine, even when they were of long standing and everything else had failed. No harm to try it, we thought, and got a bottle from Mr. Grime, the chemist, in Bolton Road; and after taking it I felt great relief. My appetite quickly improved, and I could eat without pain. When I had taken two or three bottles more the bad symptoms had all gone, and I was as well as ever. My husband also took the medicine with the same good results. You may publish my letter and refer inquirers to me. (Signed) (Mrs.) Elizabeth Wilson, 5, Northcote Street, Bolton Road, Darwen, March 1st, 1895."

The lesson in this interesting narrative is too plain for us to miss it. Our old friend Crusoe was not able to launch his boat for the want of machinery. Similarly the doctor who attended Mrs. Wilson was not able to cure her because he did not possess the right remedy. His opinion as to her complaint was entirely correct. She was suffering from chronic dyspepsia, precisely as he told her. But alas! it is one thing to know what ought to be done and quite another to have the knowledge and means to do it.

Between these two things (over this wide gap) stands Mother Seigel's Syrup, just as between the two sides of the Thames stands London Bridge.

Sir George Chesney Memorial Committee.

CHAIRMAN :

General Sir Henry W. Norman.

MEMBERS :

The Marquess of Lansdowne, Field Marshal Lord Roberts, Mr. George Allen, Colonel Sir J. Ardagh, Sir Stuart Bayley, Mr. William Blackwood, Sir Edward Braddon, Rev. A. G. Butler, Colonel Sir G. S. Clarke, General Sir E. Collen, Sir Auckland Colvin, Sir Julian Danvers, General C. H. Dickens, Sir Mortimer Durand, General Sir W. Stirling Hamilton, Captain Hext, R. N., Mr. A. P. Howell, Sir W. W. Hunter, Lieut-Genl. McLeod Innes, General Sir Allen Johnson, Sir H. S. King, M. P., Mr. A. Lawrence, General Sir R. Low, Sir Alfred Lyall, General Sir O. Newmarch, Sir Andrew Scoble, Field Marshal Sir Lintorn Simmons, Field Marshal Sir Donald Stewart, General R. Strachey, General Sir A. Taylor, Mr. Meredith Townsend, Mr. W. C. Unwin, General Sir George White and General Sir E. Williams.

Memorial

TO THE LATE

SIR GEORGE CHESNEY, K.C.B., R.E., M.P.

A Meeting was held, on the 24th April, at the Royal United Service Institution, of some of the friends of the late Sir George Chesney, to consider the question of the commemoration of his distinguished services as Soldier, Administrator, Statesman, and Author. General Sir Henry Norman presided, and was supported by Field Marshals Sir Lintorn Simmons and Sir Donald Stewart, and other friends of Sir George Chesney. To carry out the object of the Meeting, a General Committee was formed, which included the gentlemen then present, and in addition, the Marquess of Lansdowne, Field Marshal Lord Roberts, General Sir George White, Sir Andrew Scoble, Sir Alfred Lyall, Sir H. S. King, Sir W. W. Hunter, Mr. Meredith Townsend, General Richard Strachey, Mr. William Blackwood, and others.

The form the Memorial should take was left for the future consideration of the Committee, as it would depend on the amount subscribed, but the suggestions tended towards a bust of Sir George for the India Office, and a medal for valuable contributions to Military Literature. It was resolved to limit each subscription to a maximum of three guineas.

Subscriptions will be received by Lieutenant-General McLeod Innes, 9, Lexham Gardens, Cromwell Road, London, W.

COMMITTEE FOR INDIA :

His Excy. General Sir George White, V. C., G.C.I.E., K.C.B., the Hon'ble Major-General Sir E. Collen, K.C.I.E., Lieutenant-General Sir W. S. A. Lockhart, K.C.B., K.C.S.I., His Excy. Lieutenant-General Sir C. Mansfield Clarke, K.C.B., Major-General J. Duncan, Major-General G. E. L. S. Simford, C.B., C.S.I., Major-General G. de C. Mouton, C.B., Major-General A. R. Badcock, C.B., C.S.I., Brigadier-General W. G. Nicholson, C.B., Captain J. Hext, C.I.E., R.N., Colonel W. S. S. Bisset, C.I.E., R.E., Colonel T. Deane.

Honorary Secretary :
Colonel T. Deane,
Simla.

Subscriptions will be received, in India, by Messrs. King, King & Co., Bombay; Messrs. King, Hamilton & Co., Calcutta; and by the Alliance Bank, Simla, and its branches at Calcutta, Cawnpore, Agra, Ajmere, Dujeeing, Lahore, Murree, Mussoorie, Rawal Pindi and Umballa. Subscriptions are limited to a maximum of Rs. 32 in India.

By order of the Committee,
T. Deane, Col.,
Hony. Secy.
Simla, 18th July, 1896.

S. DASSEX & CO.,

Manufacturers, Importers, Repairers and Tuners of all sorts of Harmoniums, Organs and Pianos, &c., 30, Colootollah Street, Calcutta, import materials direct from England and guarantee the best workmanship and finish; are the express manufacturers of

Saraswati Flute :

Box Harmoniums 3 octaves 3 stops, 1 set of reed, Rs. 35; 3 octaves, best quality, Rs. 40; 3 octaves 4 stops, 2 sets of reed, Rs. 75. Organs, Folding Harmoniums, Table Harmoniums, &c., always ready for sale; orders executed promptly.

ALLAN'S ANTI-FAT

PURELY VEGETABLE, Perfectly Harmless. Will reduce from two to five pounds per week; acts on the food in the stomach, preventing its conversion into fat. Sold by Chemists. Send stamp for pamphlet.

Botanic Medicine Co., 3, New Oxford-street, London, W.C.

Music for the Million!

BEECHAM'S

MUSIC PORTFOLIO.

We regret to announce that owing to the run on the above having exceeded our expectations, we are absolutely and completely out of stock, not a single number remaining for such as were not wise enough to order early. The Proprietor of

"BEECHAM'S PILLS"

has never been known to disappoint the Public, and we have accordingly requested him to send out a further shipment of the Portfolios which is due here in September. It is requested that all orders should be registered at an early date, as the Portfolios will be forwarded in rotation, and no further quantity will be available when the second shipment is sold out.

G. ATHERTON & CO.,

POSTSCRIPT.

After paying the expenses of the publication, the surplus will be placed wholly at the disposal of the family of the deceased man of letters.

Orders to be made to the Business Manager, "An Indian Journalist," at the Bee Press, 1, Uchoor Dutt's Lane, Wellington Street, Calcutta.

OPINION ON THE BOOK.

It is a most interesting record of the life of a remarkable man.—Mr. H. Babington Smith, Private Secretary to the Viceroy, 5th October 1895.

Dr. Mookerjee was a famous letter-writer, and there is a breezy freshness and originality about his correspondence which make it very interesting reading.—Sir Alfred W. Corft, K.C.I.E., Director of Public Instruction, Bengal, 26th September, 1895.

It is not that amid the pressure of harassing official duties an English Civilian can find either time or opportunity to pay so graceful a tribute to the memory of a native personality as F. H. Skrine has done in his biography of the late Dr. Sambhu Chunder Mookerjee, the well-known Bengal journalist (Calcutta: Thacker, Spink and Co.); nor are there many who are more worthy of being thus honoured than the late Editor of *Reis and Rayyet*.

We may at any rate cordially agree with Mr. Skrine that the story of Mookerjee's life, with all its lights and shadows, is pregnant with lessons for those who desire to know the real India.

No weekly paper, Mr. Skrine tells us, not even the *Hindoo Patriot*, in its palmiest days under Kristodas Pal, enjoyed a degree of influence in any way approaching that which was soon attained by *Reis and Rayyet*.

A man of large heart and great qualities, his death from pneumonia in the early spring in the last year was a distinct and heavy loss to Indian journalism, and it was an admirable idea on Mr. Skrine's part to put his Life and Letters upon record.—*The Times of India*, (Bombay) September 30, 1895.

It is rarely that the life of an Indian journalist becomes worthy of publication; it is more rarely still that such a life comes to be written by an Anglo-Indian and a member of the Indian Civil Service. But, it has come to pass that in the land of the Bengali Babus, the life of at least one man among Indian journalists has been considered worthy of being written by an Englishman.—*The Madras Standard*, (Madras) September 30, 1895.

The late Editor of *Reis and Rayyet* was a profound student and an accomplished writer, who has left his mark on Indian journalism. In that he has found a Civilian like Mr. Skrine to record the story of his life he is more fortunate than the great Kristodas Pal himself.—*The Tribune*, (Lahore) October 2, 1895.

The career of "An Indian Journalist" as described by F. H. Skrine of the Indian Civil Service is exceedingly interesting.

Mookerjee's letters are marvels of pure diction which is heightened by his nervous style.

The life has been told by Mr. Skrine in a very pleasant manner and which should make it popular not only with Bengalis but with all those who are able to appreciate merit unmarred by ostentation and earnestness unspoiled by harshness.—*The Muhammadan*, (Madras) Oct. 5, 1895]

The work leaves nothing to be desired either in the way of completeness, impartiality, or lifelike portrayal of character.

Mr. Skrine deals with his interesting subject with the unfailing instinct of the biographer. Every side of Dr. Mookerjee's complex character is treated with sympathy tempered by discrimination.

Mr. Skrine's narrative certainly impresses one with the individuality of a remarkable man.

Mookerjee's own letters show that he had not only acquired a command of clear and flexible English but that he had also assimilated that sturdy independence of thought and character which is supposed to be a peculiar possession of natives of Great Britain. His reading and the stores of his general information appear to have been, considering his opportunities, little less than marvellous.

One of the first to express his condolence with the family of the deceased writer was the present Viceroy, Lord Elgin. Mookerjee appears to have won the affection not only of the dignitaries with whom he came in contact, but also of those in low estate.

The impression left upon the mind upon laying down the book is that of a good and able man whose career has been graphically portrayed.—*The Englishman*, (Calcutta) October 15, 1895.

"IMPROVED UNDAUNTED"

WATCH. Rs. 7.

Guaranteed three Years.

Strong, accurate, pretty, small, open-faced, nickel silver, keyless, short winding, patent, "NEW STYLE IMPROVED UNDAUNTED" watch, with hand setting mechanism, secondhand, for Doctors, ornamental bold dial, for Rs. 7 V. P. P. with an extra glass, spring, pretty box and full three years' guarantee. Warranted to stand the roughest use. Runs more than 28 hours with one winding. Will last a life time. Easily repairable. Others sell at double our rates. One watch free for the purchase of 8 at a time. Mr. Jno. Dickson of Haputal Railway, from Ceylon says:—It keeps splendid time and never stopped although it sustained hard knocks and jerks. x Dr. H. Moore of Royal Artillery from Poonamallee says:—I sold it for Rs. 16. x Pte. W. Hopkins of Sussex Regt. from Dundum says:—I have sold it for Rs. 20. x Mr. T. B. Scott of Patna Opium Department says:—One watch you sent me some seven years ago is still keeping very good time.

Jewelled Ring Rs. 1-8-0. Real

Silver Watch Rs. 13. Real

Solid Gold Watch Rs. 24.

Pretty electro cased gold chain Rs. 1-8-0. Fashionable electro cased Gold Ring set with scientific diamonds, Rubies, Emeralds, at Rs. 1-8-0. Mr. G. Smith, Salt Inspector from Sanikutia, says: "A German valued the diamond ring at Rs. 50 and ruby at Rs. 30." Key winding, Government stamped, solid silver hunting case, Royal watch with extras and full three years' guarantee, for Rs. 13. Pte. G. Hawkes of 2nd York Light Infantry from Purandhar says:—For the first one I got Rs. 25; the second one I sold to a Sergeant for Rs. 28. x Pte. H. C. Bishop of L. F. L. Regt. from Kamptee says:—A Corporal offered Rs. 30 for the very same watch. Gentlemen's open faced, keyless *real solid gold watch* Rs. 30; ladies' Rs. 24; both with extras and guaranteed for 3 years. Mind they are guaranteed to be of real solid gold. No agents kept, all goods sent only by us from Bombay per V. P. P.

Balaknana, Calcutta.

KAVIRAJ NAGENDRA NATH SEN, Physician, Surgeon, Accoucheur, practises the Ayurvedic system of medicine, after having obtained a diploma at the final examination of one of the Government medical Institutions of the country.

SPECIFICS

for all ordinary diseases, like Fever, Cough, Asthma, Phthisis, Diabetes, &c., including diseases brought on by irregularities of kinds Catalogues, containing full accounts of diseases and remedies, are transmitted on application. Prescriptions, with or without medicines, sent to every part of India and Ceylon, Cape Colony, and the British Isles, on receipt (by post) of full accounts of diseases.

Thousands of unsolicited Testimonials from every quarter.

CATARRH,

Hay Fever, Catarrhal Deafness.

A NEW HOME TREATMENT.

Sufferers are not generally aware that these diseases are contagious, or that they are due to the presence of living parasites in the lining membrane of the nose and eustachian tubes. Microscopic research, however, has proved this to be a fact, and the result is that a simple remedy has been formulated whereby these distressing diseases are rapidly and permanently cured by a few simple applications made at home by the patient once in two weeks. A pamphlet explaining this new treatment is sent on receipt of 2½d stamp by A HUTTON DIXON, 43 & 45 East Bloor St. TORONTO, Canada.
Scientific American.

REVIEW OF POLITICS LITERATURE AND SOCIETY

VOL. XV.

CALCUTTA, SATURDAY, SEPTEMBER 5, 1896.

WHOLE NO. 741.

WEEKLYANA.

THE 19th annual meeting of the Indian Association for the Cultivation of Science was held at the Hall of the Association on Saturday last. In the absence of the President, the Lieutenant-Governor, the Vice-President, Father Lafont, presided. The Honorary Secretary, on being called by the Chairman, read the Report of the Committee of Management for the past year, from which it appears that altogether 159 lectures were delivered in physics, chemistry, and biology, and 24 practical demonstrations were held in physics and chemistry. A noteworthy fact was that five students, who were allowed to work in the laboratory to prepare themselves for the M. A. degree of the Calcutta University, were successful in obtaining that degree. Of the eight students who underwent the examination of the Association in physics and chemistry, three were entitled to receive prizes and medals. The receipts and expenditure of the Association showed progressive financial prosperity. The Association is continuing to receive monthly, quarterly, and annual subscriptions from the Maharaja of Cooch Behar, from Maharaja Sir Jotendra Mohan Tagore Bahadur, Raja Peary Mohun Mookerjee, and others. The Association has Government securities, in the custody of the Bank of Bengal, of the nominal value of Rs. 1,24,400, which is more by Rs. 3,400 than what it had in 1894.

After the reading of the Report, Dr. Mahendralal Sircar, addressed the meeting as follows:—

"Gentlemen,—It must be a relief to you to learn that I am not going to inflict a speech upon you. The chief burden of my speech from year to year was the endowment of professorships, with special reference to the one which the Association resolved to found in the name of Lord Ripon so far back as 1884, that is, twelve years ago, for which we had not only his lordship's permission but his donation of a thousand rupees. From the report of your Committee which I have just read you have seen that two members of the Association have out of pity to the secretary, for which he cannot be too thankful, removed that burden from his to their shoulders. They have not only come forward with munificent donations, but have determined to see that at least the Ripon professorship fund do not remain a standing disgrace to the Association and a blot upon our national character, the noblest feature of which has in the past been gratitude. I only hope that Justice Gooroo Dass Banerjee and Babu Ganesh Chunder Chunder's example and practical appeal will bear fruit, and that before the year expires we shall be in a position to carry out the suggestion of the committee, namely, to endeavour to secure a whole-time professor as soon as the realized donations give us an income of Rs. 100 a month.

You no doubt feel that the Association must be in the lowest stage of evolution when it has not yet been able, after an existence of twenty years, to provide even so poorly for a single professorship, that is, for a man who can carry on investigations within its walls, unhampered with the thought of providing for the simple necessities of life. Each of you, therefore, gentlemen, who have helped in establishing the Association with the object of enabling your countrymen to cultivate science in all its departments, ought not to rest contented till you have enabled it to fulfil that object. You have to see to the endowment not of one but of several professorships. For it is no longer possible for one man to cultivate all the branches of science, though a general acquaintance with as many of them as possible helps in the proper and successful cultivation of especial branches.

The branches of science have multiplied so much in these days that fifty professors for a scientific institution would not be too many. And there are in fact institutions in Europe which do actually maintain such a number of professors. I do not expect that number in our Association within the life-time of any of us here present, though if funds were forthcoming the thing is not beyond the range of possibility. But under the circumstances of our country, to think of so many professors

for our Association would be but indulging in an idle dream. I must therefore limit myself to speaking of such professorships as have become an imperative necessity. After physics and chemistry, the next subject that has a legitimate claim upon our attention is biology. Before providing for physics I could not venture to ask for the endowment of a chair for biology. But now that some provision has been made for chemistry by H. H. the Maharaja of Cooch Behar's monthly subscription of Rs. 100 a month, and assuming, which Justice Gooroo Dass Banerjee and Babu Ganesh Chunder Chunder have enabled us confidently to do, that the Ripon professorship will ere long be an accomplished fact, I think I may now go about with a begging bowl for biology in hand.

I am glad to tell you that I do not appear before you with altogether an empty bowl. At the Hare Anniversary held here in June last, one of our colleagues, Babu Nilmani Kumar, read an address on the Calcutta Medical College, which in its infancy was an object of Hare's philanthropic solicitude and care, and thus concluded the address: 'Before resuming my seat, I beg to make a suggestion, the adoption of which, I humbly think, will perpetuate the memory of David Hare better, because more fittingly, than the statue which was erected by his immediate pupils. The suggestion is, to invite public subscriptions for the establishment of a professorship in his name in this institution (the Science Association), which may be said to have owed its existence to his influence, because founded by one who commenced his education in the Hare School and completed it in the Calcutta Medical College.'

The meeting, before which this address was delivered, was a large one, and the following resolution was passed: 'That this meeting is unanimously of opinion that the suggestion of the learned lecturer be carried out, namely, that a professorship in the name of David Hare be established in connection with the Science Association, and that the enlightened and generous public be invited to make suitable contributions towards that object.' You will, I doubt not, be pleased to learn that the mover of the resolution was no less a person than our distinguished colleague, Dr. Gooroo Dass Banerjee, who, in the course of an eloquent speech, suggested that the subject of the professorship should be biology; and what is of more interest to us is, that he did not rest contented with moving the resolution, but came forward with the first subscription, the munificent sum of Rs. 1,000, in aid of the professorship. This created such an enthusiasm amongst the audience that a further sum of one thousand three hundred and six rupees was subscribed on the spot; so that altogether I have promise of Rs. 2,306 to begin with.

No further advance has since been made, but that is, I believe, simply because the public of Calcutta and the people of Bengal have not been made sufficiently and properly acquainted with the object and importance of the professorship. My persuasion, Gentlemen, is that this is the case with the Ripon professorship, and, indeed, with the whole scheme of the Science Association.

I must confess I have not been able to do my duty at all adequately in this matter. I have not succeeded in impressing my countrymen with the importance of Science-cultivation as under the present circumstances the most important factor of not only their improvement, but of their actual regeneration. I have certainly not succeeded in inspiring the general educated community with love of science, far less with missionary zeal and enthusiasm for its propagation. It would be the height of ingratitude in me to say that I have derived no help from my educated countrymen. All the help, in fact, has come from them but this was spontaneously rendered, without any prompting from me. And the number of those who have so helped is few, very few, indeed, infinitesimal, compared to the number who may be said to have received a liberal education. The fact remains that the majority of our educated community have not awakened to an adequate sense of their responsibility in this matter of supreme importance; which you may interpret, if you like, as meaning that, from whatever cause it may be, I have not been able to reach the mind and the heart of that community which alone can influence the country.

If you are inclined to take an indulgent view of the situation you may take it that it is not possible for one man, weighted with other duties which could not be safely and conscientiously neglected, to do all that was necessary to be done in order to carry out such a large scheme as that of the Science Association, for which both the material and the moral support of the whole country is required. If you will be

Subscribers in the country are requested to remit by postal money orders, if possible, as the safest and most convenient medium, particularly as it ensures acknowledgment through the Department. No other receipt will be given, any other being unnecessary and likely to cause confusion.

pleased to take this indulgent view then I may consider my own humble work done.

I have all along maintained that the original Aryan vigour of intellect, which in the past caused the light of knowledge to radiate from our country to the rest of the world, is only dormant in us and not gone beyond recovery. That I am not a visionary or a vaunting patriot, has been proved beyond the shadow of a doubt by admittedly superior display of intelligence in other fields than pure science, and very recently even in the field of pure science itself. I allude to the success which has attended the labours of Professor Jagadish Chandra Bose whom, some of you may remember, I was the first to welcome in this very hall as a young man of promise. He has kept his promise exceedingly well. I can scarcely express in words the delight I feel at his success, and I sincerely tell you that that delight could not have been greater than if he had been my own son, or if I myself had been in his place. Indeed, Gentlemen, if I could lay bare my heart I could have shown you I am rejoicing much more simply because he has shown that Indians are not mere speculative and impractical dreamers, but that they can, if they but will it, be as practical as any nation on the face of the globe.

Yes, Gentlemen, you have but to will it, and victory even in the domain of practical science is yours. What is it which prevents you from taking that determination? What is it that has produced such an inertia of the will as to render you so unmindful of your best interests? The answer to this question furnishes, in my humble opinion, the key to our decadence as a nation, and suggests also the means by which we can not only regain our lost prestige, but even yet take rank with the most civilized nations of the world. So long as we were earnest and diligent in exploring the secrets of Nature we had mastery over her and could hold our own, but from the moment we gave ourselves up to luxury and ease and were taught by an idle priesthood to depend upon invoking the aid of the gods without doing the necessary work ourselves, we began to fall from our high estate, and our present condition shows how great has been that fall. The moral is obvious, and my whole life has been spent in preaching it to my countrymen, I hope not in vain."

The Resolutions for (1) the adoption of the Report, (2) the appointment of office-bearers, and (3) the appointment of the Committee of Management for the current year, were passed. The Hon'ble Mr. A. M. Bose, in moving the 2nd resolution for the appointment of office-bearers, made an eloquent speech in which he paid a glowing tribute to Sir Alexander Mackenzie for his services in the cause of education and for being the first Lieutenant-Governor who has sent an Indian on a scientific deputation to Europe. He also spoke highly of the Vice-Presidents, Father Lefont and Raja Peary Mohan Mookerjee, and of the Honorary Secretary. He hoped and prayed that Dr. Sircar would live long to see his cherished dream realized,—the Association with a multitude of professors diffusing the blessings of science, and many a young man successfully prosecuting scientific researches, bringing honour and glory to him as their venerated sire.

The Rev. Father Lefont, after distributing the prizes and medals, spoke of the Association as the only national Indian institution for the cultivation of science, for which reason he has helped its founder, Dr. Sircar, since the very inception of his project. Science was still an exotic, and the natives of this country could make it indigenous only by cultivating it themselves. The cultivation of science, which means the discovery of truth, by the study of God's works, will do them good and no harm, and while he would not recommend them to borrow anything else from Europe, neither literature, nor philosophy, nor even religion, he would earnestly recommend them to borrow science from her as much as they could. They should do more than merely borrow. They should add to the stock of scientific knowledge, and this they could only do, as he had already said, by carrying on scientific investigations themselves, which they were quite capable of doing. He was quite confident that they had to engage in such researches with patience, earnestness and zeal, and it would not be long before they met with their reward in the shape of some striking or useful discovery. He had, therefore, great pleasure in cordially supporting the appeal for funds in aid of the establishment of professorships.

MR. F. GANESCO, a French journalist, travelling through Shimonoseki when Li Hung Chang was acting as Ambassador to Japan after the war relates the following in the *Revue Bleue* :—

"Mr. Ganesco sought to interview the Viceroy, but it was pointed out to him that if an interview were granted in this case the same favour would have to be extended to all the other journalists present, and they were legion. Mr. Ganesco is enterprising. Meeting a friend whose influence in high quarters is great, he proposed that since Li Chung Tong would not grant him an interview, he (Mr. Ganesco) would be pleased if the Viceroy would condescend to interview him instead. Pulling the right string, and in good time, will work wonders, especially in Japan, and Mr. Ganesco knew this, with the result that he was pleased to allow the Viceroy to interview him. The conversation, which lasted ten minutes, is told by Mr. Ganesco as follows :— 'Li Chung Tong, extending his hand to me, said, "Good day, sir, how do you do? I am very pleased to meet you." Then ensued a hurried consultation with his Excellency's interpreter. I knew we should pre-

sently exchange confidences. In this I was not mistaken, for the interpreter at once began : "Speaking for his Excellency, sir, would there be objection in asking what your age might be?" How sorry I was that humour is not my strong point, for here was a fine opportunity for a pretty reply. Alas, for the narrowness of my wit! I had to state my age pure and simple. Li Chung Tong answered with an extraordinary exclamation; but whether that was intended to be complimentary or otherwise, I cannot say; it might have been anything, in fact. Directly after he blurted out with great rapidity the following cross-examination :—"Have you been here long?" "How did you come?" "When are you leaving?" "France is a great country!" Then the Viceroy thought that possibly some State secrets had still been unrevealed to me, for he promptly added, with much gravity, "It is a very fine day, is it not?" Full of gratitude in having gained the evident confidence of so great a man, I bowed respectfully and took my leave. I felt feverish from the responsibility of all that had passed between us; and I was glad of the refreshing breeze as I wended my way back to the hotel!"

THE Turk is more complimentary than the Chinaman. Hear Kinglake :—

"I think I should mislead you if I were to attempt to give the substance of any particular conversation with orientals. A traveller may write and say that the Pasha of So-and-so was particularly interested in the vast progress which has been made in the application of steam, and appeared to understand the structure of our machinery—that he remarked upon the gigantic results of our manufacturing industry—showed that he possessed considerable knowledge of our Indian affairs, and of the constitution of the Company, and expressed a lively admiration of the many sterling qualities for which the people of England are distinguished." But the heap of commonplace thus quietly attributed to the Pasha will have been founded perhaps on some such talking as this :—

Pasha.—The Englishman is welcome; most blessed among hours is this, the hour of his coming.

Dragoman (to the Traveller).—The Pasha pays you his compliments.

Traveller.—Give him my best compliments in return, and say I'm delighted to have the honour of seeing him.

Dragoman (to the Pasha).—His Lordship, this Englishman, Lord of London, Scornor of Ireland, Suppressor of France, has quitted his governments, and left his enemies to breathe for a moment, and has crossed the broad waters in strict disguise, with a small but eternally faithful retinue of followers, in order that he might look upon the bright countenance of the Pasha among Pashas—the Pasha of the everlasting Pashalik of Karaghoolkoldour.

Traveller (to his Dragoman).—What on earth have you been saying about London? The Pasha will be taking me for a mere Cockney. Have not I told you *always* to say, that I am from a branch of the family of Mudcombe Park, and that I am to be a magistrate for the county of Bedfordshire, only I've not qualified; and that I should have been a deputy-lieutenant, if it had not been for the extraordinary conduct of Lord Mountpromise; and that I was a candidate for Boughton-Soldborough at the last election, and that I should have won easy if my committee had not been bribed. I wish to heaven that if you do say anything about me, you'd tell the simple truth!

Dragoman.—[is silent].

Pasha.—What says the friendly Lord of London? Is there aught that I can grant him within the Pashalik of Karaghoolkoldour?

Dragoman (growing sulky and literal).—This friendly Englishman—this branch of Mudcombe—this head purveyor of Boughton-Soldborough—this possible policeman of Bedfordshire—is recounting his achievements and the number of his titles.

Pasha.—The end of his honours is more distant than the ends of the earth, and the catalogue of his glorious deeds is brighter than the firmament of heaven!

Dragoman (to the Traveller).—The Pasha congratulates your Excellency.

Traveller.—About Boughton-Soldborough? The deuce he does!—but I want to get at his views in relation to the present state of the Ottoman empire. Tell him the Houses of Parliament have met, and that there has been a speech from the Throne pledging England to maintain the integrity of the Sultan's dominions.

Dragoman (to the Pasha).—This branch of Mudcombe, this possible policeman of Bedfordshire, informs your Highness—that in England the talking houses have met, and that the integrity of the Sultan's dominions has been assured for ever and ever by a speech from the velvet chair.

Pasha.—Wonderful chair! Wonderful houses!—whirr! whirr! all by wheels!—whizz! whizz! all by steam!—wonderful chair! wonderful houses! wonderful people!—whirr! whirr! all by wheels!—whizz! whizz! all by steam!

Traveller (to the Dragoman).—What does the Pasha mean by that whizzing? he does not mean to say, does he, that our Government will ever abandon their pledges to the Sultan?

Dragoman.—No, your Excellency, but he says the English talk by wheels and by steam.

Traveller.—That's an exaggeration; but say that the English really have carried machinery to great perfection. Tell the Pasha (he'll be struck with that) that whenever we have any disturbances to put down, even at two or three hundred miles from London, we can send troops by the thousand to the scene of action in a few hours.

Dragoman (recovering his temper and freedom of speech).—His Excellency, this Lord of Mudcombe, observes to your Highness, that whenever the Irish, or the French, or the Indians rebel against the English, whole armies of soldiers and brigades of artillery are dropped into a mighty chasm called Euston Square, and, in the biting of a cartridge, they rise up again in Manchester, or Dublin, or Paris or Delhi, and utterly exterminate the enemies of England from the face of the earth.

Pasha.—I know it—I know all; the particulars have been faithfully related to me, and my mind comprehends locomotives. The armies of the English ride upon the vapours of boiling caldrons, and their horses are flaming coals!—whirr! whirr! all by wheels!—whiz! whiz! all by steam!

Traveller (to his Dragoman).—I wish to have the opinion of an unprejudiced Ottoman gentleman as to the prospects of our English commerce and manufactures; just ask the Pasha to give me his views on the subject.

Pasha (after having received the communication of the Dragoman). The ships of the English swarm like flies; their printed calicoes cover the whole earth, and by the side of their swords the blades of Damascus are blades of grass. All India is but an item in the ledger-books of the merchants whose lumber-rooms are filled with ancient thrones!—whirr! whirr! all by wheels!—whiz! whiz! all by steam!

Dragoman.—The Pasha compliments the cutlery of England, and also the East India Company.

Traveller.—The Pasha's right about the cutlery: I tried my scimitar with the common officers' swords belonging to our fellows at Malta, and they cut it like the leaf of a novel. Well (to the Dragoman), tell the Pasha I am exceedingly gratified to find that he entertains such a high opinion of our manufacturing energy, but I should like him to know, though, that we have got something in England besides that. These foreigners are always fancying that we have nothing but ships and railways, and East India Companies; do just tell the Pasha, that our rural districts deserve his attention, and that even within the last two hundred years there has been an evident improvement in the culture of the turnip; and if he does not take any interest about that, at all events you can explain that we have our virtues in the country—that we are a truth-telling people, and, like the Osmanlees, are faithful in the performance of our promises. Oh! and by the by, whilst you are about it, you may as well just say, at the end, that the British yeoman is still, thank God! the British yeoman.

Pasha (after hearing the Dragoman).—It is true, it is true: through all Feringhistan the English are foremost and best; for the Russians are drilled swine, and the Germans are sleeping babes, and the Italians are the servants of songs, and the French are the sons of newspapers, and the Greeks are the weavers of lies, but the English and the Osmanlees are brothers together in righteousness: for the Osmanlees believe in one only God, and cleave to the Koran, and destroy idols; so do the English worship one God, and abominate graven images, and tell the truth, and believe in a book; and though they drink the juice of the grape, yet to say that they worship their prophet as God, or to say that they are eaters of pork, these are lies—lies born of Greeks, and nursed by Jews.

Dragoman.—The Pasha compliments the English.

Traveller (rising).—Well, I've had enough of this. Tell the Pasha I am greatly obliged to him for his hospitality, and still more for his kindness in furnishing me with horses, and say that now I must be off.

Pasha (after hearing the Dragoman, and standing up on his divan).—Proud are the sires, and blessed are the dams of the horses, that shall carry his Excellency to the end of his prosperous journey. May the saddle beneath him glide down to the gates of the happy city like a boat swimming on the third river of Paradise! May he sleep the sleep of a child, when his friends are around him; and the while that his enemies are abroad may his eyes flame red through the darkness—more red than the eyes of ten tigers!—farewell!

Dragoman.—The Pasha wishes your Excellency a pleasant journey. So ends the visit.

THE "Scientific American" (supplement) of July 18, writes:—

"In Austria drunkards are treated under the Curatel law, that applies to persons mentally afflicted and to spendthrifts, their affairs being placed in charge of an administrator. A person suffering from excessive indulgence in drink may be brought judicially under this law. But in Galicia, Cracow and Bukovina there are special laws for the punishment of persons drunk in public places, while persons convicted of drunkenness three times in one year are prohibited from visiting public houses. A Bill has been introduced in Austrian Reichsrath providing for the erection of public asylums for drunkards, who may be detained for two years on complaint of their relatives or of the public authorities."

England is also for a law restraining the action of the drunkards. The English love of liberty is in the way of restraining spendthrifts. In fact, so long as a man lives, he is free to act as he likes. It is not till his death, when his will comes before the Courts that they examine his intellectual power to protect his property from fraudulent or illegal disposition. In death he is more cared for than in life.

..

In Paris, the cheapest lodging house, if house it may be called, is "le cabinet" with space for only a cot and costing the lodger £6 a year. It is only a shelter from wind and weather. The next is the "chambre" with a fire place and a window, the rent varying from £7½ to £12½. The "chambre et cabinet," and the "lodgement" consist of two rooms and kitchen with a fire-place and windows. With the "petit apartment" begins the gen-

* That is, if he stands up at all: oriental etiquette would not warrant his rising, unless his visitor were supposed to be at least his equal in point of rank and station.

tility. An "apartment" embraces a whole suite, the rent being £25 and upwards. For the luxurious there is the private hotel.

THE new Superintendent of the Calcutta School of Art and Art Gallery is Mr. Ernest Binfield Havel, appointed by the Secretary of State.

..

SIR Alfred Croft having fallen ill and about to go on leave, Dr. C. A. Martin, Inspector of Schools, Rajshahi and Burdwan Circle, is acting as Director of Public Instruction, Bengal.

..

THE *Englishman*, of August 28, has the following editorial note on Dr. Bhattacharya's latest work:—

"The Yogi has to sit with his right leg on his left thigh, and his left leg on his right thigh, and in that uncomfortable position to point his eyes towards the tip of his nose." This is only the first of a series of physical feats which the Yogi has to perform preliminary to undergoing a course of mental gymnastics. Dr. Jogendra Nath Bhattacharya in his latest work in 'Hindu Castes and Sects' (Messrs. Thacker, Spink) tells us that while seated in the method described above the devotee must close up one nostril and inhale through the other. When the lungs are entirely inflated a certain number of formulas must be repeated before he may again expire. The whole operation is very simple, says Dr. Bhattacharya, 'and yet the man who can go through it with a little pantomimic skill and seriousness can, at a very little cost, acquire a character for superior sanctity.' The subject which Dr. Bhattacharya treats of in this book is, as may be imagined, a highly complicated and difficult one, but it is dealt with in a manner which renders it extremely interesting, and with an evident earnestness of purpose which makes it a valuable contribution to the literature of the question. His work is thorough, unaffected, and the result of patient research."

..

THE following Note by the Mail is from the *Englishman*. It is introduced under the sub-heads—Some Humours of the French Census. Thirty-Year-Old Centenarians:—

"In the last census returns appeared the names of several persons who were alleged to be over one hundred years old. These wonderful examples of longevity were said to have been born in Paris, and to have spent all their lives inside its walls, only now and then, like other economical citizens, taking a cheap trip down the river or enjoying fresh air in the woods near the metropolis. From this it was argued that Paris, after all, was no unhealthy place, and that its inhabitants had as much chance of living long as though they dwelt in the country. The persons, however, who thus painted the advantages of the metropolis have had to bear keen disappointment. An attempt has been made to see the 'centenarians' in the flesh and it succeeded—up to a certain point. Two of them, says the Paris correspondent of the *Daily Telegraph*, were found to be young women who could not muster fifty years between them. They are dress-makers, and were energetically plying their needles when the investigator burst in upon them. Hearty was their laughter when he informed them that they had been set down in the census returns as grandams, who had been born about the time when Louis XVI. was guillotined by the Revolutionists. Another supposed centenarian was a hale and hearty carpenter, forty years old, of the Roquette district, who laid down his adze when told that he was born over a century since, and said that he had no objection to have his age stated at 100 years if the Government gave him a pension. It appears that, after all, there is only one authentic centenarian in Paris—namely, the old dame of the Salpêtrière Hospital, whose longevity has already been celebrated in prose and poetry."

A BOSTON journal soliloquizes:—

To advertise or not to advertise—

That is the question

Whether 'tis nobler in a business man to suffer

The loss and slowness of unbought bargains,

Or, by advertising, sell them.

There's the nightmare of neglected opportunity—

Of space unoccupied in the daily press—

That might enrich the merchant's pocket

By emptying his plethoric shelves—

All these, and other things to prize,

Should lead the wise to advertise.

..

LAST month, 550 male and 200 female Europeans and 31,569 male and 10,003 female Natives, or in all 42,322 persons, at a daily average of 1,840 for the 23 public days, visited the Indian Museum.

DEAFNESS. An essay describing a really genuine Cure for Deafness, Singing in Ears, &c., no matter how severe or long-standing, will be sent post free.—Artificial Ear-drums and similar appliances entirely superseded. Address THOMAS KEMPE, VICTORIA CHAMBERS, 19, SOUTHAMPTON BUILDINGS, HOLBORN, LONDON.

NOTES & LEADERETTES,
OUR OWN NEWS
&
THE WEEK'S TELEGRAMS IN BRIEF, WITH
OCCASIONAL COMMENTS.

DETAILS of the raid of the Armenians on the Ottoman Bank shew that they parleyed with Sir Edgar Vincent at the window, and declared that their object was to demonstrate against their desertion by the Powers. They stipulated that they should have safe conduct and retain their revolvers. These conditions were granted, and they were conveyed to Sir Edgar's yacht. They then safely sailed for Marseilles. During the Armenian occupation of the Bank, the Mussalman mob massacred, it is said, 5,000 innocent Armenians in the streets. The troops took no part, but were passive spectators of the butchery. British residents took shelter in different places. Marines have been landed from the guardships at Constantinople for the protection of the different embassies. President Cleveland has ordered a despatch of cruisers to Turkey. The foreign Ambassadors at Constantinople have appealed directly to the Sultan to put a stop to the horrors perpetrated in the city. They refer to the violation and looting of foreign domiciliaries, and point to the possible grave results that may follow. The foreign Embassies refused to illuminate on August 31, in honour of the Sultan's accession, and are drafting a note pointing to the late massacres as being organised with the connivance of the authorities. The excitement has subsided, but the Armenians are hidden in warehouses, and have several times thrown bombs and fired on the soldiers. The Porte has appointed a special commission to try the rioters and murderers and also the police who tolerated their misdeeds.

THE Sultan has sanctioned the scheme of reforms in Crete formulated by the Powers on condition that the Cretans accept it. A new organic law embodying reforms has since been promulgated. A manifesto has been issued by the Mussalmans in which they appeal to all Mahomedans to resist the proposed reforms. The Governor of Crete, replying to the foreign Consuls, states that he cannot employ troops against the Mahomedans.

VIOLENT rain storms have destroyed twelve miles of the Nile railway south of Sarras. The operations of the expedition are in consequence delayed. Rain and sandstorms have further damaged the Railway. Six thousand troops are working day and night, and have restored most of the railway. The Dervishes at Dongola are strongly fortifying a hill two miles inland, and a vigorous resistance to the Egyptian advance is considered probable. Sir Frederick Carrington reports that operations are now proceeding against six rebel forces located chiefly in the Bulwayo and Salisbury districts. The palavers between Mr. Rhodes and the Indunas have concluded without any conclusion, the rebels in the Matoppo hills retaining their arms.

ALL is quiet at Zanzibar. A detachment of Sikhs has arrived from Mombassa. Said Khalid is still at the German Consulate. Germany has refused to extradite him, on the ground that he is a political offender. The new Sultan of Zanzibar, in notifying his accession to President Faure, says that he hopes the friendship between France and Zanzibar may increase. The *Times* is surprised at this style of address from a protected ruler. The *Englishman* "regards the friendly overture in the light of a joke," and almost pities the *Times* for its notice of the new Sultan.

THE National Convention of Gold Democrats held at Indianapolis has adopted a platform upholding the gold standard and opposing the free coinage of silver. It has also nominated General Palmer, of Illinois, for the Presidency.

PRINCE Lobanoff, Russian Minister of Foreign Affairs, died suddenly while returning to Kieff from Vienna with the Tsar and the Tsarina. He died of aneurism of the heart at a country station. It is the general opinion that his successful policy will be continued. The Tsar will continue his tour. Count Shouvaloff too has had a paralytic stroke, and his condition is critical.

ITALY is sending Signor Martino, of the Diplomatic Service, on board a cruiser on a special mission to Rio to demand redress for the recent attacks on Italians there and the settlement of the claim made by the Italians for losses suffered in the last revolution.

SPAIN is sending 2,000 reinforcements to the Philippines owing to the spread of the Separatist rebellion there. Latest advices state that the Spanish troops have defeated a force of 3,000 rebels near Manila, and that a state of siege has been proclaimed. H. M. S. Redpole has left Hongkong for Manila at the instance of the British Consul there.

A TELEGRAM received at New York states that the members of a secret society have destroyed thirty Catholic missions in Shantung.

IT is reported at Brussels that news has been received from the Congo that Baron Dhanis has occupied Lado and concluded alliances with the tribesmen.

LI HUNG CHANG has arrived at New York, and had a grand reception. Government officers boarded the steamer, and welcomed him on behalf of President Cleveland. The forts and warships saluted him, and he was escorted to the hotel by troops.

A SERIOUS earthquake has taken place in the north-east of Japan, in which the town of Rokugo was demolished and other towns were damaged. Many inhabitants have perished.

SEPTEMBER 8 will be the last Tuesday mail day in Calcutta. From the week after, that is, from the 16th, the mail will close in this city on Wednesdays.

THE real celebration of the Millennial Festival of Hungary took place between June 5 and 8. On the 5th, the insignia of Hungarian royalty, the sacred crown (given in the year 1000 by Pope Sylvester II. to Prince Etienne, and afterwards, surmounted by a cross, to Mathias the Just), the purple robe, the mound and the sceptre were carried from the royal palace to the church of Mathias Corvin, where they were exposed to view for three hours. On the 8th they were taken in solemn procession to the new Parliament buildings. There were no end of decorations and joyous festivities. The new Parliament is an immense Neogothic structure facing the Danube. It is 885 feet long and covers about 21,528 square yards of ground. The height of the vanes surmounting the towers is 274 feet above the low water mark of the river, and the summit of the central dome is 351 feet high. The roofs of the halls are discernible on each side of the dome, below which lies the immense gala hall intended for solemn celebrations, like the present one, in which the two legislative bodies, the magnates and the deputies participate. The cost of the building is given at 16,000,000 fls.

LADY Tennyson, widow of the late Poet Laureate, died on August 30, at Aldworth, of congestion of the lungs supervening upon an attack of influenza. She was the daughter of Mr. Henry Sellwood, and niece of Admiral Sir John Franklin, born in Berkshire, July 9, 1813, married June 13, 1850. In the dedication to her, by Francis T. Palgrave, of the "Lyrical Poems of Alfred, Lord Tennyson," occurs the following passage descriptive of the Lady:—

"You have allowed me, in this dedication, to grace it with a name honoured, wherever Lord Tennyson's name is known, as that of the one dear, near, and true to him from youth to age, the counsellor to whom he has never looked in vain for aid and comfort, the wife whose perfect love has blessed him through these many years with large and faithful sympathy."

Only on August 8, she expressed satisfaction that she had been enabled to make and finish the corrections of the proofs of the biographical portion of the life (in preparation) of her late husband. She survived him by nearly four years.

THE "Journal of Hygiene" writes:—

"Forty years ago, Mentone was a happy village in France, where lived peasantry happy in their farms and in their superb physical state, conditioned by the climate. It was discovered that the region was a most healing one for consumptives, and it became Mecca for the unfortunates of Europe so stricken. The inhabitants abandoned their

farms to wait upon the strangers. The strong, healthy women forsook their dairies, and became the washerwomen of the consumptives' clothes. No precautions were taken; the disease was not then understood as now, the theory of tubercle bacillus not having been discovered. The place today is bacillus-ridden, a pest hole, a death itself. The hitherto strong inhabitants are emaciated, a coughing, bleeding people, filled with the germs of consumption. The soil and air are both contaminated with the tubercle bacilli. It is no longer a health resort."

We are afraid the fate that has overtaken Mentone, awaits our sanatoriums in Sonthalstan—Madhupur and Daghur. Kuelwar, on the Soane, once recommended for the lung-diseased, is now totally forsaken. The condition of the inhabitants is also becoming worse. A leper asylum will complete the ruin. Such an asylum, instead of helping segregation, is a powerful incentive to aggregation of lepers. Homes for the diseased, specially the infectious, must, therefore, be away from inhabited and in isolated localities.

A REPRESENTATION from 1,200 native residents and rate-payers of municipal Calcutta, headed by Sir Romesh Chunder Mitter, the retired Judge of the High Court, has been made to the Municipal Commissioners, to call, with the permission of Government, the newly opened Hospital at Bhawanipore, after the first native Judge of the High Court—the Shambhu Nath Pandit Hospital. It is not a mere sentimental wish to honour the deceased Judge, who, however, every way deserved to be honoured. There is a substantial monetary basis for the recommendation. It appears from the letter addressed to the Chairman of the Corporation that in, 1840, in the Southern Suburbs, Government opened a dispensary both for indoor and outdoor patients, and named it the Bhawanipore Dispensary. In 1871, the Shambhu Nath Memorial Committee made a grant to it of Rs. 21,445, when Government changed the name of the Dispensary into the Shambhu Nath Pandit Hospital. Two years after, the indoor branch was transferred to the Presidency General Hospital under the name of Shambhu Nath Pandit Ward. This Ward was abolished in 1878 and not revived in the Shambhu Nath Pandit Hospital. This institution hitherto under the management of a Committee, later on, as desired by Government, came under the control of the South Suburban Municipality, and since 1889, the Suburbs being amalgamated with the town, the dispensary has passed on to the Calcutta Corporation. It is understood to be in contemplation "to merge the Shambhu Nath Pandit Charitable Dispensary in the new institution as its outdoor branch retaining the illustrious name of Shambhu Nath Pandit." We are not aware of any official objection. Grounds may not be wanting against naming the new Hospital after the late Judge. As the people of Bhawanipore are to be chiefly benefited by it, we are sure there is not a man in that locality who, knowing the name of Pandit Shambhu Nath will not wish its perpetuation in the way proposed. Whether as a Judge, a neighbour and a friend, Pandit Shambhu Nath or his name will always be honoured, even if the Government or the Commissioners, on any technical ground, refuse the no unreasonable request of the 1,200 signatories.

THE report of the operations of the Survey of India, during the year 1894-95, shows a steady progress under each of the several branches—Trigonometrical, Topographical, Forest, Cadastral, Traverse, Geodetic, Geographical and Special. A feature of the year is the reorganisation of the Department into an Imperial, a Provincial and a Subordinate Service, with effect from the 27th March 1895. The general administration remained in the hands of Colonel Sir H. R. Thuillier, K.C.I.E., R.E., until the 26th March 1895, on which date he retired from the service after 36 years in the Department, during the last 9 of which he controlled it as Surveyor-General, and Colonel C. Srahan, R.E., who succeeded him. Besides those of Colonel Thuillier, the Department lost the services of two other officers of the Imperial List—Colonel J. R. McCullagh, R.E., Superintendent, who retired on the 1st January 1895, after having served for 26 years, and Lieutenant P. J. F. Macaulay, R.E., Assistant Superintendent, attached to the survey party with the Waziristan Delimitation Commission, who was killed in action on the 3rd November 1894, during the Mahsud-Waziri attack on the British camp in the Wana Valley. Six vacancies occurred in the Provincial List, viz. four by the deaths of Messrs. H. E. T. Keelan, C. W. F. Seyers, D. Campbell, and T. J. J. Mills, and two by the deputation of officers to the Provincial Service of the N. W. P. and Oudh.

The field operations of the year were carried on by 20 parties

(of which two were double parties) and 7 small detachments. Of these one party was employed on trigonometrical surveys; five parties and three detachments on topographical surveys; four parties on forest surveys; six on cadastral surveys; one party and one detachment on traverse surveys; three parties on scientific operations; and three detachments on geographical surveys. The aggregate area surveyed on all scales amounts to 1,25,384 square miles. This is exclusive of 5,018 square miles of traverse survey in the Central Provinces and the N.-W. P. and Oudh, to furnish a basis for field surveys under the Settlement Department.

The *trigonometrical* surveys were confined to Burma, besides completing the work of beacon-fixing along the Indus delta. *Topographical* surveys on various scales were continued in the Bombay Presidency, Beluchistan and the Himalayas. Regular topographical survey of Upper Burma was for the first time undertaken, that hitherto done being only the preliminary geographical survey. The detachments employed during the past two seasons on the survey of the Indus river in Sind completed it during the year. One detachment accompanied the Waziristan Delimitation Commission, and did an area of 3,680 square miles. That with the Pamir Commission surveyed 250 square miles and that with the Chitral Relief Force, 215 square miles. The areas topographically surveyed on various scales amount to 21,588 square miles against 16,072 of the previous year. *Forest* survey operations were continued in the Central Provinces, the Bombay and Madras Presidencies and in Lower Burma, and a small area of forest lands in the Himalayas, with a total on various scales of 4,228 square miles. The number of parties told off for *cadastral* operations were as follows:—two double parties in Bengal and one party in Assam. In the Bengal Province they were engaged in continuation of the work of previous years, in the cadastral survey and preparation of the record-of-rights in temporarily-settled tracts and in Government and private estates. The principal work was in the Mizaffirpur and Champaran districts of North Bihar; in the Darjeeling district; in the Government estate in Palamau; and the Government estates and the Tikari Ward's estate in the Gaya district. In addition, the survey and record-writing of the Chaurasi estates, district 24-Parganas, and of eight villages comprising the Tantubua estate, District Khulna, were completed. The total outturn, 6,934 square miles, however, shows a decrease of 1,346 square miles as compared with that of the previous year. The *traverse* surveys in the Central Provinces and the N. W. P. Oudh, with a view to furnish a skeleton basis for Settlement Surveys by local agency, give a total of 5,018 square miles. Two *astronomical* parties under Captain Burrard and Lenox-Conyngham were occupied with determining, by the electro-telegraphic method, the difference of longitude between Greenwich and Karachi. The work is one of considerable magnitude and is not yet concluded. The *tidal* operations were kept on. A large area was *geographically* surveyed, mainly in Birma and Sam. Some native surveyors worked independently in Persia and Arabia. Khat Bihidur Sheik Mohiuddin alone reconnoitred about 45,000 square miles of new country in Western Beluchistan and Persia; while Khat Bihidur Yusuf Sharif, with an assistant, succeeded in mapping about 19,000 square miles between Bandar Abbas and Jask. In Arabia, a reconnaissance of about 3,000 square miles was effected by Khan Bana Nur. In an Sharif who had accompanied Mr. Theodore Bent on his tour of exploration.

The geographical surveys have an immediate interest, inasmuch as they have in some cases deep and far-reaching political significance. The boundaries of the Italian Empire, where it borders on the Chinese or the Russian Empires or the Buffer States on the North-West or the East were more definitely settled. The detachment under Colonel Hildich, accompanying the Pamir Commission in June 1895, surveyed an area of 4,800 square miles, and about 40 points and peaks were fixed by triangulation, the series being successfully carried from Durok Pass to the Pamir, when a very satisfactory junction was effected with the work of the Russian party. The area in Upper Burma, to be ceded to China, under the Anglo-Chinese Convention, was surveyed by a small detachment; and the Mekong Mission enquired into the proposed limits of Buffer State on the Mekong river. The Chitral Relief Force was accompanied by a detachment under Captain Byrthell and the results comprised an area of 1,900 square miles. The aggregate areas geographically surveyed during the year on the Eastern and Western frontiers come up to 92,600 square miles.

In the face of these figures the Survey Department may be congratulated on the work done during the past official year.

REIS & RAYYET.

Saturday, September 5, 1896.

OUR SCHOOLS AND COLLEGES.

IN noticing the honour recently paid to the illustrious Arnold of Rugby, our London correspondent observed:—"What a day it would be for India if you had a native Arnold in every province, directing and stimulating the energies of your young countrymen so as to enable them to confer on their own Fatherland the priceless heritage bequeathed by Arnold to our public schools!" Arnolds are rare in every country. England is scarcely the country which can give birth to many men like the great Rugby teacher. In almost all modern countries, the relations between the teacher and the taught are mercenary. Pupils are admitted into public or private seminaries for the fees they pay. Preceptors take charge of their education for the pay they receive. This is unfavourable to the growth of those sentiments of reverence, love, and affection which Arnold inspired. Superior men do sometimes succeed in prevailing over circumstances and asserting their individuality. But this does not happen often. In India, however, the relations between preceptors and pupils, before the establishment of schools and colleges on the modern plan, were always satisfactory. The preceptor was looked upon by the pupils as their father, and the pupils were looked upon by him as his children. They were fed by the preceptor and housed by him in his own quarters. The majority of preceptors were distinguished by all the moral excellencies that adorned the great headmaster of Rugby. If example is more efficacious than precept, the students had the advantage of the best examples before them in the blameless lives of their teachers. The system of education was different. The pupils, when they left the professor, were not called upon to govern men. Most of them were averse from entering into active life. The world had no opportunities of judging the effects on their character due to the education they received. They tried, however, in their own simple ways, to serve the society of which they were members and which in its turn honoured them for their learning and character. They were distinguished by many sterling virtues. They were good neighbours, good fathers, good sons, good brothers, and good husbands.

With the abolition, however, of the Sanskrit *toles*, teachers of the Arnold type have become extinct in this country. A new race of teachers have appeared in the schools and colleges we now have. We are in the midst of a period of transition. The minds of our students are now being moulded in a manner different from what was observable in the indigenous institutions of the country. The start now, in education, is for the opposite pole. Instead of fitting the pupil for a contented life of quiet and peace along the ancient groove, the ambition of the modern system is to destroy ancient traditions and make a potter's, or a blacksmith's or a washerman's child as good as a Brahman's, a Kshatriya's, or a

Kayastha's, with the inevitable tendency of making him discontented and unhappy. The ancient system of education was not very bad, after all. It did not produce discontented men. Knowledge was cultivated for its own sake and not as a means for the acquisition of this or that sordid end. That system frequently produced men whom the whole country loved and delighted to honour. They knew very little of history and geography, but as regards *belles lettres*, and philosophy, and dialectics, and secular and religious law, and their own religious scriptures, they were thorough masters. The *toles* were supported entirely by the people. On occasions of weddings and *shrads*, and various other religious rites, benefactions to these educational institutions swelled the expenses incurred. Every man of respectability was bound to make gifts to learned men employed in teaching. It was a sort of educational cess levied not by authority and realised, in case of default, not by sharp penalties, but imposed and collected by force of custom. As regards mass education, that also was in the hands of the people. Every village had its *Gurumahasaya*. The fees were such that persons who desired to give their sons the sort of education those unpretentious elementary schools generally imparted, were not unable to find them. The *Gurus* were highly accommodating. Many boys were admitted free. The solicitude felt by the British Government for mass education in India and the step it has taken of subsidising the *Pathashalas*, have been perfectly uncalled for. The indigenous system that flourished for ages upon ages has given way. An artificial stimulant has been created. *Pathashalas* have come to be established, sometimes only a few days before the annual departmental examination, to disappear after the examination and the distribution of rewards to the *Gurus* according to their so-called success. The fact is, the Education Department has done its best to break up the indigenous system and bring about something very unreal and hollow in its place.

The higher class English schools aim at imparting an education that is scarcely solid. The great ambition with both students and their guardians now is to secure an appointment under Government. Knowledge is no longer valued for its own sake. Its equivalent in money is sought by all. The cultivation of the intellect after school days by private study is almost unknown. Readers of English novels may be found among our graduates, but nothing substantial engages their minds. Professional men are, for the most part, destitute of those very books which relate to their branches of learning. Ignorance with vanity is the common characteristic of many of our educated men. Our schools and colleges are so many shops for selling fifth-rate learning. The schoolmaster is abroad, but then he is so for trade. In Calcutta, schools have become a profitable business. Their popularity, in some cases, bears an inverse ratio to the capabilities of the teachers employed. New schools spring up into existence, competing with the old ones and impairing their efficiency. The proprietors do not endeavour to perpetuate them by the creation of any funded capital. The profits, if any, of the concerns, are appropriated by them and their heirs. It is good to see private schools multiply every year, but then none of them has a solid foundation. The law of the survival of the fittest holds good with these as well as with the Government and the Missionary institutions.

The Metropolitan Institution and the City College,

The Indian Association for the Cultivation of Science.

Lecture by Babu Rajendra Nath Chatterjee, M.A., Wednesday, the 9th, at 5-30 P.M. Subject: Barometer, its uses—Boyle's law, its application.

Lecture by Dr. D. N. Chatterjee, B.A., M.B., C.M., Thursday, the 10th Inst., at 5-30 P.M. Subjects: The Protozoa. Coelenterata.

Lecture by Dr. Manendra Lal Sircar, Friday, the 11th Inst., at 7 P.M. Subject: Change of State by Heat.

Lecture by Babu Girish Chandra Bose, M.A., F.C.S., M.R.S., &c. Saturday, the 12th Inst., at 5-30 P.M. Subject: Morphology of Plants—Flowers (continued).

Lecture by Dr. Nilantan Sirkar, M.A., M.D., Saturday, the 12th Inst., at 6-30 P.M. Subject: Histology—

due to private enterprise, have some chance of outliving others of their kind. They are located in buildings of their own. They are not, however, out of danger on account of the competition of new institutions. Canvassing for pupils is the order of the day with most of the founders of schools. Brahmanical influence has still a hold on Hindu society. Brahman canvassers very generally win, by various ways, a threat of curse being their last resort. The holy thread can still subdue the most obdurate Hindu, through his mother, or father, or other near relative. With ignorant guardians, whose number is very large in even the metropolis, such tactics are always successful. The inter-school rules framed by the Education Department have made matters worse. One of these rules is to the effect that no boy is to be admitted into a school unless and until he obtains a certificate from the school to which he belonged, stating that he has paid all his dues. It has been, further, provided that such certificate, if applied for, should be promptly granted. Delay in granting it may lead to the disaffiliation of the school as, indeed, the admission of a boy without it may lead to the same result in the case of the school admitting him. What happens, however, in many inferior private schools is this: an intelligent boy, with fair chances of passing the matriculation examination, is admitted free. His name, however, is shown on the rolls as a paying pupil. If he applies for a transfer, a large sum is demanded from him, in the form of arrears of schooling fees, which he has no chance of paying. Practically, therefore, he is unable to leave the school, and has to adhere to it however inefficient the teaching establishment may be. These inter-school rules enable unscrupulous proprietors to practise a regular extortion on boys. Delay in granting certificates is punishable, but then if the Inspectors be written to, those gentlemen very seldom attend to the matter. The consequence is a considerable waste of time and a serious interference with the progress of the boys. We know a case in which an application for transfer made in February was answered in August. The Inspector of Schools had been repeatedly written to. When at last he attended to the matter he not only punished the school which had refused to grant the certificate but also the school which had admitted the applicant out of humanity, just for preventing a waste of time. If the rules are to stand, the officers of the Education Department should be more alert than now. They should themselves be subject to penalties for not deciding matters brought to their notice as quickly as possible.

The establishment of new schools, to the detriment of the older ones, has, we understand, recently been the subject of enquiry by the Director of Public Instruction. The syndics of the university are also desirous of taking it up. The inertia of authority is very great; hence nothing tangible can be expected soon. Influential teachers of old schools take advantage of their influence on the students and set up new institutions with many boys from the old schools. Sometimes they go to such extremes as to catch boys in the streets and bring them to their institutions without the knowledge of the guardians who are generally informed of it a few days afterwards. They assure the ignorant by stories of their having secured a very superior staff of teachers, and of the old school having become thoroughly bad. Sometimes the question of religion is brought to the fore for blinding the guardians. The school is advertised as established

under the patronage of this or that holy man—a Swami or Swan who is himself in need of a puff. The immediate result is that most of the boys are led to violate the inter-school rules laid down by the Director of Public Instruction. Recently a new school has been refused affiliation to the University. For all that, it exists and carries on its illegal practices. In another case the Syndicate of the Calcutta University disaffiliated an institution for a grave irregularity. The Senate, however, when the matter was brought before it, allowed its existence with a warning against a repetition of similar malpractices. It is a fact that on account of too many bad schools in the metropolis, discipline among boys cannot be properly maintained. The proprietors of schools act more with an eye to income than to the maintenance of discipline. With a view to get a handsome profit they entertain low-paid establishments without the claims of efficiency being at all considered. They begin with respectable establishments for acquiring a reputation and then reduce them for increasing their profits. This is scarcely marked by the public. The reductions in pay generally affect the lower classes. For the higher classes an efficient staff is generally maintained. Numerous errors are taught while the minds of the boys remain very plastic. The result is that in after days considerable difficulty is experienced in unlearning those errors.

The evil days for school discipline may be said to have set in with the establishment of Mr. Surendra Nath Banerjee's Ripon College. Its easy success gave an unhealthy impetus to competition in the same line. Pundit Vidyasagar's son transferred the College department of the Metropolitan Institution to Mr. Surendra Nath, with the result that the once flourishing college began to decay. The Principal was alarmed. It has now come back to its own: the Trustees of the Vidyasagar Institute have now the control of the both the School and the College departments. The interference, for good or evil, of Mr. Banerjee has ceased, and the Professors breathe more freely.

Another dangerous practice has grown up among our school boys. It is their political activity. A national fund was attempted to be raised by stump oratory. Some of the schools closed to hear a national hero babbling on politics. The boys are taught from their early days the principles of a destructive political creed. The only good sign is that their tendency towards politics, awakened and kept up by classroom oratory, does not last beyond their school days. The evil effects of the modern system of education have become more manifest in the metropolis than in the provinces. In Calcutta, only forty per cent. of the candidates sent up for the first examination of the University pass; formerly, the percentage of successful boys averaged sixty. The country students have taken the place formerly occupied by the metropolitan. For this reason some guardians have transferred their boys to schools in the interior. There is now a rage for politics among the Calcutta boys due distinctly to lack of discipline.

The sanitary condition of most of the proprietary institutions is wretched. The Government and the Missionary schools are generally beyond reproach in this particular. The Metropolitan Institution and the City College are accommodated in buildings of their own, without sufficiently spacious compounds. A good play-ground and well-ventilated rooms are absolutely necessary for a

school. Most of the Calcutta schools, however, are conspicuous for the absence of both these. The trade on the intellects of our boys is carried on in a way that loudly calls for drastic reform. The Calcutta Municipal Consolidation Act provides against the increase of too many markets, but there is no provision in it against the creation of ill-ventilated and insanitary schools by which the health of the boys is sure to be ruined. We hope the Government of Bengal will attend to this matter. Our "patriots" have not a word to say about the multiplicity of unhealthy schools. The fact is, our "patriots" are more guided by interest than anything else. Good relations between the teachers and the taught, are, as we have already said, things of the past. We had in David Hare, perhaps, more than an Arnold, though teaching was not his profession. His sympathy with the boys was genuine. His heart yearned after them. Though an Englishman, his coffin was borne by Hindu boys without any objection, on religious grounds, from their parents or others. Offerings have been given by his Hindu admirers to his soul at the *Vishnupada* at Gya. Another David Hare may achieve wonders amongst us. Our children are now being sacrificed at the altar of Mammon. English children are not so unfortunate. They receive an education that fits them for all the duties of life. It is very true that "the world is still largely governed from Eton, Harrow, Winchester and Rugby, and the man who moulds the young Englishmen of his generation, and trains them in unshrinking courage, in lofty ideals, in love of truth and in the higher patriotism, is conferring more good on the human race than all the theologians of the Vatican and all the controversialists of the Sorbonne." Alas! the day is very distant when it will be possible for any one to use similar words with regard to the people of India. Our schools are ruled by a very inferior race of men, as the politics of the unthinking portion of our community are ruled by a very inferior race of writers.

OUR LONDON LETTER.

August 14, 1896.

The Queen's Message to her "beloved people," demands the first place in our items of Home news. On the 23rd of September our gracious Sovereign will have reigned longer than any of her predecessors. There has been a movement to have a national demonstration on that day, but the good sound common sense of our Queen and your Empress has done the proper thing. If spared to the 20th June next, she will commemorate the sixtieth anniversary of her accession, and she has determined that that shall be the day of national rejoicing. Among other advantages, such as the season of the year, Parliament in session, ministers and ambassadors in London (all which would be lost on the 23rd September), there is the crowning felicity of such an event, so long provided for in anticipation, that India and all our colonies can arrange betimes, to be worthily represented. And what a day to those who live to welcome it, will that day be! Our venerable and truly beloved monarch, surrounded by all her great dignitaries of the State, Parliamentary and Municipal, and of the churches,--- with her relatives from the Courts of St. Petersburg and Berlin--- and the representatives of Her Indian and Colonial Empires,--- what a spectacle for the pen of Macaulay, or the brush of the lamented Leighton and Millais!

Parliament will be prorogued to-night. The Irish Land Bill was saved in the House of Lords by six votes. Had it been the other way, it must have resulted in a collision between the two Houses, which has been happily averted. With the exception of Sir W. Harcourt, all are agreed that Mr. Balfour's new rules for Supply have worked most admirably and reflect great credit on his leadership. It is this that makes the Leader of the Opposition so angry. Of course, during the recess, the Opposition is entitled to make what capital it can out of the unfortunate fiasco of the Education Bill. But the rank and file of the Opposition, throughout the country, are more generous than the leaders, always excepting Sir Henry Fowler. Mr. John Morley cannot allow any good legislation to be done for Ireland by a Unionist Government without a snarl and a growl. While Sir W. Harcourt's treatment

of Mr. Balfour and Mr. Chamberlain has been the outcome of a sour and discontented temper. After the setting down he got from Mr. Chamberlain on Tuesday evening, he will not again venture to draw swords with him, if he has any regard for his Parliamentary future. The next five months will give a much needed rest to the Rollits and Bowles on the one side and the Caldwells and Dalziells on the other. If these four could only be eliminated from the House, how smoothly business would roll on! Sir A. Rollit might find refuge in the House of Lords, Captain Bowles in some snug naval sinecure on shore, while something, not necessarily of any great importance, might be found in Scotland for the arch Gladstonian obstructors.

Turkey and Crete. There is a strange rumour in circulation (requiring confirmation) that Russia and Great Britain, with the approval of France, have come to terms over the more pressing Turkish questions of Armenia and Crete, Russia with her army to be responsible for the former, while Great Britain with her incomparable navy, makes herself answerable for the latter. Meanwhile, Crete is getting quite out of hand, and, to add to Turkey's troubles, revolutionary risings are spreading to Macedonia. The last move in Crete is to demand absorption by Greece. But will Greece care to have it? Those best informed say, as regards wild, savage cruelty, there is little to choose between the Christian population and the Mahomedan.

The Czar's Journey to Breslau, Vienna, and eventually Paris, seems now to be quite arranged for. He pays a domestic visit to Copenhagen and then crosses to Aberdeen, whence he goes on to Balmoral to pay a family visit to the Queen. The select list of royalties who are to meet him at our Queen's Highland home, is now published. But more interest will be felt in the addition of the name of Lord Salisbury.

The Czar is to be accompanied by the Chancellor of the Empire, Prince Lobanoff, who, with Lord Salisbury in concord with him, rules the destinies of Europe.

Li Chung Tong is making the most of his stay here, and is evidently gratified with his reception, and with all he has seen. The reports of his conversations at the Bank of England with the governor, and with the leading officials at Woolwich, indicate the astute old statesman of great intellectual power. Unfortunately, having to leave a week earlier than was originally contemplated, owing to his having to catch the China steamer at Vancouver, he is deprived of the opportunity of visiting Manchester, Liverpool, and Sheffield. To-morrow he pays a brief visit to Mr. Gladstone at Hawarden, on his way to Barrow-in-Furness, and on Monday proceeds to Glasgow, visits the Forth Bridge on his way to Elswick, where he will witness the gigantic works of Sir W. Armstrong & Co.

Lord Walsley has made a quasi apology for his ill-natured remarks on the native army of India, and seeing that over 4,000 of his British forces are unfit for military duty, he would have exercised a wiser discretion had he maintained a studious silence. Lord George Hamilton (in the course of his Budget speech last night) took occasion in a passing remark to administer a gentle rebuke to the Commander-in-Chief, by calling in the expert evidence of Sir Henry Brackenbury who had borne testimony to the efficiency of the Indian army, and who Lord George Hamilton declared to be "of all living authorities the best acquainted with the conditions of foreign service."

Opium. I see a report that China is now cultivating this invaluable article of commerce and is now an exporter on a small scale. Our consul says it is a mere matter of time as to when China shall be independent of India for its supplies, not a pleasant matter for some of your future Chancellors of the Exchequer, who will see the most important item on the credit side of the Budget swept away, and the dreams of the anti-opium fanatics realised.

Rhea fibre. In the article on "Indian Affairs" in the "Times" of the 10th instant, is a most important as well as instructive reference on this "source of unused wealth." The Government of India as far back as 1869 endeavoured to attract experts, by the offer of a prize of £5,000 "for the invention of a machine or process which should separate the delicate fibre from the bark." Various machines were invented, but then all failed "in regard to the essential element of cheapness." Dr. Royle, "industrial adviser to the India Office," declared that the rhea fibres "are exceeded by none in fineness, excel all others in strength, and may be fitly compared to the trunk of an elephant which can pick up a needle or root up a tree." He insisted if the difficulty of separating the fibre could be overcome, "the benefits to India and the world will be incalculable." In spite, however, of the genius of France and Germany, no machine was discovered at once "cheap and serviceable." The great distinction of solving the problem belongs apparently to a Eurasian of Portuguese descent, Gomes by name. So great are the possibilities in the future, that Dr. Royle does not hesitate to say "facts seem to point to the conclusion that we are on the dawn of an industry which even promises to rival jute cultivation." The fibres take the "most beautiful dyes and can be worked into every variety of fabric from gorgeous velvets to cheap drills and delicate laces."

All apparently now depends on the cultivation of the plant, and it is here, I cannot help thinking, the initial difficulty will be met with. But doubtless there is enough British energy in India, to face and conquer the difficulties.

The writer in the "Times" then goes on to give praise to "Professor Kanai Lal Dey, of the Calcutta University" for his "exploitation" of the indigenous drugs of India. His work "brings to completion the researches of Ainslie in 1826, of O'Shaughnessy in 1844, and of Waring in 1868." Mr. Dey has brought to his work "a wealth of practical knowledge which could only have been accumulated by a chemist who has passed his life in the country, and who is intimately conversant with the languages, the customs, and the requirements of the people." Praise of no mean kind is also given to Mr. T. N. Mukharji, F.L.S., lately of the Imperial Museum, Calcutta. The article in the "Times" concludes: "At one time it seemed as if our Indian Universities were only to produce lawyers and literary men. They are now producing men of research, whose work takes a distinguished position in the scientific journals and libraries of Europe. They are also disclosing, in no small measure, that rarer quality by which men of science bring their labours to bear on the wants and the welfare of their own country. Rapid as has been the growth of Indian vernacular literature under British rule, the progress of Indian science and technical knowledge, represented by investigators like Professor K. L. Dey and Mr. T. N. Mukharji, is perhaps even more striking."

Your new Chief Justice has been entertained at a complimentary dinner by prominent members of his circuit. The only drawback I have heard to his appointment is, that for many years as a master in lunacy, he has been withdrawn from daily contact with the work of the law courts, in chancery, and at the Queen's Bench. But he is said to be a man of such plodding industry and indefatigable energy, that he will no doubt quickly adapt himself to his new sphere.

WATER ANALYSIS BY PHARMACISTS.

By Henry W. Schimpf, Ph. D.,

Professor of Inorganic Chemistry in the Brooklyn College of Pharmacy.

Druggists frequently have samples of water submitted to them for analysis and for opinions as to their potability.

To put a sample of water through a complete sanitary analysis involves considerable time and application and comparatively few pharmacists have either the time or the inclination to enter upon such a task.

A complete

SANITARY EXAMINATION OF WATER

should include a measurement of the following:

1. Colour and odour. 2. Total Solids. 3. Loss on Ignition. 4. Ammonia. 5. Albuminoid Ammonia. 6. Nitrates and Nitrites. 7. Chlorine. 8. Oxygen consuming power. 9. Phosphates. 10. Hardness.

It is necessary in some cases to determine the amount of dissolved gases, as well as to make a microscopic examination of the sample.

COLOUR AND ODOUR.

Water which is distinctly turbid and possesses an unpleasant taste and odour will, of course, be rejected on these grounds alone without further analysis.

The odour and taste of water, like its colour, are not however to be taken as positive indications of its quality. The practised nose can occasionally detect evidences of pollution which may be afterwards verified by a detailed examination.

COLOUR ESTIMATION.

The colour value of a suspected water may be estimated by looking down through a column of water in a colourless glass tube about two feet long standing upon a piece of white paper, and comparing this with an equal volume of distilled water contained in a similar tube.

THE ODOUR

may be satisfactorily determined by heating three or four ounces of water to 100°F. in a closed flask and shaking. The distinctive odour may be at once recognized on withdrawing the stopper.

ESTIMATION OF TOTAL SOLIDS.

The total solids are determined by evaporating on a water bath 100 c. c. of the water in a weighed platinum dish. The dish and the contents are then placed in an air oven and heated 212°F., or until the residue ceases to lose weight. Finally cool under a desiccator and weigh. The increase in weight of the dish represents approximately the total solids contained in the water taken.

But the figure thus obtained for total solids does not truly represent the organic and mineral matters, since much of the former as well as some of the latter is volatilized during the evaporation. Thus the figure is often lower than the actual weight; while on the other hand, certain salts retain with great tenacity their water of crystallization, and in this manner bring about an error in the opposite direction.

It will be seen then that the determination of total solids is only an approximation, and little real value can be attached to it. The organic and the inorganic matter present may either of them be injurious or not. An unusual amount of total solid residue may indicate pollution, though no absolute maximum or minimum of quantity can be assigned as a limit of safety. An arbitrary maximum limit of 60 parts per 1,00,000 has, however, been fixed by sanitary authorities.

LOSS ON IGNITION.

Though the mineral constituents must be taken into account to some extent in judging of a water, the organic matter is of far greater importance. The organic matters probably constitute the really injurious constituents, and the determination of their quantity and character is of chief importance. It was naturally supposed that by igniting the residue of total solids the organic matter would be burned out, and the loss of weight would then represent the amount originally present; but as water usually contains some earthy carbonates, which upon ignition are deprived of carbonic acid gas, and other salts which are decomposed or wholly volatilized, the loss on ignition does not truly represent the organic content. The loss on ignition should never reach 50 per cent. of the total solids.

OXYGEN CONSUMING POWER.

Potassium permanganate, as is well-known, readily yields its oxygen in presence of a strong mineral acid, oxidizing many salts and organic matter. This property led to the idea that this salt might be used for burning up (chemically speaking) the organic matter in water, and that the quantity of permanganate used could be relied upon as a means of measuring the organic matter in water. A high oxygen consuming power usually indicates the presence of organic matter, and the process is therefore of considerable importance.

THE DETECTION OF ORGANIC MATTER.

The process is conducted as follows: Five one pint bottles, perfectly clean and provided with stoppers, are placed side by side. Into each is placed 250 c. c. of the water and 10 c. c. of diluted sulphuric acid. Into the first bottle is introduced 2 c. c. of potassium permanganate solution, into the others 6, 8 and 10 c. c. respectively. The bottles are examined hourly and the discolouration noted. If all are discoloured at or before the end of the fourth hour, an additional 10 c. c. of the permanganate solution should be added to each bottle. With ordinary waters the permanganate in the first, and probably that in the second will be decolorized; and the greater the amount of organic matter present, the more rapid will be the decolorization. This method has the advantage over some others in that the rate of oxidation can be readily observed—something which is considered by some analysts to be of more importance than the actual amount of oxygen consumed. It must, however, be kept in mind that nitrites, ferrous salts, sulphides, etc., take up oxygen in the same way as does organic matter. The permanganate solution used in this process is of such strength that each cubic centimeter represents 0.0001 gm. of oxygen.

ESTIMATION OF CHLORINE.

This may be estimated by the use of decinormal or centinormal silver nitrate solution, but analysts use a solution of such strength that each cubic centimeter will represent 0.0001 gm. of chlorine.

THE PROCESS.

In a beaker put 100 c. c. of the water to be examined, followed by a few drops of neutral potassium chromate, which is the indicator, and add the silver nitrate solution from a burette until the precipitate assumes a reddish tint, indicating that all the chlorine has been thrown down. Each cubic centimeter of the silver nitrate solution used to produce the colour reaction represents 0.001 gm. of chlorine. Example: If 4 c. c. of silver nitrate solution be required, the 100 c. c. of water contains 0.004 gm. of chlorine.

SIGNIFICANCE OF CHLORIDES IN WATER.

Food contains considerable amounts of chlorides, and still more is added by way of condiment in the shape of salt. The chlorine thus taken up in the system is discharged in the excreta and is found afterward as a constituent of sewage; hence the presence of large quantities of chlorine in water is taken as an indication of pollution by sewage. The chlorine itself is not a dangerous constituent of water, and is in fact always present, but if it is found in large quantities (over 5 parts in 1,00,000) it is looked upon as an unfavourable indication. Nevertheless too much dependence must not be placed on the chlorine content as a means of estimating the purity of a water, since a dangerous contamination of organic matter may exist in the water without its presence being indicated by chlorine.

The maximum amount of chlorine per 1,00,000 given by the Rivers Pollution Commission is 21.5, the minimum 6.5 parts, though over 5 parts in 1,00,000 is taken as an unfavourable sign. But various conditions affecting the proportion of chlorine in potable waters must be taken into account, such as the nature of the strata through which the water passes, proximity to the sea, etc. A well near the sea may contain much chlorine and still be free from pollution.

AMMONIA AND ALBUMINOID AMMONIA.

When organic matter decomposes spontaneously, it first forms ammonia, then nitrite and finally nitrates. Thus the presence of ammonia in water is generally conceded to indicate decomposing organic matter, and hence its determination is an important detail of the sanitary examination of water.

PROCESS FOR THE DETECTION OF AMMONIA.

Introduce into a clean glass retort 500 c. c. of the water to be tested, together with about 5 c. c. of a twenty per cent. sodium carbonate solution. The condenser is now attached and the distillation started. When 50 c. c. of distillate passes over, it is transferred to one of the colour comparison cylinders, and 2 c. c. of Nessler's reagent is added; a yellow colour is produced, which develops more fully on standing, the intensity of colouring being proportionate to the amount of ammonia present.

The colour produced is exactly matched by introducing into another cylinder 50 c. c. of pure water and an accurately measured quantity of standard ammonium chloride solution, and 2 c. c. of Nessler's reagent as before. According as the colour so produced is deeper or lighter than that obtained from the water under examination, other solutions are prepared for comparison containing smaller or larger proportions of ammonium chloride, until the colour is exactly matched.

The distillation is continued and successive portions of 50 c. c. of distillate are taken and tested until the liquid no longer reacts with Nessler's solution. The sum of the figures obtained from the several distillates gives the total ammonia in the 500 c. c. of water taken.

THE ALBUMINOID AMMONIA

is estimated by adding to the water left in the retort 50 c. c. of an alkaline permanganate solution, and resuming the distillation, the ammonia in each 50 c. c. of distillate being estimated as before.

NITRATES AND NITRITES.

Five hundred cubic centimeters of the water is acidulated with oxalic acid, and equal parts of this are poured into each of two wide-mouthed bottles. Into one of these bottles is put a copper-zinc couple, made by taking a piece of sheet zinc and rolling it into a loose coil and immersing it into a dilute solution of copper sulphate until coated with a black, spongy coating of copper.

Cork both bottles, and at the end of twenty-four hours remove 50 c. c. from each, and treat with Nessler's solution, as directed under ammonia.

The nitrates and nitrites are completely reduced to ammonia by the copper-zinc couple, and the difference between the two figures obtained gives the ammonia due to reduction of the nitrates and nitrites.

Each molecular weight of ammonia so obtained stands for one molecule of nitrous and nitric acid; hence the result includes both of these, if present, so that the nitrites must be separately estimated and deducted.

To estimate the nitrites it is advantageous to use an acid solution of metaphenyldramin. This gives, with nitrous acid, a yellowish brown colour, and comparison can be made with a solution containing a known quantity of sodium nitrite, in exactly the same way as ammonia is estimated by Nessler's solution.

PHOSPHATES.

Sewage contains large amounts of phosphates, but water usually contains alkaline or earthy carbonates which precipitate the phosphates. Therefore, drinking water contains but very small quantities of phosphates, if any, and its absence does not indicate purity. The estimation is usually approximate, and is made by means of ammonia molybdate.

HARD WATER.

The hardness of water—that is, its soap destroying power—is due principally to the presence of calcium salts. Hard water is very wasteful of soap and bad for boilers. It is not necessarily unhealthy for drinking, though it is said to often cause the formation of calculi in the human system. The principal importance attached to hard water in a sanitary analysis is its bearing upon the question as to whether or not the water is polluted with sewage. Two kinds of hardness are recognized.

Temporary hardness is due to the presence of calcium or magnesium carbonates. This form of hardness is got rid of by boiling the sample, which reduces the bicarbonates to insoluble carbonates which are precipitated, and in this way removes the hardness.

Permanent hardness is due to salts which are not removable by boiling such as the sulphates.

ESTIMATING THE HARDNESS.

The method generally used to estimate the hardness of water is that known as Clark's.

DEAFNESS COMPLETELY CURED! Any person suffering from Deafness, Noise in the Head, &c., may learn of a new, simple treatment, which is proving very successful in completely curing cases of all kinds. Full particulars, including many unsolicited testimonials and newspaper press notices, will be sent post free on application. The system is, without doubt, the most successful ever brought before the public. Address, Aural Specialist, Albany Buildings, 39, Victoria Street, Westminster, London, S. W.

A solution of pure Castile soap in diluted alcohol is prepared of such strength that each cubic centimeter of the soap solution represents about 0.001 gm. of calcium carbonate. This is a convenient strength, because, if 100 c. c. of water be operated on, each cubic centimeter of soap solution will represent one part CaCO_3 in 1,000,000 parts of water, which is spoken of as 1 degree. Measure 100 c. c. of the water into a well-stoppered half pint bottle, and add the soap solution 1 c. c. at a time from a burette, shaking the bottle after each addition of soap solution, until a soft lather is obtained, which, if the bottle is at rest, remains continuous over the whole surface for about five minutes.

If more than 16 c. c. of soap solution is required, a smaller quantity of water should be taken—25 to 50 c. c.—and made up to 100 c. c. with distilled water, and the quantity of soap solution then used multiplied by 4 or 2.

English chemists usually operate upon 70 c. c. of soap water instead of 100 c. c. Each cubic centimeter of soap solution then represents 1 grain per imperial gallon (70,000 grains) or one degree of hardness.

Permanent hardness, or hardness after boiling, is determined by boiling a measured quantity of water briskly for half an hour, adding distilled water from time to time to make up the loss by evaporation. Then allow to cool, make up to its original quantity with recently-boiled distilled water, filter and test in the manner described above. By deducting the permanent hardness from total hardness we obtain the temporary hardness.

—American Druggist.

WE MUST HAVE THE TOOLS.

ROBINSON CRUSOE, you remember, made a big boat or canoe out of the trunk of a tree. It was a laborious and tedious job. And that wasn't the worst of it. When he got the boat done he couldn't launch it. It was too heavy for one man to handle. If he had only had an arrangement like the capstan of a ship he might have managed. He *understood* how to do it, but lacked the tools. How often we find ourselves at a dead stand for that same reason. Let me give you a fresh illustration, tied up for the moment in the following letter, which must first be read before we can rightly come at the point.

"In the spring of 1834," says our correspondent, "I got into a low weak way, not being able to imagine what had happened to me. My strength kept ebbing away till I had scarcely the desire or ability to do anything. I felt as tired as if I had just arrived home from a long, hard journey, yet no tax more than usual of any kind had been laid upon me. My mind, too, was weary; so that I turned from things that obliged me to think, plan, or consider.

"Side by side, so to speak, with all this was the failure of my appetite. Of course I continued to eat, or make an effort to eat, but food no longer tempted me as it does a person in health. I picked and minced over my meals, and the little I took neither tasted good nor did me any good after I had eaten it. Instead of warming, comforting and stimulating me, as it used to do, it gave me distress at the stomach, pain at the chest, and a singular feeling of tightness around the waist, as though a belt were buckled too snug around me.

"After a time the condition of my stomach seemed to grow worse. There was that sense of gnawing, so often mentioned by others, and occasionally a feeling of faintness and sinking, almost like the ground giving way under one's feet."

[REMARK: An eminent London physician, in one of his books, describes this sinking feeling as one of the most appalling and frightful that it is possible to experience. It is not the body but the *mind* that suffers. I, the present writer, have had two attacks of it, and pray to have no more. It is like unto the overshadowing of the Death Angel's wing, *with the mind fully conscious of the situation*. The cause is uric acid poison in the blood, one of the products of prolonged indigestion.]

"When this sinking feeling came on," continues the letter, "it weighed me down like a nightmare. Finally I got to be so weak I could only walk slowly and feebly. *The doctor who prescribed for me said my complaint was dyspepsia*, but his medicine had no perceptible effect.

"I continued like this for eight years; not always the same, but now better and then worse. Yet in all that long time there was not a day when I could say I was well. No medicine or treatment seemed right for me, and I almost began to think I never should recover my former health.

"In March, 1892, Mother Seigel's Syrup was recommended to me as having done wonders in cases like mine, even when they were of long standing and everything else had failed. No harm to try it, we thought, and got a bottle from Mr. Grime, the chemist, in Bolton Road; and after taking it I felt great relief. My appetite quickly improved, and I could eat without pain. When I had taken two or three bottles more the bad symptoms had all gone, and I was as well as ever. My husband also took the medicine with the same good results. You may publish my letter and refer inquirers to me. (Signed) (Mrs.) Elizabeth Wilson, 5, Northcote Street, Bolton Road, Daiwen, March 1st, 1895."

The lesson in this interesting narrative is too plain for us to miss it. Our old friend Crusoe was not able to launch his boat for the want of machinery. Similarly the doctor who attended Mrs. Wilson was not able to cure her because he did not possess the right remedy. His opinion as to her complaint was entirely correct. She was suffering from chronic dyspepsia, precisely as he told her. But alas! it is one thing to know what ought to be done and quite another to have the knowledge and means to do it.

Between these two things (over this wide gap) stands *Mother Seigel's Syrup*, just as between the two sides of the Thames stand London Bridge.

Sir George Chesney Memorial Committee.

CHAIRMAN :

General Sir Henry W. Norman.

MEMBERS :

The Marquess of Lansdowne, Field Marshal Lord Roberts, Mr. George Allen, Colonel Sir J. Ardagh, Sir Stuart Bayley, Mr. William Blackwood, Sir Edward Braddon, Rev. A. G. Butler, Colonel Sir G. S. Clarke, General Sir E. Colven, Sir Auckland Colvin, Sir Julian Danvers, General C. H. Dickens, Sir Mortimer Durand, General Sir W. Stirling Hamilton, Captain Hext, R. N., Mr. A. P. Howell, Sir W. W. Hunter, Lieut-Genl. McLeod Innes, General Sir Allen Johnson, Sir H. S. King, M. P., Mr. A. Lawrence, General Sir R. Low, Sir Alfred Lyall, General Sir O. Newmarch, Sir Andrew Scoble, Field Marshal Sir Lintorn Simmons, Field Marshal Sir Donald Stewart, General R. Strachey, General Sir A. Taylor, Mr. Meredith Townsend, Mr. W. C. Unwin, General Sir George White and General Sir E. Williams.

Memorial

TO THE LATE

SIR GEORGE CHESNEY, K.C.B., R.E., M.P.

A Meeting was held, on the 24th April, at the Royal United Service Institution, of some of the friends of the late Sir George Chesney, to consider the question of the commemoration of his distinguished services as Soldier, Administrator, Statesman, and Author. General Sir Henry Norman presided, and was supported by Field Marshals Sir Lintorn Simmons and Sir Donald Stewart, and other friends of Sir George Chesney. To carry out the object of the Meeting, a General Committee was formed, which included the gentlemen then present, and in addition, the Marquess of Lansdowne, Field Marshal Lord Roberts, General Sir George White, Sir Andrew Scoble, Sir Alfred Lyall, Sir H. S. King, Sir W. W. Hunter, Mr. Meredith Townsend, General Richard Strachey, Mr. William Blackwood, and others.

The form the Memorial should take was left for the future consideration of the Committee, as it would depend on the amount subscribed, but the suggestions tended towards a bust of Sir George for the India Office, and a medal for valuable contributions to Military Literature. It was resolved to limit each subscription to a maximum of three guineas.

Subscriptions will be received by Lieutenant-General McLeod Innes, 9, Lexham Gardens, Cromwell Road, London, W.

COMMITTEE FOR INDIA :

His Excy. General Sir George White, V. C., G. C. I. E., K. C. B., the Hon'ble Major-General Sir E. Colven, K. C. I. E., Lieutenant-General Sir W. S. A. Lockhart, K. C. B., K. C. S. I., His Excy. Lieutenant-General Sir C. Mansfield Clarke, K. C. B., Major-General J. Duncan, Major-General G. E. L. S. Sanford, C. B., C. S. I., Major-General G. de C. Morton, C. B., Major-General A. R. Badcock, C. B., C. S. I., Brigadier-General W. G. Nicholson, C. B., Captain J. Hext, C. I. E., R. N., Colonel W. S. S. Bisset, C. I. E., R. E., Colonel T. Deane.

Honorary Secretary :
Colonel T. Deane,
Simla.

Subscriptions will be received, in India, by Messrs. King, King & Co., Bombay ; Messrs. King, Hamilton & Co., Calcutta ; and by the Alliance Bank, Simla, and its branches at Calcutta, Cawnpore, Agra, Ajmere, Darjeeling, Lahore, Murree, Mussoorie, Rawal Pindi and Umballa. Subscriptions are limited to a maximum of Rs. 32 in India.

By order of the Committee,
T. Deane, Col.,
Hony. Secy.

POSTSCRIPT.

After paying the expenses of the publication, the surplus will be placed wholly at the disposal of the family of the deceased man of letters.

Orders to be made to the Business Manager, "An Indian Journalist," at the Bee Press, 1, Uckoor Dutt's Lane, Wellington Street, Calcutta.

OPINION ON THE BOOK.

It is a most interesting record of the life of a remarkable man.—Mr. H. Bunting Smith, Private Secretary to the Viceroy, 5th October 1895.

Dr. Mookerjee was a famous letter-writer, and there is a breezy freshness and originality about his correspondence which make it very interesting reading.—Sir Alfred W. Corft, K.C.I.E., Director of Public Instruction, Bengal, 26th September, 1895.

It is not that amid the pressure of harassing official duties an English Civilian can find either time or opportunity to pay so graceful a tribute to the memory of a native personality as F. H. Skrine has done in his biography of the late Dr. Sambhu Chunder Mookerjee, the well-known Bengal journalist (Calcutta: Thacker, Spink and Co.); nor are there many who are more worthy of being thus honoured than the late Editor of *Reis and Rayyet*.

We may at any rate cordially agree with Mr. Skrine that the story of Mookerjee's life, with all its lights and shadows, is pregnant with lessons for those who desire to know the real India.

No weekly paper, Mr. Skrine tells us, not even the *Hindoo Patriot*, in its primeval days under Kristodas Pal, enjoyed a degree of influence in any way approaching that which was soon attained by *Reis and Rayyet*.

A man of large heart and great qualities, his death from pneumonia in the early spring in the last year was a distinct and heavy loss to Indian journalism, and it was an admirable idea on Mr. Skrine's part to put his life and letters upon record.—*The Times of India*, (Bombay) September 30, 1895.

It is rarely that the life of an Indian journalist becomes worthy of publication; it is more rarely still that such a life comes to be written by an Anglo-Indian and a member of the Indian Civil Service. But, it has come to pass that in the land of the Bengali Bahus, the life of at least one man among Indian journalists has been considered worthy of being written by an Englishman.—*The Madras Standard*, (Madras) September 30, 1895.

The late Editor of *Reis and Rayyet* was a profound student and an accomplished writer, who has left his mark on Indian journalism. In that he has found a Civilian like Mr. Skrine to record the story of his life he is more fortunate than the great Kristodas Pal himself.—*The Tribune*, (Lahore) October 2, 1895.

The career of "An Indian Journalist" as described by F. H. Skrine of the Indian Civil Service is exceedingly interesting.

Mookerjee's letters are marvels of pure diction which is heightened by his nervous style.

The life has been told by Mr. Skrine in a very pleasant manner and which should make it popular not only with Bengalis but with all those who are able to appreciate merit unmarred by ostentation and earnestness unspoiled by harshness.—*The Muhammadan*, (Madras) Oct. 5, 1895.

The work leaves nothing to be desired either in the way of completeness, impartiality, or lifelike portrayal of character.

Mr. Skrine deals with his interesting subject with the unfailing instinct of the biographer. Every side of Dr. Mookerjee's complex character is treated with sympathy tempered by discrimination.

Mr. Skrine's narrative certainly impresses one with the individuality of a remarkable man.

Mookerjee's own letters show that he had not only acquired a command of clear and flexible English but that he had also assimilated that sturdy independence of thought and character which is supposed to be a peculiar possession of citizens of Great Britain. His reading and the stores of his general information appear to have been, considering his opportunities, little less than marvellous.

One of the first to express his condolence with the family of the deceased writer was the present Viceroy, Lord Elgin. Mookerjee appears to have won the affection not only of the dignitaries with whom he came in contact, but also of those in low estate.

The impression left upon the mind upon laying down the book is that of a good and able man whose career has been graphically portrayed.—*The Englishman*, (Calcutta) October 15, 1895.

"IMPROVED UNDAUNTED"

WATCH. Rs. 7.

Guaranteed three Years.

Strong, accurate, pretty, small, open-faced, nickel silver, keyless, short winding, potent, "NEW STYLE IMPROVED UNDAUNTED" watch, with hand setting mechanism, secondhand, for Doctors, ornamental bold dial, for Rs. 7 V. P. P. with an extra glass, spring, pretty box and full three years' guarantee. Warranted to stand the roughest use. Runs more than 28 hours with one winding. Will last a life time. Easily repairable. Others sell at double our rates. One watch free for the purchase of 8 at a time. Mr. Jno. Dickson of Hospital Railway, from Ceylon says:—It keeps splendid time and never stopped during its sustained hard knocks and jerks. x Dr. H. Moore of Royal Artillery from Pondicherry says:—I sold it for Rs. 16. x Pte. W. Hopkins of Sussex Regt. from Donlin says:—I have sold it for Rs. 20. x Mr. F. B. Scott of Patna Opium Department says:—The watch you sent me some seven years ago is still keeping very good time.

Jewelled Ring Rs. 1-8-0. Real

SPECIFICS

for all ordinary diseases, like Fever, Cough, Asthma, Phthisis, Diabetes, &c., including diseases brought on by irregularities of kinds Catalogues, containing full accounts of diseases and remedies, are transmitted on application. Prescriptions, with or without medicines, sent to every part of India and Ceylon, Cape Colony, and the British Isles, on receipt (by post) of full accounts of diseases. Thousands of unsolicited Testimonials from every quarter.

CATARRH.

Hay Fever, Catarrhal Deafness.

A NEW HOME TREATMENT.

Sufferers are not generally aware that these diseases are contagious, or that they are due to the presence of living parasites in the lining membrane of the nose and eustachian tubes. Microscopic research, however, has proved this to be a fact, and the result is that a simple remedy has been formulated whereby these distressing diseases are rapidly and permanently cured by a few simple applications made at home by the patient once in two weeks. A pamphlet explaining this new treatment is sent on receipt of 2½d stamp by A. HUTTON DIXON, 43 & 45 East Bloor St. TORONTO, Canada.

CALCUTTA, SATURDAY, SEPTEMBER 12, 1896.

WHOLE NO. 742.

ON LENDING A PUNCH BOWL.

BY THE LATE DR. OLIVER WENDELL HOLMES.

This ancient silver bowl of mine—it tells of good old times,
Of joyous days and jolly nights, and merry Christmas chimes :
They were a free and jovial race, but honest, brave, and true,
That dipped their ladle in the punch when the old bowl was new.

A Spanish galleon brought the bar—so runs the ancient tale—
'T was hammered by an Antwerp smith, whose arm was like a flail ;
And now and then between the strokes, for fear his strength should fail,
He wiped his brow, and quaffed a cup of good old Flemish ale.

'T was purchased by an English squire to please his loving dame,
Who saw the cherubs, and conceived a longing for the same ;
And oft as on the ancient stock another twig was found,
'T was filled with caudle spiced and hot, and handed smoking round.

But, changing hands, it reached at length a Puritan divine,
Who used to follow Timothy, and take a little wine,
But hated punch and prelacy ; and so it was, perhaps,
He went to Leyden, where he found conventicles and schnaps.

And then, of course, you know what's next—it left the Dutchman's
shore

With those that in the Mayflower came—a hundred souls and more—
Along with all the furniture, to fill their new abodes—
To judge by what is still on hand, at least a hundred loads.

I was on a dreary winter's eve, the night was closing dim,
When old Miles Standish took the bowl, and filled it to the brim ;
The little captain stood and stirred the posset with his sword,
And all his sturdy men at arms were ranged about the board.

He poured the fiery Hollands in—the man that never feared—
He took a long and solemn draught, and wiped his yellow beard ;
And one by one the musketeers, the men that fought and prayed,
All drank as 't were their mother's milk, and not a man afraid !

That night, affrighted from his nest, the screaming eagle flew,
He heard the Pequot's ringing whoop, the soldier's wild halloo ;
And there the sachem learned the rule he taught to kith and kin,
"Run from the white man when you find he smells of Hollands gin !"

A hundred years, and fifty more had spread their leaves and snows,
A thousand rubs had flattened down each little cherub's nose ;
When once again the bowl was filled, but not in mirth or joy,
I was mingled by a mother's hand to cheer her parting boy.

"Drink, John," she said, "'t will do you good—poor child, you 'd never
bear

This working in the dismal trench, out in the midnight air,
And if—God bless me—you were hurt, 't would keep away the chill ;"
So John *did* drink—and well he wrought that night at Bunker's Hill !

I tell you, there was generous warmth in good old English cheer ;
I tell you, 't was a pleasant thought to bring its symbol here ;
'T is but the fool that loves excess—hast thou a drunken soul,
Thy baue is in thy shallow skull, not in my silver bowl !

I love the memory of the past—its pressed yet fragrant flowers—
The moss that clothes its broken walls—the ivy on its towers—
Nay, this poor bauble it bequeathed—my eyes grow moist and dim,
To think of all the vanished joys that danced around its brim.

Then fill a fair and honest cup, and bear it straight to me ;
The goblet hallows all it holds, whate'er the liquid be ;
And may the cherubs on its face protect me from the sin,
That dooms one to those dreadful words—"My dear, where *have* you
been ?"

WEEKLYANA.

TAKING time by the forelock, and waylaid into forgetfulness of the future by the successful operations of the present, the Government of India have issued another notification for conversion of certain 3½ per cent. loans into the current 3. We will not wonder, if they found a way, in spite of the assurance of a fixed currency, to reduce the interest on all loans to 3. without waiting for the stipulated period. A *Gazette of India* Extraordinary dated Simla, Friday, September 4, 1895, publishes the Notification which is numbered 3850, and dated the date of the *Gazette*. We reproduce it in its entirety :—

"[In the following Notification 'Notes' means 'Promissory Notes of the Government of India' and includes 'Stock certificates issued in lieu thereof.']"

1. Notice is hereby given that all the Notes of the following three and a-half per cent. loans, namely,—

The three and a-half per cent. loan of 1853-54,
The three and a-half per cent. loan of 1893-94,
will be discharged at the General Treasury of Fort William (Public Debt Office, Bank of Bengal, Calcutta) on the 30th January, 1897, on which date the interest on such Notes will cease.

2. Proprietors of Notes hereby advertised for discharge have the option, which must be exercised before noon of the 2nd October, 1896, of tendering their Notes for transfer to the three per cent. loan of 1896-97 on the following terms :

- (1) The new Note will be of the same amount as the old Note.
- (2) The new Note will bear interest from the 31st December 1896.
- (3) Interest on Notes tendered for conversion will be paid at once as follows :

Loan of 1853-54.

For four months from the 31st August to the 30th December, 1896, namely, Re. 1-2-8 per cent.

Loan of 1893-94.

For six months from the 30th June to the 30th December 1896, namely, Re. 1-12-0 per cent.

3. Notes may be tendered for transfer at the Public Debt Office, Bank of Bengal, Calcutta, or at any other Bank (including the Bank of England) or Treasury to which they are for the time being enfaced for payment of interest. Notes so tendered must bear the following endorsement duly signed :

"Received the amount of this Note by transfer to the 3 per cent. loan of 1896-97 under Notification No. 3850 of the 4th September 1896."

4. If by reason of the duly certified absence from India of the proprietor or any of the proprietors of a Note included in the terms of this Notification, a legal signature to the endorsement mentioned in clause 3 cannot be given by noon of the 2nd October 1896, then in such case the tender will be accepted if the Note be left before that time in the

Subscribers in the country are requested to remit by postal money orders, if possible, as the safest and most convenient medium, particularly as it ensures acknowledgment through the Department. No other receipt will be given, any other being unnecessary and likely to cause confusion.

custody of the Public Debt Office, Bank, or Treasury, as the case may be, and the tender be duly signed on or before the 24th October 1896. This clause does not apply if the proprietor has an attorney in India empowered to sell.

5. In addition to the above payment of interest, a further payment of two annas per Rs. 100 will be made as brokerage or commission to the receipt of the person, whether proprietor or agent, who tenders the Note for transfer.

6. The Secretary of State will issue a Notification in London, stating the terms on which Notes hereby advertised for discharge will be received for transfer by the Bank of England.

J. F. FINLAY,
Secretary to the Government of India."

How much lower do the Government intend going?

••

It is notified that His Excellency the Viceroy and Governor-General will leave Simla on Monday, the 2nd November 1896, and visit Delhi, Ulwar, Ajmere, Oudeypore, Jeypore, Bikanir, Jodhpore, Baroda, Surat, Indore, Oojein, Jubbulpore and Benares, and will arrive at Calcutta on Thursday, the 10th December 1896.

••

ON a reference from the Bengal Government, the Government of India have held that dynamos and accumulators do not come within the exemptions accorded to prime-movers; and are chargeable with import duty unless they form part of machinery intended for the special purposes mentioned in (a) to (p) under article 14. The order explains that "a dynamo is a machine for the generation of electricity, which is ordinarily set in motion by the application to it of a steam engine, or other prime-mover; and it is therefore not a prime-mover itself. An accumulator is still more remote than the dynamo from the source of motion, and therefore is also excluded from the definition of prime-mover."

It is not enough that the legislature lays down the law. The Executive Government claim the power not only to explain the intention of the law but also to rule how or in what instances it is to be employed. The Governor General has the right to exempt an article from duty. Has he the power to include any for the tariff?

••

"HELLE" is the latest operatic success in Paris. It has been heard in London by electrophone.

••

BATOUN harbour has, at a cost of 7,50,000 roubles, been deepened to 26 ft. at the point where naphtha is loaded, to enable it to be used by the Black Sea fleet in all weathers. The previous cost on the port was 5,000,000 roubles.

••

THE Austrian journal, the "Zeitschrift fuer Elektrotechnik" has the following table showing the number of rides on passenger railways taken per year by each individual in a number of cities:

••

"MADE in Germany" need no longer cause a titter. England's oak is now made in Germany. At least the great roof beams of Winchester Cathedral are being renewed with wood from Stettin.

••

THE "Popular Science News" announces a new invention—a scare-mouse. It is a luminous cat, struck or stamped from sheet metal, or other like material, representing in appearance the exact counterpart of its animated feline sister, painted over with a luminous paint, and shining in the dark as a cat of flame. It is said that, after its being used for about week, a place is for ever free of either mice or rats. Is it the counterfeit cat or the fire that scares away the mischievous little ones?

DEAFNESS COMPLETELY CURED! Any person suffering from Deafness, Noises in the Head, &c., may learn of a new, simple treatment, which is proving very successful in completely curing cases of all kinds. Full particulars, including many unsolicited testimonials and newspaper press notices, will be sent post free on application. The system is, without doubt, the most successful ever brought before the public. Address, Aural Specialist, Albany Buildings, 39, Victoria Street, Westminster, London, S. W.

AT the Industrial Exposition, at Zurich, Switzerland, was exhibited an air tester shewing the degree of contamination in a room or work-house. "The apparatus is described as consisting of an airtight, closed glass vessel filled with a red fluid. Through a glass tube, that dips into the liquid and is bent at the top, a drop falls every one hundred seconds on a cord that hangs beneath and that is somewhat stretched by a weight. The fluid from which the drop comes has the property of changing its colour by the action of carbolic acid. The more carbolic acid there is in the air, the quicker this change in colour takes place. If the air is very foul, the drop becomes white at the upper end of the cord, while the change of colour, corresponding to a slight proportion of carbonic acid, does not take place till the drop has run further along the cord. The exact condition of the air can be ascertained by observing a scale that is placed alongside the cord and divided into convenient parts, bearing the designations, 'extremely bad,' 'very bad,' 'passable,' 'pure.'"

THE House of Commons. Kitchen Committee report that, during the last session, 13,327 luncheons and 22,316 dinners were served in the dining rooms, that £258-50s-7d. was expended in cigars, £1,782-13s-5 in wines and £6,28; in provisions.

••

THE *Bee*, stinging and vivacious, writes:—

"A curious rumour has—together with something else—been permeating a large public office situated not many miles from Government House. It appears the establishment in question has recently been so unfortunate as to lose its oldest and best known hand in the person of its Chief Superintendent, who was a *Rai Bahadur* to boot. The rumour now is that his well-known, stalwart figure, clad in his flowing *chupkan*, &c., wanders nightly through the deserted corridors of the office. This apparition, it is said, has been seen by the *durwans* and *chowkidars* in charge of the buildings, and that they have duly reported the matter to the European Caretaker to whom they are subordinate. It is further believed that some of the office records are mysteriously disarranged of a night, some of the bound files being discovered next morning actually strewn about the marble floor! And it is also asserted—we do not vouch for the truth of this—that the Caretaker has submitted a written report to the office authorities embodying the strange rumours, and suggesting that the room lately occupied by the deceased in his life-time, should at once be white-washed, and temporarily divested of all its furniture in the shape of racks, records, &c.—But will this becalm the perturbed spirit of the *Rai Bahadur*? It is not often in these matter-of-fact days that one hears of a ghost-haunted office. *Credat Judæus!*"

If the Superintendent had consulted the Durwan or other native assistants in the office, he would have been informed of the only way of quieting the disturbing spirit down. An offering to the Vishnu pada at Gya will have the same chastening effect on the *Rai Bahadur's* ghost as the arrival of dawn or Christmas has on roaming Christian spirits.

••

IT goes on:—

"Do not our Aryan brethren sometimes express themselves queerly? A native contemporary, for instance, has the following note:—'M. Henri Montague, a firstclass clerk in the French Indo-China Government service, was recently devoured by a tiger at Nhatrang, and died.' The cause and effect, it will be observed, are very clearly set forth in the above.—A friend informs us that he had to send to a highly respectable firm of Native Chemists last week for some medicine, and being in a hurry at the time he merely scribbled off a memo.—'Please send a Phenacetin powder (10 grains) for adult suffering from headache.' The bearer duly brought back the powder neatly packed and sealed. The label, however, bore the legend '*Phen. gr. X. For A. Dult, Esq.*'"

Does our contemporary understand the following line in the sign-board of a grog shop?

THE GAMBOOR WINE COMPANY.

THE Secretary of the Doveton College has filed a suit in the High Court against Babu Upendrolal Basu, an attorney of the said court, for Rs. 2,680, being arrears of schooling and boarding fees for six of his children.

THE District Judge of South Canara sentenced three natives, toddy drawers, to penal servitude for life, the form of punishment reserved by the Indian Penal Code for Europeans and Americans. Was there none in court to point out the mistake to the District Judge? Was it no part of the duty of the Government prosecutor to remind the Judge of the law? The error had to be rectified by the Madras High Court.

CHARLES B. ROUSS, the New York millionaire, has offered a million dollars for the cure of his failing eyesight.

NOTES & LEADERETTES,

OUR OWN NEWS

&

THE WEEK'S TELEGRAMS IN BRIEF, WITH OCCASIONAL COMMENTS.

THE Tsar and Tsarina arrived at Breslau on Sep. 5, and were met by the Emperor and Empress and the German Princes at the station. The reception was a splendid one. A grand review of troops took place later, followed by a banquet in the evening at which the Emperor William toasted the Tsar as "the bulwark of peace." The Tsar in responding said he was animated by the same friendship towards Germany as his father was before him. The Emperor William was most effusive, but the Tsar was most brief. Prince Hohenlohe had an hour's audience of the Tsar next day. The Tsar and Tsarina, after witnessing a splendid review of troops at Goerlitz, started for Kiel. The Emperor William, speaking at a banquet at Goerlitz after the departure of the Tsar, said that the Tsar desires only to employ his troops in the service of civilization and for the protection of peace, and the Emperor added "He and I are working in complete accord to unite the peoples of Europe on the ground of common interests and for the protection of most sacred possessions." The tone of the German press seems to indicate that closer relations between Germany and Russia are expected from the visit. The Russian papers dwell upon the Tsar's visit to Germany, and regard it as a pledge of durable peace in Europe, which will enable the Continental Powers to thwart British designs in the far East. The reserve and brevity of the Tsar's reply to the Emperor William's toast at Breslau has greatly disillusioned the German and Austrian press regarding the anticipated rapprochement between Russia and the Triple Alliance; nevertheless his tour is construed into a distinct pledge of peace. The Tsar has sailed from Kiel for Copenhagen.

FURTHER details of the seizure of the Ottoman Bank, shew that twenty-five Armenians, well dressed and educated men, entered the Bank at midday in twos and threes, while porters, who followed them, introduced bags into the building which were ostensibly filled with bullion, but actually, with bombs. Suddenly several of these bombs were thrown by the conspirators, who, during the alarm caused by the explosions, closed the Bank doors, keeping a hundred clerks prisoners. The siege was then maintained with bombs and revolvers for twelve hours when the conspirators surrendered to Sir Edgar Vincent. The collective Note from the Powers to the Porte recites a series of facts proving that the Police at Constantinople and the Municipalities supplied the mob with cudgels in the riots, and strongly hinting that some of the rioters were under the protection of the Sultan. The Porte in reply casts the whole blame on the Armenians. The Porte has commenced a wholesale deportation of Armenians from Constantinople. The Powers, however, intervened, and obtained a temporary cessation of the measure. Notwithstanding the objections of Great Britain and Italy the Porte has despatched another vessel packed with Armenians from Constantinople, and has taken rigorous measures to prevent their return, and to watch the deported wherever they are landed. Constantinople is still in a condition of nervous unrest. The trade of the place is paralyzed, and the treasury is empty. The *Standard* plainly recommends the deposition of the Sultan. Poor Turkey!

DEAFNESS. An essay describing a really genuine Cure for Deafness, Singing in Ears, &c., no matter how severe or long-standing, will be sent post free.—Artificial Ear-drums and similar appliances entirely superseded. Address THOMAS KEMPE, VICTORIA CHAMBERS, 19 SOUTHAMPTON BUILDINGS, HOLBORN, LONDON.

THE Cretan Assembly has accepted the scheme of reforms lately promulgated in the island and proposed by the Powers. A scheme has been mooted for the establishment of a European Gendarmery for Crete.

THE Nile Railway has been reopened. The twenty miles, washed away, have been relaid in ten days. The third brigade of the Nile expedition has arrived at Absarat, and the cavalry has occupied Dulgo, and sighted a strong Dervish patrol.

MAKONI, Chief of the Mashona rebels, has been court-martialled and shot. Major Watts, who is responsible for both the trial and execution of Makoni, has been suspended, pending an enquiry into the matter. He has been placed under arrest.

TWO Arab editors in Cairo have been sentenced to eighteen months' imprisonment each for insulting the Queen of England.

PRESIDENT Faure will not reply to the Sultan of Zanzibar's telegram until he has consulted the French Consul there. Lord Salisbury knows nothing of the telegram in question.

LORD Roberts, speaking at a banquet at Belfast, said he was proud to think that the Indian Army was thoroughly efficient and ready and able to share in the defence of the Empire in any part of the world. He afterwards dwelt upon the value of India as a training ground for the British Army owing to the great tracts of country where manœuvres were possible.

A FRENCH squadron has been ordered to the Levant, where a powerful British squadron already is.

SIR John Willoughby, the Hon. H. F. White, and the Hon. R. White have been retired from the army with ordinary privileges of retirement. Dr. Jameson's other officers will be permitted to return to their regiments.

REUTER'S agency learns that the negotiations between the Indian Government and the Amir are likely to result in a satisfactory settlement by appointing a joint delimitation commission. The *Times* suggests that Newagai and Mittai be included in the British zone.

THE *Times*' Singapore correspondent states that the rebellion in the Philippines is spreading, and that the Spanish officials are concealing the gravity of the situation there. A stubborn encounter has taken place between the rebels and the Spanish troops, in which the former were repulsed with a loss of forty-eight killed, and the troops lost eight in killed. Large reinforcements have arrived from Spain.

LI-HUNG-CHANG is making a triumphant progress through the towns on the Canadian-Pacific railway. He has made anxious enquiries about the proposal which has been mooted to increase the poll-tax on the Chinese immigrants from fifty to five hundred dollars.

REPLYING to an article in the *Cologne Gazette* which suggested that the time had come to abrogate the Dardanelles treaty, the *North German Gazette* declares that any modification of the treaty in question would be contrary to the principles of the German policy.

A MOST destructive cyclone took place at Paris in the afternoon of the 10th which, though only of a few minutes' duration, did immense damage. Trees were uprooted, barges on the Seine sunk, and omnibuses and cabs overturned by the force of the wind. The Palais de Justice and Observatory suffered severely. Many people were killed and injured.

NOW that the Conference on railway schemes is sitting at Simla under the presidency of the Viceroy, the Bengal Chamber of Commerce has addressed two letters to the Bengal Government, in the Public Works Department, on the subject of railways and railway communications. In the first, the Chamber lays stress on a line from Mogul-Serai to a point on the Bengal-Nagpur Line near Purulia

or Sini, either crossing the Sone near Dehri or taking a curve under Rhotas and thence to Daltongunge and so on eastward. The line, it is urged, "would be of the utmost use to the districts served by the Oudh and Rohilkund Railway," "would be of the utmost value as a source of fuel supply to the whole of Upper India, for by this railway, coal would be mined within 170 miles of Mogul-Serai." It would also be an opening of capital, Indian and English, and "develop not only in the provinces of Bengal but in the whole of Upper India, new, valuable and most needed industries, such for instance as a great iron industry." It is calculated that the line would command no less than 5 coal fields, or serve about 1,000 square miles of coal-bearing country, capable of producing at least 12,000 million tons of coal. The Chamber is opposed to the work of this railway being done by branches from the Grand Chord Line of the East Indian Railway.

The next recommendation is a branch line between the Jheria coal-fields and Midnapore, through Anara or Murulia and Bancoora. The third proposal is a line running northwards from Ranaghat crossing the Ganges in the vicinity of Bhagwangola and proceeding through Maldah to Katihar on one side, and through Sultanpore and Bogra on the other to the Brahmaputra. This for the extension of jute industry.

The second letter deals with railway rates on goods and fares for passengers. "Viewed from the standpoint of Calcutta," the letter argues, "it is only natural that the tendency of the railway policy to fix uniform minimum mileage rates for all Provinces and to all ports of export, ignoring physical and other advantages, should have been observed with disfavour. A careful consideration of the subject induces the Committee to believe that the consequences of this policy are more far reaching than its good or evil effect upon the fortunes of any individual port." It goes on to say: "It has long been accepted that the desire and intention of Government in the working out of its Railway policy, is the benefit of India as a whole, by the development of the resources of the country. But it would appear that in its details this policy, under existing conditions, is not in touch with causes which affect traders very closely." Facilities for trade, the Chamber must remember, are not the first object of railways in India.

In his Report on the Administration of the Jails of the N.-W. Provinces and Oudh for the year ended 31st December 1895, the last of Sir John W. Tyler's, the Inspector-General of Prisons deplores:—

"It is an unfortunate circumstance that our Indian Statute Book contains no provision such as that corresponding to the Conditional Release of First Offenders Act, in force in England, whereby it is enacted that 'in any case in which a person is convicted of larceny, or false pretences, or any offence punishable with not more than two years' imprisonment before any court, and no previous conviction is proved against him, if it appears to the court before whom he is so convicted that, regard being had to the youth, character and antecedents of the offender, to the trivial nature of the offence, and to any extenuating circumstances under which the offence was committed, it is expedient that the offender be released on probation of good conduct, the court may, instead of sentencing him at once to any punishment, direct that he be released on his entering into a recognizance with or without sureties.' Such a provision especially in times of scarcity, when the labour market is overstocked and prices of food grains are frequently beyond the means of the starving peasantry, would be a most humane one. For I think it is incontrovertibly established that in seasons of agricultural depression, a large number of persons are for the first time in their lives, driven to the perpetration of crime entirely by the desire of providing the absolute necessities of life, both for themselves and the helpless ones dependent upon them. Others again (and our prison records will bear me out in this) preferring death to imprisonment, have put an end, or attempted to put an end to their unhappy existence after all honest efforts to obtain food have been exhausted. I am aware that under the existing law, punishment, however lenient, must follow conviction; but I submit, and I most earnestly and respectfully submit, that the law should be modified so as to provide for extreme cases.

I have long felt the necessity for the introduction of some such provision as the above in our penal laws. It not unfrequently happens that a person of hitherto unimpeachable character, under very extenuating circumstances, or actuated by some uncontrollable passion, commits an act which brings him within the pale of the law. It is highly improbable that he is likely to repeat his offence, he is sincerely penitent, and is desirous of making the utmost reparation in his power. Surely under such circumstances it is not politic to commit the offender to jail. Several years ago I applied to the Government of Sir Auckland Colvin for a copy of this Act with a view to making certain recommendations for its introduction into this country, but I was unable to obtain it. Subsequently I personally renewed the subject in a conversation with Sir Charles Crosthwaite, the late Lieutenant-Governor and Chief Commissioner.

I venture therefore to suggest that, in view of the great increase of crime which is more or less of a petty nature, the time has now arrived when the matter should be seriously considered."

On this the Resolution of the Government of Sir Antony MacDonnell says, "Sir John Tyler expresses his regret that Indian law contains no provisions similar to those of the English Statute for the conditional release of first offenders. The subject had already engaged the attention of the High Court and of the Local Government, and enquiries preparatory to the submission of proposals for legislation have been initiated."

The number of Europeans convicted rose from 15 in 1894 to 22 in 1895. There was also an increase in the number of juvenile offenders from 214 to 334. The last increase is attributed to the general agricultural depression due to the failure of the *kharrif* in two successive previous years. Sir John thinks that boys should not be sent to jail for short terms. Their jail should be the reformatory and the period of sentence sufficiently long for them to be admitted and instructed there. His further suggestion is that boys under 16 years of age and girls be not punished by imprisonment. For the boys are "apt to become contaminated by the evil influences of hardened adult prisoners: They leave jail with the brand of prison life upon them, and their prospects of obtaining honourable employment at discharge are in many cases irretrievably blighted. It is through incarceration under such conditions that our juveniles first sip the poisonous honey of crime, and eventually develop into veritable habituals." And "it is a deplorable spectacle to witness unfortunate little girls of tender ages ranging from 9 to 12, mixing indiscriminately with hardened prostitutes and female criminals of the deepest dye." The recommendations are to apply, as a merciful act, the provisions of the Probation of First Offenders Act to these hapless little ones, if it cannot at present be adopted in its entirety in the case of adults, and to open a Reformatory School at Fatehgarh, like the one at Bareilly for boys, in the buildings vacated by the Sansiah boys and girls, which would be the first of its kind in India.

The system of hiring out prisoners to municipalities and to private individuals and employing them on outside Government work, has been discontinued.

We very much fear that with the retirement of Sir John Tyler, the Society for affording aid to Discharged Prisoners will languish into decay. Already, the present Government has disclaimed all connection with it and no fresh efforts have been made to keep it up. It has an invested fund of Rs. 31,500 in Government $3\frac{1}{2}$ per cent. securities. Sir Antony MacDonnell, while believing that there are reasons why the society should remain independent of the Government, "takes an interest in its labours, as he does in every other public movement which aims at ameliorating the condition of any section of the people." It may be true statesmanship of the present Governor to dissociate all public movements with the Government. But the country has been governed too long in the opposite direction for the present policy to take any effect in any appreciable time, even if all the Governments and Administrations adopted it.

UPHOLDING the conviction by the Chief Magistrate, the High Court has dismissed the appeal of Culloden sentenced to 9 months' hard labour for highway robbery. This case is remarkable in more ways than one. Culloden is admittedly a person of no means, yet he had the best legal assistance of the Police bar. It speaks of the liberality of Calcutta or of a certain section of the community, that a youth charged with a grave offence is not allowed to go undefended. He was enabled also to take up his case to the High Court where, if he had not any prominent senior counsel to advocate his cause, he had as his defender an able and experienced junior barrister who has large criminal practice and has officiated as Legal Remembrancer and his Deputy. In the lower court the case was made to branch out into a trial of the reverend gentleman, Frederick Moyle Stewart, on whom the offence was committed. For, grave insinuations were made against his moral character. The trial was unusually a protracted one, the judgment of the Magistrate in which he found the prisoner guilty being as long as 14 closely printed foolscap pages. It opens with the significant sentences—"This is a case in which the story of the prosecution depends almost entirely on the evidence of the complainant. One of the main questions in this case is whether the evidence he has given is such as to impress the Court with its truthfulness and such as the Court can accept in its entirety, uncorroborated as it mostly is." The evidence of this gentleman outweighs all that on the other side, of various sorts and degrees, and his evidence is taken to rebut all damning evidence against him. He is both complainant and

defendant in the same trial—no cross prosecution. He comes out triumphant in both. The witnesses against him are all disbelieved as either deliberate perjurers or gross libellers. His own witnesses who deposed against him were no better having been won over. The Police too receive a castigation from the Magistrate for turning against the man of religion and education. In the course of the trial, the *Sunday Times* is brought up on charges of defamation and it makes its peace with the reverend gentleman by apology. But there is no prosecution for any conspiracy against him, or of any of the witnesses who deposed against him for perjury.

In the High Court, the Advocate-General obtained special leave of Government to appear. He intervened to ask the court to put an end to the system of double trial introduced in the case in the lower court. He denounced the conduct of the Pleader for the defence and was determined, so long as he remained at the head of the bar, to see that the scandalous practice was not repeated. This intervention of the Advocate-General is said to have caused surprise at the bar. We welcome it. The privilege of cross-examination is being so much abused that it is necessary to put some limit to it. And if Sir Charles Paul be the means of introducing a reform in that behalf, he will do a service indeed to the public, and be remembered for it. The High Court remarks:—

"When the trial began it was allowed without objection by the public prosecutor or intervention on the part of the Magistrate to virtually take the form of a proceeding in which Mr. Stewart was to be on his trial for several offences, some of a very grave nature. The result was that a case which could have been disposed of in one or two sittings, was prolonged beyond all ordinary limits; and we have the unusual spectacle of the public prosecutor refusing to call a police officer on the ground that he could not be relied upon for the prosecution, and a Presidency Magistrate declaring in his judgment that all the police officers were against the complainant.

The Advocate-General has called upon us to put an end to this form of trial. We extremely regret it. But the law allows the public prosecutor the carriage of the case, while the officer who presides over the trial has ample authority under the Evidence Act and other enactments to compel practitioners in his Court to conduct themselves with propriety. If this authority is not exercised, irregularities, if nothing worse, are unavoidable."

The judgment concludes with the words—

"A great deal of verbal criticism has been expended on the words 'morally certain.' It seems to us that the explanation given by Mr. Stewart himself is that which must be accepted, and it does not show that his evidence is unworthy of credit.

On the whole, we are satisfied that the appellant is guilty of the offence of which he has been convicted in the Court below, and we dismiss the appeal."

The Bench that delivered the judgment was composed of Justices O'Kinealy and Jenkins. Do the Police now consider themselves cleared of the aspersions cast on them by the Chief Magistrate?

REIS & RAYYET.

Saturday, September 12, 1896.

THE NEW METROPOLITAN DRAINAGE SCHEME.

Mr. A. J. Hughes, the new engineer to the Calcutta Corporation, delivered, at the Dalhousie Institute, on the 20th July last, a lecture on the Drainage System of Calcutta. It was a good presentation of the subject as it is and as it is to be. He explained the proposed outlet of storm water for the town proper and the new scheme for the added area. He began with the visit of Mr. Baldwin Latham, in March 1891. The celebrated sanitary engineer differed from some of the views entertained by Mr. James Kimber, the late engineer to the Corporation. The discussion was carried for a period of six years, but the chief points of difference were not mentioned in the lecture. We begin from the very beginning. A minute of the Marquis of Wellesley, dated the 16th of June 1803, pointed out "that an original error has been committed in draining the town towards the river Hooghly. And it is believed that the level of the country inclines towards the Salt Water Lake." A committee was formed to take into consideration ten items of business, namely,

(1) to make a survey of Calcutta, (2) to ascertain the relative level of the water in the Hooghly, (3) to suggest the description of drains, (4) to report on the cost of maintaining them in workable condition, (5) to consider the condition of the burial grounds, (6) to examine bazars, meat markets and slaughter houses, (7) to enquire into all existing nuisances, (8) opening of new streets and roads, (9) suggestions about the health and comfort of the inhabitants and (10) to submit an estimate of expense required to complete all proposed improvements.

It is not known what report was made. The second step was the Fever Hospital Committee's Report, submitted in the year 1840, by Messrs. J. P. Grant (Chairman), C. W. Smith, J. Young, J. R. Martin, Prosonno Coomar Tagore, R. Scott Thomson, Dwarka Nath Tagore, Rustomjee Cowasjee and Russomoy Dutt. Mr. Nicolson was too ill to sign it. It was the outcome of a letter addressed to the governors of the native hospital by Surgeon J. R. (afterwards Sir Ranald) Martin. In this letter he pointed out the urgent necessity for establishing a fever hospital in the town of Calcutta. Accompanying it was a very able note on the medical topography of Calcutta and its Suburbs. The governors, after arriving at certain resolutions, communicated them to Sir C. T. Metcalfe, then Governor-General of India. Two public meetings were held, in which considerable sums were raised for the hospital. In 1836 the Earl of Auckland succeeded to the Government of India and formed a committee for the following objects. First, to establish an hospital, secondly,

to submit to the consideration of Government the sanitary state of Calcutta and its Suburbs, and the suggestion of local improvements for the purpose of producing and maintaining greater salubrity, of both which objects also His Lordship most cordially approved—but to these two objects he suggested the addition of a third, the framing of a plan of local management and taxation.

The committee divided itself into three sub-committees. The first, to inquire into the present system of assessing, collecting and appropriating the town-taxes. The second, to inquire into the present state and management of the conservancy department, that is, the drainage, cleansing, etc., of the town, in regard to salubrity and means of improving it. The third, to conduct all measures connected with the proposed Fever Hospital and the circulation of subscription books, &c.

After a minute, careful, and somewhat tedious investigation of the matters referred to them, the committee agreed upon a report embracing the results of the inquiries of the three sub-committees, which they submitted to the Government of Bengal, on the 7th January 1840. A table of levels was furnished by Lieutenant Abercrombie from surveys made by officers employed by the Lottery Committee, and by the Government, namely, Major Schaleh, Major Taylor, Captain Prinsep, Captain Forbes and Mr. Blechynden. Among others, Mr. Ryper, apothecary of the Guranhatta Dispensary, Mr. Brett, Surgeon to the Governor-General's Body Guard, Dr. J. R. Martin, Dr. W. Graham, and Dr. Modusoodun Gupto were examined by the Committee and they condemned the tanks, the drainage, and the roads. They also spoke of the great mortality then occurring in the town. Babu Ram Comul Sen and Dr. Jackson submitted a joint paper on these topics, on the 21st May 1835. The committee reported:

I. That there is no natural impediment, nor any difficulty which a due application of science and capital cannot readily overcome, to the thoroughly draining, cleansing, and ventilating, and supplying with wholesome water, the whole city and suburbs of Calcutta.

II. That the parts of the city inhabited by the Natives, forming a great population, to whose numbers the British inhabitants bear a very small proportion, and the whole of the suburbs, are, in all these respects, in a condition of such total neglect, as to render them necessarily the seats of diseases destructive of individual happiness, and of life, and inconsistent with moral improvement."

and political prosperity; and that the still imperfect, though improved, condition in these respects of those parts of the city inhabited by the British, and the noxious exhalations produced all round them by the state of the Native Town, and the Suburbs, and the marshes called the Salt Water Lake, produce in these parts effects inconsistent with salubrity.

III. That the removal of the causes, which now generate the pestilential seeds of disease to so frightful a degree, would be effected by the thoroughly draining, cleansing and ventilating the city and Suburbs, and draining the Salt Water Lake—and that an ample supply of water for watering the roads, and for all purposes of cleanliness, and of good and wholesome water for drinking, and preparing food, would be afforded to every part of the city by the formation of a sufficient head of water within it, and the excavating a sufficient number of tanks—and thus the city would be rendered a healthy residence for the Natives of the climate, and no otherwise injurious to European constitutions than through the operation, during the greater parts of the year, of tropical heat, in a climate, no doubt naturally damp, but unassisted by wholesome exhalations from the soil, or miasmata.

On the 4th September 1851 Colonel Forbes submitted a scheme to the Commissioners of Calcutta which was forwarded by their Secretary, Mr. J. O. Beckett, to Mr. W. Grey, Secretary to the Government of Bengal, on the 8th November 1854. Mr. W. Clark, secretary and engineer to the Commissioners, made ready his scheme on the 20th November 1855, and it was forwarded by the Commissioners, Messrs. G. F. Cockburn, H. L. Thuillier, Tariney Churn Bannerjee and Dinobundhu Dey, to Mr. F. J. Halliday, Lieutenant-Governor of Bengal, on the 29th December 1855. The Commissioners under advice sent the scheme to Messrs. M. and G. Rendel, the celebrated engineers of London, under date the 21st April 1858, for their opinion. A reply was received on the 12th November of the same year. Mr. Clark submitted another report commenting on the objections taken by Messrs. Rendel, which was sent up to Mr. F. J. Halliday, on the 21st March 1859. In April following the final sanction was received. A progress report was made in 1861, to Mr. J. P. Grant, Lieutenant-Governor, by three Municipal Commissioners, Messrs. S. Wauchope, H. L. Thuillier, and A. M. Dowleau. The usefulness of "the Drainage of Calcutta" was explained by Mr. Clark at a meeting of the Bengal Social Science Congress held on the 2nd February 1871, at the Town Hall. The principal features of Mr. Clark's project, as given by Mr. Hughes,

"were to be two main discharging sewers running along the Upper and Lower Circular Road with a large main outfall sewer taking off from the end of Dhurmtola Street, and discharging into the tides of the Salt lakes at Palmer's bridge. There were four other receiving sewers running east and west from the Hooghly to the Circular Road, and the surplus storm water was discharged at Manicktollah into the Circular Canal. To meet the absence of a water supply Mr. Clark took advantage of the differences of tide level between the Hooghly and the Salt lakes to secure tidal flushing at certain seasons; under favourable conditions, I think, that this aid will be always useful to you."

The defects now found are:

(1) The mistake in taking levels of the rise of water in the Hooghly and Salt water lake. (2) The actual commencement of the drainage project before the water supply. (3) The construction of Chitpore and Dhappa locks in the Circular Canal in 1881. (4) Insufficient outlet of storm water. (5) Insufficient power for sewage disposal of the Palmer's Bridge pumping machines.

The miscalculation of the tide levels and the time during which they occur was a great drawback and led to the imperfect drainage of both the storm water and the sewage. The flow tide in the lake commences nearly an hour and a-half later than the rise of the Hooghly at Calcutta. During the low-tide only, the sewage gets a real exit, while some portion of it returns with the rise of the water in the lake. The consequence is that the outflow of storm water is possible during the ebbside, and during the flow tide the drains become water-logged and the

streets are under water. This view of ours is corroborated by Mr. Hughes. He says:—

What happens is that the sewage is discharged into a channel 13,360 feet long and 80 feet wide, freely open to the tide. During the flood tide this channel ceases to discharge altogether and the heavier particles of sewage are deposited in the bed of the cut. This channel is emptied in the ebb tide and in the last quarter of the ebb most of the deposit is carried out to meet the first rush of the flood tide and most of the solid sewage is carried by the flood into the comparatively shallow channels at and above Dhappa.

The main drainage system is a combined system for both sewage and storm water. They are separated at Palmer's Bridge. The sewage is there lifted and pumped into a high-level sewer, where under present arrangements, it is possible for the sewage to escape into the storm-water open cut, to be discharged by the Makalpota sluice, just below the Dhappa lock. This sluice was constructed in 1881.

The second blunder was the construction of the sewers before the water works. The two schemes were proposed at the same time. Messrs. Rendel in their recommendation had pointed out the simultaneous necessity of water-supply and drainage. They remarked that "to construct sewers without at the same time providing an ample supply of water to keep them clear of deposits would be a worse than useless expenditure of money." Yet, the drainage operations were taken up in 1859, while works for the supply of water did not commence till so late as 1867.

The locks at Chitpore and Dhappa in the Circular Canal were constructed by the Government for various reasons. In order to keep the Canal sufficiently navigable, they were a necessity. Further, they removed the nuisance of silt and sewage deposit. Notwithstanding, it was not a wise plan to empty storm water and sewage into the Canal. That operation converted it into a great depository of sewage. The mistake was corrected by the construction of the Makalpota sluice. Mr. Hughes says:

Mr. Clark had to consider the question in 1857; it was governed by two conditions which do not exist at the present day. In the first place, he found a very efficient tidal outfall channel skirting the city on the east in the shape of the Circular Canal which was freely opened to the low tides of the Salt lakes and closed to the higher tides of the Hooghly and which was available for the escape of storm water; and in the second place, his proposals were governed by the condition that you had no water supply and therefore it was a point of some difficulty and importance to arrange that the sewers should be self-cleansing.

It is not known on what authority Mr. Hughes asserts that the Canal "was freely opened to the low tides of the Salt lakes and closed to the higher tides of the Hooghly," for there were no locks before 1881 in the Canal to perform this function.

The insufficient outlet of storm water was another blunder which is now admitted by all. The assertion of the lecturer that "you are all aware that flooding in the city never took place when the Circular Canal was open to you," does not seem to rest on any solid foundation. The city used to be flooded in the days of the Marquis of Wellesley as much as when the drainage operations were perfected before 1881. Mr. Clark designed the sewers to be capable of discharging quarter of an inch of rain per hour. Mr. Hughes says, "I have no hesitation in saying that in heavy rains the sewers can discharge nothing like a quarter inch per hour, and that the escape of storm water must be increased moreover." Add to this the incapacity of the Makalpota sluice, and you have another cause for flooding. But it is by no means certain that the cause of the city being under water is to be found, after 1881, in the locks in the Circular Canal and the Makalpota

sluice. There are other defects in the drainage system.

The crown of the intercepting sewer is higher than the crown of the sewer it was constructed to relieve. The longitudinal section is defective in other ways, and it was built 4 feet too high. It was designed to discharge 28,770 cubic feet. As a fact, it cannot dispose of more than 16,447 cubic feet per minute.

The level of the water at the Dhurmtoollah sewer junction with the main sewer is probably not less than $1\frac{1}{2}$ feet higher than the water at Palmer's Bridge.

The effect of any heavy rainfall would be an almost complete collection of water without sufficient exit. Regarding the storm water open cut, the Engineer remarks :

I have tried to find out on what principle this open cut (which has been such a misfortune to you) was designed, without success, and I have tried to get some guidance from the recorded facts of the working of the cut with the small result. What appears to happen is that the banks freely breach after heavy rainfall, and the water escapes over the country.

Is it not strange that records would be wanting to explain such expensive works undertaken and completed? Such absence may lead to other costly blunders, and we hope Mr. Hughes will not rush to any more without full enquiry and will leave a full record of his doings.

Insufficient power of the Palmer's Bridge pumping machine for disposal of sewage has been another source of trouble. The pumps, by incessant working, are only just able to deliver 3,600 cubic feet per minute and hardly able to deal with the present discharge of sewage.

Mr. Hughes proposes to remedy these evils by his project which is intended to drain the added area as well. For this purpose he divides that area into four divisions :

1. The canal area, including the additions in wards Nos. 1, 3, 4 and 9, up to the Circular Canal in the east. 2. Suburban drainage south of Tolly's Nullah. The area includes wards Nos. 23, 24 and 25. 3. Drainage of Suburbs north of Tolly's Nullah to suburban outfall. 4. Suburban drainage system north of the outfall.

The last two divisions contain wards nos. 19, 20, 21 and 22.

For the Canal area as well as for the city proper, Mr. Hughes proposes new works. He says :

I do not know at present a city with a worse outfall than Calcutta, whether for sewage or drainage. The first step you have to take, therefore, is to put your storm-water outfall in order. The storm-water outfall that we have designed for you to meet these conditions is based on the results of tidal drainage works, which are familiar to many of you, for the drainage of the Howrah, Dancoonee, and Rajapore swamps. In the case of these drainage works we were able to secure reservoir capacity by discharging upland drainings on low paddy fields at a suitable level. In the case of your outfall the levels of the low lands are not suitable, and we have to excavate a channel of sufficient reservoir capacity. Very briefly, we propose to construct a reservoir 16,700 feet long and 450 feet wide and $4\frac{1}{4}$ feet deep, which will store a quarter inch of rainfall during the flood tide and discharge its contents and the drainage of the town on the ebb through suitable channels provided for the purpose. So that the reservoir will empty to low-water level, and be again ready for use with the rise of the flood tide. This reservoir will be connected with Palmer's Bridge by a cut 70 feet wide, about twice the width of the present open cut. It will be emptied by the present Makhaltolah sluice, and an additional sluice of five spans of 17 feet fitted with Stony's roller gates, which we propose to construct at Byntollah. It is anticipated that under extreme circumstances of heavy rainfall this reservoir can never fill up to the level of 12.50 for more than a few minutes, and that at this level the outfalls of this city sewer can never be submerged. The Makhaltolah sewer and the previous expenditure on land will be fully utilized by these proposals. The work, in this form, will be capable of dealing with six inches of rainfall in twenty-four hours, and will probably meet the case of such rainfalls as eight or ten inches in twenty-four hours, such as occur once in twenty years. In the case of smaller rainfalls the reservoir will give an increased fall of three to four feet to the whole system of your sewers, and enormously increase the flushing powers of average rainfall. It will also confer a new value to the Hooghly flush, which will always be safe and useful.

Mr. Hughes' assurances are very hopeful. By his method he is almost sure to clear the plague spot in the Canal area. But does he find nothing

wrong in the existing drainage of the city? We have seen that he dates the obstruction to the flow of drainage wrongly from the locking up of the Circular Canal. That may be an addition to other causes. We suspect the insufficient fall of the sewers especially at the Circular Road and Dhurmatola junction is one grave error. If the proposed reservoir fail to draw all the water of the Calcutta streets, then the Engineer will have another huge problem to solve, and the solution will not be easy. The eradication of plague spots is always an old tale. We have had such an assurance during the sittings of the Fever Hospital Committee. Mr. Clark was equally dogmatic as he believed his drainage system perfect and capable of draining Calcutta of all its evils. We have now Mr. Hughes' very encouraging words. The last epidemics of small-pox and cholera approached in intensity to outbreaks that occurred thirty years before.

The machines at Palmer's Bridge will be added to for rendering them fully efficient. "The plant will be designed to dispose of the full quantity of sewage with ample standby; and when all the pumps are in good order they will be able to dispose of the sewage, and a sufficient volume of flush water from the Hooghly up to 10,000 cubic feet per minute, about one-third of the total discharging capacity of the main outfall sewer, so that it will not be necessary to discharge flush water into the storm water outfall in future." The advantage of the combined drainage of the combined areas is thus told: "With regard to the alignment of the new high level sewer and the general arrangements for disposing of sewage, we consider that the sewage of the city and the suburbs must be combined into one outfall channel, because the larger the volume of the sewage, the easier it is to maintain a sewage channel, and it is clearly advisable to have a single sewage channel, instead of two separate sewage channels."

The present outfall of the Makalpota sluice has often been the subject of complaint for the terrible nuisance it causes. It is proposed to remedy the defect in the following way. "The present discharge of sewage into the Balliaghatta Canal will be increased by 40 per cent. in the near future by the construction of the suburban sewage works; and this state of things will daily become worse and more unbearable. * * The bulk of the offensive portion of the sewage is now discharged at Khanabari, immediately below a shallow section of the Canal. It will be carried as close as possible to the Byntolla Khal entrance into a section of the Canal 20 feet deep at low water, and, instead of the discharge being concentrated as at present into the last quarter of the ebb, it will be uniformly pumped during two flood and two ebb tides during twenty-four hours."

The Suburban drainage south of the Tolly's Nullah includes wards Nos. 23, 24 and 25. Accepting partially the scheme of Mr. Latham, Mr. Hughes proposes to construct a low level syphon under the bed of Tolly's Nullah and place the pumping station on the north bank of the Nullah, as suggested by the expert. But he does not think that it will be possible to lower the proposed level of the sewer so as to avoid the pumping station at the Budge Budge Road, as suggested by Mr. Latham. To give effect to the recommendation of the Committee of the Corporation to avoid the pollution of Tolly's Nullah, Mr. Hughes proposes "to dispose of as much foul drainage,

as well as sewage, as may be practically possible within the reasonable limits of cost in the new sewers, so that the surface drainage which has no possible outlet, except the Nullah, may be purified to the utmost extent possible." On the whole, the drainage of this area is simple compared to the rest of the work.

Drainage of the Suburbs north of Tolly's Nullah to Suburban outfall includes an area covered by wards Nos. 21 and 22.

Many modifications are being made of the existing proposals. The suggestion of Mr. Braunfeld, one of the Commissioners, about a separate storm water outfall for the Suburbs has been accepted. The proposed extension of the Lansdowne Road and the Bidhapara Road will simplify the drainage arrangements. Mr. Hughes' next project is to carry the main sewer from the Kalighat crossing to a station which will be the second Palmer's Bridge. Here the same kind of work will be done as in the existing pumping station. Tolly's Nullah is to be relieved of its reception of the foul surface drainage which is now admitted into it.

The outfall works for the Suburban sewage system will consist of machines to lift the pure sewage into a high level sewer which will fall into the high level sewer for the city. "When the pumps are overpowered by storm water, the surplus will be discharged into a reservoir constructed at precisely the same levels as the main storm-water reservoir. The reservoir will be discharged into Balliaghata Canal by a sluice with a water-way of three spans of 17 feet with Stony-roller gate. The reservoir will not only dispose of the storm water of your main sewer but it will also receive the escape from the Lower Circular Road sewer." The sewer running through Bidhapara Road will be separate from the existing sewer in Russa Road, which will require enlargement. The flushing of the last mentioned one will be done with unfiltered water from a reservoir.

The Suburban drainage system north of the outfall includes wards Nos 19 and 20. The engineer had no definite proposition to advance for this portion, for want of a proper survey. He thinks, however that

"it may be possible to lay our pipes 20 feet below the surface. On the line of the main sewer it will be necessary to pump the sewage to a height of about 8 feet from the pumps into the sewer."

He divides this area into two sections. By a distinct compact project he means to drain the whole of ward No. 19 and a portion of ward No. 20, the sewer discharging itself at Palmer's Bridge. The sewers for the remaining portion of ward No. 20 are to be emptied by another pumping machine.

SIR COMER PETHERAM.

WITH the rising, on Tuesday, of the High Court for the Long Vacation, Sir Comer Petheram left for home to return no more. He retires from the service from November next. His has been a pleasant sojourn in India. He left it, as no other Chief Justice in Bengal has done, highly honoured and feted. Native Calcutta had once, in public meeting assembled, resolved upon a petition for recall of a Puisne Judge, but never in its previous history, had Europeans and Natives combined to honour a retiring Chief Justice, though we had far abler Chief Justices than the present. Besides the public demonstration at the Dalhousie Institute, there was a round of festivities for Sir Comer. The bar gave him a dinner. The diners, headed by the Advocate-General, were loud in their praise of him and enthusiastic in the merriment of the night. Not to be outdone, the Pleaders and Attorneys presented him addresses at the last

moment. There were also private entertainments in native houses. Khan Bahadoor Mahomed Yusuff had provided one and the Maharaja Joteendra Mohun Tagore another. The Hon'ble Chunder Madhub Ghose invited a party at his residence to bid the retiring Chief Justice farewell and had some good words for his Chief. He spoke more as a native citizen than a Judge. A number of gentlemen, European and Native, went to the railway station to wish the good Sir Comer Petheram *bon voyage*. We publish below Sir Comer's reply to the public address.

"Maharajas, Rajas, Nawabs, ladies and gentlemen,—When a man in my position is about to lay down the office which he has held for so long, he is naturally led to hope that by his conduct in his official life and in the discharge of his judicial duties he has succeeded in securing the approval and in winning the confidence of the people among whom that life has been passed. The character of the meeting at which the address which has just been read was approved and accepted, the composition of the present assembly, as well as the language of the address itself encourage me to entertain the belief that in the performance of my duties as Chief Justice of Bengal, I have given satisfaction to, and gained the approval, respect, and confidence of, a great portion of the people of this province—a belief which, I most earnestly assure you, will ever be to me the greatest source of pride and happiness, and will at all times serve to recall with the keenest pleasure the recollection of the years spent by me in this country. A very important portion of your address is that in which you refer to the position of the Judges of the High Courts in India, as to which I am constrained to say that my opinion is entirely the same as your own. When I came to India in 1884, the value of the rupee was about one shilling and eight pence, and one shilling and nine pence, and the period of service for a full High Court pension was eleven years and-a-half. I need not remind you that the rupee is now worth less than one shilling and three pence, and that the period of service necessary to gain a full High Court pension has been increased to fourteen years and-a-half. I cannot help fearing that when the professions, both here and in England, fully appreciate the effect of these changes, it will be found that the field of selection has been dangerously narrowed. I also think that there is reason to fear that the extension of the period of service may have a serious effect upon the efficiency of the judges, for a reason which does not appear to have been considered by, perhaps was not within the knowledge of, the framers of the new rules. When I became Chief Justice of the North-Western Provinces I was forty-nine years old, and I have spent twelve hot seasons in the plains of India. My knowledge of my own health and strength tells me that if I were to attempt to carry on the work of Chief Justice of Bengal for another three years, it would be found that my energy and my patience have been so seriously affected by the work which I have already done in this climate, that it would be in the interest of the court, and the public, that the office should be in younger hands. What is true of myself will, I feel sure, be found to be true of many others, and for this reason I greatly fear that it will be very difficult for men who come to this country, after they have reached middle life, to perform the duties of the office of a judge, for fifteen hot seasons in the plains of India, with the energy and patience which the public have the right to expect. I do not think any medical man who has had much experience in India will be found to take a different view. It will perhaps be said that judges may obtain rest and strength by absenting themselves from time to time on furlough. As to this I can, of course, only speak of the office of Chief Justice. But in his case I am very strongly of opinion that it would not be in the interest of the court or the public that he should absent himself, and allow his duties to pass into the hands of another, if such a course can be avoided. The extension of the period of service has also, as you suggest, a bearing on the positions and prospects of the judicial branch of the Civil Service, which I think escaped the notice of the framers of the new rules. Very soon after the new rules were published, a very large number of the more experienced of the district judges retired, because, as I believe, they felt that under the new order of things, their hope of promo-

The Indian Association for the Cultivation of Science.

210, Bow-Bazar Street, Calcutta.

(Session 1896-97.)

Lecture by Babu Rajendra Nath Chatterjee, M.A., Wednesday, the 16th Inst., at 5-30 P.M. *Subject*: Boyle's law, its application.

Lecture by Dr. D. N. Chatterjee, B.A., M.B., C.M., Thursday, the 17th Inst., at 5-30 P.M. *Subjects*: The Protozoa. Cœlenterata.

Lecture by Babu Girish Chandra Bose, M.A., F.C.S., M.R.A.S., &c. Saturday, the 19th Inst., at 5-30 P.M. *Subject*: Morphology of Plants.—Flowers (continued).

Lecture by Dr. Nilratan Sircar, M.A., M.D., Saturday, the 19th Inst., at 6-30 P.M. *Subject*: Histology.

MAHENDRA LAL SIRCAR, M.D.,

Sept. 12, 1896.

Honorary Secretary.

tion to the High Court was gone. These numerous retirements have had two effects. First, they have thrown the judicial work in the districts into the hands of men of less experience, and so have affected the field from which the civilian judges of the High Court must in future be drawn; and, secondly, they have increased the number of persons who draw incomes from the pension fund, to an extent which, I expect, largely outweighs any gain which may have been derived from the increased term of service. Whether or not the commercial list, which is now kept on the Original Side of the High Court will prove of much assistance to the mercantile community, must depend upon the action, of the litigants themselves, and of the professional men by whom the litigation is conducted. I need not tell you that when an action comes before a judge for trial, he must try every issue which is disputed, and that if the parties to the suit insist on fighting to the end every possible question, whether there is any real dispute about it or not, litigation will continue to be very long and very costly. If, on the other hand, the parties before they go into court, eliminate everything from the enquiry, but the questions which are really in dispute, and require the judge to try those questions only, trials will take much less time and will cost much less money. But the matter is one in which neither the court nor any individual judge can do much to help the people, if they are not disposed to help themselves. It only remains for me to offer you my most sincere thanks for the good wishes and kind sentiments you have expressed, in regard to my future career in my native land. You may rest assured that all questions in which the interests of India are concerned will always receive at my hands a most careful and watchful attention, and, should opportunities arise, I shall deem it a high privilege if I can be of service or assistance in any matter affecting the welfare and prosperity of the people of this country."

OUR LONDON LETTER.

August 21.

Imperial Parliament. Shortly after posting my last letter to you on the 14th instant, the Parliamentary session came to an end, being duly prorogued until Saturday, the 31st October next, after the Lord Chancellor had read the Queen's speech. The general sentiment of the journals of all parties is, that, with the distinguished exception of the Speaker, no single member has added to his laurels by the session just brought to a close. The "Times" devotes six columns to its history. Full justice is done to Mr. Balfour's "brilliant intellectual gifts as well as his personal charm of manner." But these alone will not make a successful leader of the House of Commons. And Mr. Balfour had not only the advantage of leading the strongest Government we have seen since the Reform Act of 1832, but he had also to face an "enfeebled and discredited opposition." How then to account for the failure of this strong Unionist Government? "The fundamental error was the introduction of complicated and contentious Bills, going down to the roots of principles and stirring up angry controversies on all sides." Mr. Balfour is taken to task for his somewhat absurd boast that he "never reads the newspapers" and was a "child" in the ways of the House of Commons. It was by no such methods Lord Palmerston and Mr. Disraeli asserted their position as leaders of the very first rank. Lord Palmerston entered the House of Commons in 1809 and with a short break sat in it till he died full of years and full of honours in 1865. He was in his seventy-first year when he was summoned by the voice of the nation to the grand position of Prime Minister, in 1855.

I was reading, only the other day, that when he was called to be Leader of the House of Commons, he set himself vigorously to a thorough study of its rules and practices, as if he were preparing for a college examination. And notwithstanding his advanced years, he was, as a rule, found on the Treasury Bench from four in the afternoon until one, two, and three o'clock of the following morning. As I remarked in a former letter, Mr. Balfour will have to follow such an example, if he is to earn his spurs as a Leader of the House. But all are agreed that Mr. Balfour deserves high praise for his new rules as to Supply. "They have worked admirably, the estimates being more thoroughly considered, the time devoted to them being better distributed, and none of the more important being left to be hurried through at the last moment, as was too often the case in recent years."

The grand fiasco of the Session was, beyond all controversy, Mr. Balfour's management of the Education Bill. Had Government concentrated all its energies until this great Bill had passed the House, subordinating all other measures to it, it is believed Mr. Balfour would have succeeded. But his unfortunate surrender to Sir A. Rollit, in spite of Sir J. Gorst's protest followed by the *volte face* of the meeting at the Foreign Office, and the ultimate withdrawal of the Bill, dealt, beyond all question, a serious blow at the administrative capacity of the ministry. I give you in full what the "Times" in its review of the Session says of the Suakin debate. "A more serious question arose in reference to the proposal to send Indian troops to Suakin.

It was learned with much surprise that Lord George Hamilton, who had refused to consent to charge India with any portion of the cost of two native regiments borrowed to serve at Mombasa, had decided, against the strong protest of the Indian Government, to require them to provide the ordinary pay and expenses of the Suakin contingent. The unwisdom as well as the meanness of thus insisting that India should be treated with different weights and measures as a lender and as a borrower of troops powerfully affected many of the most loyal supporters of the Government. An amendment to Lord George Hamilton's motion imposing the charge on the Indian tax-payers was moved by Mr. Morley and supported by Sir Henry Fowler, and, after an ingenious though over-subtle defence of the Government by Mr. Balfour, was rejected by 275 against 190 votes, the normal majority of the Government being reduced by nearly one-half. Some dissatisfaction was caused by the postponement of the Indian Budget till the very eve of the prorogation; but Lord George Hamilton's reassuring statement as to the Indian finances was well received."

Of personal characteristics we read that the Speaker has "made his mark. He has achieved for himself a high position amongst the many able and accomplished men who have occupied the chair. He is clear, prompt, and firm in the questions that come before him, of an imperturbable temper, and equally endowed with suavity and good sense." Mr. Chamberlain was "mainly occupied with the difficult administrative problems of his own department, but when he intervened in debate he showed all the energy and adroitness by which he has been distinguished throughout his career." Of subordinate ministers, Mr. Curzon, Sir J. Gorst, and Mr. Gerald Balfour come in for their meed of praise. Of the Lords, neither Lord Salisbury nor Lord Rosebery had any particular opportunity of coming to the front. Lord Lansdowne piloted the Irish Land Bill with "much urbanity and discretion." Turning to the front opposition bench, due acknowledgment is made of Sir W. Harcourt's "cheery audacity and uproarious humour." Sir Henry Fowler "alone has risen above the level of party, though only where India was concerned." Mr. Morley "has not improved his position." Sir H. Campbell Bannerman "has distinctly lost ground by sinking into the mere partisan." Mr. Asquith "has failed to rise above the level of a rhetorician."

Of private members, our friend Mr. Bowles is reminded "that buffoonery easily degenerates into boredom." The two Scotch bores—Caldwell and Dalziel are left in well merited contempt, and are not named, nor is Sir Charles Dilke, who might well take the hint and be less loquacious, as his interference in debate is an insult to the House.

Though prorogued to October, it is not expected that the House will reassemble for business until January, so for four or five months the hard-worked officials will have rest.

Li Chang Tong has "done" Barrow-in-Furness, Glasgow, the Forth Bridge, and the Elswick works at Newcastle since I last wrote. To-morrow he proceeds to Southampton and is due at New York on the 29th. After doing New York, Philadelphia, Washington, and Niagara, he becomes the guest of the Canadian Government who will see him by the Canadian Pacific railway transferred to Vancouver, whence he sails for Japan and China. He is as inquisitive as ever, particularly about the ages of the dignitaries that are introduced to him. On reaching Craggside, Lord Armstrong's splendid abode in Coquetland (not far from Newcastle) the first question put to his noble host was, "How old are you?" The answer was "Ten years older than Your Excellency." On the Duke of Devonshire asking him whether he ever shot game (he himself having just come from a couple of days' grouse shooting) the naive reply was "No! I only shoot rebels." On his way to Barrow he paid an hour's visit to Mr. Gladstone at Hawarden. His Excellency was in great force. "What do you think of Lord Salisbury?" to which Mr. Gladstone gave him the adroit reply "I admire his abilities but I do not always approve his policy."

I learn privately he was immensely charmed with the dinner given to him at the Crystal Palace by the Hong Kong and Shanghai Bank, and remarked of the fire works display provided for him, that it was the finest he had ever witnessed.

Dr. Nansen and the North Pole. This intrepid Arctic explorer has returned to Vardo in Norway, having failed to reach the Pole, but having got within 268 miles of it, or 170 nearer than any previous navigator. This of itself is a marvellous achievement, and will secure for Nansen an enthusiastic reception from all the geographical societies of Europe.

Sir John Millais was buried yesterday in St. Paul's Cathedral, where his dust lies contiguous to that of his illustrious predecessor, Lord Leighton. The Queen and Prince of Wales were duly represented, as was Lord Salisbury, while Lord Rosebery was one of the pall bearers. Many other leaders of society—in politics, science, and art—would have been present but for the general dispersion at this season of the year.

Rhea fibre. It would appear that the Government of India has not yet given any final decision on Mr. Gomes' discovery, referred to in my last. But the Inspector-General of Forests has given

his judgment on the process, and in time the Indian Government will no doubt give its imprimatur.

Royal Commission on Financial Relations between Great Britain and India. This not overburdened commission has risen, and will not meet again till January. The ways of royal commissions are past finding out. That on vaccination has, I think, spent seven years over its not very valuable report. The stinging paragraph in the "Pioneer" on Sir William Wedderburn and Mr. Naoroji, was thought to be of sufficient importance to be cabled to the "Times." But in fact no one of any position in regard to Indian questions cares a pin's head for the opinions of these two cranks. Sir W. Wedderburn thirsts for notoriety, while poor Mr. Naoroji has discovered that Great Britain did not exist until Clive and Hastings laid the foundations of its conquest of India! No doubt, a wonderful historical discovery, and, in season and out of season, the worthy Parsi airs his sad. But it is most unfortunate for India that a man, so well meaning, should be so eaten up with self-esteem, to use no harsher term, as to sink the real questions affecting India's well-being, into a mere parade of his own cranks and fads. He has been rebuked over and over again by the chairman—Lord Welby—for endeavouring to thrust his immature opinions on unwilling witnesses, and as a compromise Mr. Naoroji is to be examined himself as a witness, and for a time is to surrender his seat on the judicial enquiry. A small body of financial experts, say five, would have done the work infinitely better than this royal commission. Who cares a couple of straws for Mr. Caine's opinion on any question relating to India? He knows nothing of the people or the country, beyond having passed two or more cold weather seasons in scampering through the land as the guest of the Viceroy, Lieutenant-Governors and other dignitaries. To put such men as Wedderburn, Naoroji, and Caine on a commission where judicial gravity and a free open mind are the first requisities, reduces the whole thing to a sorry farce.

The Separation of Judicial from Executive Work. Your paper has been taking a vigorous and active interest in this all important question. Mr. Bhownagari took advantage of the evening devoted to the Indian Budget to bring it before the notice of the House of Commons. But the only way to bring about any successful issue to the controversy is for the Local Governments to move and, in time, get the Supreme Government to take it up. Were Sir Alexander Mackenzie, as the Lieutenant-Governor of the most advanced of the provinces of India, to bring his energy and thorough grasp of the subject, to bear upon it, a good beginning might be made. The letter which appeared in the "Times" of yesterday from Mr. J. P. Goodridge, formerly of the Bengal Civil Service, is a wise and moderate contribution to the discussion, and I hope you will be able to find room for it in an early issue of *R. & R.*

The Deaf in India. I also enclose a very interesting communication on this subject. Mr. Banerji appears to have done well so far and all he now requires is substantial pecuniary assistance from the Government. Why should Calcutta be placed in a worse position than Bombay? Is it that in the latter the missionaries have more influence with the Government? The work, it appears to me, should be thoroughly unsectarian, and Mr. Banerji is well deserving of all the assistance that Government and private individuals can give him.

Germany. The resignation of the War Minister is a matter of small significance. It throws a lurid light on the notorious duel which so agitated all Germany some months ago. The late War Minister and the present Chancellor, Prince Hohenlohe, were determined to introduce effective legislation to prevent a recurrence of such a scandal. A word from the Emperor would settle the matter, but his sympathies are known to be with the arrogant military party that refuses to bate one jot or tittle of its mediæval brutalities. The anxious question of the immediate future is, What will the Chancellor do? His personal sympathies are known to be with the late War Minister, and entirely antagonistic to the military coterie that surrounds the Emperor and enjoys his patronage. The future of Germany is an unknown quantity, and much will depend on the vagaries and whims of its eccentric and self-willed ruler.

France. The Prime Minister has announced the abandonment of the tax on *Rentes*. You will remember when announcing the intention of the French Government to introduce this tax, I pointed out the very serious opposition it would evoke throughout the entire country, and my forecast has been fully verified.

Italy. The announcement of the engagement of the Prince of Naples (the Crown Prince of Italy) to the third daughter of the Prince of Montenegro has produced lively satisfaction in Italy. The more than strained relations between the King and the Pope have rendered it a matter of difficulty to find a bride for the unfortunate Prince. The Princess of Montenegro belongs to the Greek Church, but she is willing to abjure her ancient faith and be converted to that of Rome, in prospect of one day sharing the throne of Italy. She is said to be very beautiful, and the Emperors of Russia and Germany have hastened to convey their personal congratulations to the happy couple. I have not seen that the Emperor of Austria has followed their example, and how far the

contemplated union is to effect the political relations of south eastern Europe remains to be seen.

Turkey and Crete. No settlement has yet been arrived at, but everything points to the former having to yield.

Spain and Cuba. Everything points in the direction I indicated some weeks ago. Revolution is not confined to Cuba. It is raising its hydra head in Spain itself. At Barcelona, Valencia and other centres, the Government has enough to do to keep down a feeling of widespread rebellion, while in Cuba yellow fever and floods are lending valuable aid to those who have risen against the Spanish Government. It is deplorable to read the accounts of the present state of that once prosperous island. Her chief planting interests—the backbone of her once considerable trade—sugar and tobacco, ruined. In the case of sugar the trade can never again be revived. The able correspondent of the "Times" at Havana writes: "In 1894 the world's production of sugar was 8,100,000 tons, 4,976,000 of this being obtained from beet-root and 3,125,000 from cane. Cuba produced 13 per cent. of the total amount. For 1896, in Cuba, the total of the crop just now finished is only 200,000 tons, or say 2½ per cent. of the world's production." "Nine out of every ten people in Cuba either directly or indirectly, obtain their means of livelihood from the sugar industry. The ruin of this industry means the ruin of the majority of the merchants, estate owners, brokers, retail dealers, farmers and, indeed, nearly every body."

The writer then points out that the future salvation of Cuba depends on its becoming by "purchase or otherwise," a state of the American Union. But here Spanish pride comes in.

ONLY A LITTLE AT A TIME.

THERE are sound objections to one's knowing too much about his own body. I am going to tell you what they are; not to-day, but soon. To make sure of them you will have to watch these articles sharply in the newspapers. Yet we should know a little; and a fraction of that little I will serve up now. Please favour me with your attention.

Right across the middle of the body is a large, thin, flat muscle, stretched like a canvas awning—the diaphragm. By it you are divided into two large storeys or compartments. The upper one contains the heart and lungs, the lower one contains (chiefly) the stomach, the intestines, and the liver. The most painful (internal) diseases occur downstairs, the least painful upstairs.

The entire right side of the lower compartment, from the top down to the short ribs, is filled by the liver which is suspended to a mere point of the diaphragm and shakes about with every movement you make.

Now, from the location of the liver we have a word used for ages to express one of the most unhappy conditions a human being can fall into—the word *hypochondria* (often abbreviated to "*hypo*"), the word meaning *under the cartilages*.

"For seven years," writes a correspondent, "I suffered from complaint of the liver. I was very bilious, my skin was sallow and dry, and the whites of my eyes yellow. I had much pain and weight at my right side, and was constantly depressed and melancholy. It seemed to be out of my power to take a hopeful or cheerful view of anything. The effect of this complaint on the mind was one of the aspects of it hardest to bear."

"I had lost my natural appetite, and ate to support life; but there was no more any genuine relish for food or drink. The bad taste in my mouth made all that I took taste bad. Sometimes I would be taken sick and throw up all I had eaten; and after a meal, no matter how slender and simple, I was troubled with fulness and pain at the chest. I used many kinds of medicines and while some of them may have relieved me for the moment, none conferred any lasting benefit, and I was soon as bad as ever."

"In March, 1892, I read in a small book of what Mother Seigel's Curative Syrup had done in cases similar to mine, and was especially interested in the account given in the book of the nature and duties of the liver, and its disorders. I got a bottle of the Syrup from Boots' Drug Stores, and after taking it a few days felt quite like a new man. It seemed to correct my stomach and liver and clear my system of all bile; and it left me in capital health. Since that time I have kept Mother Seigel's Syrup in the house as a family medicine and have commended it to all my friends as the best known cure for ailments like the one from which I suffered so miserably and so long. You can use this statement as you like. (Signed) John Gent, 59, Coventry Road, Bulwell, Nottingham, March 21st, 1895."

"In the spring of 1891," writes another, "I found myself in bad health. I had no appetite, and the little I did eat did me no good, gave me no strength. I had great pain and weight at the chest and right side, and my skin turned sallow and dry. My kidneys also acted badly, and from time to time I had attacks of gravel; and cold, clammy, weakening sweats broke out all over me. Being only seventeen years old when the trouble began I was greatly alarmed and anxious. No doctor was able to help me, and I continued thus for over three years. In June, 1894, I began to use Mother Seigel's Syrup and soon felt better, lighter, and more cheerful. And by taking it a few weeks longer I recovered my health and strength. Since then, when I have any stomach, liver, or kidney symptoms I resort to Mother Seigel's Syrup and it never fails to set me right. You can publish this letter. (Signed) C. Hanson, 6, New Inn Lane, Gloucester, May 31st, 1895."

The stomach, the liver, and the kidneys are all connected parts of the food and digestive system. When disordered (usually through torpidity of the stomach) they cripple the body and throw a gloom as of night over the mind. On the earliest signs of anything wrong with them use Mother Seigel's Syrup at once.

Sir George Chesney Memorial Committee.

CHAIRMAN :

General Sir Henry W. Norman.

MEMBERS :

The Marquess of Lansdowne, Field Marshal Lord Roberts, Mr. George Allen, Colonel Sir J. Ardagh, Sir Stewart Bayley, Mr. William Blackwood, Sir Edward Braddon, Rev. A. G. Butler, Colonel Sir G. S. Clarke, General Sir E. Colten, Sir Auckland Colvin, Sir Julian Danvers, General C. H. Dickens, Sir Mortimer Durand, General Sir W. Stirling Hamilton, Captain Hext, R. N., Mr. A. P. Howell, Sir W. W. Hunter, Lieut.-Genl. McLeod Innes, General Sir Allen Johnson, Sir H. S. King, M. P., Mr. A. Lawrence, General Sir R. Low, Sir Alfred Lyall, General Sir O. Newmarch, Sir Andrew Scoble, Field Marshal Sir Lintorn Simmons, Field Marshal Sir Donald Stewart, General R. Strachey, General Sir A. Taylor, Mr. Meredith Townsend, Mr. W. C. Unwin, General Sir George White and General Sir E. Williams.

Memorial

TO THE LATE

SIR GEORGE CHESNEY, K.C.B., R.E., M.P.

A Meeting was held, on the 24th April, at the Royal United Service Institution, of some of the friends of the late Sir George Chesney, to consider the question of the commemoration of his distinguished services as Soldier, Administrator, Statesman, and Author. General Sir Henry Norman presided, and was supported by Field Marshals Sir Lintorn Simmons and Sir Donald Stewart, and other friends of Sir George Chesney. To carry out the object of the Meeting, a General Committee was formed, which included the gentlemen then present, and in addition, the Marquess of Lansdowne, Field Marshal Lord Roberts, General Sir George White, Sir Andrew Scoble, Sir Alfred Lyall, Sir H. S. King, Sir W. W. Hunter, Mr. Meredith Townsend, General Richard Strachey, Mr. William Blackwood, and others.

The form the Memorial should take was left for the future consideration of the Committee, as it would depend on the amount subscribed, but the suggestions tended towards a bust of Sir George for the India Office, and a medal for valuable contributions to Military Literature. It was resolved to limit each subscription to a maximum of three guineas.

Subscriptions will be received by Lieutenant-General McLeod Innes, 9, Lexham Gardens, Cromwell Road, London, W.

COMMITTEE FOR INDIA :

His Excy. General Sir George White, V.C., G.C.I.E., K.C.B., the Hon'ble Major-General Sir E. Colten, K.C.I.E., Lieutenant-General Sir W. S. A. Lockhart, K.C.B., K.C.S.I., His Excy. Lieutenant-General Sir C. Mansfield Clarke, K.C.B., Major-General J. Duncan, Major-General G. E. L. S. Sanford, C.B., C.S.I., Major-General G. de C. Morton, C.B., Major-General A. R. Badcock, C.B., C.S.I., Brigadier-General W. G. Nicholson, C.B., Captain J. Hext, C.I.E., R.N., Colonel W. S. S. Bisset, C.I.E., R.E., Colonel T. Deane.

Honorary Secretary :
Colonel T. Deane,
Simla.

Subscriptions will be received, in India, by Messrs. King, King & Co., Bombay ; Messrs. King, Hamilton & Co., Calcutta ; and by the Alliance Bank, Simla, and its branches at Calcutta, Cawnpore, Agra, Ajmere, Darjeeling, Lahore, Murree, Mussoorie, Rawal Pindi and Umballa. Subscriptions are limited to a maximum of Rs. 32 in India.

By order of the Committee,
T. Deane, Col.,
Hony. Secy.

Simla, 18th July, 1896.

POSTSCRIPT.

After paying the expenses of the publication, the surplus will be placed wholly at the disposal of the family of the deceased man of letters.

Orders to be made to the Business Manager, "An Indian Journalist," at the Bee Press, 1, Uckoor Dutt's Lane, Wellington Street, Calcutta.

OPINION ON THE BOOK.

It is a most interesting record of the life of a remarkable man.—Mr. H. Bouington Smith, Private Secretary to the Viceroy, 5th October 1895.

Dr. Mookerjee was a famous letter-writer, and there is a breezy freshness and originality about his correspondence which make it very interesting reading.—Sir Alfred W. Corfit, K.C.L.R., Director of Public Instruction, Bengal, 26th September, 1895.

It is not that amid the pressure of his pressing official duties an English Civilian can find either time or opportunity to pay so graceful a tribute to the memory of a native personality as F. H. Skrine has done in his biography of the late Dr. Surendra Chunder Mookerjee, the well-known Bengal journalist (Calcutta: Thacker, Spink and Co.); nor are there many who are more worthy of being thus honoured than the late Editor of *Reis and Rayyet*.

We may at any rate cordially agree with Mr. Skrine that the story of Mookerjee's life, with all its lights and shadows, is pregnant with lessons for those who desire to know the real India.

No weekly paper, Mr. Skrine tells us, not even the *Hindoo Patriot*, in its pioneer days under Kristodas Pal, enjoyed a degree of influence in any way approaching that which was soon attained by *Reis and Rayyet*.

A man of large heart and great qualities, his death from pneumonia in the early spring of the last year was a distinct and heavy loss to Indian journalism, and it was an admirable idea on Mr. Skrine's part to put his life and letters on record.—*The Times of India*, (Bombay) September 30, 1895.

It is rarely in the life of an Indian journalist becomes worthy of publication; it is more rarely still that such a life comes to be written by an Anglo-Indian and a member of the Indian Civil Service. But, it has come to pass that in the land of the Bengali Barons, the life of at least one man among Indian journalists has been considered worthy of being written by an Englishman.—*The Madras Standard*, (Madras) September 30, 1895.

The late Editor of *Reis and Rayyet* was a profound student and an accomplished writer, who has left his mark on Indian journalism. In that he has found a Civilian like Mr. Skrine to record the story of his life he is more fortunate than the great Kristodas Pal himself.—*The Tribune*, (Lahore) October 2, 1895.

The career of "An Indian Journalist" as described by F. H. Skrine of the Indian Civil Service is exceedingly interesting.

Mookerjee's letters are models of pure diction which is heightened by his nervous style.

The life has been told by Mr. Skrine in a very pleasant manner and which should make it popular not only with Bengalis but with all those who are able to appreciate merit unclouded by ostentation and eagerness unspoiled by harshness.—*The Muhammadan*, (Madras) Oct. 5, 1895.

S. DASSEX & CO.,

Manufacturers, Importers, Repairers and Tuners of all sorts of Harmoniums, Organs and Pianos, &c., 30, Colootollah Street, Calcutta, import materials direct from England and guarantee the best workmanship and finish; are the express manufacturers of

Saraswati Flute :

Box Harmoniums 3 octaves 3 stops, 1 set of reed, Rs. 35; 3 octaves, best quality, Rs. 40; 3 octaves 4 stops, 2 sets of reed, Rs. 75.

SPECIFICS

for all ordinary diseases, like Fever, Cough, Asthma, Phthisis, Diabetes, &c., including diseases brought on by irregularities of kinds. Catalogues, containing full accounts of diseases and remedies, are transmitted on application. Prescriptions, with or without medicines, sent to every part of India and Ceylon, Cape Colony, and the British Isles, on receipt (by post) of full accounts of diseases.

Thousands of unsolicited Testimonials from every quarter.

CATARRH,

Hay Fever, Catarrhal Deafness.

A NEW HOME TREATMENT.

Sufferers are not generally aware that these diseases are contagious, or that they are due to the presence of living parasites in the lining membrane of the nose and eustachian tubes. Microscopic research, however, has proved this to be a fact, and the result is that a simple remedy has been formulated whereby these distressing diseases are rapidly and permanently cured by a few simple applications made at home by the patient once in two weeks. A pamphlet explaining this new treatment is sent on receipt of 2½d stamp by A. HUTTON DIXON, 43 & 45 East Bloor St. TORONTO, Canada.

VOL. XV.

CALCUTTA, SATURDAY, SEPTEMBER 19, 1896.

WHOLE NO. 743.

THE MAHAPRASTHANIKA PARVA OF THE MAHABHARATA.

[I now offer to the American public, through these pages, with all gratitude and attachment, this first, and faithful, version of the "Book of the Great Journey," being the seventeenth Parva of the Mahabharata.—Edwin Arnold.]

"THE GREAT JOURNEY."

To Narayen, Lord of lords, be glory given,
To sweet Saraswati, the queen in heaven,
To great Vyasa, eke, pay reverence due,
That this high story may its course pursue.

Then Janmejaya prayed: "O Singer, say
What wrought the princes of the Pandavas
On tidings of the battle so ensued,
And Krishna, gone on high?"

Answered the Sage:

"On tidings of the wreck of Vrishni's race,
King Yudhishtira of the Pandavas
Was minded to be done with earthly things,
And to Arjuna spake: 'O noble Prince,
Time endeth all; we linger, noose on neck,
Till the last day tightens the line, and kills.
Let us go forth to die, being yet alive.'
And Kunti's son, the great Arjuna, said:
'Let us go forth to die!—Time slayeth all.
We will find Death, who seeketh other men.'
And Bhimasena, hearing, answered: 'Yea!
We will find Death!' and Sahadev cried: 'Yea!
And his twin brother Nakula: whereat
The princes set their faces for the Mount.

"But Yudhishtira—ere he left his realm
To seek high ending—summoned Yuyutsu,
Surnamed of fights, and set him over all,
Regent, to rule in Parikshita's name
Nearest the throne; and Parikshita king
He crowned, and unto old Subhadra said:
'This, thy son's son, shall wear the Kuru crown,
And Yadu's offspring, Vajra, shall be first
In Yadu's house. Bring up the little prince
Here in our Hastinpur, but Vajra keep
At Indraprasth; and let it be thy last
Of virtuous works to guard the lads, and guide.'

"So ordering ere he went, the righteous king
Made offering of white water, heedfully,
To Vasudev, to Rama, and the rest,—
All funeral rites performing; next he spread
A funeral feast, whereat there sate as guests
Narada, Dwaipayana, Bharadwaj,
And Markandeya, rich in saintly years,
And Yajnavalkya, Hari, and the priests:
Those holy ones he fed with dainty meats
In kingliest wise, naming the name of Him
Who bears the bow; and—that it should be well

For him and his—gave to the Brahmanas
Jewels of gold and silver, lakhs on lakhs,
Fair brodered cloths, gardens and villages,
Chariots and steeds and slaves.

"Which being done,—

O Best of Bharat's line!—he bowed him low
Before his Guru's feet,—at Kripa's feet,
That sage all honoured,—saying, 'Take my prince;
Teach Parikshita as thou taughtest me.
For hearken, ministers and men of war!
Fixed is my mind to quit all earthly state.'
Full sore of heart were they, and sore the folk,
To hear such speech, and bitter went the word
Through town and country, that the king would go;
And all the people cried, 'Stay with us, Lord!
But Yudhishtira knew the time was come,
Knew that life passes and that virtue lasts,
And put aside their love.

"So, with farewells

Tenderly took of lieges and of lords,
Girt he for travel, with his princely kin,
Great Yudhishtira, Dharma's royal son.
Crest-gem and belt and ornaments he stripped
From off his body, and for brodered robe
A rough dress donned, woven of jungle-bark;
And what he did—O Lord of men!—so did
Arjuna, Bhima, and the twin-born pair,
Nakula with Sahadev, and she—in grace
The peerless—Draupadi. Lastly these six,
Thou son of Bharata! in solemn form
Made the high sacrifice of Naishtiki,
Quenching their flames in water at the close;
And so set forth, midst wailing of all folk
And tears of women, weeping most to see
The Princess Draupadi—that lovely prize
Of the great gaming, Draupadi the Bright—
Journeying afoot; but she and all the five
Rejoiced, because their way lay heavenwards.

"Seven were they, setting forth,—princess and king,
The king's four brothers, and a faithful dog.
Those left Hastinapur; but many a man,
And all the palace household, followed them
The first sad stage; and, oftentimes prayed to part,
Put parting off for love and pity, still
Sighing 'A little farther!'—till day waned;
Then one by one they turned, and Kripa said,
'Let all turn back, Yuyutsu! These must go.'
So came they homewards, but the Snake-King's child,
Ulupi, leapt in Ganges, losing them;
And Chitrangad with her people went
Mournful to Manipoor, whilst those three queens
Brought Parikshita in.

Subscribers in the country are requested to remit by postal money orders, if possible, as the safest and most convenient medium, particularly as it ensures acknowledgment through the Department. No other receipt will be given, any other being unnecessary and likely to cause confusion.

"Thus wended they,

Pandu's five sons and loveliest Draupadi,
Tasting no meat, and journeying due east,
On righteousness their high hearts fed, to heaven
Their souls assigned; and steadfast trod their feet,
By faith upborne, past nullah, ran, and wood,
River and jheel and plain. King Yudhishtir
Walked foremost, Bhima followed, after him
Arjuna, and the twin-born brethren next,
Nakula with Sahadev; in whose still steps—
O Best of Bharat's offspring!—Draupadi,
That gem of women, paced, with soft, dark face,—
Beautiful, wonderful,—and lustrous eyes,
Clear-lined like lotus-petals; last the dog
Following the Pandavas.

"At length they reach

The far Lauchityan Sea, which foameth white
Under Udayachala's ridge.—Know ye
That all this while Nakula had not ceased
Bearing the holy bow, named Gandiva,
And jewelled quiver, ever filled with shafts
Though one should shoot a thousand thousand times.
Here—broad across their path—the heroes see
Agni, the god. As though a mighty hill
Took form of front and breast and limb, he spake.
Seven streams of shining splendour rayed his brow,
While the dread voice said: 'I am Agni, chiefs!
O sons of Pandu, I am Agni! Hail!
O long-armed Yudhishtira, blameless king,—
O warlike Bhima,—O Arjuna, wise,—
O brothers twin-born from a womb divine,—
Hear! I am Agni, who consumed the wood
By will of Narayan for Arjuna's sake.
Let this your brother give Gandiva back,—
The matchless bow: the use for it is o'er.
That gem-ringed battle-discus which he whirled
Cometh again to Krishna in his hand
For avatars to be; but need is none
Henceforth of this most excellent bright bow,
Gandiva, which I brought for Partha's aid
From high Varuna. Let it be returned.
Cast it herein!'

"And all the princes said,

'Cast it, dear brother!' So Arjuna threw
Into that sea the quiver ever-filled,
And glittering bow; then, led by Agni's light,
Unto the south they turned, and so southwest,
And afterwards right west, until they saw
Dwaraka, washed and bounded by a main
Loud-thundering on its shores; and here—O Best!—
Vanished the God; while yet those heroes walked,
Now to the northwest bending, where long coasts
Shut in the sea of salt, now to the north,
Accomplishing all quarters, journeyed they;
The earth their altar of high sacrifice,
Which these most patient feet did pace around
Till Meru rose.

"At last it rose! These Six,

Their senses subjugate, their spirits pure,
Wending alone, came into sight—far off
In the eastern sky—of awful Himavan;
And, midway in the peaks of Himavan,
Meru, the mountain of all mountains, rose,
Whose head is heaven; and under Himavan
Glared a wide waste of sand, dreadful as death.

DEAFNESS COMPLETELY CURED! Any person suffering from Deafness, Noises in the Head, &c., may learn of a new, simple treatment, which is proving very successful in completely curing cases of all kinds. Full particulars, including many unsolicited testimonials and newspaper press notices, will be sent post free on application. The system is, without doubt, the most successful ever brought before the public. Address, Aural Specialist, Albany Buildings, 39, Victoria Street, Westminster, London, S. W.

"Then, as they hastened o'er the deathly waste,
Aiming for Meru, having thoughts at soul
Infinite, eager,—lo! Draupadi reeled,
With faltering heart and feet; and Bhima turned,
Gazing upon her; and that hero spake
To Yudhishtira: 'Master, Brother, King!
Why doth she fail? For never all her life
Wrought our sweet lady one thing wrong, I think.
Thou knowest, make us know, why hath she failed?'

"Then Yudhishtira answered: 'Yea, one thing.
She loved our brother better than all else,—
Better than heaven: that was her tender sin,
Fault of a faultless soul; she pays for that.'

"So spake the monarch, turning not his eyes,
Though Draupadi lay dead—striding straight on
For Meru, heart-full of the things of heaven,
Perfect and firm. But yet a little space
And Sahadev fell down, which Rhima seeing,
Cried once again: 'O King, great Madri's son
Stumbles and sinks. Why hath he sunk?—so true,
So brave and steadfast, and so free from pride!'

"'He was not free,' with countenance still fixed,
Quoth Yudhishtira; 'he was true and fast
And wise, but wisdom made him proud; he hid
One little hurt of soul, but now it kills.'

"So saying, he strode on, Kunti's strong son
And Bhima, and Arjuna followed him
And Nakula, and the hound, leaving behind
Sahadev in the sands. But Nakula,
Weakened and grieved to see Sahadev fall—
His dear-loved brother—lagged and stayed; and then
Prone on his face he fell, that noble face
Which had no match for beauty in the land,—
Glorious and godlike Nakula! Then sighed
Bhima anew: 'Brother and Lord! the man
Who never erred from virtue, never broke
Our fellowship, and never in the world
Was matched for goodly perfectness of form
Or gracious feature,—Nakula has fallen!'

"But Yudhishtira, holding fixed his eyes,—
That changeless, faithful, all-wise king,—replied:
'Yea, but he erred. The godlike form he wore
Beguiled him to believe none like to him
And he alone desirable, and things
Unlovely to be slighted. Self-love slays
Our noble brother. Bhima, follow! Each
Pays what his debt was.'

(To be continued.)

—The International Review.

WEEKLYANA.

REGULATIONS respecting the examination of candidates for the Civil Service of India to be held in August 1897, are published in the *Gazette of India* of September 12, 1896. Copies may be obtained on application to the Secretary to the Government of India, Home Department.

THE same *Gazette* publishes the further correspondence, in continuation of that published with the notification in the Finance and Commerce Department No. 1636-A., dated the 10th April 1896, with Her Majesty's Secretary of State for India, relating to the proposal to take power from the Legislature to raise from eight to ten crores of rupees the limit up to which the paper currency reserve may be invested in Government securities. Lord George Hamilton, considering that the increase in the average circulation of the paper currency is sufficient to justify the proposed step, assents to the increase. He is also "of opinion that, in such a measure, the best course is to deal with the paper currency on its own merits, and not to allow the question of the proper reserve to be dependent on the possible effect which the addition of two crores of rupees to the supply in the market may have on the exchange value of the coin."

IN New York, during the great heat, the death-rate in one week was 18.65 per thousand, representing an aggregate of 1,710 deaths, including 651 from sunstroke. There were 552 deaths of children under five years of age, chiefly due to the heat. The heat mortality, says the *Standard* correspondent, is three times as much as the largest previous record. In St. Louis the mortality exceeded that caused by the recent tornado. The *New York Herald* estimates the loss in work, wages and trade in New York, Philadelphia, Chicago, and St. Louis at an aggregate of 25,000,000 dols.

**

WHAT will the rifle be that will displace the weapons now in use in different countries? The question is asked and answered by General Wille, a German officer who has made a study of the armament of troops.

"The rapidity of shooting is quite sufficient, and it would be dangerous from the point of view of the supply of ammunition to wish it any increased rapidity. Military reformers must look to the automatic rifle as the future weapon, because it averts all mechanical operation in loading, permits the soldier to concentrate the whole of his attention on the object and to take calm aim, suppresses the recoil, and renders misfires impossible. Up to the present automatic rifles are of four distinct systems—first, the barrel slipping backwards; second, the fixed barrel; third, the fixed barrel with a parallel tube; and fourth, the barrel moving forwards. The most remarkable types are the Maxim, the Mannlicher, and the C-ii, the last of which has just been tested in Italy with good results. In these weapons the force of the recoil is employed for charging and closing the breech, so that the firer has only to let off the shot in order to again load the weapon, so that the number of shots discharged without an effort is precisely the same as the total contents of the magazine. The mechanism of the automatic rifle is simplicity itself, and the only part of it that shows any strain is the springs. From recent experiments in Austria these were in some cases worn out after 10,000 discharges, but in others they were still good after as many as 40,000."

**

THE *Army and Navy Gazette* takes exception to the appointment of Sir Frederick Carrington at the Cape while retaining his own Command at Gibraltar:—

"The position of Sir Frederick Carrington in Mitabeleland is in certain senses unique, and we question very much whether the precedent established in his case is one that is either wise or expedient. Against the employment of General Carrington not a word can be said. His qualifications for the duties entrusted to him cannot be questioned; indeed, he may be pronounced the very man for the situation, thoroughly acquainted as he is with the peculiarities of South African warfare, of which he has had exceptional experience. But Sir Frederick before he left for the Cape was commanding the brigade at Gibraltar; in that position he has not yet been succeeded. From all appearances the Matabele rebellion is likely to drag on for some time. Meanwhile the duties of General Carrington's Gibraltar command are being performed by deputy. This is an arrangement which seems open to serious objection. The system of dual commands has been very properly condemned. The War Office has even laid down that an officer shall not hold a dual commission in the Auxiliary forces, but in this case it has gone out of its way to stultify itself, and by doing so has done a rather serious injustice. There are several major-generals unemployed. What can be their feelings when they find one favoured individual relegating his legitimate duties to others week after week and month after month, and at the same time exercising an active command elsewhere with every prospect of gaining honours and distinction? It is calculated not only to cause discontent, but to create wrong impressions as to the judgment of those in high authority. The proceeding is, on the face of it, irregular; it is certainly unusual, and we are bound to admit that we agree with those who pronounce it—well, 'ridiculous.' Sir Boyle Roche laid it down as impossible that he, not being a bird, could be in two places at one time. The War Office clearly thinks that in certain circumstances a general officer to all appearances can."

**

THE famous chateau of Milmaison, every room of it reminding of Napoleon and Joséphine, is to be sold again. The prices paid for this property has varied in the most eccentric fashion. Joséphine bought it in 1798 for 160,000 fr. In 1826 a Swedish banker paid for it 250,000 fr. Queen Marie-Christine of Spain gave him 500,000 fr. for it in 1842; and Napoleon III. bought it for just three times the sum in 1861. The Duchesse d'Albufera, the last purchaser, bought the place for 271,000 fr. only two years ago. Her heirs have offered it to the market with the reserve price, for the chateau and estate, of 101,600 fr. The chateau is now in ruins.

**

THE Berlin correspondent of the *Times* telegraphs interesting experiments with X rays in Munich. A living human body was placed under the rays, and, with the aid of specially prepared tubes, observers were able to watch the action not only of the osseous parts of the body but also of the diaphragm, stomach and heart.

PRINCE Bismarck has justified his contemptuous remark about the Cretans that he took "less interest in Crete than in the smallest mound of earth in his garden," by quoting the Epistle of Titus, I. 12 and 13, in which St. Paul says:—

"One of themselves, even a prophet of their own, said, the Cretans are always liars, evil beasts, slow bellies. This witness is true, wherefore rebuke them sharply that they be sound in the faith."

**

THE total length of electric tramways in operation in Europe at the beginning of the present year, was 902 kiloms or 560 miles, stocked with 1,747 cars, against 700 kiloms or 435 miles and 1,236 cars at the beginning of 1895. Of this length, Great Britain possesses 109 kiloms or 67 miles, Germany 406 kiloms or 252 miles, and France 132 kiloms or 82 miles.

**

MR Mirquardt, the sole surviving passenger of the *Drummond Castle*, has joined the Thirteen Club. He had occupied berth 13 in the ill-fated vessel.

**

ABYSSINIA, according to M. Marcel, a French traveller, has three climates, according to the altitude above the sea. In the low country or valley, bananas, dates, indigo, cotton, and other tropical plants flourish; elephants, lions, giraffes, zebras and gazelles abound. The intermediate zone recalls the climate of Sicily or of Andalusia, in Spain. There is good pasture for flocks and herds in the highest region.

**

THE "*Glasgow Herald*" writes:

"The wasp waist is to be no longer in vogue. The Paris fashion-maker, so it is said, recently decided that the Grecian waist, with its generous proportions, is to be the fashionable standard. Since the announcement it is astonishing to note the rapidity with which the waists of women have grown larger. According to a Parisian *couturière*, many fashionable women's waists have expanded from four to six inches during a single flogging! Such are the wonders which Dame Fashion can perform with womankind."

**

THE *Hindoo Patriot* gives an account of the birth and death of the Native Press Association of Bengal, of which the editor of that journal was the president and the editor of the *Bengalee* the secretary.

"It came into existence shortly after the State prosecution of the *Bangabasi* newspaper and the object of the Association, to quote the words of the Resolution under which it was formed, was 'to protect, maintain and further by all legitimate means the lawful interests of the Native Press and to improve its tone and status; and to preserve moderation in the discussion of all public questions and to take all such measures as might be necessary to enable the Native Press to fulfil the important functions which belong to it as the educator of the people, the exponent of public opinion and the faithful interpreter between the rulers and the ruled.' Twenty-two Native newspapers joined the Association and it began under excellent auspices with the promise of the great and glorious future. The Bengal Government furnished the Association with official papers bearing on questions of public interest with the object of disseminating correct information through the medium of the Press and it was further ordered by the Bengal Government that each newspaper represented by the Association should be supplied with a free copy of the *Calcutta Gazette*—a concession which is, we believe, continued to the present day. But what was the result of this sympathetic attitude of the Provincial Government, this single-minded zeal and devotion of almost all the leading members of the Native Press of this Province? The character of the information furnished by Government was found fault with. The old and objectionable methods of vituperation and abuse were revived and the wholesome control which the Association was intended to exercise grew thin by degrees and beautifully less, till at last it was openly treated with contempt. One of the Vernacular Newspapers, which had been among the principal supporters of the movement, gave the Association the *coup de grace* by publishing in its columns a letter inciting the assassination of Sir Charles Elliott, and the conductors of the paper, with more loyalty than tact or good sense, forwarded we believe the letter to Sir Charles Elliott. The members of the Press Association could not agree amongst themselves as to what notice, if any, should be taken of the conduct of the offending journal, and then it became abundantly apparent that the Association was doomed to share the fate of the house divided against itself. What was the good of keeping up the Association if it failed to serve the purpose for which it had been established? Thus the Native Press Association died after a very short career and the only vestige of its past existence is to be found in the concession regarding the supply of the *Calcutta Gazette*."

A full history of the Association would be more instructive. Another such Native Association of the editors or their representatives of all the Presidencies that met at Delhi, during the Imperial Assemblage, was formed. It died as soon as born. All that we heard of it was that the then Maharaja of Cashmere received the members at a Durbar and presented them with *khilats*. We should like to know more of that society.

NOTES & LEADERETTES,
OUR OWN NEWS

&

THE WEEK'S TELEGRAMS IN BRIEF, WITH
OCCASIONAL COMMENTS.

THE Fenian Tynan, the notorious "Number One," has been arrested at Boulogne on warrant issued against him in 1882, as also Fenian Wallace at Rotterdam with a quantity of explosives, and Bell at Glasgow. A bomb laboratory has also been discovered at Antwerp. All these are supposed to be connected with the Fenian dynamite plot. It is rumoured that Nihilists had joined the Fenians, and that attempts on the life of the Tsar or Queen Victoria at Balmoral were meditated.

THE Armenian Revolutionary Committee has sent a circular to some of the embassies at Constantinople declaring that, unless all reforms are granted, a more serious demonstration than before will ensue. The cavalry patrols in the city have been increased. There was a false panic on the 15th. The streets were instantly cleared and all shops closed. An important discovery of explosives and documents has been made in the house of an Armenian at Scutari. Two of the leaders and several members of the Armenian Revolutionary Committee have been arrested and made confession, implicating others.

LORD Grey, Mr. Martin and Mr. Rhodes met the leading Chiefs in the Matopon Hills, on the 9th, and offered them peace if they would surrender their arms and the murderers of the white settlers. The Chiefs agreed, it is said, in admitting that they were beaten and weary of war, but needed time for a general surrender. Meanwhile, skirmishes continue in different parts. The Matabele prophet is desirous that the war against the British should be continued, and is preventing the Matabeles from retiring northward. The 4th Brigade of the Nile Expedition has arrived at Fereig, where the whole force has now assembled.

It is officially announced that eight of Dr. Jameson's officers discharged at Bow Street have been severely censured by the Adjutant-General.

THE balance of the last Chinese loan has been issued, and only half of it has been subscribed.

THE Armenian agitation against Turkey is assuming proportions which, if not early checked, will disturb the peace of Europe, and lead to dire consequences. The Sultan's rule may not be of the best. The Sublime Porte may not be always sublime, at times it may descend to be ridiculous, but it is not the scourge that it is painted. The Armenians are not the innocent lambs that they are made to appear. If the Turkish rule is hateful to them, it is of their own making. They invite chastisement. They must mend their ways before the Sultan can be called upon to be merciful. Taking advantage of the hour, Mr. Gladstone means to signalize himself once more by display of his hate for the Sick Man of Europe, whose presence in Christian Europe he cannot bear. He will make him die. If he could not make him dead while he himself had the upper hand in the United Kingdom, he is prepared to come out of his present retirement in old age and with recovered sight, but still blind with passion, to speak the Turk down and rouse against him the bitter and hostile feelings of Christian nations, including his own. A letter from him has appeared in which he describes the Sultan as a great assassin, and says that all remonstrance with him is useless unless the Powers intended to use coercion in case of need. Taking up the cue, Lord Rosebery, also in a letter, declares that the Turkish massacres are not a party question, but one of common humanity and that any responsibility in the matter lies less with the British Government than with the Powers of Europe, with whom the British Government does not appear to be very cordial at present. The subject has been taken up by the pulpit and the press of England, and meetings have been arranged in various parts of the country. Mr. Gladstone himself urged that a great meeting should be held at Liverpool, and offered to speak at that meeting. The Austrian papers

are alarmed at the agitation and bitterly accuse Great Britain of fomenting the present troubles. They further declare that any isolated action on the part of Great Britain in Turkey will be likely to end in her being expelled from Egypt. A letter has also appeared from Lord Hugh Cecil, who is staying with his father at Walmer, in which, while denouncing the government of the Sultan as infamous, he says it would mislead the Armenians if they were made to think that England alone was able to intervene on their behalf, and that there was no hope until the feeling abroad equals the excitement in England on the subject. The letter has been interpreted to be the sentiment of the father. We hope Lord Salisbury will be led by no factious outcry but will preserve his head, and maintain Great Britain's relations with Turkey, in the interests of both Great Britain and India. The death of the Sick Man will not be an ordinary end. The *Times*, we see, strongly deprecates the unchaining and passionate agitation, which, it says, will simply degenerate into a party warfare and armed intervention.

THE Bushire correspondent of the *Times of India* states that it is reported that the entire harem of the late Shah has been dismissed and the palaces are said to be almost empty of female occupants. The ladies have been enjoined to avoid contracting marriages with any civil or military officials, but they are free in their choice amongst the hordes of mullahs or priests and merchants.

IN his tour commencing on the 2nd November, when he leaves Simla at 10 A.M., and ending on the 10th December, when he arrives at Calcutta at 9-15 A.M., the Viceroy will be accompanied by the Countess of Elgin, Lady Elizabeth Bruce, Lord Bruce, the Hon'ble Robert Bruce, Mr. Cole, the Foreign Secretary, H. Bingham-Smith Esq., Private Secretary, Colonel A. Durand, C.B., Military Secretary, Brigade-Surgeon-Lieutenant-Colonel B. Franklin, C.I.E., Surgeon to the Viceroy, Captain S. H. Pollen, A.D.-C., Captain F. L. Adam, A.D.-C., Captain R. W. Morley, A.D.-C., F. W. Latimer, Esq., Assistant Private Secretary.

LEPERS are to be found in almost all European cities. They are numerous in Crete where they number 500; Norway has 800; Sweden 462; British India 100,000. The disease infests Indo-China, Tonquin, China, and Japan, as well as Hayti, Trinidad, Guinea, Venezuela, Brazil and Paraguay. The Leprosy Commission was of opinion that the disease was not increasing. There are, however, men who hold a contrary opinion. The Commission also thought that leprosy was distinct from syphilis, in so much that syphilis could not produce leprosy. A doctor tells us, that he has seen and treated cases of leprosy originating in the other disease. The symptoms were the same, though according to the bacillary theory there might be some points of difference.

WE are much obliged to Miss Manning, Honorary Secretary, National Indian Association, for the following letter dated August 26 and its enclosure:

"In your issue of July 25, you give a list of some of the Indian ladies who have visited England. As you desire to be informed of further names, I send a few which you do not appear to have included:

Madras.

Mrs. N. Subrahmanyam.
Miss Susan Rajah Gopaul.
Miss Annie Shunmugan.
Miss—Jagannadhan.
Mrs.—Chetti.
Miss Rose Govindarajulu.
Miss Gurdial Singh.

Bombay.

Bai Rukhmabai, M.D.
Mrs. Abbas Tyabji.
Mrs. Ali Akbar.
Miss Mary Sorabji.
Mrs. Hurry Chaud Chintamon.
Miss Chintamon.
Mrs.—Colah.
Miss Colah.
Mrs. Kharegat.
Miss Kharegat.
Mrs.—Dorabji.

Calcutta,
Mrs. Kadambini Ganguli.
Lahore,
Mrs. Seva Ram.
Miss—Singh.
Miss Mona Bose.
Miss Khoro Bose.
Miss Beno Bose. (Mrs. R. K. Mitter.)
Srimati Hardevi. (Mrs. Roshan Lal.)"

THE Commander-in-Chief had a nasty accident. He received a wound from his own horse and is doing well.

THE current number (Part XV) of the Englished "Charaka-Samhita," treats of the destruction of cities and towns brought about by insanitary conditions. Charak's great work is more a comprehensive treatise on hygiene than on medicine. It is addressed as much to laymen as to physicians by profession. It has interest for every one who wants to know the laws of health.

THE instinct of animals is not always unerring. *Cosmos* writes :

"Many persons still believe that the instinct of animals preserves them from certain accidents, and they never eat anything that is injurious to them. Well instructed persons have long known that in this regard animals are no better off than men. A chicken does not hesitate to drink paint ; a cow partakes of water in which bags containing nitrates of soda have been washed ; ducks strangle and choke in swallowing nails. M. Giraud, a veterinary of Bernewitz, now notes a fact that merits the attention of poultry farmers. He has observed numerous cases of poisoning in ducks following their feeding on caterpillars, especially those of the cabbage moth ; these caterpillars have been given to the fowls in mass or are found on the cabbage leaves furnished them for food. After from six to twenty hours, according to the number of caterpillars eaten, poisoning manifests itself by loss of appetite, great weakness, tottering steps, accompanied sometimes by symptomatic movements, finally by difficulty of breathing and often death, after an agony of variable duration, during which the beak and claws grow pale. The lesions disclosed by an autopsy consist chiefly in an inflammation of the digestive passages. The disease is not always fatal."

THE preliminary enquiry into the *Hitabadi* defamation case has ended in the court of the Chief Magistrate. Kavyabisharad Kaliprasanna has been committed to the sessions. The counsel for the prosecution took several days to complete his case. Mr. Pearson was patient and Mr. Palit thorough-going so as to leave no loophole of escape for the defence. The defendant, without cross-examining any of the witnesses for the prosecution and without examining any on his own behalf, at the close of the enquiry, made a statement which we give in full and which explains the attitude of the defence.

"In the Court of the Chief Presidency Magistrate, Calcutta,
The Queen-Empress (on the complaint of S. M. Kusum Kumari Maitra,
vs.
Kaliprasanna Kavyabisharad,
The statement of the above-mentioned Kali Prasanna Kavyabisharad,

Respectfully sheweth :—

That the above-mentioned S. M. Kusum Kumari Maitra through her husband has complained in this Court that I have defamed her by publishing a poem in my paper called the '*Hitabadi*' entitled '*Ruchibikai*' which poem appeared in the columns of the said newspaper on the 24th day of June of the current year.

2. That the prosecution alleges that the poem aforesaid contains allusions damaging to the character of the said S. M. Kusum Kumari Maitra inasmuch as it attributes according to the said prosecutrix sexual immorality to the said S. M. Kusum Kumari Maitra.

3. That I submit that the said poem was received by me from a contributor to my journal aforesaid the '*Hitabadi*' and that although I am in possession of the name and address of the said contributor I cannot consistent with my honour as an editor disclose the same unless the

prosecutrix guarantees that she will not prosecute the said contributor in a criminal Court.

4. That I submit that when I received the said poem and published it I could not make out and did not understand that the said poem contained any personal allusion to any body much less to the said S. M. Kusum Kumari Maitra and I further submit that I am still under the belief that the said poem does not refer to any body in particular.

5. That when on the 28th day of July of the current year I was informed by the complainant's Attorney Babu Bhupendra Nath Bose that the said poem was construed by the said S. M. Kusum Kumari Maitra and her friends to contain the aforesaid allusion to the character as wife of the said S. M. Kusum Kumari Maitra I at once published in the columns of the aforesaid newspaper the '*Hitabadi*' a paragraph stating therein that I had no idea when I gave a place in my journal to the said poem that the said poem contained any personal allusion to any body.

6. That I repeat what I have stated in the last two foregoing paragraphs namely—that I did not know at the time of the publication of the said poem that it contained any personal allusion to the said S. M. Kusum Kumari Maitra or to any body ; that I am still of the same opinion and that further if any person or persons has or have construed the said poem as a covert attack on the character as wife of the said S. M. Kusum Kumari Maitra I express my sincere regret for the same and I further enter a most emphatic denial that the said poem could possibly bear such a construction or that I ever did or could have desired or intimated that such a construction should be put thereon."

The jury will now decide how far the statement is to be accepted. We are afraid the matter is too far advanced for any compromise.

THE *Dainik* has made a full and ample apology and explained the circumstances under which, unknown to the editor and without his acquiescence, the outrageous acrostic appeared in its columns. It is believed the prosecution will accept the expression of sincere regret and let the contrite *Dainik* go.

THE Hon'ble P. Ananda Charlu writes, under date Lakeside, Egmore, Madras, 14th September 1896 :—

"Dear Sir,—Amid all the exacting professional work which, by accumulation during my absence among you and by subsequent engagements, took up nearly all my time and all my energies since my return from Calcutta, I have been looking forward, with a keen sense of pleasure, to the months which I shall have to spend among my kind and numerous friends and acquaintances in your city. But, within the few days past, I was deeply grieved to note that a feeling of bitterness has arisen among some good men there and that it has had the effect of creating a split among those who should stand together as a solid phalanx. That there should be an occasion for such a split is most to be deplored. That it should have been allowed to have become so wide as it is and threaten to grow wider still, is to be deplored no less. The proximate cause of it, so far as I can gather from the newspapers, seems to be the publication of a poem, in which Heramba and Upendra figure as proper names and Kusum as a common name and in which the unacceptability of one and the same flower to more than one image of worship is emphasised. At best, it may have been an innocent, though a misguided, piece of satire. The adoption of the less ordinary names of Heramba and Upendra, in preference to the commonly known terms, might have been accidental or intentional. But when it is found that it has had the effect of giving pain, even the satirist must veil his occupation gone and listen to offer the *amende honorable* ; and, if he does not spontaneously do so, it is the solemn and sacred duty of us all to get the poem withdrawn from the public and persuade or coerce its author to publicly apologise. This is putting the matter at the lowest point of wisdom. But when it is seriously taken to heart by respected men and when their grievance has enlisted the lively and active sympathies of such a noble and revered body as the Brahmos, it is criminal in us to allow one instant to pass, without putting a stop to the bitterness and closing the breach. Prudential considerations and regard for the vital and momentous interests of our country—if not simple common fairness between man and man—would seem to make this urgent.

I am sure that you are all keenly alive, as myself, to this urgency and that you are doing your level best to bring about an *entente cordiale*.

I share the opinion that the letter, published by Babu Dwarka Nath Gangooly, is far more an outburst of the deep sense of wrong, inflicted on the body worthy of deferential treatment, than the final manifesto of the Brahmos, as regards their attitude towards the coming Congress or its successors. I feel sure that when more than 95 per cent. of its adherents appeal through him to the body, of which he has come out as spokesman, that body is too just and too high-minded to hold its published word as irrevocable.

I shall sincerely rejoice to hear from you that the differences, under reference, have been composed and that the soreness, consequent thereon, is at an end."

DEAFNESS. An essay describing a really genuine Cure for Deafness, Singing in Ears, &c., no matter how severe or long-standing, will be sent post free.—Artificial Ear-drums and similar appliances entirely superseded. Address THOMAS KEMPE, VICTORIA CHAMBERS, 19 SOUTHAMPTON BUILDINGS, HOLBORN, LONDON.

THE Maharaja Holkar of Indore is out touring. After visiting the Punjab, he has strayed down to Calcutta. He arrived here on Thursday. There is no Governor to honour him, and he has been accommodated by the Maharaja of Durbhanga at his town residence in Middleton Street.

HERE are some extracts in translation from a letter, dated Audienne (Finistère), Brittany, of M. A. Barth, some of which cannot fail to be interesting and instructive. To begin with the *Journal des Savants*:

"There is no 'Editor,' or, as we say in French, 'Director' of the *Journal des Savants* (the 'Editor' with us means the 'publisher'). The *Journal des Savants*, which is published with the help of a special budget, is edited by a board of 16 members, recruited, as vacancies occur by death, from the members of the various academies composing the Institute. This board elects two of its members as President and Secretary, but neither the President nor the Secretary occupies the position of 'Editor.'"

We may mention that the distinguished writer of the letter belongs to the Academy of Inscriptions and *Belles Lettres*, and as a member of this Academy he is connected with the board of the *Journal des Savants*. He has succeeded M. Barthélemy Saint-Hilaire.

Regarding Dr. Jogender Nath Bhattacharya's recently published *Hindu Castes and Sects*, the great French *savant* writes:

"I have looked through the volume on Castes and Sects; it appears to me to be composed in a very judicious spirit, and to contain much useful information."

We are much flattered by M. Barth's opinion of the conduct of this journal. It is no small satisfaction to the disciples of the late Dr. Sambhu C. Mookerjee that they are able, against great odds, to preserve the reputation of the paper. The deceased had wished the paper to be continued after his death by those whom he had trained, and they regard it a sacred duty to carry out his injunctions.

"*Reis & Rayyet* reaches me very regularly. I see with pleasure that the paper keeps up to the level to which it was brought by the late Mr. Mookerjee, and I read it with exceeding interest."

The troubles of literary men are not nearly the same in France as in this country. Here, those of us who have the trick of the pen are always beseeched and besieged by a host of friends and acquaintances each having a literary task to be executed without any remuneration. Literary men are believed to have no wants. They may subsist on air. The state of things, in this respect, is slightly different in France.

"As regards the trouble and annoyance of incidental tasks from which we all suffer, and to which allusion has been made in our previous letters, I fear there may be a little misunderstanding between us. The question of money and remuneration does not enter into the matter. Orientalists—with us in France, at any rate—if they do not write for the general public, and if they have no official functions as professors, desire no pecuniary remuneration for their labours. If we had to live by our pens, and write on Hindu subjects, we should be restricted to a more severely abstemious diet than that of your own *Sanjasis*. What I complained of was the irksomeness of the interruptions, the impossibility of pursuing a work begun, without being constantly distracted by unforeseen tasks, little services to be rendered right and left."

As a Pandit, he is always for correcting mistakes. But how unlike the Pandits of this country! There is no trace of temper and how sweetly he establishes his point! This is true greatness and a great lesson. With strength of knowledge and humility of soul, he says:

"Another misunderstanding has occurred with reference to the expression 'matter of fact,' which has been rightly criticized (*R. & R.*, May 2, 1896) as incorrect in English. But it was in a French article that I employed it, and I could not foresee that you would translate the article into English. In French this English expression has been naturalized, and is used as I employed it. All languages borrow phrases of the sort in which the sense of the original is more or less maimed. In English, for instance, you have the French expression *nom de plume* for a literary pseudonym. Now, *nom de plume* does not exist in our language, which only recognizes *nom de guerre*. Still, an Englishman may quite properly make use of *nom de plume* in English, without being suspected, therefore, of not knowing French."

The concluding extract refers to his good self and his romantic residence on the sea shore.

"I have been here since the 11th of July and I think of remaining till the beginning of October, when I shall have to enter once more into the furnace of Paris life. Here I have perfect quiet. The sea breaks ten paces from my door and in rough weather the door has

to be shut if one wants to escape receiving a visit from the spray inside the house."

How we wish M. A. Barth may be long spared to France, to India and the world!

THE boy Maharaja of Burdwan, accompanied by his Raja father, makes a tour, in the Upper Provinces, in search of a wife.

REIS & RAYYET.

Saturday, September 19, 1896.

THE METROPOLITAN DRAINAGE NUISANCE.

CALCUTTA is a city of ruts, sinks, pits, drains, and undrained places. Instead of open passages for exit of rain and waste water, we have covered conduits for carrying sewage, waste water and rain. Whatever the convenience of underground drains in temperate or cold climates, in countries within the tropics they have some special disadvantages. Intense heat causes putrefaction to set in soon enough in the contents of covered drains. The result of the decomposition is the gases deleterious to health. The mischief may be removed by additional works, but cost stands in the way. Scientific opinion is not quite against a river receiving the sewage of a city at a safe distance, if there be no other outlet. The swift flow of a river can carry away the sewage and storm water partially disinfected, while the germicidal power of the rays of the sun makes them harmless to places lower down its course. If any other more convenient method of draining a city cannot be found, the question of river pollution cannot arise. Mr. G. C. Frankland, a chemist of repute, thus wrote in *Nature* :—

The bactericidal action of light is perhaps of most general hygienic significance in connection with the fate of micro-organisms in water, and there is ample field open for investigation in this direction, which so far has been little explored. It is, therefore, with especial interest that we note Prof. Buchner's important contribution to this subject in the *Archiv für Hygiene*. The title of the paper ('Ueber den Einfluss des Lichtes auf Bacterien und über die Selbstreinigung der Flüsse') already indicates that the practical aspect of the question has been considered, and indeed several experiments have been planned and carried out with the object of ascertaining what is the part played by sunshine in the alleged bacterial purification which takes place in river water during its flow.

In the first series of experiments samples of boiled tap-water were inoculated with three drops of broth cultures of the typhoid bacillus, *B. coli communis*, and *B. pyocyaneus* respectively. The typhoid bacilli, even in diffused daylight, were reduced in numbers from 7,400 per c. c. to start with, to 5,000 at the end of one

The Indian Association for the Cultivation of Science.

210, Bow-Bazar Street, Calcutta.

(Session 1896-97.)

Lecture by Bahu Rajendra Nath Chatterjee, M.A., Wednesday, the 23rd Inst., at 5-30 P.M. Subject: Pumps.

Lecture by Dr. D. N. Chatterjee, B.A., M.B., C.M., Thursday, the 24th Inst., at 5-30 P.M. Subjects: Echinodermata.

Lecture by Dr. Mahendra Lal Sircar, Friday, the 25th Inst., at 7 P.M. Subject: Change of State by Heat.

Lecture by Bihu Girish Chandra Bose, M.A., F.C.S., M.R.A.S., &c. Saturday, the 26th Inst., at 5-30 P.M. Subject: Morphology—Flowers (continued).

Lecture by Dr. Nilratan Sarkar, M.A., M.D., Saturday, the 26th Inst., at 6-30 P.M. Subject: Histology—Bone, Muscle.

Admission Fee, Rs. 4 for Physics, and Rs. 4 for Chemistry; Rs. 6 for both Physics and Chemistry; Rs. 4 for Physiology; Rs. 4 for General Biology; Rs. 6 for complete course of Physiology and Biology. The charge for a single lecture is 4 Annas.

MAHENDRA LAL SIRCAR, M.A.,

Sept. 19, 1896.

Honorary Secretary.

day, whilst on the second day none whatever were found. The *B. coli communis* sample had only 220 left on the third day, out of 22,600 at the commencement of the experiment, and was sterile on the fourth day; the *B. pyocyaneus* was, however, hardly affected at all during four days' exposure to diffused light.

The direct rays of the sun, however, were far more destructive. Thus about 30 c. c. of a sample of typhoid-infected water, placed in glass dishes and exposed to sunshine, contained no typhoid organisms at the end of six hours, and similar results were obtained with the *B. pyocyaneus*.

In all these experiments the perfectly admissible objection could be urged that the diminution in the numbers present might, at any rate in part, be attributed to a process of starvation in consequence of the absence of food-material, inasmuch as a marked decrease was also observed in those samples kept in the dark. To meet this objection, in the next series unsterile water was used, and to a litre and a half as much as 1 c. c. of the broth-culture of the particular organism was added, thus affording ample provision, both in light and darkness, for the support of the bacteria under observation. Instead of a decrease taking place in the samples kept in the dark, the numbers rose; on the other hand, in the samples placed in the sunshine, three hours' exposure in the case of the typhoid, colon, and pyocyaneus bacilli brought about their entire destruction, thus placing beyond doubt the direct bactericidal action which had taken place during insolation."

The depth of water to which the sun can penetrate to exercise its germicidal action, has also been ascertained by Professor Buchner, in the Starnberger Lake, near Munich. It has been found that that action is equally effective down to a depth of 1·6 meter. At 2·6 in, the action may be much less apparent, and, in fact, is only just perceptible. The antiseptic potency of the sun's rays ceases long before the light becomes affected by the depth of water it has to traverse. This shows the difference of action of the heat and light rays. The heat rays only possess the bactericidal power. In Germany much stress has been laid on the self-purification of water on the basis of these and other experiments. The advisability of permitting the sewage of such a large city as Cologne to pass untreated into the Rhine, has been publicly discussed. The bactericidal power of solar heat may safely be taken to be more effectual in countries between the tropics and especially those near the equator, than in temperate climes. Calcutta had no need of discharging its sewage into the river Hooghly. Its level inclines to the opposite direction, that is, towards the Salt water Lake. For this reason, it was much safer to empty its liquid refuge into the Circular Canal or into the Salt water Lake. On account of representations from boat passengers in the canal, the local Government objected to its use by the Calcutta Municipality as the receptacle of sewage. In 1881, the Makalpota sluice had, therefore, to be cut as a sufficient outlet for all purposes. The creation of this despicable channel raised fresh plague lines on its two sides. In 1886, municipal Calcutta was enlarged for better sanitation of the added area. If segregation is to be accepted as one of the best laws in hygiene, this aggregation was no doubt a mischief. The principle of isolation could have been preserved by joining Tolly's Nulla with the Circular Canal at the nearest points around this city. Such an additional canal would have prevented the silting of the Circular canal to a great extent and been an answer to the complaint of the boat passengers. We do not think it is even now too late to cut this canal, if it is deemed advisable, which, we believe, will be less costly than the second channel proposed by Mr Hughes. The town having been, for sanitary purposes, extended on the north, east and south, may, whatever the Police Commissioner may say to the contrary, as enlarging the ways of escape of bad characters, be well extended to the other side of the Hooghly and further to the south of the canal. This, instead of affecting,

may tend to increase the salubrity of the city. For, having water courses on all sides, the flushing of drains would be easier.

We are disposed to think that the many conveniences of sewers have been more than neutralized by sewer gases more deleterious than smells from sinks and open drains. They contain sulphuretted and carburetted hydrogen, chlorine, ammonia, etc., and are highly noxious to health. They rise to the uppermost part of drainage pipes and, most of them being soluble, can be mixed with large quantities of water. If the running water be surcharged with these gases, their solution becomes impracticable. They remain confined without any way of escape. In drains of a foot or less in diameter, the sewer gases cannot remain in a free state without being dissolved by the running water. They are either dissolved or forced by the water current into the larger drains, the receivers of pipe sewage. The gully pits branching out from the main drains do not receive this kind of flushing. Occasionally they are cleared of their silt deposit, but never flushed. The road side pits, having sufficient outlets for receiving rain water, act injuriously by vomiting sewer gases.

The drains have the aid of running water to dissolve the gases, only during day time, that is, from six in the morning to six in the evening. At night, the whole aspect is changed. There is no water and no solution of gases. All the drains, large and small, are then full of pestilential vapours which try to make a way through any hole or crevice if there be any. Badly joined pipes produce the mischief day and night, from the escape of water or gas through the holes. For this reason earthenware glazed pipes are not considered sufficient protection, especially as they are joined by clay or Portland cement. Iron pipes with caulked joints are safer. But the cost is prohibitive.

The gases also find a way, for mischief, through the road side pits. Almost all night one can hear the bubbling of the gases, through a small quantity of water remaining in the pits. The water being surcharged with them makes room for their easy escape. They can be collected in glass jars and tested.

These noxious exhalations make the night terrible in Calcutta. Walking in the streets especially the narrow lanes after nine or ten o'clock, is injurious to health. The danger increases as the night advances. In the small hours, it is not at all advisable to go out of doors, supposing you can keep your house free from the gas by distant connection with the sewer. The morning walk brings no hue of health unless one can fly to the *maidan*, avoiding the streets leading to it. The squares are surely better than the streets, but being encircled on all sides by sewers they are not so desirable as they ought to be.

In winter the chance of contagion is greater than in summer. For the cold, the gases cannot rise high enough, to be diluted by circulation of wind. In a close atmosphere with clouded sky, they are equally bad. Downpour of rains in sufficient quantity diminishes the nocence of the gases, for then they are well dissolved. Their escape after a small or moderate shower is marked. By the inrush of a small quantity of water the gases are not dissolved but force their way through road pits on account of sudden compression. In wide streets, the gases dilute with large volumes of air passing through them. Lanes and alleys have not this advantage. The

middle of streets is better than the sides or foot-paths for morning walks.

One of the leading thoroughfares to the maidan, running south of Wellington Square, next to this office, and leading to Government House—the Dhurmtola Street is rendered unhealthier still by the stables abutting it. It would more appropriately be called the stable-street.

The three natural safeguards against the gases affecting the health of the citizens, are their solution by large quantities of water, dilution by large volumes of air and decomposition by solar heat, in a measure to make them comparatively innocuous. Heat has another property. It assists ventilation by the process of convection. Other natural agents, such as thunder, cyclonic waves, tornado blasts, etc., also help that purification. But they are not unattended with danger of other kinds. These are our natural protections. But for these, it would have been death to live within sewered Calcutta. Typhoid fever has been attributed to sewer gas. This unhealthiness of the city might, in a great measure, be remedied by proper and constant flushing of the underground drains. But this seems to be no regular duty of the municipality, more from defective construction of the drains than neglect.

It is thought generally that underground drains are necessary for all countries. Some engineers go so far as to assert that they are indispensable. Hear what the just deceased Sir William Moore, an authority on Indian sanitation, says:

Drainage is not however the universal panacea which some consider it to be. Subsoil drainage is not applicable to those sandy countries where only a few inches of rain fall, for the sand immediately absorbs the rain like a sponge, and although it remains damp and cold a very short distance from the surface, this would not be much altered by drainage, the moisture not being sufficient to escape from the holding sand by oozing. Surgeon-General Cornish, C.I.E., has also pointed out that subsoil drainage is not applicable to certain districts in the Carnatic, where they do not suffer from too much moisture, but from excessive dryness of the soil. During the prolonged period of drought subsoil pipes become blocked by deposits of ants, lizards, rats, etc., so that when they are really required no water flows through them. This, it may be said, is a matter of supervision, and so it is to a considerable degree. But to ascertain the potency of any large extent of subsoil drainage is no easy matter, and deposits of the nature mentioned occur very suddenly. As a matter of fact, when the Indian monsoon bursts, and heavy rain falls, many subsoil drains overflow.

The drains can effect their purpose well when they are placed in a straight line without many circuitous bends. We will quote Dr. Simpson, the Health Officer of this city:

It seems to be the impression that drainage mainly consists in laying down a large number of pipes, irrespective of a consideration of the nature of the locality, which may be densely crowded with buildings constructed on most irregular lines, and by their irregularity rendering effective drainage almost an impossibility. The pushing on of underground drainage under these circumstances is a doubtful improvement. It may improve the appearance of the locality, but it is very questionable whether it improves the public health. The greater my experience of the effects of the network of underground drains in *bustees*, the greater is my distrust of their utility and freedom from danger. It would be safer and more conducive to the health of the *bustees* to restrict underground drains to the broad roads, which should intersect.

To this Sir W. Moore adds:

All tributary drains should be open, or should be covered with moveable open iron gratings, which would ensure the condition of the drain being readily seen, while the drain being exposed to the influence of the sun and air, injurious gases would not be elaborated.

The *busti* drains are worse. For want of water, they are not flushed, and for their tortuous course, they cannot be sufficiently cleansed. The present insalubrity of Calcutta may be attributed to bad and unhealthy drains, open and covered, and their negligent

cleansing. The deposit of silt with sewage in the streets after cleaning the pits or the man-holes, ought to be discontinued as soon as possible. Carts with tubs do not always accompany the cleaners. The leaky tubs in their onward course drop the liquid into the streets, spreading contagion. The drains in bye-lanes or narrow passages are cleaned at long intervals. It is unusual to see the silt taken out of them. Whenever man-holes are opened for cleaning, large volumes of sewer gas poison the neighbourhood. To prevent this nuisance it is advisable first to flush them with sufficient quantity of water.

Water is a chief pabulum of our blood, and consequently its purity is always a matter of great importance. Man can live without drainage but cannot subsist without water. With our food and especially our drinking water, we imbibe the sources of contagion or infection. If the germ theory of disease be accepted as the latest evolution in medicine, we must then guard our foods and drinking water against every kind of impurity. It is an established fact that we are liable to fall sick more from bad drinking water than from bad drainage. It has been ascertained by Dr. Simpson, that, during the decade 1880 and 1890, mortality in Calcutta was $27\frac{3}{4}$ per mille where there was water supply against 47 per mille where there was no such supply.

But it is ever our lot to see the opposite practice carried out. In Calcutta, before the water works, subsoil drainage channels were constructed. During the rule of Sir Alfred Elliott, the wrong principle was again adopted. The Sanitary Drainage Act was passed before any attempt was made for supply of sufficient potable water to the country. It seems that the authorities are not so much for supplying pure food or water as for carrying waste products. They do not uphold the constructive policy but go in for the destructive operation. A drainage system without a supply of water is unscientific and unpractical. Insufficient supply only lessens the danger. The sewer gases are dissolved by a sufficient supply of water during day time, but they cannot be so neutralized during the night. This is the chief reason of the escape of large volumes of sewer gas which enter our bed rooms and attack us when we are least prepared to receive them. The intermittent supply of water gives our enemy this advantage. On the other hand, continuous supply, both day and night, would be very costly. What is to be done?

Letter to the Editor.

THE BASAUT ALI KHAN ENDOWMENT AT MURSHIDABAD.

Murshidabad, September 14, 1896.

At a special meeting of the Committee of Management of the Basaut Ali Khan's Endowment, held on the 2nd instant, at the Qudam-Sharif building, Nawab Syed Mazaffer Ali Khan Sahib, a senior member, was elected President, to the satisfaction of the Mahomedan community of the district, for it is the belief here that the poor will now be much benefited under his administration of the sacred trust.

It will not, perhaps, be out of place here to give a short account of the donor, Basaut Ali Khan. He was, during the palmy days of the Nizamut, a chief eunuch in the service of one of the favourite Begums of the late Nawab Mir Mahomed Jaffer Khan, the founder of the Murshidabad Nizamut House, and, as such, made a fortune. In 1834, about two years before his death, he made this endowment for charitable and religious purposes for the peace of his mind in this, and the benefit of his soul in the next world. He also distributed a portion of his wealth and chattels among 50 of his servants, that they might, after his death, live comfortably. The yearly net income of his estates, gardens and houses, was

then Rs. 15,000, out of which he made provisions for the maintenance of the Qudam Sharif Imambaras, the two mosques, &c. These institutions are well kept up, and over 100 poor persons daily fed.

The first Matwallis were Nawab Bahoo Begum Sahiba (a junior Gadinashin Begum of the Nizamit) and her chief eunuch Sidi Bahar Ali Khan. During their management, additions were made to the buildings and a couple of tanks excavated. The lady herself would occasionally live there to the special advantage of the poor, who in the cold weather would be presented with warm clothing at her own expense.

On the death of the Begum and her chief eunuch, the Board of Revenue, in 1849, appointed Sidi Darab Ali Khan Bahadur, chief eunuch of the Nizamut, trustee (amin) of the said estate. Unfortunately, under him, the endowment sustained a heavy loss by continued litigation and mismanagement of its funds by the *amla*. At the instance of the Agent to the Governor-General at Murshidabad, Raja Prosunno Narain Deb Bahadur, the then Dewan-i-Nizamut, intervened, and the endowment was, under the provisions of Act XX of 1863, made over to a committee, appointed by Government, consisting of 3 members, namely, Nawab Syed Azim Ali Khan Bahadur, Nawab Syed Ahmud Reza Khan of the Chitpore family, and Nawab Syed Amir Ali Khan Sahib of Rajah Bazar. In the beginning of 1867, when the estates passed from Darab Ali Khan to the committee, only a few annas represented the cash balance. For a few years, the usual routine business was done, while a healthy tone was infused into the internal administration. No proceedings, however, of the meetings were ever recorded. In 1870, Nawab Syed Ahmud Reza Khan died at Chitpore, Calcutta, of heart disease. He was succeeded in the committee by Syed Kazim Ali Khan, brother of the late President. The 3rd member, Nawab Syed Amir Ali Khan, a personal friend of the late Dr. Sambhu Chunder Mookerjee, the then Naib Dewan of the Nizamut, in consultation with him, did not take any active part in the committee and left for Calcutta, probably in disgust, owing to the extraordinary proceedings of the President and his brother. He died there in March 1879. His place on the committee was allowed to remain vacant till the 14th February 1890, when his only son and heir, Nawab Syed Mazaffer Ali Khan, the present President, was appointed in his place.

The history of the endowment shows constant disagreement between the members. The management, too, which was practically the President and Syed Kazim Ali Khan's, had to answer several charges brought against it, but which, for want of funds, the complainants could not pursue to the end. In the meantime, the late President, Nawab Azim Ali Khan, in January 1895, left for Mecca, Medina and Karbala, leaving the management of the sacred trust in the hands of his son, Syed Faiyaz Ali, and Syed Kazim Ali Khan, the other member, Nawab Syed Mazaffer Ali Khan, having kept himself aloof. On the 21st February 1896, the late President died at Karbala, and on the 14th August last, Solaiman Qudr Syed Wahid Ali Mirza, a son of His Highness the late Nawab Nazim of Bengal, was appointed a member of the committee, by Mr. F. Taylor, District Judge of Murshidabad.

In spite of the difference of opinion among the several members, the late President, Nawab Azim Ali Khan, managed to effect a saving in the expenditure and deposited Rs. 40,000 at the Berhampore Treasury to the credit of the endowment, as a provision against future emergencies, though it was against the wishes of the donor, who meant that every pice of the proceeds of his endowed estates should be expended for the good of the poor. The present annual income of the *wakf* is Rs. 25,000.

OUR LONDON LETTER.

August 28.

Li Hung Chang A contributed article to the "Times," evidently written at the instigation of the Viceroy himself, throws a flood of light on what the main object of his visit to Great Britain was. It seems the urgent request he had to make to Lord Salisbury was to have the customs duties at the Treaty Ports of China doubled, so as to enable the Chinese Government not only to satisfy the war indemnity due to Japan and enable it to raise a loan of fifty millions sterling, wherewith to rehabilitate it after the crushing reverses of the late war, but also to enable it to make a commencement of the great work of opening up China to western civilization, by means of railways, telegraphs, &c. The Viceroy leaves a disappointed man so far as regards Lord Salisbury's attitude to his demand. There is much to be said in favour of Li Hung Chang's contention. It would appear we have already granted a similar concession to Japan, without exacting any "quid pro quo." Lord Salisbury says in effect: "I agree entirely with you as to principle but what will the Chambers of Commerce of Hong Kong, Shanghai and other treaty ports say? The concession to Japan was made not by my Government, but by that of Lord Rosebery, and the agreement has been signed by Lord Kimberley. Further, the Chambers of Commerce, whose interests have been affected,

have been complaining ever since." The Viceroy's answer to this is: "I have nothing to do with Chambers of Commerce. It is you the powerful minister that has to act. I show you the one only way by which my country can retrieve itself, and all I ask is that China be placed on the same favourable footing as Japan." Singularly enough the Chambers of Commerce of Hong Kong and Shanghai being cognizant of China's intention to ask sooner or later for an increase of the duties levied on foreign imports from 5 to 8 per cent. *ad valorem*, had put themselves in communication with the British Minister at Peking, and their views are published here simultaneously with the account of the Viceroy's interview with Lord Salisbury, referred to above. To a certain extent they agree with the views of the Viceroy. But what he asked for unconditionally, the Chambers would only grant on China being willing to abolish entirely what is known as the *likin* duty on foreign imports, that is, a sort of *octroi* duty imposed on all foreign goods that pass out of the treaty ports into the interior. The Chambers say: "Let China have an increase of duty on foreign imports from 5% to 8%, but insist on the abolition of the *likin* duty which at present is a source of gross illegalities, and the Chinese Government will recoup itself by the enhanced 3% on goods consumed at the treaty ports, which at present are not subject to the *likin* tax." It is just here the Viceroy's difficulties arise, for the question of *likin* brings him into collision with the provincial governors who at present make it an instrument for their own illegal aggrandisement, and so the question stands today. I cannot help thinking that, before very long, a *modus vivendi* between Great Britain and China will be arrived at. Both have much to gain by the opening up of the interior of China to the softening influences of commercial enterprise. Great Britain will have a struggle no doubt to maintain its own, particularly against our German friends. Germany leaves Great Britain to pour out her blood and treasure in India and China, and then steps in, trying to outlive the latter in the course of trade, that she may be the better able to maintain her bloated army, and her much belauded but insignificant navy. I annex the excellent farewell speech the Envoy delivered on board the "St. Louis" on Saturday forenoon:

"At this stage the official interpreter, Lo Fen Luh, had arrived, and the Envoy gave him a few whispered directions in answer to the speech of Mr. Harper, which had been translated by Mr. Tseng.

Lo Fen Luh then gave the following as his Excellency's answer: Before the Viceroy takes his departure from British shores he finds it impossible to conceal his feelings and sentiments for the people who have given him such a hearty and cordial welcome, and such a reception during his brief visit to and sojourn in this country. Southampton is the first portion of Her Majesty's soil on which the Viceroy alighted from the ship which brought him here, and Southampton is the last of the territory from which now the Viceroy is going to take his departure. A deep impression has been made upon the Viceroy by the magnitude of the accumulated knowledge, the accumulated wealth, and the accumulated force of this nation. The Viceroy has also been very deeply impressed by the simplicity, by the solidity, and by the frankness of the character of this distinguished people (cheers). So the Viceroy humbly hopes that he also has made a certain impression---(cheers)---and this impression he hopes will not be soon forgotten, and he trusts that after his return to China he will come to power again, not on his own account, but in the interests of the destiny of the great empire which he now represents, and he sincerely hopes that he will be able to count upon the support of this great and distinguished people in the West. In his future administration of our empire he trusts likewise that the impressions which he has made here in Great Britain, and also of the impressions made by Great Britain on him will not only serve as a means of cementing the cordial relations between the two countries, but will also serve as a means of developing our unlimited natural resources for the benefit of the human race (cheers). Now the Viceroy has again to tender to you his best thanks for the hospitality, the welcome, the reception which he has received from the most frank and simple people of Great Britain, and he only regrets that he has to leave your shores so soon as twelve o'clock, but he goes away in order to visit a country which is cousin to you (cheers)."

A letter from Hankow gives a diverting account of another Viceroy, the notable Chang Chih-tung, and of the troubles that beset him in his character as a provincial governor.

In 1889, a decree was issued by the Emperor from Peking, authorizing Chang Chih-tung to construct a railway from Hankow to the capital, to be "built entirely with native money, native materials and by native workmen." After spending millions on this enterprise the large-minded Viceroy is unable, after seven years, to point to a "single mile of railway built, or even surveyed as yet."

Zanzibar. In addition to the troubles connected with the boundary settlement in Venezuela, and those of Crete, the state of things at Zanzibar has now to be added to Lord Salisbury's anxieties. On Tuesday, the 25th instant, the reigning Sultan, Hamid,

died unexpectedly. Strong doubts are entertained that he did not die a natural death, and the subsequent proceedings of his cousin Khalid tend to throw strong suspicion upon him. This last at once proclaimed himself successor to Hamid, shut himself up in the Palace, surrounded with from 1,500 to 2,000 native soldiers as a bodyguard, and bade defiance to the British Government. Our Foreign Office acted with the utmost promptitude. Four and twenty hours' notice was given to Khalid to haul down his flag, and tender his submission. The ultimatum expired at 9 o'clock yesterday morning, and the Pretender having taken no notice of our challenge, the palace was bombarded, and in less than an hour Khalid had hauled down his flag, and taken refuge personally at the German consulate.

The future of Zanzibar will be one of growing importance, and fortunately Lord Salisbury's arrangement with Germany in 1890 over Heligoland leaves Great Britain a free hand in dealing not only with the development of its commercial interests, but of far greater issues morally, in the stamping out of slavery. For the present, the Foreign Office is responsible for the government of the Island. But so soon as things quiet down and the new regime is thoroughly set on foot, the preponderance of the opinion of those interested in its trade development, seems to favour the Island being placed under the Colonial Office, and its government assimilated to that of a Crown colony.

The British Government has installed Hamoud as the new Sultan, and the only difficulty now will be as to the surrender of Khalid by the Germans. The fate of the late Sultan has to be enquired into, and should foul play be established and Khalid's guilt brought home to him, he will probably have to pay forfeit with his life. But, if he can prove his innocence of any murderous intent, his future residence will probably be as a state prisoner in some station of Western India.

Venezuela. Another volume of documents relating to the boundary question has just been issued by the Foreign Office. It deals principally with Sir Robert Schomburgk's reports on his travels in British Guiana. "The general impression received from a perusal of the reports is that Sir Robert was a very competent and conscientious explorer." In his time the general complaint of the natives was against the cruelty of Spanish rule, and they gladly welcomed, when they could, the substitution of British. But these matters do not throw much light on the present political situation, and as I have more than once said, if only those settlers who have domiciled themselves in what has hitherto been accepted as British territory, were allowed to remain under our protection other and more far reaching questions might well be submitted to arbitration.

Post Office and Progress. The annual report of the Post Master General has just been published, and is full of interesting matter. In 1895, the year under review, 3,000,000,000 letters, post cards and postal packets were delivered in the United Kingdom. Before the introduction of a uniform penny postage the number of letters carried in 1839, was 82,000,000. In 1840 the number went up with a bound to 169,000,000 and there has been a steady increase every year since. Turning to telegrams, last year the number delivered was 78,839,000, an increase of 7,000,000 on 1894. Another very interesting branch of Post Office work is the Savings Bank. The deposits increased by £8,000,000, and the number of accounts by nearly 350,000. These figures indicate a marvellous amount of prosperity among the wage earning class, and is a satisfactory proof of national prosperity.

Books of the Week. Macmillan have just published an English translation of Professor Ratzel's important work on the "History of Mankind." The work of translation has been accomplished by Mr. A. J. Butler, and those competent to form an opinion say he has done it well. "Alike by the high authority of its original author, by the interest and importance of its subject, and by the comprehensive manner in which it is treated, the 'History of Mankind' in its English form is admirably calculated to promote the intelligent study of anthropology in this country." And no doubt many of your friends will be glad to have such a work rendered accessible in its present form.

A work, with an attractive title for your educated countrymen, comes from America. "The Religions of India" must always have a special fascination for all thoughtful minds who take an interest in our great eastern dependency. Unfortunately, judging by the review in the "Times," Professor Jastrow of the University of Pennsylvania, the Editor, appears to have come very far short of what would have been expected from one who writes in a somewhat humorous style, and treats with something like contempt scholars like Dr. J. Muir, Max Müller and indeed apparently every one of our great names in Indian literature. I enclose the full notice, for which some day soon you may find space in your paper.

Mr. Rudyard Kipling's new story "William the Conqueror" should have a large sale in India, as the story is based on one of your periodical famines. It is very highly spoken of as a work of extraordinary power and pathos.

Vicissitudes of Indian Service. In the "Times" obituary of the

24th instant is the announcement of the death of two members of the Indian Civil Service, quite startling in their contrast. The one is that of Major Boland, aged 94, the other of Mr. Hugh Fox in his 24th year, before he had completed one year of service. The former is described as late E. J. C. S. and Indian Civil Service. He must have been born in 1802, and from the description had apparently entered the service of the Company as a cadet, and subsequently, by influence at Leadenhall Street, been transferred to the Civil Service.

The latter, Mr. Fox, was a personal friend of my own. I saw him off to Bombay at Liverpool Street only last November. He was attached to the North West and was doing duty at Lucknow, where he fell a victim to typhoid fever on the 20th instant. He was a young man in whose future career I took a more than ordinary interest. An Irishman by birth, he belonged hereditarily to the Roman faith. He was educated at the Oratory, Birmingham, then under the grand prestige of the late Cardinal Newman. The great prize of the school is called the "Norfolk" prize, after the present Duke of Norfolk, who founded it, and who was himself a pupil of the Cardinal. Fox carried off that prize, and so was head of the school. He had every quality to make him popular. Clever without arrogance, he had all the taking gifts of the best of his countrymen. Vivacious, full of talk, and eminently good humoured, he, had he been spared, might have done good work for the natives of India. But his too brief career has left him no opportunity of making his mark, and all that is left to his sorrowing parents is the memory of a singularly gifted son.

ONLY A LITTLE AT A TIME.

THERE are sound objections to one's knowing too much about his own body. I am going to tell you what they are; not to-day, but soon. To make sure of them you will have to watch these articles sharply in the newspapers. Yet we should know a little; and a fraction of that little I will serve up now. Please favour me with your attention.

Right across the middle of the body is a large, thin, flat muscle, stretched like a canvas awning—the diaphragm. By it you are divided into two large storeys or compartments. The upper one contains the heart and lungs, the lower one contains (chiefly) the stomach, the intestines, and the liver. The most painful (internal) diseases occur downstairs, the least painful upstairs.

The entire right side of the lower compartment, from the top down to the short ribs, is filled by the liver which is suspended to a mere point of the diaphragm and shakes about with every movement you make.

Now, from the location of the liver we have a word used for ages to express one of the most unhappy conditions a human being can fall into—the word *hypochondria* (often abbreviated to "*hypo*"), the word meaning *under the cartilages*.

"For seven years," writes a correspondent, "I suffered from complaint of the liver. I was very bilious, my skin was sallow and dry, and the whites of my eyes yellow. I had much pain and weight at my right side, and was constantly depressed and melancholy. It seemed to be out of my power to take a hopeful or cheerful view of anything. The effect of this complaint on the mind was one of the aspects of it hardest to bear."

"I had lost my natural appetite, and ate to support life; but there was no more any genuine relish for food or drink. The bad taste in my mouth made all that I took taste bad. Sometimes I would be taken sick and throw up all I had eaten; and after a meal, no matter how slender and simple, I was troubled with fulness and pain at the chest. I used many kinds of medicines and while some of them may have relieved me for the moment, none conferred any lasting benefit, and I was soon as bad as ever."

"In March, 1892, I read in a small book of what Mother Seigel's Curative Syrup had done in cases similar to mine, and was especially interested in the account given in the book of the nature and duties of the liver, and its disorders. I got a bottle of the Syrup from Boots' Drug Stores, and after taking it a few days felt quite like a new man. It seemed to correct my stomach and liver and clear my system of all bile; and it left me in capital health. Since that time—~~and~~ I have kept Mother Seigel's Syrup in the house as a family medicine and have commended it to all my friends as the best known cure for ailments like the one from which I suffered so miserably and so long. You can use this statement as you like. (Signed) John Gent, 59, Coventry Road, Bulwell, Nottingham, March 21st, 1895."

"In the spring of 1891," writes another, "I found myself in bad health. I had no appetite, and the little I did eat did me no good, gave me no strength. I had great pain and weight at the chest and right side, and my skin turned sallow and dry. My kidneys also acted badly, and from time to time I had attacks of gravel; and cold, clammy, weakening sweats broke out all over me. Being only seventeen years old when the trouble began I was greatly alarmed and anxious. No doctor was able to help me, and I continued thus for over three years. In June, 1894, I began to use Mother Seigel's Syrup and soon felt better, lighter, and more cheerful. And by taking it a few weeks longer I recovered my health and strength. Since then, when I have any stomach, liver, or kidney symptoms I resort to Mother Seigel's Syrup and it never fails to set me right. You can publish this letter. (Signed) C. Hanson, 6, New Inn Lane, Gloucester, May 31st, 1895."

The stomach, the liver, and the kidneys are all connected parts of the food and digestive system. When disordered (usually through torpidity of the stomach) they cripple the body and throw a gloom as of night over the mind. On the earliest signs of anything wrong with them use Mother Seigel's Syrup at once.

Sir George Chesney Memorial Committee.

CHAIRMAN :

General Sir Henry W. Norman.

MEMBERS :

The Marquess of Lansdowne, Field Marshal Lord Roberts, Mr. George Allen, Colonel Sir J. Ardagh, Sir Stuart Bayley, Mr. William Blackwood, Sir Edward Braddon, Rev. A. G. Butler, Colonel Sir G. S. Clarke, General Sir E. Collen, Sir Auckland Colvin, Sir J. Inland Danvers, General C. H. Dickens, Sir Mortimer Durand, General Sir W. Stirling Hamilton, Captain Hext, R. N., Mr. A. P. Howell, Sir W. W. Hunter, Lieut-Genl. McLeod Innes, General Sir Allen Johnson, Sir H. S. King, M. P., Mr. A. Lawrence, General Sir R. Low, Sir Alfred Lyall, General Sir O. Newmarch, Sir Andrew Scoble, Field Marshal Sir Lintorn Simmons, Field Marshal Sir Donald Stewart, General R. Strachey, General Sir A. Taylor, Mr. Meredith Townsend, Mr. W. C. Unwin, General Sir George White and General Sir E. Williams.

Memorial

TO THE LATE

SIR GEORGE CHESNEY, K.C.B., R.E., M.P.

A Meeting was held, on the 24th April, at the Royal United Service Institution, of some of the friends of the late Sir George Chesney, to consider the question of the commemoration of his distinguished services as Soldier, Administrator, Statesman, and Author. General Sir Henry Norman presided, and was supported by Field Marshals Sir Lintorn Simmons and Sir Donald Stewart, and other friends of Sir George Chesney. To carry out the object of the Meeting, a General Committee was formed, which included the gentlemen then present, and in addition, the Marquess of Lansdowne, Field Marshal Lord Roberts, General Sir George White, Sir Andrew Scoble, Sir Alfred Lyall, Sir H. S. King, Sir W. W. Hunter, Mr. Meredith Townsend, General Richard Strachey, Mr. William Blackwood, and others.

The form the Memorial should take was left for the future consideration of the Committee, as it would depend on the amount subscribed, but the suggestions tended towards a bust of Sir George for the India Office, and a medal for valuable contributions to Military Literature. It was resolved to limit each subscription to a maximum of three guineas.

Subscriptions will be received by Lieutenant-General McLeod Innes, 9, Lexham Gardens, Cromwell Road, London, W.

COMMITTEE FOR INDIA :

His Excy. General Sir George White, V. C., G. C. I. E., K. C. B., the Hon'ble Major-General Sir E. Collen, K. C. I. E., Lieutenant-General Sir W. S. A. Lockhart, K. C. B., K. C. S. I., His Excy. Lieutenant-General Sir C. Mansfield Clarke, K. C. B., Major-General J. Duncan, Major-General G. E. L. S. Sanford, C. B., C. S. I., Major-General G. de C. Morton, C. B., Major-General A. R. Badcock, C. B., C. S. I., Brigadier-General W. G. Nicholson, C. B., Captain J. Hext, C. I. E., R. N., Colonel W. S. S. Bisset, C. I. E., R. E., Colonel T. Deane.

Honorary Secretary :

Colonel T. Deane, Simla.

Subscriptions will be received, in India, by Messrs. King, King & Co., Bombay; Messrs. King, Hamilton & Co., Calcutta; and by the Alliance Bank, Simla, and its branches at Calcutta, Cawnpore, Agra, Ajmere, Darjeeling, Lahore, Murree, Mussoorie, Rawal Pindi and Umballa. Subscriptions are limited to a maximum of Rs. 32 in India.

By order of the Committee,
T. Deane, Col.,
Hony. Secy.

Simla, 18th July, 1896.

S. DASSEX & CO.,

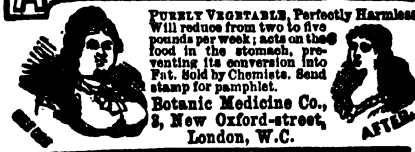

Manufacturers, Importers, Repairers and Tuners of all sorts of Harmoniums, Organs and Pianos, &c., 30, Colootollah Street, Calcutta, import materials direct from England and guarantee the best workmanship and finish; are the express manufacturers of

Saraswati Flute :

Box Harmoniums 3 octaves 3 stops, 1 set of reed, Rs. 35; 3 octaves, best quality, Rs. 40; 3 octaves 4 stops, 2 sets of reed, Rs. 75.

Organs, Folding Harmoniums, Table Harmoniums, &c., always ready for sale; orders executed promptly.

ALLAN'S ANTI-FAT

PURELY VEGETABLE, Perfectly Harmless. Will reduce from two to five pounds per week; acts on the food in the stomach, preventing its conversion into Fat. Sold by Chemists. Send stamp for pamphlet. Botanic Medicine Co., 8, New Oxford-street, London, W.C.

POSTSCRIPT.

After paying the expenses of the publication, the surplus will be placed wholly at the disposal of the family of the deceased man of letters.

Orders to be made to the Business Manager, "An Indian Journalist," at the Bee Press, 1, Uckoor Dutt's Lane, Wellington Street, Calcutta.

OPINION ON THE BOOK.

It is a most interesting record of the life of a remarkable man.—Mr. H. B. Bingham Smith, Private Secretary to the Viceroy, 5th October 1895.

Dr. Mookerjee was a famous letter-writer, and there is a breezy freshness and originality about his correspondence which make it very interesting reading.—Sir Alfred W. Corft, K.C.I.E., Director of Public Instruction, Bengal, 26th September, 1895.

It is not that amid the pressure of harassing official duties an English Civilian can find either time or opportunity to pay so graceful a tribute to the memory of a native personality as F. H. Skrine has done in his biography of the late Dr. Sambhu Chunder Mookerjee, the well-known Bengal journalist (Calcutta: Thacker, Spink and Co.); nor are there many who are more worthy of being thus honoured than the late Editor of *Reis and Rayyet*.

We may at any rate cordially agree with Mr. Skrine that the story of Mookerjee's life, with all its lights and shadows, is pregnant with lessons for those who desire to know the real India.

No weekly paper, Mr. Skrine tells us, not even the *Hindoo Patriot*, in its palmiest days under Kristodas Pal, enjoyed a degree of influence in any way approaching that which was soon attained by *Reis and Rayyet*.

A man of large heart and great qualities, his death from pneumonia in the early spring in the last year was a distinct and heavy loss to Indian journalism, and it was an admirable idea on Mr. Skrine's part to put his Life and Letters upon record.—*The Times of India*, (Bombay) September 30, 1895.

It is rarely that the life of an Indian journalist becomes worthy of publication; it is more rarely still that such a life comes to be written by an Anglo-Indian and a member of the Indian Civil Service. But, it has come to pass that in the land of the Bengali Babus, the life of at least one man among Indian journalists has been considered worthy of being written by an Englishman.—*The Madras Standard*, (Madras) September 30, 1895.

The late Editor of *Reis and Rayyet* was a profound student and an accomplished writer, who has left his mark on Indian journalism. In that he has found a Civilian like Mr. Skrine to record the story of his life he is more fortunate than the great Kristodas Pal himself.—*The Tribune*, (Lahore) October 2, 1895.

The career of "An Indian Journalist" as described by F. H. Skrine of the Indian Civil Service is exceedingly interesting.

Mookerjee's letters are in vults of pure diction which is heightened by his nervous style.

The life has been told by Mr. Skrine in a very pleasant manner and which should make it popular not only with Bengalis but with all those who are able to appreciate merit unmarred by ostentation and earnestness unspoiled by harshness.—*The Muhammadan*, (Madras) Oct. 5, 1895.

The work leaves nothing to be desired either in the way of completeness, impartiality, or lifelike portrayal of character.

Mr. Skrine deals with his interesting subject with the unfailing instinct of the biographer. Every side of Dr. Mookerjee's complex character is treated with sympathy tempered by discrimination.

Mr. Skrine's narrative certainly impresses one with the individuality of a remarkable man.

Mookerjee's own letters show that he had not only acquired a command of clear and flexible English but that he had also assimilated that sturdy independence of thought and character which is supposed to be a peculiar possession of natives of Great Britain. His reading and the stores of his general information appear to have been, considering his opportunities, little less than marvellous.

One of the first to express his condolence with the family of the deceased writer was the present Viceroy, Lord Elgin. Mookerjee appears to have won the affection not only of the dignitaries with whom he came in contact, but also of those in low estate.

The impression left upon the mind upon laying down the book is that of a good and able man whose career has been graphically portrayed.—*The Englishman*, (Calcutta) October 15, 1895.

"IMPROVED UNDAUNTED"

WATCH. Rs. 7.

Guaranteed three Years.

Strong, accurate, pretty, small, open-faced, nickel silver, keyless, short winding, potent, "NEW STYLE IMPROVED UNDAUNTED" watch, with hand setting mechanism, secondhand, for Doctors, ornamental bold dial, for Rs. 7 V. P. P. with an extra glass, spring, pretty box and full three years' guarantee. Warranted to stand the roughest use. Runs more than 28 hours with one winding. Will last a life time. Easily repairable. Others sell at double our rates. One watch free for the purchase of 8 at a time. Mr. Jno. Dickson of Haputal Railway, from Ceylon says:—It keeps splendid time and never stopped although it sustained hard knocks and jerks. x Dr. H. Moore of Royal Artillery from Poona says:—I sold it for Rs. 16. x Pte. W. Hopkins of Sussex Regt. from Dundee says:—I have sold it for Rs. 20. x Mr. T. B. Scott of Patna Opium Department says:—The watch you sent me some seven years ago is still keeping very good time.

Jewelled Ring Rs. 1-8-0. Real

Silver Watch Rs. 13. Real

Solid Gold Watch Rs. 24.

Pretty electro cased gold chain Re. 1-8-0. Fashionable electro cased Gold Ring set with scientific diamonds, Rubies, Emeralds, at Re. 1-8-0. Mr. G. Smith, Salt Inspector from Suikotia, says: "A German valued the diamond ring at Rs. 50 and ruby at Rs. 30." Key winding, Government stamped, solid silver hunting case, Royal watch with extras and full three years' guarantee, for Rs. 13. Pte. G. Hawkes of 2nd York Light Infantry from Parandhar says:—For the first one I got Rs. 25; the second one I sold to a Sergeant for Rs. 28. x Pte. H. C. Bishop of L. F. L. Regt. from Kaimpsee says:—A Corporal offered Rs. 30 for the very same watch. Gentlemen's open faced, keyless *real solid gold watch* Rs. 30; ladies' Rs. 24; both with extras and guaranteed for 3 years. Mind they are guaranteed to be of real solid gold. No agents kept, all goods sent only by us from Bombay per V. P. P.

Bilakana, Calcutta.

KAVIRAJ AGENDRA NATH SEN, Physician, Surgeon, Accoucheur, practises the Ayurvedic system of medicine, after having obtained a diploma at the final examination of one of the Government medical Institutions of the country.

SPECIFICS

for all ordinary diseases, like Fever, Cough, Asthma, Phthisis, Diabetes, &c., including diseases brought on by irregularities of kinds. Catalogues, containing full accounts of diseases and remedies, are transmitted on application. Prescriptions, with or without medicines, sent to every part of India and Ceylon, Cape Colony, and the British Isles, on receipt (by post) of full accounts of diseases.

Thousands of unsolicited Testimonials from every quarter.

CATARRH,

Hay Fever, Catarrhal Deafness.

A NEW HOME TREATMENT.

Sufferers are not generally aware that these diseases are contagious, or that they are due to the presence of living parasites in the lining membrane of the nose and eustachian tubes. Microscopic research, however, has proved this to be a fact, and the result is that a simple remedy has been formulated whereby these distressing diseases are rapidly and permanently cured by a few simple applications made at home by the patient once in two weeks. A pamphlet explaining this new treatment is sent on receipt of 2½d stamp by A HUTTON DIXON, 43 & 45 East Bloor St. TORONTO, Canada.

CALCUTTA, SATURDAY, SEPTEMBER 26, 1896.

WHOLE NO. 744.

THE MAHAPRASTHANIKA PARVA OF THE MAHABHARATA.

"THE GREAT JOURNEY."

[Concluded from page 446.]

"And Arjuna heard,

Weeping to see them fall ; and that stout son

Of Pandu, that destroyer of his foes,
That Prince, who drove through crimson waves of war,
In old days, with his chariot-steeds of milk,
He, the arch-hero, sank ! Beholding this,—
The yielding of that soul unconquerable,
Fearless, divine, from Sakra's self derived,
Arjuna's,—Bhima cried aloud : 'O king !
This man was surely perfect. Never once,
Not even in slumber when the lips are loosed,
Spake he one word that was not true as truth.
Ah, heart of gold, why art thou broke ? O King !
Whence falleth he ?'

"And Yudhisthira said,

Not pausing : 'Once he lied, a lordly lie !
He bragged—our brother—that a single day
Should see him utterly consume, alone,
All those his enemies,—which could not be.
Yet from a great heart sprang the unmeasured speech.
Howbeit a finished hero should not shame
Himself in such wise, nor his enemy,
If he will faultless fight and blameless die :
This was Arjuna's sin. Follow thou me !'

"So the king still went on. But Bhima next
Fainted, and stayed upon the way, and sank ;
But, sinking, cried behind the steadfast prince :
'Ah, brother, see ! I die ! Look upon me,
Thy well-belovéd ! Wherefore falter I,
Who strove to stand ?'

"And Yudhisthira said :

'More than was well the goodly things of earth
Pleased thee, my pleasant brother ! Light the offence,
And large thy spirit ; but the o'er-fed soul
Plumed itself over others. Pritha's son,
For this thou failest, who so near didst gain.'

"Thenceforth alone the long-armed monarch strode,
Not looking back,—nay ! not for Bhima's sake —
But walking with his face set for the Mount
And the hound followed him,—only the hound.

"After the deathly sands, the Mount ! and, lo !
Sakra shone forth,—the God,—filling the earth
And heavens with thunder of his chariot-wheels.
'Ascend,' he said, 'with me, Pritha's great son !'
But Yudhisthira answered, sore at heart
For those his kinsfolk, fallen on the way :

'O Thousand eyed, O Lord of all the gods,
Give that my brothers come with me, who fell !
Not without them is Swarga sweet to me.
She too, the dear and kind and queenly,—she
Whose perfect virtue Paradise must crown,—
Grant her to come with us ! Dost thou grant this ?'

"The God replied : 'In heaven thou shalt see
Thy kinsmen and the queen—these will attain—
And Krishna. Grieve no longer for thy dead,
Thou chief of men ! their mortal covering stripped,
They have their places ; but to thee the gods
Allot an unknown grace : thou shalt go up
Living and in thy form to the immortal homes.'

"But the king answered : 'O thou Wisest One,
Who know'st what was, and is, and is to be,
Still one more grace ! This hound hath ate with me,
Followed me, loved me : must I leave him now ?'

"'Monarch,' spake Indra, 'thou art now as we,—
Deathless, divine ; thou art become a god ;
Glory and power and gifts celestial,
And all the joys of heaven are thine for aye :
What hath a beast with these ? Leave here thy hound.'

"Yet Yudhisthira answered : 'O Most High,
O Thousand-eyed and Wisest ! can it be
That one exalted should seem pitiless ?
Nay, let me lose such glory : for its sake
I cannot leave one living thing I loved.'

"Then sternly Indra spake : 'He is unclean,
And into Swarga such shall enter not.
The Krodhavasha gods destroy the fruits
Of sacrifice, if dogs defile the fire.
Bethink thee, Dharmaraj, quit now this beast !
That which is seemly is not hard of heart.'

"Still he replied : 'T is written that to spurn
A suppliant equals in offence to slay
A twice-born ; wherefore, not for Swarga's bliss
Quit I, Mahendra, this poor clinging dog,—
So without any hope or friend save me,
So wistful, fawning for my faithfulness,
So agonized to die, unless I help
Who among men was called steadfast and just.'

"Quoth Indra : 'Nay ! the altar-flame is foul
Where a dog passeth ; angry angels sweep
The ascending smoke aside, and all the fruits
Of offering, and the merit of the prayer
Of him whom a hound toucheth. Leave it here !
He that will enter heaven must enter pure.
Why did'st thou quit thy brethren on the way,
And Krishna, and the dear-loved Draupadi,

Subscribers in the country are requested to remit by postal money orders, if possible, as the safest and most convenient medium, particularly as it ensures acknowledgment through the Department. No other receipt will be given, any other being unnecessary and likely to cause confusion.

Attaining, firm and glorious, to this Mount
Through perfect deeds, to linger for a brute?
Hath Yudhishtira vanquished self, to melt
With one poor passion at the Door of bliss?
Stay'st thou for this, who did'st not stay for them,—
Draupadi, Bhima?'

"But the king yet spake:

'Tis known that none can hurt or help the dead.
They, the delightful ones, who sank and died,
Following my footsteps, could not live again
Though I had turned,—therefore I did not turn;
But could help profit, I had turned to help.
There be four sins, O Sakra, grievous sins:
The first is making suppliants despair,
The second is to slay a nursing wife,
The third is spoiling Brahmans' goods by force,
The fourth is injuring an ancient friend.
These four I deem but equal to one sin,
If one, in coming forth from woe to weal,
Abandon any meanest comrade then.'

"Straight as he spake, brightly great Indra smiled;
Vanished the hound, and in its stead stood there
The Lord of Death and Justice, Dharma's self!
Sweet were the words which fell from those dread lips,
Precious the lovely praise: 'O thou true king,
Thou that dost bring to harvest the good seed
Of Pandu's righteousness; thou that hast ruth
As he before, on all which lives!—O Son,
I tried thee in the Dwaita wood, what time
They smote thy brothers, bringing water; then
Thou prayed'st for Nakula's life—tender and just—
Not Bhima's nor Arjuna's, true to both,
To Madri as to Kunti, to both queens.
Hear thou my word! Because thou didst not mount
This car divine, lest the poor hound be shent
Who looked to thee, lo! there is none in heaven
Shall sit above thee, King!—Bharata's son,
Enter thou now to the eternal joys,
Living and in thy form. Justice and Love
Welcome thee, Monarch! thou shalt throne with them!'

"Thereat those mightiest gods, in glorious train,
Mahendra, Dharma,—with bright retinue
Of Maruts, Saints, Aswin-Kumaras, Nats,
Spirits and angels,—bore the king aloft,
The thundering chariot first, and after it
Those airy-moving Presences. Serene,
Clad in great glory, potent wonderful,
They glide at will,—at will they know and see,
At wish their wills are wrought; for these are pure,
Passionless, hallowed, perfect, free of earth.
In such celestial midst the Kuru king
Soared upward, and a sweet light filled the sky
And fell on earth, cast by his face and form,
Transfigured as he rose; and there was heard
The voice of Narad,—it is he who sings,
Sitting in heaven, the deeds that good men do
In all the quarters,—Narad, chief of bards,
Narad the wise, who laudeth purity,—
So cried he: 'Thou art risen, Kuru king,
Whose greatness is above all royal saints.
Hail, son of Pandu! like to thee is none
Now or before among the sons of men,
Whose fame hath filled the three wide worlds, who com'st
Bearing thy mortal body, which doth shine
With radiance as a god's.'

"The glad king heard
Narad's loud praise; he saw the immortal gods,—
Dharma, Mahendra; and dead chiefs and saints,
Known upon earth, in blessed heaven he saw,
But only those. 'I do desire,' he said,
'That region, be it of the Blest as this,

Or of the Sorrowful some otherwhere,
Where my dear brothers are, and Draupadi.
I cannot stay elsewhere! I see them not!'

"Then answer made Purandara, the God:
'O thou compassionate and noblest one,
Rest in the pleasures which thy deeds have gained.
How, being as are the gods, canst thou live bound
By mortal chains? Thou art become of us,
Who live above hatred and love, in bliss
Pinnacled, safe, supreme. Sun of thy race,
Thy brothers cannot reach where thou hast climbed!
Most glorious lord of men, let not thy peace
Be touched by stir of earth! Look! this is heaven.
See where the saints sit, and the happy souls,
Siddhas and angels, and the gods who live
Forever and forever.'

"'King of gods,'

Spake Yudhishtira, 'but I will not live
A little space without those souls I loved.
O Slayer of the demons! let me go
Where Bhima and my brothers are, and she,
My Draupadi, the princess with the face
Softer and darker than the Kihad-bud,
And soul as sweet as are its odours. Lo!
Where they have gone, there will I surely go.'

EDWIN ARNOLD.

—The International Review.

WEEKLYANA.

MISS Barbara Reid, of Barra, Aberdeenshire, the youngest daughter of Sir John Reid, fifth baronet, of Barra (whose title became extinct about ten years ago), by his wife Barbara, daughter of Thomas Livingstone, M.D., of Dawny Hill, Aberdeenshire, a member of the same family with Dr. David Livingstone, the African explorer and missionary, has just died at her residence in Eardley Crescent, Kensington, within a few weeks of attaining her twentieth year.

THE American papers report the death, in the Connecticut valley, of a woman who had lived to the age of 105 years and four months, having retained her mental and physical activity to the time of her death. She remembered the funeral of Washington.

THE following epitaph is from a tomb in Exeter Cathedral:—

"Here lies the body of Captain Tully,
Aged one hundred and nine years fully;
